Finland	81	65	48	- 20	- 40	- 20	- 40
Sweden	31	25	19	- 20	- 40	- 20	- 40

<sup>(1)</sup> Member States may for technical reasons delay for up to two years the phase 1 date for reduction in NO<sub>x</sub> emissions by notifying the Commission within one month of the notification of the Directive.

<sup>(1)</sup> Additional emissions may arise from capacity authorised on or after 1 July 1987.

<sup>(2)</sup> Emissions coming from combustion plants authorised before 1 July 1987 but not yet in operation before that date and which have not been taken into account in establishing the emission ceilings fixed by this Annex shall either comply with the requirements established by this Directive for new plants or be accounted for in the overall emissions from existing plants that must not exceed the ceilings fixed in this Annex.

## ANNEX III

EMISSION LIMIT VALUES FOR SO<sub>2</sub>

Solid fuel

A. SO<sub>2</sub> emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 6%) to be applied by new and existing plants pursuant to Article 4(1) and 4(3) respectively:

NB Where the emission limit values above cannot be met due to the characteristics of the fuel, a rate of desulphurisation of at least 60% shall be achieved in the case of plants with a rated thermal input of less than or equal to 100 MW<sub>th,r</sub>, 75% for plants greater than 100 MW<sub>th</sub> and less than or equal to 300 MW<sub>th</sub> and 90% for plants greater than 300 MW<sub>th</sub>. For plants greater than 500 MW<sub>th,r</sub>, a desulphurisation rate of at least 94% shall apply or of at least 92% where a contract for the fitting of flue gas desulphurisation or lime injection equipment has been entered into, and work on its installation has commenced, before 1 January 2001.

B. SO<sub>2</sub> emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 6%) to be applied by new plants pursuant to Article 4(2) with the exception of gas turbines.

Type of fuel	50 to 100 MWth	50 to 100 MWth	> 300 MWth
Biomass	200	200	200
General case	850	200 (1)	200

(1) Except in the case of the 'Outermost Regions' where 850 to 200 mg/Nm<sup>3</sup> (linear decrease) shall apply.

NB Where the emission limit values above cannot be met due to the characteristics of the fuel, installations shall achieve 300 mg/Nm<sup>3</sup> SO<sub>2</sub>, or a rate of desulphurisation of at least 92% shall be achieved in the case of plants with a rated thermal input of less than or equal to 300 MWth and in the case of plants with a rated thermal input greater than 300 MWth a rate of desulphurisation of at least 95% together with a maximum permissible emission limit value of 400 mg/Nm<sup>3</sup> shall apply.

## ANNEX IV

EMISSION LIMIT VALUES FOR SO<sub>2</sub>

Liquid fuels

A. SO<sub>2</sub> emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 3%) to be applied by new and existing plants pursuant to Article 4(1) and 4(3), respectively:

B. SO<sub>2</sub> emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 3%) to be applied by new plants pursuant to Article 4(2) with the exception of gas turbines

50 to 100 MWth	100 to 300 MWth	> 300 MWth
850	400 to 200 (linear decrease) <sup>(1)</sup>	200

<sup>(1)</sup> Except in the case of the 'Outermost Regions' where 850 to 200 mg/Nm<sup>3</sup> (linear decrease) shall apply.

In the case of two installations with a rated thermal input of 250 MWth on Crete and Rhodos to be licensed before 31 December 2007 the emission limit value of 1700 mg/Nm<sup>3</sup> shall apply.

**ANNEX V****EMISSION LIMIT VALUES FOR SO<sub>2</sub>**

## Gaseous fuels

A. SO<sub>2</sub> emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 3%) to be applied by new and existing plants pursuant to Article 4(1) and 4(3), respectively:

Type of fuel	Limit values (mg/Nm <sup>3</sup> )
Gaseous fuels in general	35
Liquefied gas	5
Low caloric gases from gasification of refinery residues coke oven gas, blast-furnace gas	800
Gas from gasification of coal	( <sup>1</sup> )

(<sup>1</sup>) The Council will fix the emission limit values applicable to such gas at a later stage on the basis of proposals from the Commission to be made in the light of further technical experience.

B. SO<sub>2</sub> emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 3%) to be applied by new plants pursuant to Article 4(2):

Gaseous fuels in general	35
Liquefied gas	5
Low calorific gases from coke oven	400
Low caloric gases from blast furnace	200

## ANNEX VI

EMISSION LIMIT VALUES FOR NO<sub>x</sub> (MEASURED AS NO<sub>2</sub>)

A. NO<sub>x</sub> emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 6% for solid fuels, 3% for liquid and gaseous fuels) to be applied by new and existing plants pursuant to Article 4(1) and 4(3), respectively:

Type of fuel	Limit values <sup>(1)</sup> (mg/Nm <sup>3</sup> )
Solid <sup>(2)</sup> , <sup>(3)</sup> :	
50 to 500 MWth:	600
>500 MWth:	500
From 1 January 2016	
50 to 500 MWth:	600
>500 MWth:	200
Liquid:	
50 to 500 MWth:	400
>500 MWth:	450
Gaseous:	
50 to 500 MWth:	300
>500 MWth:	200

<sup>(1)</sup> Except in the case of the 'Outermost Regions' where the following values shall apply:

Solid in general: 650

Solid with < 10% vol comps: 1300

Liquid: 450

Gaseous: 350

<sup>(2)</sup> Until 31 December 2015 plants of a rated thermal input greater than 500 MW, which from 2008 onwards do not operate more than 2000 hours a year (rolling average over a period of five years), shall:

- in the case of plant licensed in accordance with Article 4(3)(a), be subject to a limit value for nitrogen oxide emissions (measured as NO<sub>2</sub>) of 600 mg/Nm<sup>3</sup>;

- in the case of plant subject to a national plan under Article 4(6), have their contribution to the national plan assessed on the basis of a limit value of 600 mg/Nm<sup>3</sup>.

From 1 January 2016 such plants, which do not operate more than 1500 hours a year (rolling average over a period of five years), shall be subject to a limit value for nitrogen oxide emissions (measured as NO<sub>2</sub>) of 450 mg/Nm<sup>3</sup>.

<sup>(3)</sup> Until 1 January 2018 in the case of plants that in the 12 month period ending on 1 January 2001 operated on, and continue to operate on, solid fuels whose volatile content is less than 10%, 1200 mg/Nm<sup>3</sup> shall apply.

B. NO<sub>x</sub> emission limit values expressed in mg/Nm<sup>3</sup> to be applied by new plants pursuant to Article 4(2) with the exception of gas turbines

*Solid fuels (O<sub>2</sub> content 6%)*

Type of fuel	50 to 100 MWth	100 to 300 MWth	> 300 MWth
Biomass	400	300	200
General case	400	200 <sup>(1)</sup>	200

<sup>(1)</sup> Except in the case of the 'Outermost Regions' where 300 mg/Nm<sup>3</sup> (linear decrease) shall apply.

*Liquid fuels (O<sub>2</sub> content 3%)*

50 to 100 MWth	100 to 300 MWth	> 300 MWth
400	200 <sup>(1)</sup>	200

<sup>(1)</sup> Except in the case of the 'Outermost Regions' where 300 mg/Nm<sup>3</sup> (linear decrease) shall apply.

In the case of two installations with a rated thermal input of 250 MWth on Crete and Rhodos to be licensed before 31 December 2007 the emission limit value of 400 mg/Nm<sup>3</sup> shall apply.

*Gaseous fuels (O<sub>2</sub> content 3%)*

	50 to 300 MWth	> 300 MWth
Natural gas <sup>(1)</sup>	150	100
Other gases	200	200

*Gas Turbines*

NO<sub>x</sub> emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 15%) to be applied by a single gas turbine unit pursuant to Article 4(2) (the limit values apply only above 70% load):

	> 50 MWth (thermal input at ISO conditions)
Natural gas <sup>(1)</sup>	50 <sup>(2)</sup>
Liquid fuels <sup>(3)</sup>	120
Gaseous fuels (other than natural gas)	120

<sup>(1)</sup> Natural gas is naturally occurring methane with not more than 20% (by volume) of inerts and other constituents.

<sup>(2)</sup> 75 mg/Nm<sup>3</sup> in the following cases, where the efficiency of the gas turbine is determined at ISO base load conditions:

- gas turbines, used in combined heat and power systems having an overall efficiency greater than 75%;
- gas turbines used in combined cycle plants having an annual average overall electrical efficiency greater than 55%;
- gas turbines for mechanical drives.

For single cycle gas turbines not falling into any of the above categories, but having an efficiency greater than 35% - determined at ISO base load conditions - the emission limit value shall be  $50 \cdot \eta / 35$  where  $\eta$  is the gas turbine efficiency expressed as a percentage (and at ISO base load conditions).

<sup>(3)</sup> This emission limit value only applies to gas turbines firing light and middle distillates.

Gas turbines for emergency use that operate less than 500 hours per year are excluded from these limit values. The operator of such plants is required to submit each year to the competent authority a record of such used time.

## ANNEX VII

## EMISSION LIMIT VALUES FOR DUST

A. Dust emission limit values expressed in mg/Nm<sup>3</sup> (O<sub>2</sub> content 6% for solid fuels, 3% for liquid and gaseous fuels) to be applied by new and existing plants pursuant to Article 4(1) and 4(3), respectively:

Type of fuel	Rated thermal input (MW)	Emission limit values (mg/Nm <sup>3</sup> )
Solid	≥ 500	50 <sup>(2)</sup>
	< 500	100
Liquid <sup>(1)</sup>	all plants	50
Gaseous	all plants	5 as a rule 10 for blast furnace 50 for gases produced by the steel industry which can be used elsewhere

<sup>(1)</sup> A limit value of 100 mg/Nm<sup>3</sup> may be applied to plants with a rated thermal input less than 500 MWth burning liquid fuel with an ash content of more than 0.06%.

<sup>(2)</sup> A limit value of 100 mg/Nm<sup>3</sup> may be applied to plants licensed pursuant to Article 4(3) with a rated thermal input greater than or equal to 500 MWth burning solid fuel with a heat content of less than 5800 kJ/kg (net calorific value), a moisture content greater than 45% by weight, a combined moisture and ash content greater than 60% by weight and a calcium oxide content greater than 10%.

B. Dust emission limit values expressed in mg/Nm<sup>3</sup> to be applied by new plants, pursuant to Article 4(2) with the exception of gas turbines:

*Solid fuels (O<sub>2</sub> content 6%)*

50 to 100 MWth	> 100 MWth
50	30

*Liquid fuels (O<sub>2</sub> content 3%)*

50 to 100 MWth	> 100 MWth
50	30

In the case of two installations with a rated thermal input of 250 MWth on Crete and Rhodos to be licensed before 31 December 2007 the emission limit value of 50 mg/Nm<sup>3</sup> shall apply.

*Gaseous fuels (O<sub>2</sub> content 3%)*

As a rule	5
For blast furnace	10
For gases produced by the steel industry which can be used elsewhere	30

## ANNEX VIII

### METHODS OF MEASUREMENT OF EMISSIONS

#### **A. Procedures for measuring and evaluating emissions from combustion plants.**

##### *1. Until 27 November 2004*

Concentrations of SO<sub>2</sub>, dust, NO<sub>x</sub> shall be measured continuously in the case of new plants for which a licence is granted pursuant to Article 4(1) with a rated thermal input of more than 300 MW. However, monitoring of SO<sub>2</sub> and dust may be confined to discontinuous measurements or other appropriate determination procedures in cases where such measurements or procedures, which must be verified and approved by the competent authorities, may be used to obtain concentration.

In the case of new plants for which a licence is granted pursuant to Article 4(1) not covered by the first subparagraph, the competent authorities may require continuous measurements of those three pollutants to be carried out where considered necessary. Where continuous measurements are not required, discontinuous measurements or appropriate determination procedures as approved by the competent authorities shall be used regularly to evaluate the quantity of the above-mentioned substances present in the emissions.

##### *2. From 27 November 2002 and without prejudice to Article 18(2)*

Competent authorities shall require continuous measurements of concentrations of SO<sub>2</sub>, NO<sub>x</sub>, and dust from waste gases from each combustion plant with a rated thermal input of 100 MW or more.

By way of derogation from the first subparagraph, continuous measurements may not be required in the following cases:

- for combustion plants with a life span of less than 10 000 operational hours;
- for SO<sub>2</sub> and dust from natural gas burning boilers or from gas turbines firing natural gas;
- for SO<sub>2</sub> from gas turbines or boilers firing oil with known sulphur content in cases where there is no desulphurisation equipment;
- for SO<sub>2</sub> from biomass firing boilers if the operator can prove that the SO<sub>2</sub> emissions can under no circumstances be higher than the prescribed emission limit values.

Where continuous measurements are not required, discontinuous measurements shall be required at least every six months. As an alternative, appropriate determination procedures, which must be verified and approved by the competent authorities, may be used to evaluate the quantity of the above mentioned pollutants present in the emissions. Such procedures shall use relevant CEN standards as soon as they are available. If CEN standards are not available ISO standards, national or international standards which will ensure the provision of data of an equivalent scientific quality shall apply.

3. In the case of plants which must comply with the desulphurisation rates fixed by Article 5(2) and Annex III, the requirements concerning SO<sub>2</sub> emission measurements established under paragraph 2 of this point shall apply. Moreover, the sulphur content of the fuel which is introduced into the combustion plant facilities must be regularly monitored.

4. The competent authorities shall be informed of substantial changes in the type of fuel used or in the mode of operation of the plant. They shall decide whether the monitoring requirements laid down in paragraph 2 are still adequate or require adaptation.

5. The continuous measurements carried out in compliance with paragraph 2 shall include the relevant process operation parameters of oxygen content, temperature, pressure and water vapour content. The continuous measurement of the water vapour content of the exhaust gases shall not be necessary, provided that the sampled exhaust gas is dried before the emissions are analysed.

Representative measurements, i.e. sampling and analysis, of relevant pollutants and process parameters as well as reference measurement methods to calibrate automated measurement systems shall be carried out in accordance with CEN standards as soon as they are available. If CEN standards are not available ISO standards, national or international standards which will ensure the provision of data of an equivalent scientific quality shall apply.

Continuous measuring systems shall be subject to control by means of parallel measurements with the reference methods at least every year.

6. The values of the 95% confidence intervals of a single measures results shall not exceed the following percentages of the emission limit values:

- Sulphur dioxide 20%
- Nitrogen oxides 20%
- Dust 30%

The validated hourly and daily average values shall be determined from the measured valid hourly average values after having subtracted the value of the confidence interval specified above.

Any day in which more than three hourly average values are invalid due to malfunction or maintenance of the continuous measurement system shall be invalidated. If more than ten days over a year are invalidated for such situations the competent authority shall require the operator to take adequate measures to improve the reliability of the continuous monitoring system.

## **B. Determination of total annual emissions of combustion plants**

**Contracting Parties shall establish, starting in 2018 and for each subsequent year, an inventory of SO<sub>2</sub>, NO<sub>x</sub> and dust emissions from all combustion plants with a rated thermal input of 50 MW or more. The competent authority shall obtain for each plant operated under the control of one operator at a given location the following data:**

- the total annual emissions of SO<sub>2</sub>, NO<sub>x</sub> and dust (as total suspended particles);**
- the total annual amount of energy input, related to the net calorific value, broken down in terms of the five categories of fuel: biomass, other solid fuels, liquid fuels, natural gas, other gases.**

**A summary of the results of this inventory that shows the emissions from refineries separately shall be communicated to the Secretariat every three years within twelve months from the end of the three-year period considered. The yearly plant-by-plant data shall be made available to the Secretariat upon request. The Secretariat shall make available to the Contracting Parties a summary of the comparison and evaluation of the national inventories within twelve months of receipt of the national inventories.**

**Contracting Parties implementing a national emission reduction plan in accordance with Article 4(6) shall report annually to the Secretariat the plant-by-plant fuel use and emission data for all plants covered by the plan. With the aim of demonstrating progress in**

implementation, this report shall also include emission projections for scenarios taking into account ongoing investments for which financing is secured and a well-defined implementation timeline is drawn up.<sup>7</sup>

### C. Determination of the total annual emissions of existing plants until and including 2003.

1. **Contracting Parties** shall establish, starting in 1990 and for each subsequent year until and including 2003, a complete emission inventory for existing plants covering SO<sub>2</sub> and NO<sub>x</sub>:

- on a plant by plant basis for plants above 300 MWth and for refineries;
- on an overall basis for other combustion plants to which this Directive applies.

2. The methodology used for these inventories shall be consistent with that used to determine SO<sub>2</sub> and NO<sub>x</sub> emissions from combustion plants in 1980.

3. The results of this inventory shall be communicated to the **Secretariat** in a conveniently aggregated form within nine months from the end of the year considered. The methodology used for establishing such emission inventories and the detailed base information shall be made available to the **Secretariat** at its request.

4. The **Secretariat** shall organise a systematic comparison of such national inventories and, if appropriate, shall submit proposals to the Council aiming at harmonising emission inventory methodologies, for the needs of an effective implementation of this Directive.

---

<sup>7</sup> The text displayed here corresponds to Article 6 of Decision 2013/05/MC-EnC.

## **DIRECTIVE 2010/75/EU of 24 November 2010 on industrial emissions (integrated pollution prevention and control)<sup>1 2</sup>**

Incorporated and adapted by Ministerial Council Decision 2013/06/MC-EnC of 24 October 2013 on the implementation of Chapter III, Annex V, and Article 72(3)-(4) of Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions (integrated pollution prevention and control) and amending Article 16 and Annex II of the Energy Community Treaty and adapted by Ministerial Council Decision 2015/06/MC-EnC of 16 October 2015 on the implementation of Chapter III, Annex V, and Article 72(3)-(4) of Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions (integrated pollution prevention and control) for existing combustion plants and amending Annex II of the Energy Community Treaty.

*The adaptations made by Ministerial Council Decision 2013/06/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) A number of substantial changes are to be made to Council Directive 78/176/EEC of 20 February 1978 on waste from the titanium dioxide industry, Council Directive 82/883/EEC of 3 December 1982 on procedures for the surveillance and monitoring of environments concerned by waste from the titanium dioxide industry, Council Directive 92/112/EEC of 15 December 1992 on procedures for harmonising the programmes for the reduction and eventual elimination of pollution caused by waste from the titanium dioxide industry, Council Directive 1999/13/EC of 11 March 1999 on the limitation of emissions of volatile organic compounds due to the use of organic solvents in certain activities and installations, Directive 2000/76/EC of the European Parliament and of the Council of 4 December 2000 on the incineration of waste, Directive 2001/80/EC of the European Parliament and of the Council of 23 October 2001 on the limitation of emissions of certain pollutants into the air from large combustion plants and Directive 2008/1/EC of the European Parliament and of the Council of 15 January 2008 concerning integrated pollution prevention and control. In the interests of clarity, those Directives should be recast.

(2) In order to prevent, reduce and as far as possible eliminate pollution arising from industrial activities in compliance with the 'polluter pays' principle and the principle of pollution prevention, it is necessary to establish a general framework for the control of the main industrial activities, giving priority to intervention at source, ensuring prudent management of natural resources and taking into account, when necessary, the economic situation and specific local characteristics of the place in which the industrial activity is taking place.

(3) Different approaches to controlling emissions into air, water or soil separately may encourage the shifting of pollution from one environmental medium to another rather than protecting the environment as a whole. It is, therefore, appropriate to provide for an integrated approach to prevention and control of emissions into air, water and soil, to waste management, to energy efficiency and to accident prevention. Such an approach will also contribute to the achievement of a level playing

<sup>1</sup> Since Ministerial Council Decision 2013/06/MC-EnC incorporated only Chapter III, Annex V, and Article 72(3)-(4) of Directive 2010/75/EU into the Energy Community *acquis communautaire*, only the text of those provisions are displayed here.

<sup>2</sup> Recommendation 2018/03/MC-EnC to prepare the implementation of Chapter II, Chapter IV and Annex VI of Directive 2010/75/EU has incorporated other parts of this Directive into the Energy Community *acquis communautaire*, albeit in a non-legally binding manner.

field in the Union by aligning environmental performance requirements for industrial installations.

(4) It is appropriate to revise the legislation relating to industrial installations in order to simplify and clarify the existing provisions, reduce unnecessary administrative burden and implement the conclusions of the Commission Communications of 21 September 2005 on the Thematic Strategy on Air Pollution (hereinafter the Thematic Strategy on Air Pollution), of 22 September 2006 on the Thematic Strategy for Soil Protection and of 21 December 2005 on the Thematic Strategy on the Prevention and Recycling of Waste adopted as a follow-up to Decision No 1600/2002/EC of the European Parliament and of the Council of 22 July 2002 laying down the Sixth Community Environment Action Programme. Those Communications set objectives to protect human health and the environment which cannot be met without further reductions in emissions arising from industrial activities.

(5) In order to ensure the prevention and control of pollution, each installation should operate only if it holds a permit or, in the case of certain installations and activities using organic solvents, only if it holds a permit or is registered.

(6) It is for Member States to determine the approach for assigning responsibilities to operators of installations provided that compliance with this Directive is ensured. Member States may choose to grant a permit to one responsible operator for each installation or to specify the responsibility amongst several operators of different parts of an installation. Where its current legal system provides for only one responsible operator for each installation, a Member State may decide to retain this system.

(7) In order to facilitate the granting of permits, Member States should be able to set requirements for certain categories of installations in general binding rules.

(8) It is important to prevent accidents and incidents and limit their consequences. Liability regarding the environmental consequences of accidents and incidents is a matter for relevant national law and, where applicable, other relevant Union law.

(9) In order to avoid duplication of regulation, the permit for an installation covered by Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community should not include an emission limit value for direct emissions of the greenhouse gases specified in Annex I to that Directive except where it is necessary to ensure that no significant local pollution is caused or where an installation is excluded from that scheme.

(10) In accordance with Article 193 of the Treaty on the Functioning of the European Union (TFEU), this Directive does not prevent Member States from maintaining or introducing more stringent protective measures, for example greenhouse gas emission requirements, provided that such measures are compatible with the Treaties and the Commission has been notified.

(11) Operators should submit permit applications containing the information necessary for the competent authority to set permit conditions. Operators should be able to use information resulting from the application of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment and of Council Directive 96/82/EC of 9 December 1996 on the control of major-accident hazards involving dangerous substances when submitting permit applications.

(12) The permit should include all the measures necessary to achieve a high level of protection of the environment as a whole and to ensure that the installation is operated in accordance with the general principles governing the basic obligations of the operator. The permit should also include emission

limit values for polluting substances, or equivalent parameters or technical measures, appropriate requirements to protect the soil and groundwater and monitoring requirements. Permit conditions should be set on the basis of best available techniques.

(13) In order to determine best available techniques and to limit imbalances in the Union as regards the level of emissions from industrial activities, reference documents for best available techniques (hereinafter BAT reference documents') should be drawn up, reviewed and, where necessary, updated through an exchange of information with stakeholders and the key elements of BAT reference documents (hereinafter BAT conclusions') adopted through committee procedure. In this respect, the Commission should, through committee procedure, establish guidance on the collection of data, on the elaboration of BAT reference documents and on their quality assurance. BAT conclusions should be the reference for setting permit conditions. They can be supplemented by other sources. The Commission should aim to update BAT reference documents not later than 8 years after the publication of the previous version.

(14) In order to ensure an effective and active exchange of information resulting in high-quality BAT reference documents, the Commission should establish a forum that functions in a transparent manner. Practical arrangements for the exchange of information and the accessibility of BAT reference documents should be laid down, in particular to ensure that Member States and stakeholders provide data of sufficient quality and quantity based on established guidance to enable the determination of best available techniques and emerging techniques.

(15) It is important to provide sufficient flexibility to competent authorities to set emission limit values that ensure that, under normal operating conditions, emissions do not exceed the emission levels associated with the best available techniques. To this end, the competent authority may set emission limits that differ from the emission levels associated with the best available techniques in terms of the values, periods of time and reference conditions applied, so long as it can be demonstrated, through the results of emission monitoring, that emissions have not exceeded the emission levels associated with the best available techniques. Compliance with the emission limit values that are set in permits results in emissions below those emission limit values.

(16) In order to take into account certain specific circumstances where the application of emission levels associated with the best available techniques would lead to disproportionately high costs compared to the environmental benefits, competent authorities should be able to set emission limit values deviating from those levels. Such deviations should be based on an assessment taking into account well-defined criteria. The emission limit values set out in this Directive should not be exceeded. In any event, no significant pollution should be caused and a high level of protection of the environment taken as a whole should be achieved.

(17) In order to enable operators to test emerging techniques which could provide for a higher general level of environmental protection, or at least the same level of environmental protection and higher cost savings than existing best available techniques, the competent authority should be able to grant temporary derogations from emission levels associated with the best available techniques.

(18) Changes to an installation may give rise to higher levels of pollution. Operators should notify the competent authority of any planned change which might affect the environment. Substantial changes to installations which may have significant negative effects on human health or the environment should not be made without a permit granted in accordance with this Directive.

(19) The spreading of manure contributes significantly to emissions of pollutants into air and water.

With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution and Union law on water protection, it is necessary for the Commission to review the need to establish the most suitable controls of these emissions through the application of best available techniques.

(20) The intensive rearing of poultry and cattle contributes significantly to emissions of pollutants into air and water. With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution and in Union law on water protection, it is necessary for the Commission to review the need to establish differentiated capacity thresholds for different poultry species in order to define the scope of this Directive and to review the need to establish the most suitable controls on emissions from cattle rearing installations.

(21) In order to take account of developments in best available techniques or other changes to an installation, permit conditions should be reconsidered regularly and, where necessary, updated, in particular where new or updated BAT conclusions are adopted.

(22) In specific cases where permit reconsideration and updating identifies that a longer period than 4 years after the publication of a decision on BAT conclusions might be needed to introduce new best available techniques, competent authorities may set a longer time period in permit conditions where this is justified on the basis of the criteria laid down in this Directive.

(23) It is necessary to ensure that the operation of an installation does not lead to a deterioration of the quality of soil and groundwater. Permit conditions should, therefore, include appropriate measures to prevent emissions to soil and groundwater and regular surveillance of those measures to avoid leaks, spills, incidents or accidents occurring during the use of equipment and during storage. In order to detect possible soil and groundwater pollution at an early stage and, therefore, to take appropriate corrective measures before the pollution spreads, the monitoring of soil and groundwater for relevant hazardous substances is also necessary. When determining the frequency of monitoring, the type of prevention measures and the extent and occurrence of their surveillance may be considered.

(24) In order to ensure that the operation of an installation does not deteriorate the quality of soil and groundwater, it is necessary to establish, through a baseline report, the state of soil and groundwater contamination. The baseline report should be a practical tool that permits, as far as possible, a quantified comparison between the state of the site described in that report and the state of the site upon definitive cessation of activities, in order to ascertain whether a significant increase in pollution of soil or groundwater has taken place. The baseline report should, therefore, contain information making use of existing data on soil and groundwater measurements and historical data related to past uses of the site.

(25) In accordance with the polluter pays principle, when assessing the level of significance of the pollution of soil and groundwater caused by the operator which would trigger the obligation to return the site to the state described in the baseline report, Member States should take into account the permit conditions that have applied over the lifetime of the activity concerned, the pollution prevention measures adopted for the installation, and the relative increase in pollution compared to the contamination load identified in the baseline report. Liability regarding pollution not caused by the operator is a matter for relevant national law and, where applicable, other relevant Union law.

(26) In order to ensure the effective implementation and enforcement of this Directive, operators should regularly report to the competent authority on compliance with permit conditions. Member States should ensure that the operator and the competent authority each take necessary measures

in the event of non-compliance with this Directive and provide for a system of environmental inspections. Member States should ensure that sufficient staff are available with the skills and qualifications needed to carry out those inspections effectively.

(27) In accordance with the Århus Convention on access to information, public participation in decision-making and access to justice in environmental matters, effective public participation in decision-making is necessary to enable the public to express, and the decision-maker to take account of, opinions and concerns which may be relevant to those decisions, thereby increasing the accountability and transparency of the decision-making process and contributing to public awareness of environmental issues and support for the decisions taken. Members of the public concerned should have access to justice in order to contribute to the protection of the right to live in an environment which is adequate for personal health and well-being.

(28) The combustion of fuel in installations with a total rated thermal input below 50 MW contributes significantly to emissions of pollutants into the air. With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution, it is necessary for the Commission to review the need to establish the most suitable controls on emissions from such installations. That review should take into account the specificities of combustion plants used in healthcare facilities, in particular with regard to their exceptional use in the case of emergencies.

(29) Large combustion plants contribute greatly to emissions of polluting substances into the air resulting in a significant impact on human health and the environment. In order to reduce that impact and to work towards meeting the requirements of Directive 2001/81/EC of the European Parliament and of the Council of 23 October 2001 on national emission ceilings for certain atmospheric pollutants and the objectives set out in the Thematic Strategy on Air Pollution, it is necessary to set more stringent emission limit values at Union level for certain categories of combustion plants and pollutants.

(30) The Commission should review the need to establish Union-wide emission limit values and to amend the emission limit values set out in Annex V for certain large combustion plants, taking into account the review and update of the relevant BAT reference documents. In this context, the Commission should consider the specificity of the energy systems of refineries.

(31) Due to the characteristics of certain indigenous solid fuels, it is appropriate to apply minimum desulphurisation rates rather than emission limit values for sulphur dioxide for combustion plants firing such fuels. Moreover, as the specific characteristics of oil shale may not allow the application of the same sulphur abatement techniques or the achievement of the same desulphurisation efficiency as for other fuels, a slightly lower minimum desulphurisation rate for plants using this fuel is appropriate.

(32) In the case of a sudden interruption in the supply of low-sulphur fuel or gas resulting from a serious shortage, the competent authority should be able to grant temporary derogations to allow emissions of the combustion plants concerned to exceed the emission limit values set out in this Directive.

(33) The operator concerned should not operate a combustion plant for more than 24 hours after malfunctioning or breakdown of abatement equipment and unabated operation should not exceed 120 hours in a 12-month period in order to limit the negative effects of pollution on the environment. However, where there is an overriding need for energy supplies or it is necessary to avoid an overall increase of emissions resulting from the operation of another combustion plant, competent authorities should be able to grant a derogation from those time limits.

(34) In order to ensure a high level of environmental and human health protection and to avoid transboundary movements of waste to plants operating at lower environmental standards, it is necessary to set and maintain stringent operating conditions, technical requirements and emission limit values for plants incinerating or co-incinerating waste within the Union.

(35) The use of organic solvents in certain activities and installations gives rise to emissions of organic compounds into the air which contribute to the local and transboundary formation of photochemical oxidants which causes damage to natural resources and has harmful effects on human health. It is, therefore, necessary to take preventive action against the use of organic solvents and to establish a requirement to comply with emission limit values for organic compounds and appropriate operating conditions. Operators should be allowed to comply with the requirements of a reduction scheme instead of complying with the emission limit values set out in this Directive where other measures, such as the use of low-solvent or solvent-free products or techniques, provide alternative means of achieving equivalent emission reduction.

(36) Installations producing titanium dioxide can give rise to significant pollution into air and water. In order to reduce these impacts, it is necessary to set at Union level more stringent emission limit values for certain polluting substances.

(37) With regard to the inclusion in the scope of national laws, regulations and administrative provisions brought into force in order to comply with this Directive of installations for the manufacturing of ceramic products by firings, on the basis of the characteristics of the national industrial sector, and in order to grant clear interpretation of the scope, Member States should decide whether to apply both the criteria, production capacity and kiln capacity, or just one of the two criteria.

(38) In order to simplify reporting and reduce unnecessary administrative burden, the Commission should identify methods to streamline the way in which data are made available pursuant to this Directive with the other requirements of Union law, and in particular Regulation (EC) No 166/2006 of the European Parliament and of the Council of 18 January 2006 concerning the establishment of a European Pollutant Release and Transfer Register.

(39) In order to ensure uniform conditions for implementation, implementing powers should be conferred on the Commission to adopt guidance on the collection of data, on the drawing up of BAT reference documents and on their quality assurance, including the suitability of their content and format, to adopt decisions on BAT conclusions, to establish detailed rules on the determination of start-up and shut-down periods and for transitional national plans for large combustion plants, and to establish the type, format and frequency of information that Member States are to make available to the Commission. In accordance with Article 291 TFEU, rules and general principles concerning mechanisms for the control by Member States of the Commission's exercise of implementing powers are to be laid down in advance by a regulation adopted in accordance with the ordinary legislative procedure. Pending the adoption of that new regulation, Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission continues to apply, with the exception of the regulatory procedure with scrutiny, which is not applicable.

(40) The Commission should be empowered to adopt delegated acts in accordance with Article 290 TFEU in respect of the setting of the date from which continuous measurements of emissions into the air of heavy metals and dioxins and furans are to be carried out, and the adaptation of certain parts of Annexes V, VI and VII to scientific and technical progress. In the case of waste incineration

plants and waste co-incineration plants, this may include, *inter alia*, the establishment of criteria to allow derogations from continuous monitoring of total dust emissions. It is of particular importance that the Commission carry out appropriate consultations during its preparatory work, including at expert level.

(41) In order to address significant environmental pollution, for example from heavy metals and dioxins and furans, the Commission should, based on an assessment of the implementation of the best available techniques by certain activities or of the impact of those activities on the environment as a whole, present proposals for Union-wide minimum requirements for emission limit values and for rules on monitoring and compliance.

(42) Member States should lay down rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive and ensure that they are implemented. Those penalties should be effective, proportionate and dissuasive.

(43) In order to provide existing installations with sufficient time to adapt technically to the new requirements of this Directive, some of the new requirements should apply to those installations after a fixed period from the date of application of this Directive. Combustion plants need sufficient time to install the necessary abatement measures to meet the emission limit values set out in Annex V.

(44) Since the objectives of this Directive, namely to ensure a high level of environmental protection and the improvement of environmental quality, cannot be sufficiently achieved by Member States and can, therefore, by reason of the transboundary nature of pollution from industrial activities, be better achieved at Union level, the Union may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(45) This Directive respects the fundamental rights and observes the principles recognised in particular by the Charter of Fundamental Rights of the European Union. In particular, this Directive seeks to promote the application of Article 37 of that Charter.

(46) The obligation to transpose this Directive into national law should be confined to those provisions which represent a substantive change as compared with the earlier Directives. The obligation to transpose the provisions which are unchanged arises under the earlier Directives.

(47) In accordance with paragraph 34 of the Interinstitutional agreement on better law-making, Member States are encouraged to draw up, for themselves and in the interests of the Union, their own tables, which will as far as possible, illustrate the correlation between this Directive and the transposition measures, and to make those tables public.

(48) This Directive should be without prejudice to the obligations of the Member States relating to the time-limits for transposition into national law and application of the Directives set out in Annex IX, Part B.

## CHAPTER III

### SPECIAL PROVISIONS FOR COMBUSTION PLANTS

#### *Article 28*

##### **Scope**

This Chapter shall apply to combustion plants, the total rated thermal input of which is equal to or greater than 50 MW, irrespective of the type of fuel used.

This Chapter shall not apply to the following combustion plants:

- (a) plants in which the products of combustion are used for the direct heating, drying, or any other treatment of objects or materials;
- (b) post-combustion plants designed to purify the waste gases by combustion which are not operated as independent combustion plants;
- (c) facilities for the regeneration of catalytic cracking catalysts;
- (d) facilities for the conversion of hydrogen sulphide into sulphur;
- (e) reactors used in the chemical industry;
- (f) coke battery furnaces;
- (g) cowpers;
- (h) any technical apparatus used in the propulsion of a vehicle, ship or aircraft;
- (i) gas turbines and gas engines used on offshore platforms;
- (j) plants which use any solid or liquid waste as a fuel other than waste referred to in point (b) of point 31 of Article 3.

#### *Article 29*

##### **Aggregation rules**

1. Where the waste gases of two or more separate combustion plants are discharged through a common stack, the combination formed by such plants shall be considered as a single combustion plant and their capacities added for the purpose of calculating the total rated thermal input.
2. Where two or more separate combustion plants which have been granted a permit for the first time on or after 1 July 1987, or the operators of which have submitted a complete application for a permit on or after that date, are installed in such a way that, taking technical and economic factors into account, their waste gases could in the judgement of the competent authority, be discharged through a common stack, the combination formed by such plants shall be considered as a single combustion plant and their capacities added for the purpose of calculating the total rated thermal input.
3. For the purpose of calculating the total rated thermal input of a combination of combustion plants referred to in paragraphs 1 and 2, individual combustion plants with a rated thermal input below 15 MW shall not be considered.

### Article 30

#### Emission limit values

1. Waste gases from combustion plants shall be discharged in a controlled way by means of a stack, containing one or more flues, the height of which is calculated in such a way as to safeguard human health and the environment.

2. All permits for installations containing combustion plants which have been granted a permit before **1 January 2018**<sup>2</sup>, or the operators of which have submitted a complete application for a permit before that date, provided that such plants are put into operation no later than **1 January 2019**, shall include conditions ensuring that emissions into air from these plants do not exceed the emission limit values set out in Part 1 of Annex V.

All permits for installations containing combustion plants which had been granted an exemption as referred to in Article 4(4) of Directive 2001/80/EC and which are in operation after **1 January 2024**<sup>3</sup>, shall include conditions ensuring that emissions into the air from these plants do not exceed the emission limit values set out in Part 2 of Annex V.

3. All permits for installations containing combustion plants not covered by paragraph 2 shall include conditions ensuring that emissions into the air from these plants do not exceed the emission limit values set out in Part 2 of Annex V.

4. The emission limit values set out in Parts 1 and 2 of Annex V as well as the minimum rates of desulphurisation set out in Part 5 of that Annex shall apply to the emissions of each common stack in relation to the total rated thermal input of the entire combustion plant. Where Annex V provides that emission limit values may be applied for a part of a combustion plant with a limited number of operating hours, those limit values shall apply to the emissions of that part of the plant, but shall be set in relation to the total rated thermal input of the entire combustion plant.

5. The competent authority may grant a derogation for a maximum of 6 months from the obligation to comply with the emission limit values provided for in paragraphs 2 and 3 for sulphur dioxide in respect of a combustion plant which to this end normally uses low-sulphur fuel, in cases where the operator is unable to comply with those limit values because of an interruption in the supply of low-sulphur fuel resulting from a serious shortage.

Member States<sup>4</sup> shall immediately inform the Commission of any derogation granted under the first subparagraph.

6. The competent authority may grant a derogation from the obligation to comply with the emission limit values provided for in paragraphs 2 and 3 in cases where a combustion plant using only gaseous fuel has to resort exceptionally to the use of other fuels because of a sudden interruption in the supply of gas and for this reason would need to be equipped with a waste gas purification facility. The period for which such a derogation is granted shall not exceed 10 days except where there is an overriding need to maintain energy supplies.

The operator shall immediately inform the competent authority of each specific case referred to in the first subparagraph.

<sup>2</sup> The text displayed here corresponds to Point 5 of Annex II of the Treaty.

<sup>3</sup> Article 4(4) of Directive 2001/80/EC as amended by Article 4 of Decision 2013/05/MC-EnC.

<sup>4</sup> Decision 2013/06/MC-EnC incorporating this Directive is addressed to the Contracting Parties.

Member States shall inform the Commission immediately of any derogation granted under the first subparagraph.

7. Where a combustion plant is extended, the emission limit values set out in Part 2 of Annex V shall apply to the extended part of the plant affected by the change and shall be set in relation to the total rated thermal input of the entire combustion plant. In the case of a change to a combustion plant, which may have consequences for the environment and which affects a part of the plant with a rated thermal input of 50 MW or more, the emission limit values as set out in Part 2 of Annex V shall apply to the part of the plant which has changed in relation to the total rated thermal input of the entire combustion plant.

8. The emission limit values set out in Parts 1 and 2 of Annex V shall not apply to the following combustion plants:

(a) diesel engines;

(b) recovery boilers within installations for the production of pulp.

9. For the following combustion plants, on the basis of the best available techniques, the Commission shall review the need to establish Union-wide emission limit values and to amend the emission limit values set out in Annex V:

(a) the combustion plants referred to in paragraph 8;

(b) combustion plants within refineries firing the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, taking into account the specificity of the energy systems of refineries;

(c) combustion plants firing gases other than natural gas;

(d) combustion plants in chemical installations using liquid production residues as non-commercial fuel for own consumption.

The Commission shall, by 31 December 2013, report the results of this review to the European Parliament and to the Council accompanied, if appropriate, by a legislative proposal.

### **Article 31**

#### **Desulphurisation rate**

1. For combustion plants firing indigenous solid fuel, which cannot comply with the emission limit values for sulphur dioxide referred to in Article 30(2) and (3) due to the characteristics of this fuel, Member States may apply instead the minimum rates of desulphurisation set out in Part 5 of Annex V, in accordance with the compliance rules set out in Part 6 of that Annex and with prior validation by the competent authority of the technical report referred to in Article 72(4)(a).

2. For combustion plants firing indigenous solid fuel, which co-incinerate waste, and which cannot comply with the  $C_{\text{proc}}$  values for sulphur dioxide set out in points 3.1 or 3.2 of Part 4 of Annex VI due to the characteristics of the indigenous solid fuel, Member States may apply instead the minimum rates of desulphurisation set out in Part 5 of Annex V, in accordance with the compliance rules set out in Part 6 of that Annex. If Member States choose to apply this paragraph,  $C_{\text{waste}}$  as referred to in point 1 of Part 4 of Annex VI shall be equal to 0 mg/Nm<sup>3</sup>.

3. The Commission shall, by 31 December 2019, review the possibility of applying minimum rates of

desulphurisation set out in Part 5 of Annex V, taking into account, in particular, the best available techniques and benefits obtained from reduced sulphur dioxide emissions.

### **Article 32**

#### **Transitional National Plan**

<...><sup>5</sup>

### **Article 33**

#### **Limited life time derogation**

<...><sup>6</sup>

### **Article 34**

#### **Small isolated systems**

1. Until 31 December 2019, combustion plants being, on 6 January 2011, part of a small isolated system may be exempted from compliance with the emission limit values referred to in Article 30(2) and the rates of desulphurisation referred to in Article 31, where applicable. Until 31 December 2019, the emission limit values set out in the permits of these combustion plants, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, shall at least be maintained.
2. Combustion plants with a total rated thermal input of more than 500 MW firing solid fuels, which were granted the first permit after 1 July 1987, shall comply with the emission limit values for nitrogen oxides set out in Part 1 of Annex V.
3. Where there are, on the territory of a Member State combustion plants covered by this Chapter that are part of a small isolated system, that Member State shall report to the Commission before 7 January 2013 a list of those combustion plants, the total annual energy consumption of the small isolated system and the amount of energy obtained through interconnection with other systems.

### **Article 35**

#### **District heating plants**

1. Until 31 December 2022, a combustion plant may be exempted from compliance with the emission limit values referred to in Article 30(2) and the rates of desulphurisation referred to in Article 31 provided that the following conditions are fulfilled:
  - (a) the total rated thermal input of the combustion plant does not exceed 200 MW;
  - (b) the plant was granted a first permit before 27 November 2002 or the operator of that plant had

<sup>5</sup> Article 4(6) of Directive 2001/80/EC as amended by Decision 2013/05/MC-EnC applies.

<sup>6</sup> Article 4(4) of Directive 2001/80/EC as amended by Decision 2013/05/MC-EnC applies.

submitted a complete application for a permit before that date, provided that it was put into operation no later than 27 November 2003;

(c) at least 50% of the useful heat production of the plant, as a rolling average over a period of 5 years, is delivered in the form of steam or hot water to a public network for district heating; and

(d) the emission limit values for sulphur dioxide, nitrogen oxides and dust set out in its permit applicable on 31 December 2015, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, are at least maintained until 31 December 2022.

2. At the latest on 1 January 2016, each Member State shall communicate to the Commission a list of any combustion plants to which paragraph 1 applies, including their total rated thermal input, the fuel types used and the applicable emission limit values for sulphur dioxide, nitrogen oxides and dust. In addition, Member States shall, for any combustion plants to which paragraph 1 applies and during the period mentioned in that paragraph, inform the Commission annually of the proportion of useful heat production of each plant which was delivered in the form of steam or hot water to a public network for district heating, expressed as a rolling average over the preceding 5 years.

### **Article 36**

#### **Geological storage of carbon dioxide**

1. Member States shall ensure that operators of all combustion plants with a rated electrical output of 300 megawatts or more for which the original construction licence or, in the absence of such a procedure, the original operating licence is granted after the entry into force of Directive 2009/31/EC of the European Parliament and of the Council of 23 April 2009 on the geological storage of carbon dioxide, have assessed whether the following conditions are met:

(a) suitable storage sites are available,

(b) transport facilities are technically and economically feasible,

(c) it is technically and economically feasible to retrofit for carbon dioxide capture.

2. If the conditions laid down in paragraph 1 are met, the competent authority shall ensure that suitable space on the installation site for the equipment necessary to capture and compress carbon dioxide is set aside. The competent authority shall determine whether the conditions are met on the basis of the assessment referred to in paragraph 1 and other available information, particularly concerning the protection of the environment and human health.

### **Article 37**

#### **Malfunction or breakdown of the abatement equipment**

1. Member States shall ensure that provision is made in the permits for procedures relating to malfunction or breakdown of the abatement equipment.

2. In the case of a breakdown, the competent authority shall require the operator to reduce or close down operations if a return to normal operation is not achieved within 24 hours, or to operate the plant using low polluting fuels.

The operator shall notify the competent authority within 48 hours after the malfunction or breakdown of the abatement equipment.

The cumulative duration of unabated operation shall not exceed 120 hours in any 12-month period. The competent authority may grant a derogation from the time limits set out in the first and third subparagraphs in one of the following cases:

- (a) there is an overriding need to maintain energy supplies;
- (b) the combustion plant with the breakdown would be replaced for a limited period by another plant which would cause an overall increase in emissions.

### **Article 38**

#### **Monitoring of emissions into air**

1. Member States shall ensure that the monitoring of air polluting substances is carried out in accordance with Part 3 of Annex V.
2. The installation and functioning of the automated monitoring equipment shall be subject to control and to annual surveillance tests as set out in Part 3 of Annex V.
3. The competent authority shall determine the location of the sampling or measurement points to be used for the monitoring of emissions.
4. All monitoring results shall be recorded, processed and presented in such a way as to enable the competent authority to verify compliance with the operating conditions and emission limit values which are included in the permit.

### **Article 39**

#### **Compliance with emission limit values**

The emission limit values for air shall be regarded as being complied with if the conditions set out in Part 4 of Annex V are fulfilled.

### **Article 40**

#### **Multi-fuel firing combustion plants**

1. In the case of a multi-fuel firing combustion plant involving the simultaneous use of two or more fuels, the competent authority shall set the emission limit values in accordance with the following steps:
  - (a) taking the emission limit value relevant for each individual fuel and pollutant corresponding to the total rated thermal input of the entire combustion plant as set out in Parts 1 and 2 of Annex V;
  - (b) determining fuel-weighted emission limit values, which are obtained by multiplying the individual emission limit value referred to in point (a) by the thermal input delivered by each fuel, and dividing the product of multiplication by the sum of the thermal inputs delivered by all fuels,

(c) aggregating the fuel-weighted emission limit values.

2. In the case of multi-fuel firing combustion plants covered by Article 30(2), which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, the following emission limit values may be applied instead of the emission limit values set according to paragraph 1:

(a) where, during the operation of the combustion plant, the proportion contributed by the determinative fuel to the sum of the thermal inputs delivered by all fuels is 50% or more, the emission limit value set in Part 1 of Annex V for the determinative fuel;

(b) where the proportion contributed by the determinative fuel to the sum of the thermal inputs delivered by all fuels is less than 50%, the emission limit value determined in accordance with the following steps:

(i) taking the emission limit values set out in Part 1 of Annex V for each of the fuels used, corresponding to the total rated thermal input of the combustion plant;

(ii) calculating the emission limit value of the determinative fuel by multiplying the emission limit value, determined for that fuel according to point (i), by a factor of two, and subtracting from this product the emission limit value of the fuel used with the lowest emission limit value as set out in Part 1 of Annex V, corresponding to the total rated thermal input of the combustion plant;

(iii) determining the fuel-weighted emission limit value for each fuel used by multiplying the emission limit value determined under points (i) and (ii) by the thermal input of the fuel concerned and by dividing the product of this multiplication by the sum of the thermal inputs delivered by all fuels;

(iv) aggregating the fuel-weighted emission limit values determined under point (iii).

3. In the case of multi-fuel firing combustion plants covered by Article 30(2), which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, the average emission limit values for sulphur dioxide set out in Part 7 of Annex V may be applied instead of the emission limit values set according to paragraphs 1 or 2 of this Article.

## **Article 41**

### **Implementing rules**

Implementing rules shall be established concerning:

(a) the determination of the start-up and shut-down periods referred to in point 27 of Article 3 and in point 1 of Part 4 of Annex V; and

(b) the transitional national plans referred to in Article 32 and, in particular, the setting of emission ceilings and related monitoring and reporting.

Those implementing rules shall be adopted in accordance with the regulatory procedure referred to in Article 75(2). The Commission shall make appropriate proposals not later than 7 July 2011.

**Article 72****Reporting by Member States<sup>7</sup>**

&lt;...&gt;

3. For all combustion plants covered by Chapter III of this Directive, Member States shall, from **1 January 2018**,<sup>8</sup> establish an annual inventory of the sulphur dioxide, nitrogen oxides and dust emissions and energy input.

Taking into account the aggregation rules set out in Article 29, the competent authority shall obtain the following data for each combustion plant:

- (a) the total rated thermal input (MW) of the combustion plant;
- (b) the type of combustion plant: boiler, gas turbine, gas engine, diesel engine, other (specifying the type);
- (c) the date of the start of operation of the combustion plant;
- (d) the total annual emissions (tonnes per year) of sulphur dioxide, nitrogen oxides and dust (as total suspended particles);
- (e) the number of operating hours of the combustion plant;
- (f) the total annual amount of energy input, related to the net calorific value (TJ per year), broken down in terms of the following categories of fuel: coal, lignite, biomass, peat, other solid fuels (specifying the type), liquid fuels, natural gas, other gases (specifying the type).

The annual plant-by-plant data contained in these inventories shall be made available to the Commission upon request.

A summary of the inventories shall be made available to the Commission every 3 years within 12 months from the end of the three-year period considered. This summary shall show separately the data for combustion plants within refineries.

The Commission shall make available to the Member States and to the public a summary of the comparison and evaluation of those inventories in accordance with Directive 2003/4/EC within 24 months from the end of the three-year period considered.

4. Member States shall, from **1 January 2018**,<sup>9</sup> report the following data annually to the Commission:

- (a) for combustion plants to which Article 31 applies, the sulphur content of the indigenous solid fuel used and the rate of desulphurisation achieved, averaged over each month. For the first year where Article 31 is applied, the technical justification of the non-feasibility of complying with the emission limit values referred to in Article 30(2) and (3) shall also be reported; and
- (b) for combustion plants which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, the number of operating hours per year.

&lt;...&gt;

<sup>7</sup> Decision 2013/06/MC-EnC incorporating this Directive is addressed to the Contracting Parties.

<sup>8</sup> The text displayed here corresponds to Article 2(1) of Decision 2013/06/MC-EnC.

<sup>9</sup> *ibid.*

**Article 80**

**Transposition<sup>10</sup>**

1. Each Contracting Party shall bring into force the laws, regulations and administrative provisions necessary to comply with Chapter III, Annex V and Article 72(3)-(4) of Directive 2010/75/EU by 1 January 2018.<sup>11</sup> They shall forthwith inform the Energy Community Secretariat thereof.

2. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by the present Decision.

**Article 83**

**Entry into force<sup>12</sup>**

This Decision shall enter into force upon its adoption by the Ministerial Council.

**Article 84**

**Addressees<sup>13</sup>**

This Decision is addressed to the Contracting Parties.

## ANNEX V

### TECHNICAL PROVISIONS RELATING TO COMBUSTION PLANTS

#### PART 1

##### Emission limit values for combustion plants referred to in Article 30(2)

- All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O<sub>2</sub> content of 6% for solid fuels, 3% for combustion plants, other than gas turbines and gas engines using liquid and gaseous fuels and 15% for gas turbines and gas engines.
- Emission limit values (mg/Nm<sup>3</sup>) for SO<sub>2</sub> for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass	Peat	Liquid fuels
50-100	400	200	300	350
100-300	250	200	300	250
> 300	200	200	200	200

Combustion plants, using solid fuels which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for SO<sub>2</sub> of 800 mg/Nm<sup>3</sup>.

Combustion plants using liquid fuels, which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for SO<sub>2</sub> of 850 mg/Nm<sup>3</sup> in case of plants with a total rated thermal input not exceeding 300 MW and of 400 mg/Nm<sup>3</sup> in case of plants with a total rated thermal input greater than 300 MW.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding two paragraphs in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

- Emission limit values (mg/Nm<sup>3</sup>) for SO<sub>2</sub> for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	35
Liquefied gas	5
Low calorific gases from coke oven	400
Low calorific gases from blast furnace	200

Combustion plants, firing low calorific gases from gasification of refinery residues, which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, shall be subject to an emission limit value for SO<sub>2</sub> of 800 mg/Nm<sup>3</sup>.

4. Emission limit values (mg/Nm<sup>3</sup>) for NO<sub>x</sub> for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels
50-100	300 450 in case of pulverised lignite combustion	300	450
100-300	200	250	200 (1)
> 300	200	200	150 (1)

(1) The emission limit value is 450 mg/Nm<sup>3</sup> for the firing of distillation and conversion residues from the refining of crude-oil for own consumption in combustion plants with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

Combustion plants in chemical installations using liquid production residues as non-commercial fuel for own consumption with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, shall be subject to an emission limit value for NO<sub>x</sub> of 450 mg/Nm<sup>3</sup>.

Combustion plants using solid or liquid fuels with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO<sub>x</sub> of 450 mg/Nm<sup>3</sup>.

Combustion plants using solid fuels with a total rated thermal input greater than 500 MW, which were granted a permit before 1 July 1987 and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO<sub>x</sub> of 450 mg/Nm<sup>3</sup>.

Combustion plants using liquid fuels, with a total rated thermal input greater than 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO<sub>x</sub> of 400 mg/Nm<sup>3</sup>.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding three paragraphs in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

5. Gas turbines (including combined cycle gas turbines (CCGT)) using light and middle distillates as liquid fuels shall be subject to an emission limit value for  $\text{NO}_x$  of  $90 \text{ mg/Nm}^3$  and for CO of  $100 \text{ mg/Nm}^3$ . Gas turbines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

6. Emission limit values ( $\text{mg/Nm}^3$ ) for  $\text{NO}_x$  and CO for gas fired combustion plants

	$\text{NO}_x$	CO
Combustion plants firing natural gas with the exception of gas turbines and gas engines	100	100
Combustion plants firing blast furnace gas, coke oven gas or low calorific gases from gasification of refinery residues, with the exception of gas turbines and gas engines	200 <sup>(4)</sup>	—
Combustion plants firing other gases, with the exception of gas turbines and gas engines	200 <sup>(4)</sup>	—
Gas turbines (including CCGT), using natural gas <sup>(1)</sup> as fuel	50 <sup>(2)</sup> <sup>(3)</sup>	100
Gas turbines (including CCGT), using other gases as fuel	120	—
Gas engines	100	100

<sup>(1)</sup> Natural gas is naturally occurring methane with not more than 20% (by volume) of inerts and other constituents.

<sup>(2)</sup>  $75 \text{ mg/Nm}^3$  in the following cases, where the efficiency of the gas turbine is determined at ISO base load conditions:

- (i) gas turbines, used in combined heat and power systems having an overall efficiency greater than 75%;
- (ii) gas turbines used in combined cycle plants having an annual average overall electrical efficiency greater than 55%;
- (iii) gas turbines for mechanical drives.

<sup>(3)</sup> For single cycle gas turbines not falling into any of the categories mentioned under note (2), but having an efficiency greater than 35% – determined at ISO base load conditions – the emission limit value for  $\text{NO}_x$  shall be  $50x/35$  where  $x$  is the gas turbine efficiency at ISO base load conditions expressed as a percentage.

<sup>(4)</sup>  $300 \text{ mg/Nm}^3$  for such combustion plants with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

For gas turbines (including CCGT), the  $\text{NO}_x$  and CO emission limit values set out in the table contained in this point apply only above 70% load.

For gas turbines (including CCGT) which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, the emission limit value for  $\text{NO}_x$  is  $150 \text{ mg/Nm}^3$  when firing natural gas and  $200 \text{ mg/Nm}^3$  when firing other gases or liquid fuels.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding paragraph in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

Gas turbines and gas engines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall

record the used operating hours.

7. Emission limit values (mg/Nm<sup>3</sup>) for dust for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels <sup>(1)</sup>
50-100	30	30	30
100-300	25	20	25
> 300	20	20	20

<sup>(1)</sup> The emission limit value is 50 mg/Nm<sup>3</sup> for the firing of distillation and conversion residues from the refining of crude oil for own consumption in combustion plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

8. Emission limit values (mg/Nm<sup>3</sup>) for dust for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	5
Blast furnace gas	10
Gases produced by the steel industry which can be used elsewhere	30

## PART 2

### Emission limit values for combustion plants referred to in Article 30(3)

1. All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O<sub>2</sub> content of 6% for solid fuels, 3% for combustion plants other than gas turbines and gas engines using liquid and gaseous fuels and 15% for gas turbines and gas engines.

In case of combined cycle gas turbines with supplementary firing, the standardised O<sub>2</sub> content may be defined by the competent authority, taking into account the specific characteristics of the installation concerned.

2. Emission limit values (mg/Nm<sup>3</sup>) for SO<sub>2</sub> for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass	Peat	Liquid fuels
50-100	400	200	300	350
100-300	200	200	300 250 in case of fluidised bed combustion	200
> 300	150 200 in case of circulating or pressurised fluidised bed combustion	150	150 200 in case of fluidised bed combustion	150

3. Emission limit values (mg/Nm<sup>3</sup>) for SO<sub>2</sub> for combustion plants using gaseous fuels with the excep-

tion of gas turbines and gas engines

In general	35
Liquefied gas	5
Low calorific gases from coke oven	400
Low calorific gases from blast furnace	200

4. Emission limit values (mg/Nm<sup>3</sup>) for NO<sub>x</sub> for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels
50-100	300 400 in case of pulverised lignite combustion	250	300
100-300	200	200	150
> 300	150 200 in case of pulverised lignite combustion	150	100

5. Gas turbines (including CCGT) using light and middle distillates as liquid fuels shall be subject to an emission limit value for NO<sub>x</sub> of 50 mg/Nm<sup>3</sup> and for CO of 100 mg/Nm<sup>3</sup>

Gas turbines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

6. Emission limit values (mg/Nm<sup>3</sup>) for NO<sub>x</sub> and CO for gas fired combustion plants

	NO <sub>x</sub>	CO
Combustion plants other than gas turbines and gas engines	100	100
Gas turbines (including CCGT)	50 (1)	100
Gas engines	75	100

(1) For single cycle gas turbines having an efficiency greater than 35% – determined at ISO base load conditions – the emission limit value for NO<sub>x</sub> shall be 50x/35 where x is the gas turbine efficiency at ISO base load conditions expressed as a percentage.

For gas turbines (including CCGT), the NO<sub>x</sub> and CO emission limit values set out in this point apply only above 70% load.

Gas turbines and gas engines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

7. Emission limit values (mg/Nm<sup>3</sup>) for dust for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	
50-300	20
> 300	10 20 for biomass and peat

8. Emission limit values (mg/Nm<sup>3</sup>) for dust for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	5
Blast furnace gas	10
Gases produced by the steel industry which can be used elsewhere	30

### PART 3

#### Emission monitoring

1. The concentrations of SO<sub>2</sub>, NO<sub>x</sub> and dust in waste gases from each combustion plant with a total rated thermal input of 100 MW or more shall be measured continuously.

The concentration of CO in waste gases from each combustion plant firing gaseous fuels with a total rated thermal input of 100 MW or more shall be measured continuously.

2. The competent authority may decide not to require the continuous measurements referred to in point 1 in the following cases:

(a) for combustion plants with a life span of less than 10 000 operational hours;

(b) for SO<sub>2</sub> and dust from combustion plants firing natural gas;

(c) for SO<sub>2</sub> from combustion plants firing oil with known sulphur content in cases where there is no waste gas desulphurisation equipment;

(d) for SO<sub>2</sub> from combustion plants firing biomass if the operator can prove that the SO<sub>2</sub> emissions can under no circumstances be higher than the prescribed emission limit values.

3. Where continuous measurements are not required, measurements of SO<sub>2</sub>, NO<sub>x</sub>, dust and, for gas fired plants, also of CO shall be required at least once every 6 months.

4. For combustion plants firing coal or lignite, the emissions of total mercury shall be measured at least once per year.

5. As an alternative to the measurements of SO<sub>2</sub> and NO<sub>x</sub> referred to in point 3, other procedures, verified and approved by the competent authority, may be used to determine the SO<sub>2</sub> and NO<sub>x</sub> emissions. Such procedures shall use relevant CEN standards or, if CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality.

6. The competent authority shall be informed of significant changes in the type of fuel used or in the mode of operation of the plant. The competent authority shall decide whether the monitoring requirements laid down in points 1 to 4 are still adequate or require adaptation.

7. The continuous measurements carried out in accordance with point 1 shall include the measurement of the oxygen content, temperature, pressure and water vapour content of the waste gases. The continuous measurement of the water vapour content of the waste gases shall not be necessary, provided that the sampled waste gas is dried before the emissions are analysed.

8. Sampling and analysis of relevant polluting substances and measurements of process parameters as well as the quality assurance of automated measuring systems and the reference measurement methods to calibrate those systems shall be carried out in accordance with CEN standards. If CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality shall apply.

The automated measuring systems shall be subject to control by means of parallel measurements with the reference methods at least once per year.

The operator shall inform the competent authority about the results of the checking of the automated measuring systems.

9. At the emission limit value level, the values of the 95% confidence intervals of a single measured result shall not exceed the following percentages of the emission limit values:

Carbon monoxide	10%
Sulphur dioxide	20%
Nitrogen oxides	20%
Dust	30%

10. The validated hourly and daily average values shall be determined from the measured valid hourly average values after having subtracted the value of the confidence interval specified in point 9.

Any day in which more than three hourly average values are invalid due to malfunction or maintenance of the automated measuring system shall be invalidated. If more than 10 days over a year are invalidated for such situations the competent authority shall require the operator to take adequate measures to improve the reliability of the automated measuring system.

11. In the case of plants which must comply with the rates of desulphurisation referred to in Article 31, the sulphur content of the fuel which is fired in the combustion plant shall also be regularly monitored. The competent authorities shall be informed of substantial changes in the type of fuel used.

## PART 4

### Assessment of compliance with emission limit values

1. In the case of continuous measurements, the emission limit values set out in Parts 1 and 2 shall be regarded as having been complied with if the evaluation of the measurement results indicates, for operating hours within a calendar year, that all of the following conditions have been met:

(a) no validated monthly average value exceeds the relevant emission limit values set out in Parts 1 and 2;

(b) no validated daily average value exceeds 110% of the relevant emission limit values set out in Parts 1 and 2;

(c) in cases of combustion plants composed only of boilers using coal with a total rated thermal input below 50 MW, no validated daily average value exceeds 150% of the relevant emission limit values set out in Parts 1 and 2,

(d) 95% of all the validated hourly average values over the year do not exceed 200% of the relevant emission limit values set out in Parts 1 and 2.

The validated average values are determined as set out in point 10 of Part 3.

For the purpose of the calculation of the average emission values, the values measured during the periods referred to in Article 30(5) and (6) and Article 37 as well as during the start-up and shut-down periods shall be disregarded.

2. Where continuous measurements are not required, the emission limit values set out in Parts 1 and 2 shall be regarded as having been complied with if the results of each of the series of measure-

ments or of the other procedures defined and determined according to the rules laid down by the competent authorities do not exceed the emission limit values.

## PART 5

### Minimum rate of desulphurisation

1. Minimum rate of desulphurisation for combustion plants referred to in Article 30(2)

Total rated thermal input (MW)	Minimum rate of desulphurisation	
	Plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003	Other plants
50-100	80%	92%
100-300	90%	92%
> 300	96% <sup>(1)</sup>	96%

<sup>(1)</sup> For combustion plants firing oil shale, the minimum rate of desulphurisation is 95%.

2. Minimum rate of desulphurisation for combustion plants referred to in Article 30(3)

Total rated thermal input (MW)	Minimum rate of desulphurisation
50-100	93%
100-300	93%
> 300	97%

## PART 6

### Compliance with rate of desulphurisation

The minimum rates of desulphurisation set out in Part 5 of this Annex shall apply as a monthly average limit value.

## PART 7

### Average emission limit values for multi-fuel firing combustion plants within a refinery

Average emission limit values (mg/Nm<sup>3</sup>) for SO<sub>2</sub> for multi-fuel firing combustion plants within a refinery, with the exception of gas turbines and gas engines, which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels:

(a) for combustion plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003: 1 000 mg/Nm<sup>3</sup>;

(b) for other combustion plants: 600 mg/Nm<sup>3</sup>.

These emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O<sub>2</sub> content of 6% for solid fuels and 3% for liquid and gaseous fuels.

## **DIRECTIVE 79/409/EEC of 2 April 1979 on the conservation of wild birds**

Whereas the Council declaration of 22 November 1973 on the programme of action of the European Communities on the environment calls for specific action to protect birds, supplemented by the resolution of the Council of the European Communities and of the representatives of the Governments of the Member States meeting within the Council of 17 May 1977 on the continuation and implementation of a European Community policy and action programme on the environment;

Whereas a large number of species of wild birds naturally occurring in the European territory of the Member States are declining in number, very rapidly in some cases; whereas this decline represents a serious threat to the conservation of the natural environment, particularly because of the biological balances threatened thereby;

Whereas the species of wild birds naturally occurring in the European territory of the Member States are mainly migratory species; whereas such species constitute a common heritage and whereas effective bird protection is typically a trans-frontier environment problem entailing common responsibilities;

Whereas the conditions of life for birds in Greenland are fundamentally different from those in the other regions of the European territory of the Member States on account of the general circumstances and in particular the climate, the low density of population and the exceptional size and geographical situation of the island;

Whereas therefore this Directive should not apply to Greenland;

Whereas the conservation of the species of wild birds naturally occurring in the European territory of the Member States is necessary to attain, within the operation of the common market, of the Community's objectives regarding the improvement of living conditions, a harmonious development of economic activities throughout the Community and a continuous and balanced expansion, but the necessary specific powers to act have not been provided for in the Treaty;

Whereas the measures to be taken must apply to the various factors which may affect the numbers of birds, namely the repercussions of man's activities and in particular the destruction and pollution of their habitats, capture and killing by man and the trade resulting from such practices; whereas the stringency of such measures should be adapted to the particular situation of the various species within the framework of a conservation policy;

Whereas conservation is aimed at the long-term protection and management of natural resources as an integral part of the heritage of the peoples of Europe; whereas it makes it possible to control natural resources and governs their use on the basis of the measures necessary for the maintenance and adjustment of the natural balances between species as far as is reasonably possible;

Whereas the preservation, maintenance or restoration of a sufficient diversity and area of habitats is essential to the conservation of all species of birds; whereas certain species of birds should be the subject of special conservation measures concerning their habitats in order to ensure their survival and reproduction in their area of distribution; whereas such measures must also take account of migratory species and be coordinated with a view to setting up a coherent whole;

Whereas, in order to prevent commercial interests from exerting a possible harmful pressure on exploitation levels it is necessary to impose a general ban on marketing and to restrict all derogation to those species whose biological status so permits, account being taken of the specific conditions

obtaining in the different regions;

Whereas, because of their high population level, geographical distribution and reproductive rate in the Community as a whole, certain species may be hunted, which constitutes acceptable exploitation; where certain limits are established and respected, such hunting must be compatible with maintenance of the population of these species at a satisfactory level;

Whereas the various means, devices or methods of large-scale or non-selective capture or killing and hunting with certain forms of transport must be banned because of the excessive pressure which they exert or may exert on the numbers of the species concerned;

Whereas, because of the importance which may be attached to certain specific situations, provision should be made for the possibility of derogations on certain conditions and subject to monitoring by the Commission;

Whereas the conservation of birds and, in particular, migratory birds still presents problems which call for scientific research; whereas such research will also make it possible to assess the effectiveness of the measures taken;

Whereas care should be taken in consultation with the Commission to see that the introduction of any species of wild bird not naturally occurring in the European territory of the Member States does not cause harm to local flora and fauna;

Whereas the Commission will every three years prepare and transmit to the Member States a composite report based on information submitted by the Member States on the application of national provisions introduced pursuant to this Directive;

Whereas it is necessary to adapt certain Annexes rapidly in the light of technical and scientific progress; whereas, to facilitate the implementation of the measures needed for this purpose, provision should be made for a procedure establishing close cooperation between the Member States and the Commission in a Committee for Adaptation to Technical and Scientific Progress.

### **Article 1**

1. This Directive relates to the conservation of all species of naturally occurring birds in the wild state in the European territory of the Member States to which the Treaty applies. It covers the protection, management and control of these species and lays down rules for their exploitation.
2. It shall apply to birds, their eggs, nests and habitats.
3. This Directive shall not apply to Greenland.

### **Article 2**

Member States shall take the requisite measures to maintain the population of the species referred to in Article 1 at a level which corresponds in particular to ecological, scientific and cultural requirements, while taking account of economic and recreational requirements, or to adapt the population of these species to that level.

### Article 3

1. In the light of the requirements referred to in Article 2, Member States shall take the requisite measures to preserve, maintain or re-establish a sufficient diversity and area of habitats for all the species of birds referred to in Article 1.

2. The preservation, maintenance and re-establishment of biotopes and habitats shall include primarily the following measures:

- (a) creation of protected areas;
- (b) upkeep and management in accordance with the ecological needs of habitats inside and outside the protected zones;
- (c) re-establishment of destroyed biotopes;
- (d) creation of biotopes.

### Article 4

1. The species mentioned in Annex I shall be the subject of special conservation measures concerning their habitat in order to ensure their survival and reproduction in their area of distribution.

In this connection, account shall be taken of:

- (a) species in danger of extinction;
- (b) species vulnerable to specific changes in their habitat;
- (c) species considered rare because of small populations or restricted local distribution;
- (d) other species requiring particular attention for reasons of the specific nature of their habitat.

Trends and variations in population levels shall be taken into account as a background for evaluations.

Member States shall classify in particular the most suitable territories in number and size as special protection areas for the conservation of these species, taking into account their protection requirements in the geographical sea and land area where this Directive applies.

**2. Member States shall take similar measures for regularly occurring migratory species not listed in Annex I, bearing in mind their need for protection in the geographical sea and land area where this Directive applies, as regards their breeding, moulting and wintering areas and staging posts along their migration routes. To this end, Member States shall pay particular attention to the protection of wetlands and particularly to wetlands of international importance.<sup>1</sup>**

3. Member States shall send the Commission all relevant information so that it may take appropriate initiatives with a view to the coordination necessary to ensure that the areas provided for in paragraphs 1 and 2 above form a coherent whole which meets the protection requirements of these species in the geographical sea and land area where this Directive applies.

4. In respect of the protection areas referred to in paragraphs 1 and 2 above, Member States shall

<sup>1</sup> According to Article 16(iv) of the Treaty, the *acquis communautaire* on environment includes Article 4(2) of Directive 79/409/EEC.

take appropriate steps to avoid pollution or deterioration of habitats or any disturbances affecting the birds, in so far as these would be significant having regard to the objectives of this Article. Outside these protection areas, Member States shall also strive to avoid pollution or deterioration of habitats.

### **Article 5**

Without prejudice to Articles 7 and 9, Member States shall take the requisite measures to establish a general system of protection for all species of birds referred to in Article 1, prohibiting in particular:

- (a) deliberate killing or capture by any method;
- (b) deliberate destruction of, or damage to, their nests and eggs or removal of their nests;
- (c) taking their eggs in the wild and keeping these eggs even if empty;
- (d) deliberate disturbance of these birds particularly during the period of breeding and rearing, in so far as disturbance would be significant having regard to the objectives of this Directive;
- (e) keeping birds of species the hunting and capture of which is prohibited.

### **Article 6**

1. Without prejudice to the provisions of paragraphs 2 and 3, Member States shall prohibit, for all the bird species referred to in Article 1, the sale, transport for sale, keeping for sale and the offering for sale of live or dead birds and of any readily recognizable parts or derivatives of such birds.

2. The activities referred to in paragraph 1 shall not be prohibited in respect of the species referred to in Annex III/1, provided that the birds have been legally killed or captured or otherwise legally acquired.

3. Member States may, for the species listed in Annex III/2, allow within their territory the activities referred to in paragraph 1, making provision for certain restrictions, provided the birds have been legally killed or captured or otherwise legally acquired.

Member States wishing to grant such authorization shall first of all consult the Commission with a view to examining jointly with the latter whether the marketing of specimens of such species would result or could reasonably be expected to result in the population levels, geographical distribution or reproductive rate of the species being endangered throughout the Community. Should this examination prove that the intended authorization will, in the view of the Commission, result in any one of the aforementioned species being thus endangered or in the possibility of their being thus endangered, the Commission shall forward a reasoned recommendation to the Member State concerned stating its opposition to the marketing of the species in question. Should the Commission consider that no such risk exists, it will inform the Member State concerned accordingly.

The Commission's recommendation shall be published in the Official Journal of the European Communities.

Member States granting authorization pursuant to this paragraph shall verify at regular intervals that the conditions governing the granting of such authorization continue to be fulfilled.

4. The Commission shall carry out studies on the biological status of the species listed in Annex III/3 and on the effects of marketing on such status.

It shall submit, at the latest four months before the time limit referred to in Article 18 (1) of this Directive, a report and its proposals to the Committee referred to in Article 16, with a view to a decision on the entry of such species in Annex III/2.

Pending this decision, the Member States may apply existing national rules to such species without prejudice to paragraph 3 hereof.

### **Article 7**

1. Owing to their population level, geographical distribution and reproductive rate throughout the Community, the species listed in Annex II may be hunted under national legislation. Member States shall ensure that the hunting of these species does not jeopardize conservation efforts in their distribution area.

2. The species referred to in Annex II/1 may be hunted in the geographical sea and land area where this Directive applies.

3. The species referred to in Annex II/2 may be hunted only in the Member States in respect of which they are indicated.

4. Member States shall ensure that the practice of hunting, including falconry if practised, as carried on in accordance with the national measures in force, complies with the principles of wise use and ecologically balanced control of the species of birds concerned and that this practice is compatible as regards the population of these species, in particular migratory species, with the measures resulting from Article 2. They shall see in particular that the species to which hunting laws apply are not hunted during the rearing season nor during the various stages of reproduction. In the case of migratory species, they shall see in particular that the species to which hunting regulations apply are not hunted during their period of reproduction or during their return to their rearing grounds. Member States shall send the Commission all relevant information on the practical application of their hunting regulations.

### **Article 8**

1. In respect of the hunting, capture or killing of birds under this Directive, Member States shall prohibit the use of all means, arrangements or methods used for the large-scale or non-selective capture or killing of birds or capable of causing the local disappearance of a species, in particular the use of those listed in Annex IV (a).

2. Moreover, Member States shall prohibit any hunting from the modes of transport and under the conditions mentioned in Annex IV (b).

### **Article 9**

1. Member States may derogate from the provisions of Articles 5, 6, 7 and 8, where there is no other satisfactory solution, for the following reasons:

(a) - in the interests of public health and safety,

- in the interests of air safety,

- to prevent serious damage to crops, livestock, forests, fisheries and water,

- for the protection of flora and fauna;

(b) for the purposes of research and teaching, of re-population, of re-introduction and for the breeding necessary for these purposes;

(c) to permit, under strictly supervised conditions and on a selective basis, the capture, keeping or other judicious use of certain birds in small numbers.

2. The derogations must specify:

- the species which are subject to the derogations,

- the means, arrangements or methods authorized for capture or killing,

- the conditions of risk and the circumstances of time and place under which such derogations may be granted,

- the authority empowered to declare that the required conditions obtain and to decide what means, arrangements or methods may be used, within what limits and by whom,

- the controls which will be carried out.

3. Each year the Member States shall send a report to the Commission on the implementation of this Article.

4. On the basis of the information available to it, and in particular the information communicated to it pursuant to paragraph 3, the Commission shall at all times ensure that the consequences of these derogations are not incompatible with this Directive. It shall take appropriate steps to this end.

### **Article 10**

1. Member States shall encourage research and any work required as a basis for the protection, management and use of the population of all species of bird referred to in Article 1.

2. Particular attention shall be paid to research and work on the subjects listed in Annex V. Member States shall send the Commission any information required to enable it to take appropriate measures for the coordination of the research and work referred to in this Article.

### **Article 11**

Member States shall see that any introduction of species of bird which do not occur naturally in the wild state in the European territory of the Member States does not prejudice the local flora and fauna. In this connection they shall consult the Commission.

### **Article 12**

1. Member States shall forward to the Commission every three years, starting from the date of expiry

of the time limit referred to in Article 18(1), a report on the implementation of national provisions taken thereunder.

2. The Commission shall prepare every three years a composite report based on the information referred to in paragraph 1. That part of the draft report covering the information supplied by a Member State shall be forwarded to the authorities of the Member State in question for verification. The final version of the report shall be forwarded to the Member States.

### **Article 13**

Application of the measures taken pursuant to this Directive may not lead to deterioration in the present situation as regards the conservation of species of birds referred to in Article 1.

### **Article 14**

Member States may introduce stricter protective measures than those provided for under this Directive.

### **Article 15**

Such amendments as are necessary for adapting Annexes I and V to this Directive to technical and scientific progress and the amendments referred to in the second paragraph of Article 6(4) shall be adopted in accordance with the procedure laid down in Article 17.

### **Article 16**

1. For the purposes of the amendments referred to in Article 15 of this Directive, a Committee for the Adaptation to Technical and Scientific Progress (hereinafter called "the Committee"), consisting of representatives of the Member States and chaired by a representative of the Commission, is hereby set up.

2. The Committee shall draw up its rules of procedure.

### **Article 17**

1. Where the procedure laid down in this Article is to be followed, matters shall be referred to the Committee by its chairman, either on his own initiative or at the request of the representative of a Member State.

2. The Commission representative shall submit to the Committee a draft of the measures to be taken. The Committee shall deliver its opinion on the draft within a time limit set by the chairman having regard to the urgency of the matter. It shall act by a majority of 41 votes, the votes of the Member States being weighted as provided in Article 148(2) of the Treaty. The chairman shall not vote.

3. (a) The Commission shall adopt the measures envisaged where they are in accordance with the opinion of the Committee.

(b) Where the measures envisaged are not in accordance with the opinion of the Committee, or if no opinion is delivered, the Commission shall without delay submit a proposal to the Council concerning the measures to be adopted. The Council shall act by a qualified majority.

(c) If, within three months of the proposal being submitted to it, the Council has not acted, the proposed measures shall be adopted by the Commission.

### **Article 18<sup>2</sup>**

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive within two years of its notification. They shall forthwith inform the Commission thereof.

2. Member States shall communicate to the Commission the texts of the main provisions of national law which they adopt in the field governed by this Directive.

### **Article 19**

This Directive is addressed to the Member States.

---

<sup>2</sup> Contracting Parties were obliged to bring into force the laws, regulations and administrative provisions necessary to comply with that Directive until 1 July 2006 (in accordance with their Accession Protocols, 30 December 2010 for Moldova, 1 January 2015 for Ukraine and 1 September 2019 for Georgia).

## ANNEX I

1. *Gavia immer* | Great northern diver
2. *Calonectris diomedea* | Cory's shearwater
3. *Hydrobates pelagicus* | Storm petrel
4. *Oceanodroma leucorhoa* | Leach's petrel
5. *Phalacrocorax carbo sinensis* | Cormorant (continental race)
6. *Botaurus stellaris* | Bittern
7. *Nycticorax nycticorax* | Night heron
8. *Ardeola ralloides* | Squacco heron
9. *Egretta garzetta* | Little egret
10. *Egretta alba* | Great white heron
11. *Ardea purpurea* | Purple heron
12. *Ciconia nigra* | Black stork
13. *Ciconia ciconia* | White stork
14. *Plegadis falcinellus* | Glossy ibis
15. *Platalea leucorodia* | Spoonbill
16. *Phoenicopterus ruber* | Greater flamingo
17. *Cygnus colombianus bewickii*(*Cygnus bewickii*) | Bewick's swan
18. *Cygnus cygnus* | Whooper swan
19. *Anser albifrons flavirostris* | White-fronted goose (Greenland race)
20. *Branta leucopsis* | Barnacle goose
21. *Aythya nyroca* | White-eyed pochard
22. *Oxyura leucicephala* | White-headed duck
23. *Pernis apivorus* | Honey buzzard
24. *Milvus migrans* | Black kite
25. *Milvus milvus* | Kite
26. *Haliaeetus albicilla* | White-tailed eagle
27. *Gypaetus barbatus* | Bearded vulture
28. *Neophron percnopterus* | Egyptian vulture
29. *Gyps fulvus* | Griffon vulture
30. *Aegypius monachus* | Black vulture
31. *Circaetus gallicus* | Short-toed eagle
32. *Circus aeruginosus* | Marsh harrier
33. *Circus cyaneus* | Hen harrier
34. *Circus pygargus* | Montagu's harrier

35. *Aquila chrysaetus* | Golden eagle
36. *Hieraaetus pennatus* | Booted eagle
37. *Hieraaetus fasciatus* | Bonelli's eagle
38. *Pandion haliaetus* | Osprey
39. *Falco eleonorae* | Eleonora's falcon
40. *Falco biarmicus* | Lanner falcon
41. *Falco peregrinus* | Peregrine
42. *Porphyrio porphyrio* | Purple gallinule
43. *Grus grus* | Crane
44. *Tetrax tetrax* (*Otis tetrax*) | Little bustard
45. *Otis tarda* | Great bustard
46. *Himantopus himantopus* | Black-winged stilt
47. *Recurvirostra avosetta* | Avocet
48. *Burhinus oedicephalus* | Stone curlew
49. *Glareola pratincola* | Pratincole
50. *Charadrius morinellus* (*Endromias morinellus*) | Dotterel
51. *Pluvialis apricaria* | Golden plover
52. *Gallinago media* | Great snipe
53. *Tringa glareola* | Wood-sandpiper
54. *Phalaropus lobatus* | Red-necked phalarope
55. *Larus genei* | Slender-billed gull
56. *Larus audouinii* | Audouin's gull
57. *Gelochelidon nilotica* | Gull-billed tern
58. *Sterna sandvicensis* | Sandwich tern
59. *Sterna dougallii* | Roseate tern
60. *Sterna hirundo* | Common tern
61. *Sterna paradisaea* | Arctic tern
62. *Sterna albifrons* | Little tern
63. *Chelidonias niger* | Black tern
64. *Pterocles alchata* | Pin-tailed sandgrouse
65. *Bubo bubo* | Eagle owl
66. *Nyctea scandiaca* | Snowy owl
67. *Asio flammeus* | Short-eared owl
68. *Alcedo atthis* | Kingfisher
69. *Dryocopus martius* | Black woodpecker
70. *Dendrocopos leucotus* | White-backed woodpecker

- 71. *Luscinia svecica* | Blue-throat
- 72. *Sylvia undata* | Dartford warbler
- 73. *Sylvia nisoria* | Barred warbler
- 74. *Sitta whiteheadi* | Corsican nuthatch

## **DIRECTIVE 2004/35/EC of 21 April 2004 on environmental liability with regard to the prevention and remedying of environmental damage**

Incorporated and adapted by Ministerial Council Decision 2016/14/MC-EnC of 14 October 2016 on amending the Treaty establishing the Energy Community and adapting and implementing Directive 2004/35/EC of the European Parliament and of the Council.

*The adaptations made by Ministerial Council Decision 2016/12/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) There are currently many contaminated sites in the Community, posing significant health risks, and the loss of biodiversity has dramatically accelerated over the last decades. Failure to act could result in increased site contamination and greater loss of biodiversity in the future. Preventing and remedying, insofar as is possible, environmental damage contributes to implementing the objectives and principles of the Community's environment policy as set out in the Treaty. Local conditions should be taken into account when deciding how to remedy damage.

(2) The prevention and remedying of environmental damage should be implemented through the furtherance of the "polluter pays" principle, as indicated in the Treaty and in line with the principle of sustainable development. The fundamental principle of this Directive should therefore be that an operator whose activity has caused the environmental damage or the imminent threat of such damage is to be held financially liable, in order to induce operators to adopt measures and develop practices to minimise the risks of environmental damage so that their exposure to financial liabilities is reduced.

(3) Since the objective of this Directive, namely to establish a common framework for the prevention and remedying of environmental damage at a reasonable cost to society, cannot be sufficiently achieved by the Member States and can therefore be better achieved at Community level by reason of the scale of this Directive and its implications in respect of other Community legislation, namely Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds, Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora, and Directive 2000/60/EC of the European Parliament and of the Council of 23 October 2000 establishing a framework for Community action in the field of water policy, the Community may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve that objective.

(4) Environmental damage also includes damage caused by airborne elements as far as they cause damage to water, land or protected species or natural habitats.

(5) Concepts instrumental for the correct interpretation and application of the scheme provided for by this Directive should be defined especially as regards the definition of environmental damage. When the concept in question derives from other relevant Community legislation, the same definition should be used so that common criteria can be used and uniform application promoted.

(6) Protected species and natural habitats might also be defined by reference to species and habitats protected in pursuance of national legislation on nature conservation. Account should nevertheless

be taken of specific situations where Community, or equivalent national, legislation allows for certain derogations from the level of protection afforded to the environment.

(7) For the purposes of assessing damage to land as defined in this Directive the use of risk assessment procedures to determine to what extent human health is likely to be adversely affected is desirable.

(8) This Directive should apply, as far as environmental damage is concerned, to occupational activities which present a risk for human health or the environment. Those activities should be identified, in principle, by reference to the relevant Community legislation which provides for regulatory requirements in relation to certain activities or practices considered as posing a potential or actual risk for human health or the environment.

(9) This Directive should also apply, as regards damage to protected species and natural habitats, to any occupational activities other than those already directly or indirectly identified by reference to Community legislation as posing an actual or potential risk for human health or the environment. In such cases the operator should only be liable under this Directive whenever he is at fault or negligent.

(10) Express account should be taken of the Euratom Treaty and relevant international conventions and of Community legislation regulating more comprehensively and more stringently the operation of any of the activities falling under the scope of this Directive. This Directive, which does not provide for additional rules of conflict of laws when it specifies the powers of the competent authorities, is without prejudice to the rules on international jurisdiction of courts as provided, *inter alia*, in Council Regulation (EC) No 44/2001 of 22 December 2000 on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters. This Directive should not apply to activities the main purpose of which is to serve national defence or international security.

(11) This Directive aims at preventing and remedying environmental damage, and does not affect rights of compensation for traditional damage granted under any relevant international agreement regulating civil liability.

(12) Many Member States are party to international agreements dealing with civil liability in relation to specific fields. These Member States should be able to remain so after the entry into force of this Directive, whereas other Member States should not lose their freedom to become parties to these agreements.

(13) Not all forms of environmental damage can be remedied by means of the liability mechanism. For the latter to be effective, there need to be one or more identifiable polluters, the damage should be concrete and quantifiable, and a causal link should be established between the damage and the identified polluter(s). Liability is therefore not a suitable instrument for dealing with pollution of a widespread, diffuse character, where it is impossible to link the negative environmental effects with acts or failure to act of certain individual actors.

(14) This Directive does not apply to cases of personal injury, to damage to private property or to any economic loss and does not affect any right regarding these types of damages.

(15) Since the prevention and remedying of environmental damage is a task directly contributing to the pursuit of the Community's environment policy, public authorities should ensure the proper implementation and enforcement of the scheme provided for by this Directive.

(16) Restoration of the environment should take place in an effective manner ensuring that the relevant restoration objectives are achieved. A common framework should be defined to that end, the proper application of which should be supervised by the competent authority.

(17) Appropriate provision should be made for those situations where several instances of environmental damage have occurred in such a manner that the competent authority cannot ensure that all the necessary remedial measures are taken at the same time. In such a case, the competent authority should be entitled to decide which instance of environmental damage is to be remedied first.

(18) According to the “polluter-pays” principle, an operator causing environmental damage or creating an imminent threat of such damage should, in principle, bear the cost of the necessary preventive or remedial measures. In cases where a competent authority acts, itself or through a third party, in the place of an operator, that authority should ensure that the cost incurred by it is recovered from the operator. It is also appropriate that the operators should ultimately bear the cost of assessing environmental damage and, as the case may be, assessing an imminent threat of such damage occurring.

(19) Member States may provide for flat-rate calculation of administrative, legal, enforcement and other general costs to be recovered.

(20) An operator should not be required to bear the costs of preventive or remedial actions taken pursuant to this Directive in situations where the damage in question or imminent threat thereof is the result of certain events beyond the operator’s control. Member States may allow that operators who are not at fault or negligent shall not bear the cost of remedial measures, in situations where the damage in question is the result of emissions or events explicitly authorised or where the potential for damage could not have been known when the event or emission took place.

(21) Operators should bear the costs relating to preventive measures when those measures should have been taken as a matter of course in order to comply with the legislative, regulatory and administrative provisions regulating their activities or the terms of any permit or authorisation.

(22) Member States may establish national rules covering cost allocation in cases of multiple party causation. Member States may take into account, in particular, the specific situation of users of products who might not be held responsible for environmental damage in the same conditions as those producing such products. In this case, apportionment of liability should be determined in accordance with national law.

(23) Competent authorities should be entitled to recover the cost of preventive or remedial measures from an operator within a reasonable period of time from the date on which those measures were completed.

(24) It is necessary to ensure that effective means of implementation and enforcement are available, while ensuring that the legitimate interests of the relevant operators and other interested parties are adequately safeguarded. Competent authorities should be in charge of specific tasks entailing appropriate administrative discretion, namely the duty to assess the significance of the damage and to determine which remedial measures should be taken.

(25) Persons adversely affected or likely to be adversely affected by environmental damage should be entitled to ask the competent authority to take action. Environmental protection is, however, a diffuse interest on behalf of which individuals will not always act or will not be in a position to act. Non-governmental organisations promoting environmental protection should therefore also be given the opportunity to properly contribute to the effective implementation of this Directive.

(26) The relevant natural or legal persons concerned should have access to procedures for the review of the competent authority’s decisions, acts or failure to act.

(27) Member States should take measures to encourage the use by operators of any appropriate insurance or other forms of financial security and the development of financial security instruments and markets in order to provide effective cover for financial obligations under this Directive.

(28) Where environmental damage affects or is likely to affect several Member States, those Member States should cooperate with a view to ensuring proper and effective preventive or remedial action in respect of any environmental damage. Member States may seek to recover the costs for preventive or remedial actions.

(29) This Directive should not prevent Member States from maintaining or enacting more stringent provisions in relation to the prevention and remedying of environmental damage; nor should it prevent the adoption by Member States of appropriate measures in relation to situations where double recovery of costs could occur as a result of concurrent action by a competent authority under this Directive and by a person whose property is affected by the environmental damage.

(30) Damage caused before the expiry of the deadline for implementation of this Directive should not be covered by its provisions.

(31) Member States should report to the Commission on the experience gained in the application of this Directive so as to enable the Commission to consider, taking into account the impact on sustainable development and future risks to the environment, whether any review of this Directive is appropriate.

### **Article 1**

#### **Subject matter**

The purpose of this Directive is to establish a framework of environmental liability based on the "polluter-pays" principle, to prevent and remedy environmental damage.

### **Article 2**

#### **Definitions**

For the purpose of this Directive the following definitions shall apply:

1. "environmental damage" means:

(a) damage to protected species and natural habitats, which is any damage that has significant adverse effects on reaching or maintaining the favourable conservation status of such habitats or species. The significance of such effects is to be assessed with reference to the baseline condition, taking account of the criteria set out in Annex I;

Damage to protected species and natural habitats does not include previously identified adverse effects which result from an act by an operator which was expressly authorised by the relevant authorities in accordance with provisions implementing Article 6(3) and (4) or Article 16 of Directive 92/43/EEC or Article 9 of Directive 79/409/EEC or, in the case of habitats and species not covered by Community law, in accordance with equivalent provisions of national law on nature conservation.

(b) water damage, which is any damage that significantly adversely affects the ecological, chemical and/or quantitative status and/or ecological potential, as defined in Directive 2000/60/EC, of the

waters concerned, with the exception of adverse effects where Article 4(7) of that Directive applies;

(c) land damage, which is any land contamination that creates a significant risk of human health being adversely affected as a result of the direct or indirect introduction, in, on or under land, of substances, preparations, organisms or micro-organisms;

2. "damage" means a measurable adverse change in a natural resource or measurable impairment of a natural resource service which may occur directly or indirectly;

3. "protected species and natural habitats" means:

(a) the species mentioned in Article 4(2) of Directive 79/409/EEC or listed in Annex I thereto or listed in Annexes II and IV to Directive 92/43/EEC;

(b) the habitats of species mentioned in Article 4(2) of Directive 79/409/EEC or listed in Annex I thereto or listed in Annex II to Directive 92/43/EEC, and the natural habitats listed in Annex I to Directive 92/43/EEC and the breeding sites or resting places of the species listed in Annex IV to Directive 92/43/EEC; and

(c) where a **Contracting Party** so determines, any habitat or species, not listed in those Annexes which the **Contracting Party** designates for equivalent purposes as those laid down in these two Directives;

4. "conservation status" means:

(a) in respect of a natural habitat, the sum of the influences acting on a natural habitat and its typical species that may affect its long-term natural distribution, structure and functions as well as the long-term survival of its typical species within, as the case may be, the European territory of the **Contracting Parties** to which the Treaty applies or the territory of a **Contracting Party** or the natural range of that habitat;

The conservation status of a natural habitat will be taken as "favourable" when:

- its natural range and areas it covers within that range are stable or increasing,
- the specific structure and functions which are necessary for its long-term maintenance exist and are likely to continue to exist for the foreseeable future, and
- the conservation status of its typical species is favourable, as defined in (b);

(b) in respect of a species, the sum of the influences acting on the species concerned that may affect the long-term distribution and abundance of its populations within, as the case may be, the European territory of the **Contracting Parties** to which the Treaty applies or the territory of a **Contracting Party** or the natural range of that species;

The conservation status of a species will be taken as "favourable" when:

- population dynamics data on the species concerned indicate that it is maintaining itself on a long-term basis as a viable component of its natural habitats,
- the natural range of the species is neither being reduced nor is likely to be reduced for the foreseeable future, and
- there is, and will probably continue to be, a sufficiently large habitat to maintain its populations on a long-term basis;

5. "waters" mean all waters covered by Directive 2000/60/EC;

6. "operator" means any natural or legal, private or public person who operates or controls the oc-

cupational activity or, where this is provided for in national legislation, to whom decisive economic power over the technical functioning of such an activity has been delegated, including the holder of a permit or authorisation for such an activity or the person registering or notifying such an activity;

7. "occupational activity" means any activity carried out in the course of an economic activity, a business or an undertaking, irrespectively of its private or public, profit or non-profit character;

8. "emission" means the release in the environment, as a result of human activities, of substances, preparations, organisms or micro-organisms;

9. "imminent threat of damage" means a sufficient likelihood that environmental damage will occur in the near future;

10. "preventive measures" means any measures taken in response to an event, act or omission that has created an imminent threat of environmental damage, with a view to preventing or minimising that damage;

11. "remedial measures" means any action, or combination of actions, including mitigating or interim measures to restore, rehabilitate or replace damaged natural resources and/or impaired services, or to provide an equivalent alternative to those resources or services as foreseen in Annex II;

12. "natural resource" means protected species and natural habitats, water and land;

13. "services" and "natural resources services" mean the functions performed by a natural resource for the benefit of another natural resource or the public;

14. "baseline condition" means the condition at the time of the damage of the natural resources and services that would have existed had the environmental damage not occurred, estimated on the basis of the best information available;

15. "recovery", including "natural recovery", means, in the case of water, protected species and natural habitats the return of damaged natural resources and/or impaired services to baseline condition and in the case of land damage, the elimination of any significant risk of adversely affecting human health;

16. "costs" means costs which are justified by the need to ensure the proper and effective implementation of this Directive including the costs of assessing environmental damage, an imminent threat of such damage, alternatives for action as well as the administrative, legal, and enforcement costs, the costs of data collection and other general costs, monitoring and supervision costs.

### **Article 3**

#### **Scope**

1. This Directive shall apply to:

(a) environmental damage caused by any of the occupational activities listed in Annex III **in the field of Network Energy**, and to any imminent threat of such damage occurring by reason of any of those activities;

(b) damage to protected species and natural habitats caused by any occupational activities other than those listed in Annex III, and to any imminent threat of such damage occurring by reason of any of those activities, whenever the operator has been at fault or negligent.

2. This Directive shall apply without prejudice to more stringent Community legislation regulating

the operation of any of the activities falling within the scope of this Directive and without prejudice to Community legislation containing rules on conflicts of jurisdiction.

3. Without prejudice to relevant national legislation, this Directive shall not give private parties a right of compensation as a consequence of environmental damage or of an imminent threat of such damage.

#### **Article 4** **Exceptions**

1. This Directive shall not cover environmental damage or an imminent threat of such damage caused by:

- (a) an act of armed conflict, hostilities, civil war or insurrection;
- (b) a natural phenomenon of exceptional, inevitable and irresistible character.

2. This Directive shall not apply to environmental damage or to any imminent threat of such damage arising from an incident in respect of which liability or compensation falls within the scope of any of the International Conventions listed in Annex IV, including any future amendments thereof, which is in force in the **Contracting Party** concerned.

3. This Directive shall be without prejudice to the right of the operator to limit his liability in accordance with national legislation implementing the Convention on Limitation of Liability for Maritime Claims (LLMC), 1976, including any future amendment to the Convention, or the Strasbourg Convention on Limitation of Liability in Inland Navigation (CLNI), 1988, including any future amendment to the Convention.

4. This Directive shall not apply to such nuclear risks or environmental damage or imminent threat of such damage as may be caused by the activities covered by the Treaty establishing the European Atomic Energy Community or caused by an incident or activity in respect of which liability or compensation falls within the scope of any of the international instruments listed in Annex V, including any future amendments thereof.

5. This Directive shall only apply to environmental damage or to an imminent threat of such damage caused by pollution of a diffuse character, where it is possible to establish a causal link between the damage and the activities of individual operators.

6. This Directive shall not apply to activities the main purpose of which is to serve national defence or international security nor to activities the sole purpose of which is to protect from natural disasters.

#### **Article 5** **Preventive action**

1. Where environmental damage has not yet occurred but there is an imminent threat of such damage occurring, the operator shall, without delay, take the necessary preventive measures.

2. **Contracting Parties** shall provide that, where appropriate, and in any case whenever an imminent threat of environmental damage is not dispelled despite the preventive measures taken by the

operator, operators are to inform the competent authority of all relevant aspects of the situation, as soon as possible.

3. The competent authority may, at any time:

(a) require the operator to provide information on any imminent threat of environmental damage or in suspected cases of such an imminent threat;

(b) require the operator to take the necessary preventive measures;

(c) give instructions to the operator to be followed on the necessary preventive measures to be taken; or

(d) itself take the necessary preventive measures.

4. The competent authority shall require that the preventive measures are taken by the operator. If the operator fails to comply with the obligations laid down in paragraph 1 or 3(b) or (c), cannot be identified or is not required to bear the costs under this Directive, the competent authority may take these measures itself.

## **Article 6**

### **Remedial action**

1. Where environmental damage has occurred the operator shall, without delay, inform the competent authority of all relevant aspects of the situation and take:

(a) all practicable steps to immediately control, contain, remove or otherwise manage the relevant contaminants and/or any other damage factors in order to limit or to prevent further environmental damage and adverse effects on human health or further impairment of services and

(b) the necessary remedial measures, in accordance with Article 7.

2. The competent authority may, at any time:

(a) require the operator to provide supplementary information on any damage that has occurred;

(b) take, require the operator to take or give instructions to the operator concerning, all practicable steps to immediately control, contain, remove or otherwise manage the relevant contaminants and/or any other damage factors in order to limit or to prevent further environmental damage and adverse effect on human health, or further impairment of services;

(c) require the operator to take the necessary remedial measures;

(d) give instructions to the operator to be followed on the necessary remedial measures to be taken; or

(e) itself take the necessary remedial measures.

3. The competent authority shall require that the remedial measures are taken by the operator. If the operator fails to comply with the obligations laid down in paragraph 1 or 2(b), (c) or (d), cannot be identified or is not required to bear the costs under this Directive, the competent authority may take these measures itself, as a means of last resort.

## **Article 7**

### **Determination of remedial measures**

1. Operators shall identify, in accordance with Annex II, potential remedial measures and submit them to the competent authority for its approval, unless the competent authority has taken action under Article 6(2)(e) and (3).
2. The competent authority shall decide which remedial measures shall be implemented in accordance with Annex II, and with the cooperation of the relevant operator, as required.
3. Where several instances of environmental damage have occurred in such a manner that the competent authority cannot ensure that the necessary remedial measures are taken at the same time, the competent authority shall be entitled to decide which instance of environmental damage must be remedied first.

In making that decision, the competent authority shall have regard, *inter alia*, to the nature, extent and gravity of the various instances of environmental damage concerned, and to the possibility of natural recovery. Risks to human health shall also be taken into account.

4. The competent authority shall invite the persons referred to in Article 12(1) and in any case the persons on whose land remedial measures would be carried out to submit their observations and shall take them into account.

## **Article 8**

### **Prevention and remediation costs**

1. The operator shall bear the costs for the preventive and remedial actions taken pursuant to this Directive.
2. Subject to paragraphs 3 and 4, the competent authority shall recover, *inter alia*, via security over property or other appropriate guarantees from the operator who has caused the damage or the imminent threat of damage, the costs it has incurred in relation to the preventive or remedial actions taken under this Directive.

However, the competent authority may decide not to recover the full costs where the expenditure required to do so would be greater than the recoverable sum or where the operator cannot be identified.

3. An operator shall not be required to bear the cost of preventive or remedial actions taken pursuant to this Directive when he can prove that the environmental damage or imminent threat of such damage:

- (a) was caused by a third party and occurred despite the fact that appropriate safety measures were in place; or
- (b) resulted from compliance with a compulsory order or instruction emanating from a public authority other than an order or instruction consequent upon an emission or incident caused by the operator's own activities.

In such cases **Contracting Parties** shall take the appropriate measures to enable the operator to recover the costs incurred.

4. The **Contracting Parties** may allow the operator not to bear the cost of remedial actions taken pursuant to this Directive where he demonstrates that he was not at fault or negligent and that the environmental damage was caused by:

(a) an emission or event expressly authorised by, and fully in accordance with the conditions of, an authorisation conferred by or given under applicable national laws and regulations which implement those legislative measures adopted by the Community specified in Annex III, as applied at the date of the emission or event;

(b) an emission or activity or any manner of using a product in the course of an activity which the operator demonstrates was not considered likely to cause environmental damage according to the state of scientific and technical knowledge at the time when the emission was released or the activity took place.

5. Measures taken by the competent authority in pursuance of Article 5(3) and (4) and Article 6(2) and (3) shall be without prejudice to the liability of the relevant operator under this Directive and without prejudice to Articles 87 and 88 of the Treaty.

### **Article 9**

#### **Cost allocation in cases of multiple party causation**

This Directive is without prejudice to any provisions of national regulations concerning cost allocation in cases of multiple party causation especially concerning the apportionment of liability between the producer and the user of a product.

### **Article 10**

#### **Limitation period for recovery of costs**

The competent authority shall be entitled to initiate cost recovery proceedings against the operator, or if appropriate, a third party who has caused the damage or the imminent threat of damage in relation to any measures taken in pursuance of this Directive within five years from the date on which those measures have been completed or the liable operator, or third party, has been identified, whichever is the later.

### **Article 11**

#### **Competent authority**

1. **Contracting Parties** shall designate the competent authority(ies) responsible for fulfilling the duties provided for in this Directive.

2. The duty to establish which operator has caused the damage or the imminent threat of damage, to assess the significance of the damage and to determine which remedial measures should be taken with reference to Annex II shall rest with the competent authority. To that effect, the competent authority shall be entitled to require the relevant operator to carry out his own assessment and to

supply any information and data necessary.

3. **Contracting Parties** shall ensure that the competent authority may empower or require third parties to carry out the necessary preventive or remedial measures.

4. Any decision taken pursuant to this Directive which imposes preventive or remedial measures shall state the exact grounds on which it is based. Such decision shall be notified forthwith to the operator concerned, who shall at the same time be informed of the legal remedies available to him under the laws in force in the **Contracting Party** concerned and of the time-limits to which such remedies are subject.

### **Article 12**

#### **Request for action**

1. Natural or legal persons:

(a) affected or likely to be affected by environmental damage or

(b) having a sufficient interest in environmental decision making relating to the damage or, alternatively,

(c) alleging the impairment of a right, where administrative procedural law of a **Contracting Party** requires this as a precondition,

shall be entitled to submit to the competent authority any observations relating to instances of environmental damage or an imminent threat of such damage of which they are aware and shall be entitled to request the competent authority to take action under this Directive.

What constitutes a "sufficient interest" and "impairment of a right" shall be determined by the **Contracting Parties**.

To this end, the interest of any non-governmental organisation promoting environmental protection and meeting any requirements under national law shall be deemed sufficient for the purpose of subparagraph (b). Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (c).

2. The request for action shall be accompanied by the relevant information and data supporting the observations submitted in relation to the environmental damage in question.

3. Where the request for action and the accompanying observations show in a plausible manner that environmental damage exists, the competent authority shall consider any such observations and requests for action. In such circumstances the competent authority shall give the relevant operator an opportunity to make his views known with respect to the request for action and the accompanying observations.

4. The competent authority shall, as soon as possible and in any case in accordance with the relevant provisions of national law, inform the persons referred to in paragraph 1, which submitted observations to the authority, of its decision to accede to or refuse the request for action and shall provide the reasons for it.

5. **Contracting Parties** may decide not to apply paragraphs 1 and 4 to cases of imminent threat of damage.

### **Article 13**

#### **Review procedures**

1. The persons referred to in Article 12(1) shall have access to a court or other independent and impartial public body competent to review the procedural and substantive legality of the decisions, acts or failure to act of the competent authority under this Directive.
2. This Directive shall be without prejudice to any provisions of national law which regulate access to justice and those which require that administrative review procedures be exhausted prior to recourse to judicial proceedings.

### **Article 14**

#### **Financial security**

1. **Contracting Parties** shall take measures to encourage the development of financial security instruments and markets by the appropriate economic and financial operators, including financial mechanisms in case of insolvency, with the aim of enabling operators to use financial guarantees to cover their responsibilities under this Directive.
2. <...><sup>1</sup>

### **Article 15**

#### **Cooperation between Contracting Parties**

1. Where environmental damage affects or is likely to affect several **Contracting Parties**, those **Contracting Parties** shall cooperate, including through the appropriate exchange of information, with a view to ensuring that preventive action and, where necessary, remedial action is taken in respect of any such environmental damage.
2. Where environmental damage has occurred, the **Contracting Party** in whose territory the damage originates shall provide sufficient information to the potentially affected **Contracting Parties**.
3. Where a **Contracting Party** identifies damage within its borders which has not been caused within them it may report the issue to the **Secretariat** and any other **Contracting Party** concerned; it may make recommendations for the adoption of preventive or remedial measures and it may seek, in accordance with this Directive, to recover the costs it has incurred in relation to the adoption of preventive or remedial measures.

### **Article 16**

#### **Relationship with national law**

1. This Directive shall not prevent **Contracting Parties** from maintaining or adopting more stringent provisions in relation to the prevention and remedying of environmental damage, including the identification of additional activities to be subject to the prevention and remediation requirements of

---

<sup>1</sup> Not applicable in accordance with Article 2(2) of Decision 2016/14/MC-EnC.

this Directive and the identification of additional responsible parties.

2. This Directive shall not prevent **Contracting Parties** from adopting appropriate measures, such as the prohibition of double recovery of costs, in relation to situations where double recovery could occur as a result of concurrent action by a competent authority under this Directive and by a person whose property is affected by environmental damage.

### **Article 17**

#### **Temporal application**

This Directive shall not apply to:

- damage caused by an emission, event or incident that took place before the date referred to in Article 19(1),
- damage caused by an emission, event or incident which takes place subsequent to the date referred to in Article 19(1) when it derives from a specific activity that took place and finished before the said date,
- damage, if more than 30 years have passed since the emission, event or incident, resulting in the damage, occurred.

### **Article 18**

#### **Reports and review**

1. **Contracting Parties** shall report to the **Secretariat** on the experience gained in the application of this Directive by **31 December 2026** at the latest. The reports shall include the information and data set out in Annex VI.

2. <...>
3. <...>

### **Article 19**

#### **Implementation**

**1. Contracting Parties shall inform the Energy Community Secretariat of the laws, regulations and administrative provisions brought into force to comply with the relevant provisions of Directive 2004/35/EC, as amended by Directive 2006/21/EC, Directive 2009/31/EC and Directive 2013/30/EU, in accordance with Article 12 of the Treaty establishing the Energy Community by 1 January 2021.**

**When Contracting Parties adopt those provisions, they shall contain a reference to this Decision and Directive 2004/35/EC, as amended by Directive 2006/21/EC, Directive 2009/31/EC and Directive 2013/30/EU, or shall be accompanied by such reference on the occasion of their official publication. The methods of making such reference shall be laid down by the Contracting Parties.**

**2. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by this Decision and Directive 2004/35/EC, as amended by Directive 2006/21/EC, Directive 2009/31/EC and Directive 2013/30/EU.<sup>2</sup>**

***Article 20***

**Entry into force**

**This Decision shall enter into force on the date of its adoption.<sup>3</sup>**

***Article 21***

**Addressees**

**This Decision is addressed to the Contracting Parties of the Treaty establishing the Energy Community.<sup>4</sup>**

<sup>3</sup> The text displayed here corresponds to Article 4 of Decision 2016/14/MC-EnC.

<sup>4</sup> The text displayed here corresponds to Article 5 of Decision 2016/14/MC-EnC.

## ANNEX I

### CRITERIA REFERRED TO IN ARTICLE 2(1)(A)

The significance of any damage that has adverse effects on reaching or maintaining the favourable conservation status of habitats or species has to be assessed by reference to the conservation status at the time of the damage, the services provided by the amenities they produce and their capacity for natural regeneration. Significant adverse changes to the baseline condition should be determined by means of measurable data such as:

- the number of individuals, their density or the area covered,
- the role of the particular individuals or of the damaged area in relation to the species or to the habitat conservation, the rarity of the species or habitat (assessed at local, regional and higher level including at Community level),
- the species' capacity for propagation (according to the dynamics specific to that species or to that population), its viability or the habitat's capacity for natural regeneration (according to the dynamics specific to its characteristic species or to their populations),
- the species' or habitat's capacity, after damage has occurred, to recover within a short time, without any intervention other than increased protection measures, to a condition which leads, solely by virtue of the dynamics of the species or habitat, to a condition deemed equivalent or superior to the baseline condition.

Damage with a proven effect on human health must be classified as significant damage.

The following does not have to be classified as significant damage:

- negative variations that are smaller than natural fluctuations regarded as normal for the species or habitat in question,
- negative variations due to natural causes or resulting from intervention relating to the normal management of sites, as defined in habitat records or target documents or as carried on previously by owners or operators,
- damage to species or habitats for which it is established that they will recover, within a short time and without intervention, either to the baseline condition or to a condition which leads, solely by virtue of the dynamics of the species or habitat, to a condition deemed equivalent or superior to the baseline condition.

## ANNEX II

### REMEDYING OF ENVIRONMENTAL DAMAGE

This Annex sets out a common framework to be followed in order to choose the most appropriate measures to ensure the remedying of environmental damage.

#### 1. Remediation of damage to water or protected species or natural habitats

Remedying of environmental damage, in relation to water or protected species or natural habitats, is achieved through the restoration of the environment to its baseline condition by way of primary, complementary and compensatory remediation, where:

- (a) "Primary" remediation is any remedial measure which returns the damaged natural resources and/or impaired services to, or towards, baseline condition;
- (b) "Complementary" remediation is any remedial measure taken in relation to natural resources and/or services to compensate for the fact that primary remediation does not result in fully restoring the damaged natural resources and/or services;
- (c) "Compensatory" remediation is any action taken to compensate for interim losses of natural resources and/or services that occur from the date of damage occurring until primary remediation has achieved its full effect;
- (d) "interim losses" means losses which result from the fact that the damaged natural resources and/or services are not able to perform their ecological functions or provide services to other natural resources or to the public until the primary or complementary measures have taken effect. It does not consist of financial compensation to members of the public.

Where primary remediation does not result in the restoration of the environment to its baseline condition, then complementary remediation will be undertaken. In addition, compensatory remediation will be undertaken to compensate for the interim losses.

Remedying of environmental damage, in terms of damage to water or protected species or natural habitats, also implies that any significant risk of human health being adversely affected be removed.

#### 1.1. Remediation objectives

##### Purpose of primary remediation

1.1.1. The purpose of primary remediation is to restore the damaged natural resources and/or services to, or towards, baseline condition.

##### Purpose of complementary remediation

1.1.2. Where the damaged natural resources and/or services do not return to their baseline condition, then complementary remediation will be undertaken. The purpose of complementary remediation is to provide a similar level of natural resources and/or services, including, as appropriate, at an alternative site, as would have been provided if the damaged site had been returned to its baseline condition. Where possible and appropriate the alternative site should be geographically linked to the damaged site, taking into account the interests of the affected population.

##### Purpose of compensatory remediation

1.1.3. Compensatory remediation shall be undertaken to compensate for the interim loss of natural resources and services pending recovery. This compensation consists of additional improvements to

protected natural habitats and species or water at either the damaged site or at an alternative site. It does not consist of financial compensation to members of the public.

### 1.2. *Identification of remedial measures*

#### Identification of primary remedial measures

1.2.1. Options comprised of actions to directly restore the natural resources and services towards baseline condition on an accelerated time frame, or through natural recovery, shall be considered.

#### Identification of complementary and compensatory remedial measures

1.2.2. When determining the scale of complementary and compensatory remedial measures, the use of resource-to-resource or service-to-service equivalence approaches shall be considered first. Under these approaches, actions that provide natural resources and/or services of the same type, quality and quantity as those damaged shall be considered first. Where this is not possible, then alternative natural resources and/or services shall be provided. For example, a reduction in quality could be offset by an increase in the quantity of remedial measures.

1.2.3. If it is not possible to use the first choice resource-to-resource or service-to-service equivalence approaches, then alternative valuation techniques shall be used. The competent authority may prescribe the method, for example monetary valuation, to determine the extent of the necessary complementary and compensatory remedial measures. If valuation of the lost resources and/or services is practicable, but valuation of the replacement natural resources and/or services cannot be performed within a reasonable time-frame or at a reasonable cost, then the competent authority may choose remedial measures whose cost is equivalent to the estimated monetary value of the lost natural resources and/or services.

The complementary and compensatory remedial measures should be so designed that they provide for additional natural resources and/or services to reflect time preferences and the time profile of the remedial measures. For example, the longer the period of time before the baseline condition is reached, the greater the amount of compensatory remedial measures that will be undertaken (other things being equal).

### 1.3. *Choice of the remedial options*

1.3.1. The reasonable remedial options should be evaluated, using best available technologies, based on the following criteria:

- The effect of each option on public health and safety,
- The cost of implementing the option,
- The likelihood of success of each option,
- The extent to which each option will prevent future damage, and avoid collateral damage as a result of implementing the option,
- The extent to which each option benefits to each component of the natural resource and/or service,
- The extent to which each option takes account of relevant social, economic and cultural concerns and other relevant factors specific to the locality,
- The length of time it will take for the restoration of the environmental damage to be effective,
- The extent to which each option achieves the restoration of site of the environmental damage,
- The geographical linkage to the damaged site.

1.3.2. When evaluating the different identified remedial options, primary remedial measures that do not fully restore the damaged water or protected species or natural habitat to baseline or that restore it more slowly can be chosen. This decision can be taken only if the natural resources and/or services foregone at the primary site as a result of the decision are compensated for by increasing complementary or compensatory actions to provide a similar level of natural resources and/or services as were foregone. This will be the case, for example, when the equivalent natural resources and/or services could be provided elsewhere at a lower cost. These additional remedial measures shall be determined in accordance with the rules set out in section 1.2.2.

1.3.3. Notwithstanding the rules set out in section 1.3.2. and in accordance with Article 7(3), the competent authority is entitled to decide that no further remedial measures should be taken if:

- (a) the remedial measures already taken secure that there is no longer any significant risk of adversely affecting human health, water or protected species and natural habitats, and
- (b) the cost of the remedial measures that should be taken to reach baseline condition or similar level would be disproportionate to the environmental benefits to be obtained.

## **2. Remediation of land damage**

The necessary measures shall be taken to ensure, as a minimum, that the relevant contaminants are removed, controlled, contained or diminished so that the contaminated land, taking account of its current use or approved future use at the time of the damage, no longer poses any significant risk of adversely affecting human health. The presence of such risks shall be assessed through risk-assessment procedures taking into account the characteristic and function of the soil, the type and concentration of the harmful substances, preparations, organisms or micro-organisms, their risk and the possibility of their dispersion. Use shall be ascertained on the basis of the land use regulations, or other relevant regulations, in force, if any, when the damage occurred.

If the use of the land is changed, all necessary measures shall be taken to prevent any adverse effects on human health.

If land use regulations, or other relevant regulations, are lacking, the nature of the relevant area where the damage occurred, taking into account its expected development, shall determine the use of the specific area.

A natural recovery option, that is to say an option in which no direct human intervention in the recovery process would be taken, shall be considered.

## ANNEX III

### ACTIVITIES REFERRED TO IN ARTICLE 3(1)

1. The operation of installations subject to permit in pursuance of Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control. That means all activities listed in Annex I of Directive 96/61/EC with the exception of installations or parts of installations used for research, development and testing of new products and processes.

2. Waste management operations, including the collection, transport, recovery and disposal of waste and hazardous waste, including the supervision of such operations and after-care of disposal sites, subject to permit or registration in pursuance of Council Directive 75/442/EEC of 15 July 1975 on waste and Council Directive 91/689/EEC of 12 December 1991 on hazardous waste.

Those operations include, *inter alia*, the operation of landfill sites under Council Directive 1999/31/EC of 26 April 1999 on the landfill of waste and the operation of incineration plants under Directive 2000/76/EC of the European Parliament and of the Council of 4 December 2000 on the incineration of waste.

For the purpose of this Directive, **Contracting Parties** may decide that those operations shall not include the spreading of sewage sludge from urban waste water treatment plants, treated to an approved standard, for agricultural purposes.

3. All discharges into the inland surface water, which require prior authorisation in pursuance of Council Directive 76/464/EEC of 4 May 1976 on pollution caused by certain dangerous substances, discharged into the aquatic environment of the Community.

4. All discharges of substances into groundwater which require prior authorisation in pursuance of Council Directive 80/68/EEC of 17 December 1979 on the protection of groundwater against pollution caused by certain dangerous substances.

5. The discharge or injection of pollutants into surface water or groundwater which require a permit, authorisation or registration in pursuance of Directive 2000/60/EC.

6. Water abstraction and impoundment of water subject to prior authorisation in pursuance of Directive 2000/60/EC.

7. Manufacture, use, storage, processing, filling, release into the environment and onsite transport of

(a) dangerous substances as defined in Article 2(2) of Council Directive 67/548/EEC of 27 June 1967 on the approximation of the laws, regulations and administrative provisions of the **Contracting Parties** relating to the classification, packaging and labelling of dangerous substances;

(b) dangerous preparations as defined in Article 2(2) of Directive 1999/45/EC of the European Parliament and of the Council of 31 May 1999 concerning the approximation of the laws, regulations and administrative provisions of the **Contracting Parties** relating to the classification, packaging and labelling of dangerous preparations;

(c) plant protection products as defined in Article 2(1) of Council Directive 91/414/EEC of 15 July 1991 concerning the placing of plant protection products on the market;

(d) biocidal products as defined in Article 2(1)(a) of Directive 98/8/EC of the European Parliament and of the Council of 16 February 1998 concerning the placing of biocidal products on the market.

8. Transport by road, rail, inland waterways, sea or air of dangerous goods or polluting goods as defined either in Annex A to Council Directive 94/55/EC of 21 November 1994 on the approximation of the laws of the **Contracting Parties** with regard to the transport of dangerous goods by road or in the Annex to Council Directive 96/49/EC of 23 July 1996 on the approximation of the laws of the **Contracting Parties** with regard to the transport of dangerous goods by rail or as defined in Council Directive 93/75/EEC of 13 September 1993 concerning minimum requirements for vessels bound for or leaving Community ports and carrying dangerous or polluting goods.

9. The operation of installations subject to authorisation in pursuance of Council Directive 84/360/EEC of 28 June 1984 on the combating of air pollution from industrial plants in relation to the release into air of any of the polluting substances covered by the aforementioned Directive.

10. Any contained use, including transport, involving genetically modified micro-organisms as defined by Council Directive 90/219/EEC of 23 April 1990 on the contained use of genetically modified micro-organisms.

11. Any deliberate release into the environment, transport and placing on the market of genetically modified organisms as defined by Directive 2001/18/EC of the European Parliament and of the Council.

12. Transboundary shipment of waste within, into or out of the European Union, requiring an authorisation or prohibited in the meaning of Council Regulation (EEC) No 259/93 of 1 February 1993 on the supervision and control of shipments of waste within, into and out of the European Community.

## ANNEX IV

### INTERNATIONAL CONVENTIONS REFERRED TO IN ARTICLE 4(2)

- (a) the International Convention of 27 November 1992 on Civil Liability for Oil Pollution Damage;
- (b) the International Convention of 27 November 1992 on the Establishment of an International Fund for Compensation for Oil Pollution Damage;
- (c) the International Convention of 23 March 2001 on Civil Liability for Bunker Oil Pollution Damage;
- (d) the International Convention of 3 May 1996 on Liability and Compensation for Damage in Connection with the Carriage of Hazardous and Noxious Substances by Sea;
- (e) the Convention of 10 October 1989 on Civil Liability for Damage Caused during Carriage of Dangerous Goods by Road, Rail and Inland Navigation Vessels.

## **ANNEX V**

### **INTERNATIONAL INSTRUMENTS REFERRED TO IN ARTICLE 4(4)**

- (a) the Paris Convention of 29 July 1960 on Third Party Liability in the Field of Nuclear Energy and the Brussels Supplementary Convention of 31 January 1963;
- (b) the Vienna Convention of 21 May 1963 on Civil Liability for Nuclear Damage;
- (c) the Convention of 12 September 1997 on Supplementary Compensation for Nuclear Damage;
- (d) the Joint Protocol of 21 September 1988 relating to the Application of the Vienna Convention and the Paris Convention;
- (e) the Brussels Convention of 17 December 1971 relating to Civil Liability in the Field of Maritime Carriage of Nuclear Material.

## ANNEX VI

### INFORMATION AND DATA REFERRED TO IN ARTICLE 18(1)

The reports referred to in Article 18(1) shall include a list of instances of environmental damage and instances of liability under this Directive, with the following information and data for each instance:

1. Type of environmental damage, date of occurrence and/or discovery of the damage and date on which proceedings were initiated under this Directive.
2. Activity classification code of the liable legal person(s).
3. Whether there has been resort to judicial review proceedings either by liable parties or qualified entities. (The type of claimants and the outcome of proceedings shall be specified.)
4. Outcome of the remediation process.
5. Date of closure of proceedings.

**Contracting Parties** may include in their reports any other information and data they deem useful to allow a proper assessment of the functioning of this Directive, for example:

1. Costs incurred with remediation and prevention measures, as defined in this Directive:
  - paid for directly by liable parties, when this information is available;
  - recovered *ex post facto* from liable parties;
  - unrecovered from liable parties. (Reasons for non-recovery should be specified.)
2. Results of the actions to promote and the implementation of the financial security instruments used in accordance with this Directive.
3. An assessment of the additional administrative costs incurred annually by the public administration in setting up and operating the administrative structures needed to implement and enforce this Directive.

## **DIRECTIVE 2001/42/EC of 27 June 2001 on the assessment of the effects of certain plans and programmes on the environment**

Incorporated and adapted by Ministerial Council Decision 2016/13/MC-EnC of 14 October 2016 on amending the Treaty establishing the Energy Community and adapting and implementing Directive 2001/42/EC of the European Parliament and of the Council.

*The adaptations made by Ministerial Council Decision 2016/13/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Article 174 of the Treaty provides that Community policy on the environment is to contribute to, *inter alia*, the preservation, protection and improvement of the quality of the environment, the protection of human health and the prudent and rational utilisation of natural resources and that it is to be based on the precautionary principle. Article 6 of the Treaty provides that environmental protection requirements are to be integrated into the definition of Community policies and activities, in particular with a view to promoting sustainable development.

(2) The Fifth Environment Action Programme: Towards sustainability - A European Community programme of policy and action in relation to the environment and sustainable development, supplemented by Council Decision No 2179/98/EC on its review, affirms the importance of assessing the likely environmental effects of plans and programmes.

(3) The Convention on Biological Diversity requires Parties to integrate as far as possible and as appropriate the conservation and sustainable use of biological diversity into relevant sectoral or cross-sectoral plans and programmes.

(4) Environmental assessment is an important tool for integrating environmental considerations into the preparation and adoption of certain plans and programmes which are likely to have significant effects on the environment in the Member States, because it ensures that such effects of implementing plans and programmes are taken into account during their preparation and before their adoption.

(5) The adoption of environmental assessment procedures at the planning and programming level should benefit undertakings by providing a more consistent framework in which to operate by the inclusion of the relevant environmental information into decision making. The inclusion of a wider set of factors in decision making should contribute to more sustainable and effective solutions.

(6) The different environmental assessment systems operating within Member States should contain a set of common procedural requirements necessary to contribute to a high level of protection of the environment.

(7) The United Nations/Economic Commission for Europe Convention on Environmental Impact Assessment in a Transboundary Context of 25 February 1991, which applies to both Member States and other States, encourages the parties to the Convention to apply its principles to plans and programmes as well; at the second meeting of the Parties to the Convention in Sofia on 26 and 27 February 2001, it was decided to prepare a legally binding protocol on strategic environmental assessment which would supplement the existing provisions on environmental impact assessment in a transboundary context, with a view to its possible adoption on the occasion of the 5th Ministerial

Conference "Environment for Europe" at an extraordinary meeting of the Parties to the Convention, scheduled for May 2003 in Kiev, Ukraine. The systems operating within the Community for environmental assessment of plans and programmes should ensure that there are adequate transboundary consultations where the implementation of a plan or programme being prepared in one Member State is likely to have significant effects on the environment of another Member State. The information on plans and programmes having significant effects on the environment of other States should be forwarded on a reciprocal and equivalent basis within an appropriate legal framework between Member States and these other States.

(8) Action is therefore required at Community level to lay down a minimum environmental assessment framework, which would set out the broad principles of the environmental assessment system and leave the details to the Member States, having regard to the principle of subsidiarity. Action by the Community should not go beyond what is necessary to achieve the objectives set out in the Treaty.

(9) This Directive is of a procedural nature, and its requirements should either be integrated into existing procedures in Member States or incorporated in specifically established procedures. With a view to avoiding duplication of the assessment, Member States should take account, where appropriate, of the fact that assessments will be carried out at different levels of a hierarchy of plans and programmes.

(10) All plans and programmes which are prepared for a number of sectors and which set a framework for future development consent of projects listed in Annexes I and II to Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment, and all plans and programmes which have been determined to require assessment pursuant to Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild flora and fauna, are likely to have significant effects on the environment, and should as a rule be made subject to systematic environmental assessment. When they determine the use of small areas at local level or are minor modifications to the above plans or programmes, they should be assessed only where Member States determine that they are likely to have significant effects on the environment.

(11) Other plans and programmes which set the framework for future development consent of projects may not have significant effects on the environment in all cases and should be assessed only where Member States determine that they are likely to have such effects.

(12) When Member States make such determinations, they should take into account the relevant criteria set out in this Directive.

(13) Some plans or programmes are not subject to this Directive because of their particular characteristics.

(14) Where an assessment is required by this Directive, an environmental report should be prepared containing relevant information as set out in this Directive, identifying, describing and evaluating the likely significant environmental effects of implementing the plan or programme, and reasonable alternatives taking into account the objectives and the geographical scope of the plan or programme; Member States should communicate to the Commission any measures they take concerning the quality of environmental reports.

(15) In order to contribute to more transparent decision making and with the aim of ensuring that the information supplied for the assessment is comprehensive and reliable, it is necessary to provide

that authorities with relevant environmental responsibilities and the public are to be consulted during the assessment of plans and programmes, and that appropriate time frames are set, allowing sufficient time for consultations, including the expression of opinion.

(16) Where the implementation of a plan or programme prepared in one Member State is likely to have a significant effect on the environment of other Member States, provision should be made for the Member States concerned to enter into consultations and for the relevant authorities and the public to be informed and enabled to express their opinion.

(17) The environmental report and the opinions expressed by the relevant authorities and the public, as well as the results of any transboundary consultation, should be taken into account during the preparation of the plan or programme and before its adoption or submission to the legislative procedure.

(18) Member States should ensure that, when a plan or programme is adopted, the relevant authorities and the public are informed and relevant information is made available to them.

(19) Where the obligation to carry out assessments of the effects on the environment arises simultaneously from this Directive and other Community legislation, such as Council Directive 79/409/EEC of 2 April 1979 on the conservation of wild birds, Directive 92/43/EEC, or Directive 2000/60/EC of the European Parliament and the Council of 23 October 2000 establishing a framework for Community action in the field of water policy, in order to avoid duplication of the assessment, Member States may provide for coordinated or joint procedures fulfilling the requirements of the relevant Community legislation.

(20) A first report on the application and effectiveness of this Directive should be carried out by the Commission five years after its entry into force, and at seven-year intervals thereafter. With a view to further integrating environmental protection requirements, and taking into account the experience acquired, the first report should, if appropriate, be accompanied by proposals for amendment of this Directive, in particular as regards the possibility of extending its scope to other areas/sectors and other types of plans and programmes.

### **Article 1**

#### **Objectives**

The objective of this Directive is to provide for a high level of protection of the environment and to contribute to the integration of environmental considerations into the preparation and adoption of plans and programmes with a view to promoting sustainable development, by ensuring that, in accordance with this Directive, an environmental assessment is carried out of certain plans and programmes which are likely to have significant effects on the environment.

### **Article 2**

#### **Definitions**

For the purposes of this Directive:

(a) "plans and programmes" shall mean plans and programmes, including those co-financed by the

**European Union, or international financial institutions**, as well as any modifications to them:

- which are subject to preparation and/or adoption by an authority at national, regional or local level or which are prepared by an authority for adoption, through a legislative procedure by Parliament or Government, and

- which are required by legislative, regulatory or administrative provisions;

(b) "environmental assessment" shall mean the preparation of an environmental report, the carrying out of consultations, the taking into account of the environmental report and the results of the consultations in decision-making and the provision of information on the decision in accordance with Articles 4 to 9;

(c) "environmental report" shall mean the part of the plan or programme documentation containing the information required in Article 5 and Annex I;

(d) "The public" shall mean one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups.

### **Article 3**

#### **Scope**

1. An environmental assessment, in accordance with Articles 4 to 9, shall be carried out for plans and programmes referred to in paragraphs 2 to 4 which are likely to have significant environmental effects.

2. Subject to paragraph 3, an environmental assessment shall be carried out for all plans and programmes,

(a) which are prepared for **network energy, or, provided that they contain network-energy related issues, in the fields of** agriculture, forestry, fisheries, industry, transport, waste management, water management, telecommunications, tourism, town and country planning or land use and which set the framework for future development consent of projects listed in Annexes I and II to Directive **2011/92/EU**, or

(b) which, in view of the likely effect on sites, have been determined to require an assessment pursuant to Article 6 or 7 of Directive 92/43/EEC.

3. Plans and programmes referred to in paragraph 2 which determine the use of small areas at local level and minor modifications to plans and programmes referred to in paragraph 2 shall require an environmental assessment only where the **Contracting Parties** determine that they are likely to have significant environmental effects.

4. **Contracting Parties** shall determine whether plans and programmes, other than those referred to in paragraph 2, which set the framework for future development consent of projects, are likely to have significant environmental effects.

5. **Contracting Parties** shall determine whether plans or programmes referred to in paragraphs 3 and 4 are likely to have significant environmental effects either through case-by-case examination or by specifying types of plans and programmes or by combining both approaches. For this purpose **Contracting Parties** shall in all cases take into account relevant criteria set out in Annex II, in order to ensure that plans and programmes with likely significant effects on the environment are covered

by this Directive.

6. In the case-by-case examination and in specifying types of plans and programmes in accordance with paragraph 5, the authorities referred to in Article 6(3) shall be consulted.

7. **Contracting Parties** shall ensure that their conclusions pursuant to paragraph 5, including the reasons for not requiring an environmental assessment pursuant to Articles 4 to 9, are made available to the public.

8. The following plans and programmes are not subject to this Directive:

- plans and programmes the sole purpose of which is to serve national defence or civil emergency,
- financial or budget plans and programmes.

9. <...><sup>1</sup>

#### **Article 4**

##### **General obligations**

1. The environmental assessment referred to in Article 3 shall be carried out during the preparation of a plan or programme and before its adoption or submission to the legislative procedure.

2. The requirements of this Directive shall either be integrated into existing procedures in **Contracting Parties** for the adoption of plans and programmes or incorporated in procedures established to comply with this Directive.

3. Where plans and programmes form part of a hierarchy, **Contracting Parties** shall, with a view to avoiding duplication of the assessment, take into account the fact that the assessment will be carried out, in accordance with this Directive, at different levels of the hierarchy. For the purpose of, *inter alia*, avoiding duplication of assessment, **Contracting Parties** shall apply Article 5(2) and (3).

#### **Article 5**

##### **Environmental report**

1. Where an environmental assessment is required under Article 3(1), an environmental report shall be prepared in which the likely significant effects on the environment of implementing the plan or programme, and reasonable alternatives taking into account the objectives and the geographical scope of the plan or programme, are identified, described and evaluated. The information to be given for this purpose is referred to in Annex I.

2. The environmental report prepared pursuant to paragraph 1 shall include the information that may reasonably be required taking into account current knowledge and methods of assessment, the contents and level of detail in the plan or programme, its stage in the decision-making process and the extent to which certain matters are more appropriately assessed at different levels in that process in order to avoid duplication of the assessment.

3. Relevant information available on environmental effects of the plans and programmes and obtained at other levels of decision-making or through other Community legislation may be used for

<sup>1</sup> Not applicable in accordance with Article 2(2) of Decision 2016/13/MC-EnC.

providing the information referred to in Annex I.

4. The authorities referred to in Article 6(3) shall be consulted when deciding on the scope and level of detail of the information which must be included in the environmental report.

### **Article 6**

#### **Consultations**

1. The draft plan or programme and the environmental report prepared in accordance with Article 5 shall be made available to the authorities referred to in paragraph 3 of this Article and the public.

2. The authorities referred to in paragraph 3 and the public referred to in paragraph 4 shall be given an early and effective opportunity within appropriate time frames to express their opinion on the draft plan or programme and the accompanying environmental report before the adoption of the plan or programme or its submission to the legislative procedure.

3. **Contracting Parties** shall designate the authorities to be consulted which, by reason of their specific environmental responsibilities, are likely to be concerned by the environmental effects of implementing plans and programmes.

4. **Contracting Parties** shall identify the public for the purposes of paragraph 2, including the public affected or likely to be affected by, or having an interest in, the decision-making subject to this Directive, including relevant non-governmental organisations, such as those promoting environmental protection and other organisations concerned.

5. The detailed arrangements for the information and consultation of the authorities and the public shall be determined by the **Contracting Parties**.

### **Article 7**

#### **Transboundary consultations**

1. Where a **Contracting Party** considers that the implementation of a plan or programme being prepared in relation to its territory is likely to have significant effects on the environment in another **Contracting Party**, or where a **Contracting Party** likely to be significantly affected so requests, the **Contracting Party** in whose territory the plan or programme is being prepared shall, before its adoption or submission to the legislative procedure, forward a copy of the draft plan or programme and the relevant environmental report to the other **Contracting Party as well as to the Secretariat**.

2. Where a **Contracting Party** is sent a copy of a draft plan or programme and an environmental report under paragraph 1, it shall indicate to the other **Contracting Party** whether it wishes to enter into consultations before the adoption of the plan or programme or its submission to the legislative procedure and, if it so indicates, the **parties** concerned shall enter into consultations concerning the likely transboundary environmental effects of implementing the plan or programme and the measures envisaged to reduce or eliminate such effects.

Where such consultations take place, the **parties** concerned shall agree on detailed arrangements to ensure that the authorities referred to in Article 6(3) and the public referred to in Article 6(4) in the **Contracting Party** likely to be significantly affected are informed and given an opportunity to

forward their opinion within a reasonable time-frame.

3. Where **Contracting Parties** are required under this Article to enter into consultations, they shall agree, at the beginning of such consultations, on a reasonable timeframe for the duration of the consultations.

### **Article 8**

#### **Decision making**

The environmental report prepared pursuant to Article 5, the opinions expressed pursuant to Article 6 and the results of any transboundary consultations entered into pursuant to Article 7 shall be taken into account during the preparation of the plan or programme and before its adoption or submission to the legislative procedure.

### **Article 9**

#### **Information on the decision**

1. **Contracting Parties** shall ensure that, when a plan or programme is adopted, the authorities referred to in Article 6(3), the public and any **party** consulted under Article 7 are informed and the following items are made available to those so informed:

(a) the plan or programme as adopted;

(b) a statement summarising how environmental considerations have been integrated into the plan or programme and how the environmental report prepared pursuant to Article 5, the opinions expressed pursuant to Article 6 and the results of consultations entered into pursuant to Article 7 have been taken into account in accordance with Article 8 and the reasons for choosing the plan or programme as adopted, in the light of the other reasonable alternatives dealt with; and,

(c) the measures decided concerning monitoring in accordance with Article 10.

2. The detailed arrangements concerning the information referred to in paragraph 1 shall be determined by the **Contracting Parties**.

### **Article 10**

#### **Monitoring**

1. **Contracting Parties** shall monitor the significant environmental effects of the implementation of plans and programmes in order, *inter alia*, to identify at an early stage unforeseen adverse effects, and to be able to undertake appropriate remedial action.

2. In order to comply with paragraph 1, existing monitoring arrangements may be used if appropriate, with a view to avoiding duplication of monitoring.

### Article 11

#### Relationship with other Community legislation

1. An environmental assessment carried out under this Directive shall be without prejudice to any requirements under Directive **2011/92/EU** and to any other Community law requirements.
2. For plans and programmes for which the obligation to carry out assessments of the effects on the environment arises simultaneously from this Directive and other **Energy Community** legislation, **Contracting Parties** may provide for coordinated or joint procedures fulfilling the requirements of the relevant **Energy Community** legislation in order, *inter alia*, to avoid duplication of assessment.
3. For plans and programmes co-financed by **international financial institutions**, the environmental assessment in accordance with this Directive shall be carried out in conformity with the specific provisions in relevant **Energy Community** legislation.

### Article 12

#### Information, reporting and review

1. **Contracting Parties** and the **Secretariat** shall exchange information on the experience gained in applying this Directive.
2. **Contracting Parties** shall ensure that environmental reports are of a sufficient quality to meet the requirements of this Directive and shall communicate to the **Secretariat** any measures they take concerning the quality of these reports.
3. <...>
4. <...><sup>2</sup>

### Article 13

#### Implementation of the Directive

1. **Contracting Parties** shall inform the **Energy Community Secretariat** of the laws, regulations and administrative provisions brought into force to comply with the relevant provisions of Directive 2001/42/EC in accordance with Article 12 of the Treaty establishing the **Energy Community** by 1 January 2018.

When **Contracting Parties** adopt those provisions, they shall contain a reference to this Decision and Directive 2001/42/EC or shall be accompanied by such reference on the occasion of their official publication. The methods of making such reference shall be laid down by the **Contracting Parties**.

2. **Contracting Parties** shall communicate to the **Energy Community Secretariat** the text of the main provisions of national law which they adopt in the field covered by this Decision and Directive 2001/42/EC.

**Contracting Parties** shall implement the provisions adopted according to this Decision by

<sup>2</sup> Not applicable in accordance with Article 2(2) of Decision 2016/13/MC-EnC.

**31 March 2018.**<sup>3</sup>

3. The obligation referred to in Article 4(1) shall apply to the plans and programmes of which the first formal preparatory act is subsequent to the date referred to in paragraph 1. Plans and programmes of which the first formal preparatory act is before that date and which are adopted or submitted to the legislative procedure more than 24 months thereafter, shall be made subject to the obligation referred to in Article 4(1) unless **Contracting Parties** decide on a case by case basis that this is not feasible and inform the public of their decision.

4. Before 21 July 2004, **Contracting Parties** shall communicate to the **Secretariat**, in addition to the measures referred to in paragraph 1, separate information on the types of plans and programmes which, in accordance with Article 3, would be subject to an environmental assessment pursuant to this Directive. The **Secretariat** shall make this information available to the **Contracting Parties**. The information will be updated on a regular basis.

**Article 14****Entry into force**

**This Decision shall enter into force on the date of its adoption.**<sup>4</sup>

**Article 15****Addressees**

**This Decision is addressed to the Contracting Parties of the Treaty establishing the Energy Community.**

<sup>4</sup> The text displayed here corresponds to Article 4 of Decision 2016/13/MC-EnC.

## ANNEX I

### Information referred to in Article 5(1)

The information to be provided under Article 5(1), subject to Article 5(2) and (3), is the following:

- (a) an outline of the contents, main objectives of the plan or programme and relationship with other relevant plans and programmes;
- (b) the relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme;
- (c) the environmental characteristics of areas likely to be significantly affected;
- (d) any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC;
- (e) the environmental protection objectives, established at international, Community or **Contracting Party** level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation;
- (f) the likely significant effects<sup>5</sup> on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors;
- (g) the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme;
- (h) an outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information;
- (i) a description of the measures envisaged concerning monitoring in accordance with Article 10;
- (j) a non-technical summary of the information provided under the above headings.

---

<sup>5</sup> These effects should include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects.

## ANNEX II

### Criteria for determining the likely significance of effects referred to in Article 3(5)

1. The characteristics of plans and programmes, having regard, in particular, to
  - the degree to which the plan or programme sets a framework for projects and other activities, either with regard to the location, nature, size and operating conditions or by allocating resources,
  - the degree to which the plan or programme influences other plans and programmes including those in a hierarchy,
  - the relevance of the plan or programme for the integration of environmental considerations in particular with a view to promoting sustainable development,
  - environmental problems relevant to the plan or programme,
  - the relevance of the plan or programme for the implementation of Community legislation on the environment (e.g. plans and programmes linked to waste-management or water protection).
2. Characteristics of the effects and of the area likely to be affected, having regard, in particular, to
  - the probability, duration, frequency and reversibility of the effects,
  - the cumulative nature of the effects,
  - the transboundary nature of the effects,
  - the risks to human health or the environment (e.g. due to accidents),
  - the magnitude and spatial extent of the effects (geographical area and size of the population likely to be affected),
  - the value and vulnerability of the area likely to be affected due to:
    - special natural characteristics or cultural heritage,
    - exceeded environmental quality standards or limit values,
    - intensive land-use,
  - the effects on areas or landscapes which have a recognised national, Community or international protection status.

---

## **PART II**

ACQUIS COMMUNAUTAIRE

RENEWABLE ENERGY

## **DIRECTIVE 2009/28/EC of 23 April 2009 on the promotion of the use of energy from renewable sources and amending and subsequently repealing Directives 2001/77/EC and 2003/30/EC**

Incorporated and adapted by Ministerial Council Decision 2012/04/MC-EnC of 18 October 2012 on the implementation of Council Directive 2009/28/EC and amending Article 20 of the Energy Community Treaty.

*The adaptations made by Ministerial Council Decision 2012/04/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) The control of European energy consumption and the increased use of energy from renewable sources, together with energy savings and increased energy efficiency, constitute important parts of the package of measures needed to reduce greenhouse gas emissions and comply with the Kyoto Protocol to the United Nations Framework Convention on Climate Change, and with further Community and international greenhouse gas emission reduction commitments beyond 2012. Those factors also have an important part to play in promoting the security of energy supply, promoting technological development and innovation and providing opportunities for employment and regional development, especially in rural and isolated areas.

(2) In particular, increasing technological improvements, incentives for the use and expansion of public transport, the use of energy efficiency technologies and the use of energy from renewable sources in transport are some of the most effective tools by which the Community can reduce its dependence on imported oil in the transport sector, in which the security of energy supply problem is most acute, and influence the fuel market for transport.

(3) The opportunities for establishing economic growth through innovation and a sustainable competitive energy policy have been recognised. Production of energy from renewable sources often depends on local or regional small and medium-sized enterprises (SMEs). The opportunities for growth and employment that investment in regional and local production of energy from renewable sources bring about in the Member States and their regions are important. The Commission and the Member States should therefore support national and regional development measures in those areas, encourage the exchange of best practices in production of energy from renewable sources between local and regional development initiatives and promote the use of structural funding in this area.

(4) When favouring the development of the market for renewable energy sources, it is necessary to take into account the positive impact on regional and local development opportunities, export prospects, social cohesion and employment opportunities, in particular as concerns SMEs and independent energy producers.

(5) In order to reduce greenhouse gas emissions within the Community and reduce its dependence on energy imports, the development of energy from renewable sources should be closely linked to increased energy efficiency.

(6) It is appropriate to support the demonstration and commercialisation phase of decentralised renewable energy technologies. The move towards decentralised energy production has many benefits, including the utilisation of local energy sources, increased local security of energy supply, shorter

transport distances and reduced energy transmission losses. Such decentralisation also fosters community development and cohesion by providing income sources and creating jobs locally.

(7) Directive 2001/77/EC of the European Parliament and of the Council of 27 September 2001 on the promotion of electricity produced from renewable energy sources in the internal electricity market and Directive 2003/30/EC of the European Parliament and of the Council of 8 May 2003 on the promotion of the use of biofuels or other renewable fuels for transport established definitions for different types of energy from renewable sources. Directive 2003/54/EC of the European Parliament and of the Council of 26 June 2003 concerning common rules for the internal market in electricity established definitions for the electricity sector in general. In the interests of legal certainty and clarity it is appropriate to use the same or similar definitions in this Directive.

(8) The Commission communication of 10 January 2007 entitled "Renewable Energy Roadmap - Renewable energies in the 21st century: building a more sustainable future" demonstrated that a 20% target for the overall share of energy from renewable sources and a 10% target for energy from renewable sources in transport would be appropriate and achievable objectives, and that a framework that includes mandatory targets should provide the business community with the long-term stability it needs to make rational, sustainable investments in the renewable energy sector which are capable of reducing dependence on imported fossil fuels and boosting the use of new energy technologies. Those targets exist in the context of the 20% improvement in energy efficiency by 2020 set out in the Commission communication of 19 October 2006 entitled "Action Plan for Energy Efficiency: Realising the Potential", which was endorsed by the European Council of March 2007, and by the European Parliament in its resolution of 31 January 2008 on that Action Plan.

(9) The European Council of March 2007 reaffirmed the Community's commitment to the Community-wide development of energy from renewable sources beyond 2010. It endorsed a mandatory target of a 20% share of energy from renewable sources in overall Community energy consumption by 2020 and a mandatory 10% minimum target to be achieved by all Member States for the share of biofuels in transport petrol and diesel consumption by 2020, to be introduced in a cost-effective way. It stated that the binding character of the biofuel target is appropriate, subject to production being sustainable, second-generation biofuels becoming commercially available and Directive 98/70/EC of the European Parliament and of the Council of 13 October 1998 relating to the quality of petrol and diesel fuels being amended to allow for adequate levels of blending. The European Council of March 2008 repeated that it is essential to develop and fulfil effective sustainability criteria for biofuels and ensure the commercial availability of second-generation biofuels. The European Council of June 2008 referred again to the sustainability criteria and the development of second-generation biofuels, and underlined the need to assess the possible impacts of biofuel production on agricultural food products and to take action, if necessary, to address shortcomings. It also stated that further assessment should be made of the environmental and social consequences of the production and consumption of biofuels.

(10) In its resolution of 25 September 2007 on the Road Map for Renewable Energy in Europe, the European Parliament called on the Commission to present, by the end of 2007, a proposal for a legislative framework for energy from renewable sources, referring to the importance of setting targets for the shares of energy from renewable sources at Community and Member State level.

(11) It is necessary to set transparent and unambiguous rules for calculating the share of energy from renewable sources and for defining those sources. In this context, the energy present in oceans and other water bodies in the form of waves, marine currents, tides, ocean thermal energy gradients or

salinity gradients should be included.

(12) The use of agricultural material such as manure, slurry and other animal and organic waste for biogas production has, in view of the high greenhouse gas emission saving potential, significant environmental advantages in terms of heat and power production and its use as biofuel. Biogas installations can, as a result of their decentralised nature and the regional investment structure, contribute significantly to sustainable development in rural areas and offer farmers new income opportunities.

(13) In the light of the positions taken by the European Parliament, the Council and the Commission, it is appropriate to establish mandatory national targets consistent with a 20% share of energy from renewable sources and a 10% share of energy from renewable sources in transport in Community energy consumption by 2020.

(14) The main purpose of mandatory national targets is to provide certainty for investors and to encourage continuous development of technologies which generate energy from all types of renewable sources. Deferring a decision about whether a target is mandatory until a future event takes place is thus not appropriate.

(15) The starting point, the renewable energy potential and the energy mix of each Member State vary. It is therefore necessary to translate the Community 20% target into individual targets for each Member State, with due regard to a fair and adequate allocation taking account of Member States' different starting points and potentials, including the existing level of energy from renewable sources and the energy mix. It is appropriate to do this by sharing the required total increase in the use of energy from renewable sources between Member States on the basis of an equal increase in each Member State's share weighted by their GDP, modulated to reflect their starting points, and by accounting in terms of gross final consumption of energy, with account being taken of Member States' past efforts with regard to the use of energy from renewable sources.

(16) By contrast, it is appropriate for the 10% target for energy from renewable sources in transport to be set at the same level for each Member State in order to ensure consistency in transport fuel specifications and availability. Because transport fuels are traded easily, Member States with low endowments of the relevant resources will easily be able to obtain biofuels from elsewhere. While it would technically be possible for the Community to meet its target for the use of energy from renewable sources in transport solely from domestic production, it is both likely and desirable that the target will in fact be met through a combination of domestic production and imports. To this end, the Commission should monitor the supply of the Community market for biofuels, and should, as appropriate, propose relevant measures to achieve a balanced approach between domestic production and imports, taking into account, *inter alia*, the development of multilateral and bilateral trade negotiations, environmental, social and economic considerations, and the security of energy supply.

(17) The improvement of energy efficiency is a key objective of the Community, and the aim is to achieve a 20% improvement in energy efficiency by 2020. That aim, together with existing and future legislation including Directive 2002/91/EC of the European Parliament and of the Council of 16 December 2002 on the energy performance of buildings, Directive 2005/32/EC of the European Parliament and of the Council of 6 July 2005 establishing a framework for the setting of ecodesign requirements for energy-using products, and Directive 2006/32/EC of the European Parliament and of the Council of 5 April 2006 on energy end-use efficiency and energy services, has a critical role to play in ensuring that the climate and energy objectives are being achieved at least cost, and can also provide new opportunities for the European Union's economy. Energy efficiency and energy saving

policies are some of the most effective methods by which Member States can increase the percentage share of energy from renewable sources, and Member States will thus more easily achieve the overall national and transport targets for energy from renewable sources laid down by this Directive.

(18) It will be incumbent upon Member States to make significant improvements in energy efficiency in all sectors in order more easily to achieve their targets for energy from renewable sources, which are expressed as a percentage of gross final consumption of energy. The need for energy efficiency in the transport sector is imperative because a mandatory percentage target for energy from renewable sources is likely to become increasingly difficult to achieve sustainably if overall demand for energy for transport continues to rise. The mandatory 10% target for transport to be achieved by all Member States should therefore be defined as that share of final energy consumed in transport which is to be achieved from renewable sources as a whole, and not from biofuels alone.

(19) To ensure that the mandatory national overall targets are achieved, Member States should work towards an indicative trajectory tracing a path towards the achievement of their final mandatory targets. They should establish a national renewable energy action plan including information on sectoral targets, while having in mind that there are different uses of biomass and therefore it is essential to mobilise new biomass resources. In addition, Member States should set out measures to achieve those targets. Each Member State should assess, when evaluating its expected gross final consumption of energy in its national renewable energy action plan, the contribution which energy efficiency and energy saving measures can make to achieving its national targets. Member States should take into account the optimal combination of energy efficiency technologies with energy from renewable sources.

(20) To permit the benefits of technological progress and economies of scale to be reaped, the indicative trajectory should take into account the possibility of a more rapid growth in the use of energy from renewable sources in the future. Thus special attention can be given to sectors that suffer disproportionately from the absence of technological progress and economies of scale and therefore remain under-developed, but which, in future, could significantly contribute to reaching the targets for 2020.

(21) The indicative trajectory should take 2005 as its starting point because that is the latest year for which reliable data on national shares of energy from renewable sources are available.

(22) The achievement of the objectives of this Directive requires that the Community and Member States dedicate a significant amount of financial resources to research and development in relation to renewable energy technologies. In particular, the European Institute of Innovation and Technology should give high priority to the research and development of renewable energy technologies.

(23) Member States may encourage local and regional authorities to set targets in excess of national targets and to involve local and regional authorities in drawing up national renewable energy action plans and in raising awareness of the benefits of energy from renewable sources.

(24) In order to exploit the full potential of biomass, the Community and the Member States should promote greater mobilisation of existing timber reserves and the development of new forestry systems.

(25) Member States have different renewable energy potentials and operate different schemes of support for energy from renewable sources at the national level. The majority of Member States apply support schemes that grant benefits solely to energy from renewable sources that is produced on their territory. For the proper functioning of national support schemes it is vital that Member

States can control the effect and costs of their national support schemes according to their different potentials. One important means to achieve the aim of this Directive is to guarantee the proper functioning of national support schemes, as under Directive 2001/77/EC, in order to maintain investor confidence and allow Member States to design effective national measures for target compliance. This Directive aims at facilitating cross-border support of energy from renewable sources without affecting national support schemes. It introduces optional cooperation mechanisms between Member States which allow them to agree on the extent to which one Member State supports the energy production in another and on the extent to which the energy production from renewable sources should count towards the national overall target of one or the other. In order to ensure the effectiveness of both measures of target compliance, i.e. national support schemes and cooperation mechanisms, it is essential that Member States are able to determine if and to what extent their national support schemes apply to energy from renewable sources produced in other Member States and to agree on this by applying the cooperation mechanisms provided for in this Directive.

(26) It is desirable that energy prices reflect external costs of energy production and consumption, including, as appropriate, environmental, social and healthcare costs.

(27) Public support is necessary to reach the Community's objectives with regard to the expansion of electricity produced from renewable energy sources, in particular for as long as electricity prices in the internal market do not reflect the full environmental and social costs and benefits of energy sources used.

(28) The Community and the Member States should strive to reduce total consumption of energy in transport and increase energy efficiency in transport. The principal means of reducing consumption of energy in transport include transport planning, support for public transport, increasing the share of electric cars in production and producing cars which are more energy efficient and smaller both in size and in engine capacity.

(29) Member States should aim to diversify the mix of energy from renewable sources in all transport sectors. The Commission should present a report to the European Parliament and the Council by 1 June 2015 outlining the potential for increasing the use of energy from renewable sources in each transport sector.

(30) In calculating the contribution of hydropower and wind power for the purposes of this Directive, the effects of climatic variation should be smoothed through the use of a normalisation rule. Further, electricity produced in pumped storage units from water that has previously been pumped uphill should not be considered to be electricity produced from renewable energy sources.

(31) Heat pumps enabling the use of aerothermal, geothermal or hydrothermal heat at a useful temperature level need electricity or other auxiliary energy to function. The energy used to drive heat pumps should therefore be deducted from the total usable heat. Only heat pumps with an output that significantly exceeds the primary energy needed to drive it should be taken into account.

(32) Passive energy systems use building design to harness energy. This is considered to be saved energy. To avoid double counting, energy harnessed in this way should not be taken into account for the purposes of this Directive.

(33) Some Member States have a large share of aviation in their gross final consumption of energy. In view of the current technological and regulatory constraints that prevent the commercial use of biofuels in aviation, it is appropriate to provide a partial exemption for such Member States, by excluding from the calculation of their gross final consumption of energy in national air transport, the

amount by which they exceed one-and-a-half times the Community average gross final consumption of energy in aviation in 2005, as assessed by Eurostat, i.e. 6.18%. Cyprus and Malta, due to their insular and peripheral character, rely on aviation as a mode of transport, which is essential for their citizens and their economy. As a result, Cyprus and Malta have a gross final consumption of energy in national air transport which is disproportionately high, i.e. more than three times the Community average in 2005, and are thus disproportionately affected by the current technological and regulatory constraints. For those Member States it is therefore appropriate to provide that the exemption should cover the amount by which they exceed the Community average gross final consumption of energy in aviation in 2005 as assessed by Eurostat, i.e. 4.12%.

(34) To obtain an energy model that supports energy from renewable sources there is a need to encourage strategic cooperation between Member States, involving, as appropriate, regions and local authorities.

(35) Whilst having due regard to the provisions of this Directive, Member States should be encouraged to pursue all appropriate forms of cooperation in relation to the objectives set out in this Directive. Such cooperation can take place at all levels, bilaterally or multilaterally. Apart from the mechanisms with effect on target calculation and target compliance, which are exclusively provided for in this Directive, namely statistical transfers between Member States, joint projects and joint support schemes, cooperation can also take the form of, for example, exchanges of information and best practices, as provided for, in particular, in the transparency platform established by this Directive, and other voluntary coordination between all types of support schemes.

(36) To create opportunities for reducing the cost of achieving the targets laid down in this Directive, it is appropriate both to facilitate the consumption in Member States of energy produced from renewable sources in other Member States, and to enable Member States to count energy from renewable sources consumed in other Member States towards their own national targets. For this reason, flexibility measures are required, but they remain under Member States' control in order not to affect their ability to reach their national targets. Those flexibility measures take the form of statistical transfers, joint projects between Member States or joint support schemes.

(37) It should be possible for imported electricity, produced from renewable energy sources outside the Community, to count towards Member States' targets. However, to avoid a net increase in greenhouse gas emissions through the diversion of existing renewable sources and their complete or partial replacement by conventional energy sources, only electricity produced by renewable energy installations that become operational after the entry into force of this Directive or by the increased capacity of an installation that was refurbished after that date should be eligible to be counted. In order to guarantee an adequate effect of energy from renewable sources replacing conventional energy in the Community as well as in third countries it is appropriate to ensure that such imports can be tracked and accounted for in a reliable way. Agreements with third countries concerning the organisation of such trade in electricity from renewable energy sources will be considered. If, by virtue of a decision taken under the Energy Community Treaty to that effect, the contracting parties to that treaty become bound by the relevant provisions of this Directive, the measures of cooperation between Member States provided for in this Directive will be applicable to them.

(38) When Member States undertake joint projects with one or more third countries regarding the production of electricity from renewable energy sources, it is appropriate that those joint projects relate only to newly constructed installations or to installations with newly increased capacity. This will help ensure that the proportion of energy from renewable sources in the third country's total

energy consumption is not reduced due to the importation of energy from renewable sources into the Community. In addition, the Member States concerned should facilitate the domestic use by the third country concerned of part of the production of electricity by the installations covered by the joint project. Furthermore, the third country concerned should be encouraged by the Commission and Member States to develop a renewable energy policy, including ambitious targets.

(39) Noting that projects of high European interest in third countries, such as the Mediterranean Solar Plan, may need a long lead-time before being fully interconnected to the territory of the Community, it is appropriate to facilitate their development by allowing Member States to take into account in their national targets a limited amount of electricity produced by such projects during the construction of the interconnection.

(40) The procedure used by the administration responsible for supervising the authorisation, certification and licensing of renewable energy plants should be objective, transparent, non-discriminatory and proportionate when applying the rules to specific projects. In particular, it is appropriate to avoid any unnecessary burden that could arise by classifying renewable energy projects under installations which represent a high health risk.

(41) The lack of transparent rules and coordination between the different authorisation bodies has been shown to hinder the deployment of energy from renewable sources. Therefore the specific structure of the renewable energy sector should be taken into account when national, regional and local authorities review their administrative procedures for giving permission to construct and operate plants and associated transmission and distribution network infrastructures for the production of electricity, heating and cooling or transport fuels from renewable energy sources. Administrative approval procedures should be streamlined with transparent timetables for installations using energy from renewable sources. Planning rules and guidelines should be adapted to take into consideration cost-effective and environmentally beneficial renewable heating and cooling and electricity equipment.

(42) For the benefit of rapid deployment of energy from renewable sources and in view of their overall high sustainable and environmental beneficial quality, Member States should, when applying administrative rules, planning structures and legislation which are designed for licensing installations with respect to pollution reduction and control for industrial plants, for combating air pollution and for the prevention or minimisation of the discharge of dangerous substances in the environment, take into account the contribution of renewable energy sources towards meeting environmental and climate change objectives, in particular when compared to non-renewable energy installations.

(43) In order to stimulate the contribution by individual citizens to the objectives set out in this Directive, the relevant authorities should consider the possibility of replacing authorisations by simple notifications to the competent body when installing small decentralised devices for producing energy from renewable sources.

(44) The coherence between the objectives of this Directive and the Community's other environmental legislation should be ensured. In particular, during the assessment, planning or licensing procedures for renewable energy installations, Member States should take account of all Community environmental legislation and the contribution made by renewable energy sources towards meeting environmental and climate change objectives, in particular when compared to non-renewable energy installations.

(45) National technical specifications and other requirements falling within the scope of Directive

98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations and rules on Information Society services, relating for example to levels of quality, testing methods or conditions of use, should not create barriers for trade in renewable energy equipment and systems. Therefore, support schemes for energy from renewable sources should not prescribe national technical specifications which deviate from existing Community standards or require the supported equipment or systems to be certified or tested in a specified location or by a specified entity.

(46) It is appropriate for Member States to consider mechanisms for the promotion of district heating and cooling from energy from renewable sources.

(47) At national and regional level, rules and obligations for minimum requirements for the use of energy from renewable sources in new and renovated buildings have led to considerable increases in the use of energy from renewable sources. Those measures should be encouraged in a wider Community context, while promoting the use of more energy-efficient applications of energy from renewable sources through building regulations and codes.

(48) It may be appropriate for Member States, in order to facilitate and accelerate the setting of minimum levels for the use of energy from renewable sources in buildings, to provide that such levels are achieved by incorporating a factor for energy from renewable sources in meeting minimum energy performance requirements under Directive 2002/91/EC, relating to a cost-optimal reduction of carbon emissions per building.

(49) Information and training gaps, especially in the heating and cooling sector, should be removed in order to encourage the deployment of energy from renewable sources.

(50) In so far as the access or pursuit of the profession of installer is a regulated profession, the pre-conditions for the recognition of professional qualifications are laid down in Directive 2005/36/EC of the European Parliament and of the Council of 7 September 2005 on the recognition of professional qualifications. This Directive therefore applies without prejudice to Directive 2005/36/EC.

(51) While Directive 2005/36/EC lays down requirements for the mutual recognition of professional qualifications, including for architects, there is a further need to ensure that architects and planners properly consider an optimal combination of renewable energy sources and high-efficiency technologies in their plans and designs. Member States should therefore provide clear guidance in this regard. This should be done without prejudice to the provisions of Directive 2005/36/EC and in particular Articles 46 and 49 thereof.

(52) Guarantees of origin issued for the purpose of this Directive have the sole function of proving to a final customer that a given share or quantity of energy was produced from renewable sources. A guarantee of origin can be transferred, independently of the energy to which it relates, from one holder to another. However, with a view to ensuring that a unit of electricity from renewable energy sources is disclosed to a customer only once, double counting and double disclosure of guarantees of origin should be avoided. Energy from renewable sources in relation to which the accompanying guarantee of origin has been sold separately by the producer should not be disclosed or sold to the final customer as energy from renewable sources. It is important to distinguish between green certificates used for support schemes and guarantees of origin.

(53) It is appropriate to allow the emerging consumer market for electricity from renewable energy sources to contribute to the construction of new installations for energy from renewable sources. Member States should therefore be able to require electricity suppliers who disclose their energy mix

to final customers in accordance with Article 3(6) of Directive 2003/54/EC, to include a minimum percentage of guarantees of origin from recently constructed installations producing energy from renewable sources, provided that such a requirement is in conformity with Community law.

(54) It is important to provide information on how the supported electricity is allocated to final customers in accordance with Article 3(6) of Directive 2003/54/EC. In order to improve the quality of that information to consumers, in particular as regards the amount of energy from renewable sources produced by new installations, the Commission should assess the effectiveness of the measures taken by Member States.

(55) Directive 2004/8/EC of the European Parliament and of the Council of 11 February 2004 on the promotion of cogeneration based on a useful heat demand in the internal energy market provides for guarantees of origin for proving the origin of electricity produced from high-efficiency cogeneration plants. Such guarantees of origin cannot be used when disclosing the use of energy from renewable sources in accordance with Article 3(6) of Directive 2003/54/EC as this might result in double counting and double disclosure.

(56) Guarantees of origin do not by themselves confer a right to benefit from national support schemes.

(57) There is a need to support the integration of energy from renewable sources into the transmission and distribution grid and the use of energy storage systems for integrated intermittent production of energy from renewable sources.

(58) The development of renewable energy projects, including renewable energy projects of European interest under the Trans-European Network for Energy (TEN-E) programme should be accelerated. To that end, the Commission should also analyse how the financing of such projects can be improved. Particular attention should be paid to renewable energy projects that will contribute to a significant increase in security of energy supply in the Community and neighbouring countries.

(59) Interconnection among countries facilitates integration of electricity from renewable energy sources. Besides smoothing out variability, interconnection can reduce balancing costs, encourage true competition bringing about lower prices, and support the development of networks. Also, the sharing and optimal use of transmission capacity could help avoid excessive need for newly built capacity.

(60) Priority access and guaranteed access for electricity from renewable energy sources are important for integrating renewable energy sources into the internal market in electricity, in line with Article 11(2) and developing further Article 11(3) of Directive 2003/54/EC. Requirements relating to the maintenance of the reliability and safety of the grid and to the dispatching may differ according to the characteristics of the national grid and its secure operation. Priority access to the grid provides an assurance given to connected generators of electricity from renewable energy sources that they will be able to sell and transmit the electricity from renewable energy sources in accordance with connection rules at all times, whenever the source becomes available. In the event that the electricity from renewable energy sources is integrated into the spot market, guaranteed access ensures that all electricity sold and supported obtains access to the grid, allowing the use of a maximum amount of electricity from renewable energy sources from installations connected to the grid. However, this does not imply any obligation on the part of Member States to support or introduce purchase obligations for energy from renewable sources. In other systems, a fixed price is defined for electricity from renewable energy sources, usually in combination with a purchase obligation for the system

operator. In such a case, priority access has already been given.

(61) In certain circumstances it is not possible fully to ensure transmission and distribution of electricity produced from renewable energy sources without affecting the reliability or safety of the grid system. In such circumstances it may be appropriate for financial compensation to be given to those producers. Nevertheless, the objectives of this Directive require a sustained increase in the transmission and distribution of electricity produced from renewable energy sources without affecting the reliability or safety of the grid system. To this end, Member States should take appropriate measures in order to allow a higher penetration of electricity from renewable energy sources, *inter alia*, by taking into account the specificities of variable resources and resources which are not yet storable. To the extent required by the objectives set out in this Directive, the connection of new renewable energy installations should be allowed as soon as possible. In order to accelerate grid connection procedures, Member States may provide for priority connection or reserved connection capacities for new installations producing electricity from renewable energy sources.

(62) The costs of connecting new producers of electricity and gas from renewable energy sources to the electricity and gas grids should be objective, transparent and non-discriminatory and due account should be taken of the benefit that embedded producers of electricity from renewable energy sources and local producers of gas from renewable sources bring to the electricity and gas grids.

(63) Electricity producers who want to exploit the potential of energy from renewable sources in the peripheral regions of the Community, in particular in island regions and regions of low population density, should, whenever feasible, benefit from reasonable connection costs in order to ensure that they are not unfairly disadvantaged in comparison with producers situated in more central, more industrialised and more densely populated areas.

(64) Directive 2001/77/EC lays down the framework for the integration into the grid of electricity from renewable energy sources. However, there is a significant variation between Member States in the degree of integration actually achieved. For this reason it is necessary to strengthen the framework and to review its application periodically at national level.

(65) Biofuel production should be sustainable. Biofuels used for compliance with the targets laid down in this Directive, and those that benefit from national support schemes, should therefore be required to fulfil sustainability criteria.

(66) The Community should take appropriate steps in the context of this Directive, including the promotion of sustainability criteria for biofuels and the development of second and third-generation biofuels in the Community and worldwide, and to strengthen agricultural research and knowledge creation in those areas.

(67) The introduction of sustainability criteria for biofuels will not achieve its objective if those products that do not fulfil the criteria and would otherwise have been used as biofuels are used, instead, as bioliquids in the heating or electricity sectors. For this reason, the sustainability criteria should also apply to bioliquids in general.

(68) The European Council of March 2007 invited the Commission to propose a comprehensive Directive on the use of all renewable energy sources, which could contain criteria and provisions to ensure sustainable provision and use of bioenergy. Such sustainability criteria should form a coherent part of a wider scheme covering all bioliquids and not biofuels alone. Such sustainability criteria should therefore be included in this Directive. In order to ensure a coherent approach between energy and environment policies, and to avoid the additional costs to business and the environmental in-

coherence that would be associated with an inconsistent approach, it is essential to provide the same sustainability criteria for the use of biofuels for the purposes of this Directive on the one hand, and Directive 98/70/EC on the other. For the same reasons, double reporting should be avoided in this context. Furthermore, the Commission and the competent national authorities should coordinate their activities in the framework of a committee specifically responsible for sustainability aspects. The Commission should, in addition, in 2009, review the possible inclusion of other biomass applications and the modalities relating thereto.

(69) The increasing worldwide demand for biofuels and bioliquids, and the incentives for their use provided for in this Directive, should not have the effect of encouraging the destruction of biodiverse lands. Those finite resources, recognised in various international instruments to be of value to all mankind, should be preserved. Consumers in the Community would, in addition, find it morally unacceptable that their increased use of biofuels and bioliquids could have the effect of destroying biodiverse lands. For these reasons, it is necessary to provide sustainability criteria ensuring that biofuels and bioliquids can qualify for the incentives only when it can be guaranteed that they do not originate in biodiverse areas or, in the case of areas designated for nature protection purposes or for the protection of rare, threatened or endangered ecosystems or species, the relevant competent authority demonstrates that the production of the raw material does not interfere with those purposes. The sustainability criteria should consider forest as biodiverse where it is a primary forest in accordance with the definition used by the Food and Agriculture Organisation of the United Nations (FAO) in its Global Forest Resource Assessment, which countries use worldwide to report on the extent of primary forest or where it is protected by national nature protection law. Areas where collection of non-wood forest products occurs should be included, provided the human impact is small. Other types of forests as defined by the FAO, such as modified natural forests, semi-natural forests and plantations, should not be considered as primary forests. Having regard, furthermore, to the highly biodiverse nature of certain grasslands, both temperate and tropical, including highly biodiverse savannahs, steppes, scrublands and prairies, biofuels made from raw materials originating in such lands should not qualify for the incentives provided for by this Directive. The Commission should establish appropriate criteria and geographical ranges to define such highly biodiverse grasslands in accordance with the best available scientific evidence and relevant international standards.

(70) If land with high stocks of carbon in its soil or vegetation is converted for the cultivation of raw materials for biofuels or bioliquids, some of the stored carbon will generally be released into the atmosphere, leading to the formation of carbon dioxide. The resulting negative greenhouse gas impact can offset the positive greenhouse gas impact of the biofuels or bioliquids, in some cases by a wide margin. The full carbon effects of such conversion should therefore be accounted for in calculating the greenhouse gas emission saving of particular biofuels and bioliquids. This is necessary to ensure that the greenhouse gas emission saving calculation takes into account the totality of the carbon effects of the use of biofuels and bioliquids.

(71) In calculating the greenhouse gas impact of land conversion, economic operators should be able to use actual values for the carbon stocks associated with the reference land use and the land use after conversion. They should also be able to use standard values. The work of the Intergovernmental Panel on Climate Change is the appropriate basis for such standard values. That work is not currently expressed in a form that is immediately applicable by economic operators. The Commission should therefore produce guidance drawing on that work to serve as the basis for the calculation of carbon stock changes for the purposes of this Directive, including such changes to forested areas with a

canopy cover of between 10 to 30%, savannahs, scrublands and prairies.

(72) It is appropriate for the Commission to develop methodologies with a view to assessing the impact of the drainage of peatlands on greenhouse gas emissions.

(73) Land should not be converted for the production of biofuels if its carbon stock loss upon conversion could not, within a reasonable period, taking into account the urgency of tackling climate change, be compensated by the greenhouse gas emission saving resulting from the production of biofuels or bioliquids. This would prevent unnecessary, burdensome research by economic operators and the conversion of high-carbon-stock land that would prove to be ineligible for producing raw materials for biofuels and bioliquids. Inventories of worldwide carbon stocks indicate that wetlands and continuously forested areas with a canopy cover of more than 30% should be included in that category. Forested areas with a canopy cover of between 10 and 30% should also be included, unless there is evidence demonstrating that their carbon stock is sufficiently low to justify their conversion in accordance with the rules laid down in this Directive. The reference to wetlands should take into account the definition laid down in the Convention on Wetlands of International Importance, especially as Waterfowl Habitat, adopted on 2 February 1971 in Ramsar.

(74) The incentives provided for in this Directive will encourage increased production of biofuels and bioliquids worldwide. Where biofuels and bioliquids are made from raw material produced within the Community, they should also comply with Community environmental requirements for agriculture, including those concerning the protection of groundwater and surface water quality, and with social requirements. However, there is a concern that production of biofuels and bioliquids in certain third countries might not respect minimum environmental or social requirements. It is therefore appropriate to encourage the development of multilateral and bilateral agreements and voluntary international or national schemes that cover key environmental and social considerations, in order to promote the production of biofuels and bioliquids worldwide in a sustainable manner. In the absence of such agreements or schemes, Member States should require economic operators to report on those issues.

(75) The requirements for a sustainability scheme for energy uses of biomass, other than bioliquids and biofuels, should be analysed by the Commission in 2009, taking into account the need for biomass resources to be managed in a sustainable manner.

(76) Sustainability criteria will be effective only if they lead to changes in the behaviour of market actors. Those changes will occur only if biofuels and bioliquids meeting those criteria command a price premium compared to those that do not. According to the mass balance method of verifying compliance, there is a physical link between the production of biofuels and bioliquids meeting the sustainability criteria and the consumption of biofuels and bioliquids in the Community, providing an appropriate balance between supply and demand and ensuring a price premium that is greater than in systems where there is no such link. To ensure that biofuels and bioliquids meeting the sustainability criteria can be sold at a higher price, the mass balance method should therefore be used to verify compliance. This should maintain the integrity of the system while at the same time avoiding the imposition of an unreasonable burden on industry. Other verification methods should, however, be reviewed.

(77) Where appropriate, the Commission should take due account of the Millennium Ecosystem Assessment which contains useful data for the conservation of at least those areas that provide basic ecosystem services in critical situations such as watershed protection and erosion control.

(78) It is appropriate to monitor the impact of biomass cultivation, such as through land-use changes, including displacement, the introduction of invasive alien species and other effects on biodiversity, and effects on food production and local prosperity. The Commission should consider all relevant sources of information, including the FAO hunger map. Biofuels should be promoted in a manner that encourages greater agricultural productivity and the use of degraded land.

(79) It is in the interests of the Community to encourage the development of multilateral and bilateral agreements and voluntary international or national schemes that set standards for the production of sustainable biofuels and bioliquids, and that certify that the production of biofuels and bioliquids meets those standards. For that reason, provision should be made for such agreements or schemes to be recognised as providing reliable evidence and data, provided that they meet adequate standards of reliability, transparency and independent auditing.

(80) It is necessary to lay down clear rules for the calculation of greenhouse gas emissions from biofuels and bioliquids and their fossil fuel comparators.

(81) Co-products from the production and use of fuels should be taken into account in the calculation of greenhouse gas emissions. The substitution method is appropriate for the purposes of policy analysis, but not for the regulation of individual economic operators and individual consignments of transport fuels. In those cases the energy allocation method is the most appropriate method, as it is easy to apply, is predictable over time, minimises counter-productive incentives and produces results that are generally comparable with those produced by the substitution method. For the purposes of policy analysis the Commission should also, in its reporting, present results using the substitution method.

(82) In order to avoid a disproportionate administrative burden, a list of default values should be laid down for common biofuel production pathways and that list should be updated and expanded when further reliable data is available. Economic operators should always be entitled to claim the level of greenhouse gas emission saving for biofuels and bioliquids established by that list. Where the default value for greenhouse gas emission saving from a production pathway lies below the required minimum level of greenhouse gas emission saving, producers wishing to demonstrate their compliance with this minimum level should be required to show that actual emissions from their production process are lower than those that were assumed in the calculation of the default values.

(83) It is appropriate for the data used in the calculation of the default values to be obtained from independent, scientifically expert sources and to be updated as appropriate as those sources progress their work. The Commission should encourage those sources to address, when they update their work, emissions from cultivation, the effect of regional and climatological conditions, the effects of cultivation using sustainable agricultural and organic farming methods, and the scientific contribution of producers, within the Community and in third countries, and civil society.

(84) In order to avoid encouraging the cultivation of raw materials for biofuels and bioliquids in places where this would lead to high greenhouse gas emissions, the use of default values for cultivation should be limited to regions where such an effect can reliably be ruled out. However, to avoid a disproportionate administrative burden, it is appropriate for Member States to establish national or regional averages for emissions from cultivation, including from fertiliser use.

(85) Global demand for agricultural commodities is growing. Part of that increased demand will be met through an increase in the amount of land devoted to agriculture. The restoration of land that has been severely degraded or heavily contaminated and therefore cannot be used, in its present

state, for agricultural purposes is a way of increasing the amount of land available for cultivation. The sustainability scheme should promote the use of restored degraded land because the promotion of biofuels and bioliquids will contribute to the growth in demand for agricultural commodities. Even if biofuels themselves are made using raw materials from land already in arable use, the net increase in demand for crops caused by the promotion of biofuels could lead to a net increase in the cropped area. This could affect high carbon stock land, which would result in damaging carbon stock losses. To alleviate that risk, it is appropriate to introduce accompanying measures to encourage an increased rate of productivity on land already used for crops, the use of degraded land, and the adoption of sustainability requirements, comparable to those laid down in this Directive for Community biofuel consumption, in other biofuel-consuming countries. The Commission should develop a concrete methodology to minimise greenhouse gas emissions caused by indirect land-use changes. To this end, the Commission should analyse, on the basis of best available scientific evidence, in particular, the inclusion of a factor for indirect land-use changes in the calculation of greenhouse gas emissions and the need to incentivise sustainable biofuels which minimise the impacts of land-use change and improve biofuel sustainability with respect to indirect land-use change. In developing that methodology, the Commission should address, *inter alia*, the potential indirect land-use changes resulting from biofuels produced from non-food cellulosic material and from ligno-cellulosic material.

(86) In order to permit the achievement of an adequate market share of biofuels, it is necessary to ensure the placing on the market of higher blends of biodiesel in diesel than those envisaged by standard EN590/2004.

(87) In order to ensure that biofuels that diversify the range of feedstocks used become commercially viable, those biofuels should receive an extra weighting under national biofuel obligations.

(88) Regular reporting is needed to ensure a continuing focus on progress in the development of energy from renewable sources at national and Community level. It is appropriate to require the use of a harmonised template for national renewable energy action plans which Member States should submit. Such plans could include estimated costs and benefits of the measures envisaged, measures relating to the necessary extension or reinforcement of the existing grid infrastructure, estimated costs and benefits to develop energy from renewable sources in excess of the level required by the indicative trajectory, information on national support schemes and information on their use of energy from renewable sources in new or renovated buildings.

(89) When designing their support systems, Member States may encourage the use of biofuels which give additional benefits, including the benefits of diversification offered by biofuels made from waste, residues, non-food cellulosic material, ligno-cellulosic material and algae, as well as non-irrigated plants grown in arid areas to fight desertification, by taking due account of the different costs of producing energy from traditional biofuels on the one hand and of those biofuels that give additional benefits on the other. Member States may encourage investment in research and development in relation to those and other renewable energy technologies that need time to become competitive.

(90) The implementation of this Directive should reflect, where relevant, the provisions of the Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters, in particular as implemented through Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information.

(91) The measures necessary for the implementation of this Directive should be adopted in accord-

ance with Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission.

(92) In particular, the Commission should be empowered to adapt the methodological principles and values necessary for assessing whether sustainability criteria have been fulfilled in relation to biofuels and bioliquids, to adapt the energy content of transport fuels to technical and scientific progress, to establish criteria and geographic ranges for determining highly biodiverse grassland, and to establish detailed definitions for severely degraded or contaminated land. Since those measures are of general scope and are designed to amend non-essential elements of this Directive, *inter alia*, by supplementing it with new non-essential elements, they must be adopted in accordance with the regulatory procedure with scrutiny provided for in Article 5a of Decision 1999/468/EC.

(93) Those provisions of Directive 2001/77/EC and Directive 2003/30/EC that overlap with the provisions of this Directive should be deleted from the latest possible moment for transposition of this Directive. Those that deal with targets and reporting for 2010 should remain in force until the end of 2011. It is therefore necessary to amend Directive 2001/77/EC and Directive 2003/30/EC accordingly.

(94) Since the measures provided for in Articles 17 to 19 also have an effect on the functioning of the internal market by harmonising the sustainability criteria for biofuels and bioliquids for the target accounting purposes under this Directive, and thus facilitate, in accordance with Article 17(8), trade between Member States in biofuels and bioliquids which comply with those conditions, they are based on Article 95 of the Treaty.

(95) The sustainability scheme should not prevent Member States from taking into account, in their national support schemes, the higher production cost of biofuels and bioliquids that deliver benefits that exceed the minima laid down in the sustainability scheme.

(96) Since the general objectives of this Directive, namely to achieve a 20% share of energy from renewable sources in the Community's gross final consumption of energy and a 10% share of energy from renewable sources in each Member State's transport energy consumption by 2020, cannot be sufficiently achieved by the Member States and can therefore, by reason of the scale of the action, be better achieved at Community level, the Community may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(97) In accordance with point 34 of the Interinstitutional agreement on better law-making, Member States are encouraged to draw up, for themselves and in the interest of the Community, their own tables illustrating, as far as possible, the correlation between this Directive and the transposition measures and to make them public.

## **Article 1**

### **Subject matter and scope**

This Directive establishes a common framework for the promotion of energy from renewable sources. It sets mandatory national targets for the overall share of energy from renewable sources in gross final consumption of energy and for the share of energy from renewable sources in transport. It lays down rules relating to statistical transfers between **Contracting Parties**, joint projects between

**Contracting Parties** and with third countries, guarantees of origin, administrative procedures, information and training, and access to the electricity grid for energy from renewable sources. It establishes sustainability criteria for biofuels and bioliquids.

## **Article 2**

### **Definitions**

For the purposes of this Directive, the definitions in Directive 2003/54/EC apply.

The following definitions also apply:

- (a) "energy from renewable sources" means energy from renewable non-fossil sources, namely wind, solar, aerothermal, geothermal, hydrothermal and ocean energy, hydropower, biomass, land-fill gas, sewage treatment plant gas and biogases;
- (b) "aerothermal energy" means energy stored in the form of heat in the ambient air;
- (c) "geothermal energy" means energy stored in the form of heat beneath the surface of solid earth;
- (d) "hydrothermal energy" means energy stored in the form of heat in surface water;
- (e) "biomass" means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;
- (f) "gross final consumption of energy" means the energy commodities delivered for energy purposes to industry, transport, households, services including public services, agriculture, forestry and fisheries, including the consumption of electricity and heat by the energy branch for electricity and heat production and including losses of electricity and heat in distribution and transmission;
- (g) "district heating" or "district cooling" means the distribution of thermal energy in the form of steam, hot water or chilled liquids, from a central source of production through a network to multiple buildings or sites, for the use of space or process heating or cooling;
- (h) "bioliquids" means liquid fuel for energy purposes other than for transport, including electricity and heating and cooling, produced from biomass;
- (i) "biofuels" means liquid or gaseous fuel for transport produced from biomass;
- (j) "guarantee of origin" means an electronic document which has the sole function of providing proof to a final customer that a given share or quantity of energy was produced from renewable sources as required by Article 3(6) of Directive 2003/54/EC;
- (k) "support scheme" means any instrument, scheme or mechanism applied by a **Contracting Party** or a group of **Contracting Parties**, that promotes the use of energy from renewable sources by reducing the cost of that energy, increasing the price at which it can be sold, or increasing, by means of a renewable energy obligation or otherwise, the volume of such energy purchased. This includes, but is not restricted to, investment aid, tax exemptions or reductions, tax refunds, renewable energy obligation support schemes including those using green certificates, and direct price support schemes including feed-in tariffs and premium payments;
- (l) "renewable energy obligation" means a national support scheme requiring energy producers to include a given proportion of energy from renewable sources in their production, requiring energy

suppliers to include a given proportion of energy from renewable sources in their supply, or requiring energy consumers to include a given proportion of energy from renewable sources in their consumption. This includes schemes under which such requirements may be fulfilled by using green certificates;

(m) "actual value" means the greenhouse gas emission saving for some or all of the steps of a specific biofuel production process calculated in accordance with the methodology laid down in part C of Annex V;

(n) "typical value" means an estimate of the representative greenhouse gas emission saving for a particular biofuel production pathway;

(o) "default value" means a value derived from a typical value by the application of pre-determined factors and that may, in circumstances specified in this Directive, be used in place of an actual value.

### Article 3

#### Mandatory national overall targets and measures for the use of energy from renewable sources

1. Each **Contracting Party** shall ensure that the share of energy from renewable sources, calculated in accordance with Articles 5 to 11, in gross final consumption of energy in 2020 is at least its national overall target for the share of energy from renewable sources in that year, as set out in the third column of the table in part A of Annex I. <...> In order to achieve the targets laid down in this Article more easily, each **Contracting Party** shall promote and encourage energy efficiency and energy saving.

2. **Contracting Parties** shall introduce measures effectively designed to ensure that the share of energy from renewable sources equals or exceeds that shown in the indicative trajectory set out in part B of Annex I.

3. In order to reach the targets set in paragraphs 1 and 2 of this Article **Contracting Parties** may, *inter alia*, apply the following measures:

(a) support schemes;

(b) measures of cooperation between different **Contracting Parties** and with third countries for achieving their national overall targets in accordance with Articles 5 to 11.

Without prejudice to **Article 18(1)(c) and 18(2) of the Energy Community Treaty**, **Contracting Parties** shall have the right to decide, in accordance with Articles 5 to 11 of this Directive, to which extent they support energy from renewable sources which is produced in a different **Contracting Party**.

4. Each **Contracting Party** shall ensure that the share of energy from renewable sources in all forms of transport in 2020 is at least 10% of the final consumption of energy in transport in that **Contracting Party**.

For the purposes of this paragraph, the following provisions shall apply:

(a) for the calculation of the denominator, that is the total amount of energy consumed in transport for the purposes of the first subparagraph, only petrol, diesel, biofuels consumed in road and rail transport, and electricity shall be taken into account;

(b) for the calculation of the numerator, that is the amount of energy from renewable sources consumed in transport for the purposes of the first subparagraph, all types of energy from renewable sources consumed in all forms of transport shall be taken into account;

(c) for the calculation of the contribution from electricity produced from renewable sources and consumed in all types of electric vehicles for the purpose of points (a) and (b), **Contracting Parties** may choose to use either the average share of electricity from renewable energy sources in the **Energy Community** or the share of electricity from renewable energy sources in their own country as measured two years before the year in question. Furthermore, for the calculation of the electricity from renewable energy sources consumed by electric road vehicles, that consumption shall be considered to be 2.5 times the energy content of the input of electricity from renewable energy sources.

#### **Article 4**

#### **National renewable energy action plans**

1. Each **Contracting Party** shall adopt a national renewable energy action plan. The national renewable energy action plans shall set out **Contracting Parties'** national targets for the share of energy from renewable sources consumed in transport, electricity and heating and cooling in 2020, taking into account the effects of other policy measures relating to energy efficiency on final consumption of energy, and adequate measures to be taken to achieve those national overall targets, including cooperation between local, regional and national authorities, planned statistical transfers or joint projects, national policies to develop existing biomass resources and mobilise new biomass resources for different uses, and the measures to be taken to fulfil the requirements of Articles 13 to 19.

<...>

**Contracting Parties shall present their National Renewable Energy Action Plans in the form of the template adopted by the Commission under the second subparagraph of Article 4(1) of the Directive.**<sup>1</sup>

2. **Contracting Parties** shall notify their national renewable energy action plans to the **Energy Community Secretariat** by **30 June 2013**.

3. Each **Contracting Party** shall publish and notify to the **Energy Community Secretariat**, six months before its national renewable energy action plan is due, a forecast document indicating:

(a) its estimated excess production of energy from renewable sources compared to the indicative trajectory which could be transferred to other **Contracting Parties** in accordance with Articles 6 to 11, as well as its estimated potential for joint projects, until 2020; and

(b) its estimated demand for energy from renewable sources to be satisfied by means other than domestic production until 2020.

That information may include elements relating to cost and benefits and financing. That forecast shall be updated in the reports of the **Contracting Parties** as set out in Article 22(1)(l) and (m).

4. A **Contracting Party** whose share of energy from renewable sources fell below the indicative trajectory in the immediately preceding two-year period set out in part B of Annex I, shall submit an amended national renewable energy action plan to the **Energy Community Secretariat** by 30 June

<sup>1</sup> Article 5(2) of Decision 2012/04/MC-EnC, referring to Commission Decision 2009/548/EC of 30 June 2009 establishing a template for National Renewable Energy Action Plans under Directive 2009/28/EC.

of the following year, setting out adequate and proportionate measures to rejoin, within a reasonable timetable, the indicative trajectory in part B of Annex I.

**The Energy Community Secretariat may, if the Contracting Party has not met the indicative trajectory by a limited margin, and taking due account of the current and future measures taken by the Contracting Party, propose to the Permanent High Level Group to adopt a decision to release the Contracting Party from the obligation to submit an amended National Renewable Energy Action Plan.**

5. The **Energy Community Secretariat** shall evaluate the national renewable energy action plans, notably the adequacy of the measures envisaged by the **Contracting Party** in accordance with Article 3(2). In response to a national renewable energy action plan or to an amended national renewable energy action plan, the **Energy Community Secretariat** may issue a recommendation.

### Article 5

#### Calculation of the share of energy from renewable sources

1. The gross final consumption of energy from renewable sources in each **Contracting Party** shall be calculated as the sum of:

- (a) gross final consumption of electricity from renewable energy sources;
- (b) gross final consumption of energy from renewable sources for heating and cooling; and
- (c) final consumption of energy from renewable sources in transport.

Gas, electricity and hydrogen from renewable energy sources shall be considered only once in point (a), (b), or (c) of the first subparagraph, for calculating the share of gross final consumption of energy from renewable sources.

Subject to the second subparagraph of Article 17(1), biofuels and bioliquids that do not fulfil the sustainability criteria set out in Article 17(2) to (6) shall not be taken into account.

2. Where a **Contracting Party** considers that, due to force majeure, it is impossible for it to meet its share of energy from renewable sources in gross final consumption of energy in 2020 set out in the third column of the table in Annex I, it shall inform the **Energy Community Secretariat** accordingly as soon as possible. **The Energy Community Secretariat shall issue an opinion on whether force majeure has been demonstrated. In the event that the Energy Community Secretariat considers that force majeure has been demonstrated, the Permanent High Level Group shall decide on whether an adjustment that shall be made to the Contracting Party's gross final consumption of energy from renewable sources for the year 2020 and the level of that adjustment.**<sup>2</sup>

3. For the purposes of paragraph 1(a), gross final consumption of electricity from renewable energy sources shall be calculated as the quantity of electricity produced in a **Contracting Party** from renewable energy sources, excluding the production of electricity in pumped storage units from water that has previously been pumped uphill.

<sup>2</sup> According to Article 12 of Decision 2012/04/MC-EnC ('Decisions of the Permanent High Level Group') "1. Decisions of the Permanent High Level Group taken in application of Directive 2009/28/EC, as adapted by the present Decision, shall be adopted by majority of its members, which must include a vote in favour by the European Union. 2. The Permanent High Level Group shall adopt a procedural act on the implementation of the present article."

In multi-fuel plants using renewable and conventional sources, only the part of electricity produced from renewable energy sources shall be taken into account. For the purposes of this calculation, the contribution of each energy source shall be calculated on the basis of its energy content.

The electricity generated by hydropower and wind power shall be accounted for in accordance with the normalisation rules set out in Annex II.

4. For the purposes of paragraph 1(b), the gross final consumption of energy from renewable sources for heating and cooling shall be calculated as the quantity of district heating and cooling produced in a **Contracting Party** from renewable sources, plus the consumption of other energy from renewable sources in industry, households, services, agriculture, forestry and fisheries, for heating, cooling and processing purposes.

In multi-fuel plants using renewable and conventional sources, only the part of heating and cooling produced from renewable energy sources shall be taken into account. For the purposes of this calculation, the contribution of each energy source shall be calculated on the basis of its energy content.

Aerothermal, geothermal and hydrothermal heat energy captured by heat pumps shall be taken into account for the purposes of paragraph 1(b) provided that the final energy output significantly exceeds the primary energy input required to drive the heat pumps. The quantity of heat to be considered as energy from renewable sources for the purposes of this Directive shall be calculated in accordance with the methodology laid down in Annex VII.

Thermal energy generated by passive energy systems, under which lower energy consumption is achieved passively through building design or from heat generated by energy from non-renewable sources, shall not be taken into account for the purposes of paragraph 1(b).

5. The energy content of the transport fuels listed in Annex III shall be taken to be as set out in that Annex. Annex III may be adapted to technical and scientific progress. Those measures, designed to amend non-essential elements of this Directive, shall be adopted in accordance with the regulatory procedure with scrutiny referred to in Article 25(4).

6. The share of energy from renewable sources shall be calculated as the gross final consumption of energy from renewable sources divided by the gross final consumption of energy from all energy sources, expressed as a percentage.

For the purposes of the first subparagraph, the sum referred to in paragraph 1 shall be adjusted in accordance with Articles 6, 8, 10 and 11.

In calculating a **Contracting Party's** gross final energy consumption for the purpose of measuring its compliance with the targets and indicative trajectory laid down in this Directive, the amount of energy consumed in aviation shall, as a proportion of that **Contracting Party's** gross final consumption of energy, be considered to be no more than 6.18%. For Cyprus and Malta the amount of energy consumed in aviation shall, as a proportion of those **Contracting Parties**<sup>3</sup> gross final consumption of energy, be considered to be no more than 4.12%.

7. The methodology and definitions used in the calculation of the share of energy from renewable sources shall be those of Regulation (EC) No 1099/2008 of the European Parliament and of the Council of 22 October 2008 on energy statistics.

**Contracting Parties** shall ensure coherence of statistical information used in calculating those sectoral and overall shares and statistical information reported to the **Energy Community Secretariat** under Regulation (EC) No 1099/2008.

<sup>3</sup> Cyprus and Malta are not Contracting Parties of the Energy Community.

## Article 6

### Statistical transfers between Contracting Parties

1. **Contracting Parties** may agree on and may make arrangements for the statistical transfer of a specified amount of energy from renewable sources from one **Contracting Party** to another **Contracting Party**. The transferred quantity shall be:

(a) deducted from the amount of energy from renewable sources that is taken into account in measuring compliance by the **Contracting Party** making the transfer with the requirements of Article 3(1) and (2); and

(b) added to the amount of energy from renewable sources that is taken into account in measuring compliance by another **Contracting Party** accepting the transfer with the requirements of Article 3(1) and (2).

A statistical transfer shall not affect the achievement of the national target of the **Contracting Party** making the transfer.

2. The arrangements referred to in paragraph 1 may have a duration of one or more years. They shall be notified to the **Energy Community Secretariat** no later than three months after the end of each year in which they have effect. The information sent to the **Energy Community Secretariat** shall include the quantity and price of the energy involved.

3. Transfers shall become effective only after all **Contracting Parties** involved in the transfer have notified the transfer to the **Energy Community Secretariat**.

## Article 8 of Decision 2012/04/MC-EnC

### Statistical transfers from Contracting Parties to Member States of the European Union

1. Upon motivated request from an interested Contracting Party, the Ministerial Council may decide<sup>4</sup> that this Contracting Party may agree on statistical transfers of a specified amount of energy from renewable sources to a Member State of the European Union. The Ministerial Council shall ask the Secretariat for an opinion on the request.

2. The transferred quantity shall be deducted from the amount of energy from renewable sources that is taken into account in measuring compliance by the Contracting Party making the transfer with the requirements of Article 3(1) and (2) of Directive 2009/28/EC, as adapted by this decision.

**A statistical transfer shall not affect the achievement of the national target of the Contracting Party making the transfer.**

<sup>4</sup> According to Article 11 of Decision 2012/04/MC-EnC,

*"1. The Decision of the Ministerial Council referred to in Article 8 and 9 of this Decision shall be adopted by majority of the Members of the Ministerial Council, which must include a vote in favour by the European Union.*

*2. The Decision shall be positive only if all the following conditions are met:*

*a) that the Contracting Party has fully transposed Directive 2009/28/EC, as adapted by this Decision;*

*b) that the envisaged statistical transfers or distribution rules (as appropriate) are based on reliable and accurate energy statistics that are compiled in accordance with the European Union's methodology on energy statistics, and*

*c) that the Contracting Party is expected to exceed the indicative trajectory and binding target without including potential contributions from joint projects with third countries.*

*3. The Ministerial Council shall adopt a procedural act on the implementation of the present article."*

3. The arrangements for the statistical transfer to a Member State of the European Union may have a duration of one or more years. They shall be notified by the Contracting Party to the Secretariat no later than three months after the end of each year in which they have effect. The information sent to the Secretariat shall include the quantity and price of the energy involved.

4. Transfers shall become effective only after the Contracting Party involved has notified the transfer to the Secretariat.

5. The provisions in this Article are without prejudice to more stringent requirements agreed by the parties involved in the statistical transfer.

#### Article 13 of Decision 2012/04/MC-EnC

##### External Audits

1. The implementation of Article 8 <...> of this Decision shall be subject to an external audit on a biennial basis of which the results shall be sent to the Secretariat. Where the result of the audit shows that the conditions laid down in this Decision for applying the cooperation mechanisms of the Directive were not met, the involved transfers will be annulled.

2. The Contracting Party concerned shall arrange for the independent audit referred to in paragraph 1. The auditor needs to be accredited by a member of the International Accreditation Body and must have implemented relevant international standards to ensure its competence.

#### Article 7

##### Joint projects between Contracting Parties

1. Two or more **Contracting Parties** may cooperate on all types of joint projects relating to the production of electricity, heating or cooling from renewable energy sources. That cooperation may involve private operators.

2. **Contracting Parties** shall notify the **Energy Community Secretariat** of the proportion or amount of electricity, heating or cooling from renewable energy sources produced by any joint project in their territory, that became operational after **18 December 2012**, or by the increased capacity of an installation that was refurbished after that date, which is to be regarded as counting towards the national overall target of another **Contracting Party** for the purposes of measuring compliance with the requirements of this Directive.

3. The notification referred to in paragraph 2 shall:

- (a) describe the proposed installation or identify the refurbished installation;
- (b) specify the proportion or amount of electricity or heating or cooling produced from the installation which is to be regarded as counting towards the national overall target of another **Contracting Party**;
- (c) identify the **Contracting Party** in whose favour the notification is being made; and

(d) specify the period, in whole calendar years, during which the electricity or heating or cooling produced by the installation from renewable energy sources is to be regarded as counting towards the national overall target of the other **Contracting Party**.

4. The period specified under paragraph 3(d) shall not extend beyond 2020. The duration of a joint project may extend beyond 2020.

5. A notification made under this Article shall not be varied or withdrawn without the joint agreement of the **Contracting Party** making the notification and the **Contracting Party** identified in accordance with paragraph 3(c).

### **Article 8**

#### **Effects of joint projects between Contracting Parties**

1. Within three months of the end of each year falling within the period specified under Article 7(3) (d), the **Contracting Party** that made the notification under Article 7 shall issue a letter of notification stating:

(a) the total amount of electricity or heating or cooling produced during the year from renewable energy sources by the installation which was the subject of the notification under Article 7; and

(b) the amount of electricity or heating or cooling produced during the year from renewable energy sources by that installation which is to count towards the national overall target of another **Contracting Party** in accordance with the terms of the notification.

2. The notifying **Contracting Party** shall send the letter of notification to the **Contracting Party** in whose favour the notification was made and to the **Energy Community Secretariat**.

3. For the purposes of measuring target compliance with the requirements of this Directive concerning national overall targets, the amount of electricity or heating or cooling from renewable energy sources notified in accordance with paragraph 1(b) shall be:

(a) deducted from the amount of electricity or heating or cooling from renewable energy sources that is taken into account, in measuring compliance by the **Contracting Party** issuing the letter of notification under paragraph 1; and

(b) added to the amount of electricity or heating or cooling from renewable energy sources that is taken into account, in measuring compliance by the **Contracting Party** receiving the letter of notification in accordance with paragraph 2.

### **Article 9**

#### **Joint projects between Contracting Parties and third countries<sup>5</sup>**

1. One or more **Contracting Parties** may cooperate with one or more third countries on all types of joint projects regarding the production of electricity from renewable energy sources. Such cooperation may involve private operators.

<sup>5</sup> According to Recital 6 of Decision 2012/04/MC-EnC, joint projects between Member States and Contracting Parties remain possible under Articles 9 and 10 of the Directive. Article 9 of the Directive in its original form thus remains also relevant.

2. Electricity from renewable energy sources produced in a third country shall be taken into account only for the purposes of measuring compliance with the requirements of this Directive concerning national overall targets if the following conditions are met:

(a) the electricity is consumed in the **Energy Community**, a requirement that is deemed to be met where:

(i) an equivalent amount of electricity to the electricity accounted for has been firmly nominated to the allocated interconnection capacity by all responsible transmission system operators in the country of origin, the country of destination and, if relevant, each third country of transit;

(ii) an equivalent amount of electricity to the electricity accounted for has been firmly registered in the schedule of balance by the responsible transmission system operator on the **Energy Community** side of an interconnector; and

(iii) the nominated capacity and the production of electricity from renewable energy sources by the installation referred to in paragraph 2(b) refer to the same period of time;

(b) the electricity is produced by a newly constructed installation that became operational after **18 December 2012** or by the increased capacity of an installation that was refurbished after that date, under a joint project as referred to in paragraph 1; and

(c) the amount of electricity produced and exported has not received support from a support scheme of a third country other than investment aid granted to the installation.

3. **Contracting Parties** may apply to the **Energy Community Secretariat**, for the purposes of Article 5, for account to be taken of electricity from renewable energy sources produced and consumed in a third country, in the context of the construction of an interconnector with a very long lead-time between a **Contracting Party** and a third country if the following conditions are met:

(a) construction of the interconnector started by 31 December 2016;

(b) it is not possible for the interconnector to become operational by 31 December 2020;

(c) it is possible for the interconnector to become operational by 31 December 2022;

(d) after it becomes operational, the interconnector will be used for the export to the **Energy Community**, in accordance with paragraph 2, of electricity generated from renewable energy sources;

(e) the application relates to a joint project that fulfils the criteria in points (b) and (c) of paragraph 2 and that will use the interconnector after it becomes operational, and to a quantity of electricity that is no greater than the quantity that will be exported to the **Energy Community** after the interconnector becomes operational.

4. The proportion or amount of electricity produced by any installation in the territory of a third country, which is to be regarded as counting towards the national overall target of one or more **Contracting Parties** for the purposes of measuring compliance with Article 3, shall be notified to the **Energy Community Secretariat**. When more than one **Contracting Party** is concerned, the distribution between **Contracting Parties** of this proportion or amount shall be notified to the **Energy Community Secretariat**. This proportion or amount shall not exceed the proportion or amount actually exported to, and consumed in, the **Energy Community**, corresponding to the amount referred to in paragraph 2(a)(i) and (ii) of this Article and meeting the conditions as set out in its paragraph (2)(a). The notification shall be made by each **Contracting Party** towards whose overall national target the proportion or amount of electricity is to count.

5. The notification referred to in paragraph 4 shall:

- (a) describe the proposed installation or identify the refurbished installation;
  - (b) specify the proportion or amount of electricity produced from the installation which is to be regarded as counting towards the national target of a **Contracting Party** as well as, subject to confidentiality requirements, the corresponding financial arrangements;
  - (c) specify the period, in whole calendar years, during which the electricity is to be regarded as counting towards the national overall target of the **Contracting Party**; and
  - (d) include a written acknowledgement of points (b) and (c) by the third country in whose territory the installation is to become operational and the proportion or amount of electricity produced by the installation which will be used domestically by that third country.
6. The period specified under paragraph 5(c) shall not extend beyond 2020. The duration of a joint project may extend beyond 2020.
7. A notification made under this Article may not be varied or withdrawn without the joint agreement of the **Contracting Party** making the notification and the third country that has acknowledged the joint project in accordance with paragraph 5(d).
8. **Contracting Parties** and the **Energy Community** shall encourage the relevant bodies of the **Energy Community Treaty** to take, in conformity with the **Energy Community Treaty**, the measures which are necessary so that the **Contracting Parties** to that Treaty can apply the provisions on cooperation laid down in this Directive between **Contracting Parties**.

### **Article 10**

#### **Effects of joint projects between **Contracting Parties** and third countries<sup>6</sup>**

1. Within three months of the end of each year falling within the period specified under Article 9(5)(c), the **Contracting Party** having made the notification under Article 9 shall issue a letter of notification stating:
- (a) the total amount of electricity produced during that year from renewable energy sources by the installation which was the subject of the notification under Article 9;
  - (b) the amount of electricity produced during the year from renewable energy sources by that installation which is to count towards its national overall target in accordance with the terms of the notification under Article 9; and
  - (c) proof of compliance with the conditions set out in Article 9(2).
2. The **Contracting Party** shall send the letter of notification to the third country which has acknowledged the project in accordance with Article 9(5)(d) and to the **Energy Community Secretariat**.
3. For the purposes of measuring target compliance with the requirements of this Directive concerning national overall targets, the amount of electricity produced from renewable energy sources notified in accordance with paragraph 1(b) shall be added to the amount of energy from renewable sources that is taken into account, in measuring compliance by the **Contracting Party** issuing the letter of notification.

<sup>6</sup> According to Recital 6 of Decision 2012/04/MC-EnC, joint projects between Member States and Contracting Parties remain possible under Articles 9 and 10 of the Directive. Article 10 of the Directive in its original form thus remains also relevant.

## Article 11

### Joint support schemes

1. Without prejudice to the obligations of **Contracting Parties** under Article 3, two or more **Contracting Parties** may decide, on a voluntary basis, to join or partly coordinate their national support schemes. In such cases, a certain amount of energy from renewable sources produced in the territory of one participating **Contracting Party** may count towards the national overall target of another participating **Contracting Party** if the **Contracting Parties** concerned:

(a) make a statistical transfer of specified amounts of energy from renewable sources from one **Contracting Party** to another **Contracting Party** in accordance with Article 6; or

(b) set up a distribution rule agreed by participating **Contracting Parties** that allocates amounts of energy from renewable sources between the participating **Contracting Parties**. Such a rule shall be notified to the **Energy Community Secretariat** no later than three months after the end of the first year in which it takes effect.

2. Within three months of the end of each year each **Contracting Party** having made a notification under paragraph 1(b) shall issue a letter of notification stating the total amount of electricity or heating or cooling from renewable energy sources produced during the year which is to be the subject of the distribution rule.

3. For the purposes of measuring compliance with the requirements of this Directive concerning national overall targets, the amount of electricity or heating or cooling from renewable energy sources notified in accordance with paragraph 2 shall be reallocated between the concerned **Contracting Parties** in accordance with the notified distribution rule.

## Article 9 of Decision 2012/04/MC-EnC

### Joint support schemes between Contracting Parties and Member States of the European Union

1. **One or more Contracting Parties and one or more EU Member States may decide, on a voluntary basis, to join or partly coordinate their national support schemes. In such cases, a certain amount of energy from renewable sources produced in the territory of one participating Contracting Party or Member State may count towards the national overall target of another participating Contracting Party(ies) or Member State(s) if the involved Parties concerned:**

**(a) make a statistical transfer of specified amounts of energy from renewable sources from one Party to another Party in accordance with Article 8 of this Decision; or**

**(b) set up a distribution rule agreed by the participating Contracting Party and Member State that allocates amounts of energy from renewable sources between the participating Parties. Such a rule shall be notified to the Secretariat by the Contracting Party no later than three months after the end of the first year in which it takes effect.**

2. Upon motivated request from an interested Contracting Party, which shall include the information referred in Article 7(3) of Directive 2009/28, the Ministerial Council may decide<sup>7</sup> that this Contracting Party may agree on a joint support scheme with a Member State of the European Union. The Ministerial Council shall ask the Secretariat for an opinion on the request.

3. Within three months of the end of each year each Contracting Party having made a notification under paragraph 1(b) shall issue a letter of notification stating the total amount of electricity or heating or cooling from renewable energy sources produced during the year which is to be the subject of the distribution rule.

4. For the purposes of measuring compliance with the requirements of this Directive concerning national overall targets, the amount of electricity or heating or cooling from renewable energy sources notified in accordance with paragraph 2 shall be reallocated between the concerned Contracting Party(ies) and Member State(s) in accordance with the notified distribution rule.

5. The provisions in this Article are without prejudice to more stringent requirements agreed by the parties coordinating their national support schemes.

#### Article 13 of Decision 2012/04/MC-EnC

##### External Audits

1. The implementation of Article <...> 9 of this Decision shall be subject to an external audit on a biennial basis of which the results shall be sent to the Secretariat. Where the result of the audit shows that the conditions laid down in this Decision for applying the cooperation mechanisms of the Directive were not met, the involved transfers will be annulled.

2. The Contracting Party concerned shall arrange for the independent audit referred to in paragraph 1. The auditor needs to be accredited by a member of the International Accreditation Body and must have implemented relevant international standards to ensure its competence.

#### Article 12

##### Capacity increases

For the purpose of Article 7(2) and Article 9(2)(b), units of energy from renewable sources imputable to an increase in the capacity of an installation shall be treated as if they were produced by a separate installation becoming operational at the moment at which the increase of capacity occurred.

<sup>7</sup> According to Article 11 of Decision 2012/04/MC-EnC,

*"1. The Decision of the Ministerial Council referred to in Article 8 and 9 of this Decision shall be adopted by majority of the Members of the Ministerial Council, which must include a vote in favour by the European Union.*

*2. The Decision shall be positive only if all the following conditions are met:*

*a) that the Contracting Party has fully transposed Directive 2009/28/EC, as adapted by this Decision;*

*b) that the envisaged statistical transfers or distribution rules (as appropriate) are based on reliable and accurate energy statistics that are compiled in accordance with the European Union's methodology on energy statistics, and*

*c) that the Contracting Party is expected to exceed the indicative trajectory and binding target without including potential contributions from joint projects with third countries.*

*3. The Ministerial Council shall adopt a procedural act on the implementation of the present article."*

## **Article 13**

### **Administrative procedures, regulations and codes**

1. **Contracting Parties** shall ensure that any national rules concerning the authorisation, certification and licensing procedures that are applied to plants and associated transmission and distribution network infrastructures for the production of electricity, heating or cooling from renewable energy sources, and to the process of transformation of biomass into biofuels or other energy products, are proportionate and necessary.

**Contracting Parties** shall, in particular, take the appropriate steps to ensure that:

(a) subject to differences between **Contracting Parties** in their administrative structures and organisation, the respective responsibilities of national, regional and local administrative bodies for authorisation, certification and licensing procedures including spatial planning are clearly coordinated and defined, with transparent timetables for determining planning and building applications;

(b) comprehensive information on the processing of authorisation, certification and licensing applications for renewable energy installations and on available assistance to applicants are made available at the appropriate level;

(c) administrative procedures are streamlined and expedited at the appropriate administrative level;

(d) rules governing authorisation, certification and licensing are objective, transparent, proportionate, do not discriminate between applicants and take fully into account the particularities of individual renewable energy technologies;

(e) administrative charges paid by consumers, planners, architects, builders and equipment and system installers and suppliers are transparent and cost-related; and

(f) simplified and less burdensome authorisation procedures, including through simple notification if allowed by the applicable regulatory framework, are established for smaller projects and for decentralised devices for producing energy from renewable sources, where appropriate.

2. **Contracting Parties** shall clearly define any technical specifications which must be met by renewable energy equipment and systems in order to benefit from support schemes. Where European standards exist, including eco-labels, energy labels and other technical reference systems established by the European standardisation bodies, such technical specifications shall be expressed in terms of those standards. Such technical specifications shall not prescribe where the equipment and systems are to be certified and should not impede the operation of the internal market.

3. **Contracting Parties** shall recommend to all actors, in particular local and regional administrative bodies to ensure equipment and systems are installed for the use of electricity, heating and cooling from renewable energy sources and for district heating and cooling when planning, designing, building and renovating industrial or residential areas. **Contracting Parties** shall, in particular, encourage local and regional administrative bodies to include heating and cooling from renewable energy sources in the planning of city infrastructure, where appropriate.

4. **Contracting Parties** shall introduce in their building regulations and codes appropriate measures in order to increase the share of all kinds of energy from renewable sources in the building sector.

In establishing such measures or in their regional support schemes, **Contracting Parties** may take into account national measures relating to substantial increases in energy efficiency and relating to cogeneration and to passive, low or zero-energy buildings.

By 31 December 2014, **Contracting Parties** shall, in their building regulations and codes or by other means with equivalent effect, where appropriate, require the use of minimum levels of energy from renewable sources in new buildings and in existing buildings that are subject to major renovation. **Contracting Parties** shall permit those minimum levels to be fulfilled, *inter alia*, through district heating and cooling produced using a significant proportion of renewable energy sources.

The requirements of the first subparagraph shall apply to the armed forces, only to the extent that its application does not cause any conflict with the nature and primary aim of the activities of the armed forces and with the exception of material used exclusively for military purposes.

5. **Contracting Parties** shall ensure that new public buildings, and existing public buildings that are subject to major renovation, at national, regional and local level fulfil an exemplary role in the context of this Directive from 1 January 2012 onwards. **Contracting Parties** may, *inter alia*, allow that obligation to be fulfilled by complying with standards for zero energy housing, or by providing that the roofs of public or mixed private-public buildings are used by third parties for installations that produce energy from renewable sources.

6. With respect to their building regulations and codes, **Contracting Parties** shall promote the use of renewable energy heating and cooling systems and equipment that achieve a significant reduction of energy consumption. **Contracting Parties** shall use energy or eco-labels or other appropriate certificates or standards developed at national or **Energy Community** level, where these exist, as the basis for encouraging such systems and equipment.

In the case of biomass, **Contracting Parties** shall promote conversion technologies that achieve a conversion efficiency of at least 85% for residential and commercial applications and at least 70% for industrial applications.

In the case of heat pumps, **Contracting Parties** shall promote those that fulfil the minimum requirements of eco-labelling established in Commission Decision 2007/742/EC of 9 November 2007 establishing the ecological criteria for the award of the Community eco-label to electrically driven, gas driven or gas absorption heat pumps.

In the case of solar thermal energy, **Contracting Parties** shall promote certified equipment and systems based on European standards where these exist, including eco-labels, energy labels and other technical reference systems established by the European standardisation bodies.

In assessing the conversion efficiency and input/output ratio of systems and equipment for the purposes of this paragraph, **Contracting Parties** shall use **Energy Community** or, in their absence, international procedures if such procedures exist.

## Article 14

### Information and training

1. **Contracting Parties** shall ensure that information on support measures is made available to all relevant actors, such as consumers, builders, installers, architects, and suppliers of heating, cooling and electricity equipment and systems and of vehicles compatible with the use of energy from renewable sources.

2. **Contracting Parties** shall ensure that information on the net benefits, cost and energy efficiency of equipment and systems for the use of heating, cooling and electricity from renewable energy sources is made available either by the supplier of the equipment or system or by the national com-

patent authorities.

3. **Contracting Parties** shall ensure that certification schemes or equivalent qualification schemes become or are available by 31 December 2012 for installers of small-scale biomass boilers and stoves, solar photovoltaic and solar thermal systems, shallow geothermal systems and heat pumps. Those schemes may take into account existing schemes and structures as appropriate, and shall be based on the criteria laid down in Annex IV. Each **Contracting Party** shall recognise certification awarded by other **Contracting Parties** in accordance with those criteria.

4. **Contracting Parties** shall make available to the public information on certification schemes or equivalent qualification schemes as referred to in paragraph 3. **Contracting Parties** may also make available the list of installers who are qualified or certified in accordance with the provisions referred to in paragraph 3.

5. **Contracting Parties** shall ensure that guidance is made available to all relevant actors, notably for planners and architects so that they are able properly to consider the optimal combination of renewable energy sources, of high-efficiency technologies and of district heating and cooling when planning, designing, building and renovating industrial or residential areas.

6. **Contracting Parties**, with the participation of local and regional authorities, shall develop suitable information, awareness-raising, guidance or training programmes in order to inform citizens of the benefits and practicalities of developing and using energy from renewable sources.

### **Article 15**

#### **Guarantees of origin of electricity, heating and cooling produced from renewable energy sources**

1. For the purposes of proving to final customers the share or quantity of energy from renewable sources in an energy supplier's energy mix in accordance with Article 3(6) of Directive 2003/54/EC, **Contracting Parties** shall ensure that the origin of electricity produced from renewable energy sources can be guaranteed as such within the meaning of this Directive, in accordance with objective, transparent and non-discriminatory criteria.

2. To that end, **Contracting Parties** shall ensure that a guarantee of origin is issued in response to a request from a producer of electricity from renewable energy sources. **Contracting Parties** may arrange for guarantees of origin to be issued in response to a request from producers of heating and cooling from renewable energy sources. Such an arrangement may be made subject to a minimum capacity limit. A guarantee of origin shall be of the standard size of 1 MWh. No more than one guarantee of origin shall be issued in respect of each unit of energy produced.

**Contracting Parties** shall ensure that the same unit of energy from renewable sources is taken into account only once.

**Contracting Parties** may provide that no support be granted to a producer when that producer receives a guarantee of origin for the same production of energy from renewable sources.

The guarantee of origin shall have no function in terms of a **Contracting Party's** compliance with Article 3. Transfers of guarantees of origin, separately or together with the physical transfer of energy, shall have no effect on the decision of **Contracting Parties** to use statistical transfers, joint projects or joint support schemes for target compliance or on the calculation of the gross final con-

sumption of energy from renewable sources in accordance with Article 5.

3. Any use of a guarantee of origin shall take place within 12 months of production of the corresponding energy unit. A guarantee of origin shall be cancelled once it has been used.

4. **Contracting Parties** or designated competent bodies shall supervise the issuance, transfer and cancellation of guarantees of origin. The designated competent bodies shall have non-overlapping geographical responsibilities, and be independent of production, trade and supply activities.

5. **Contracting Parties** or the designated competent bodies shall put in place appropriate mechanisms to ensure that guarantees of origin shall be issued, transferred and cancelled electronically and are accurate, reliable and fraud-resistant.

6. A guarantee of origin shall specify at least:

(a) the energy source from which the energy was produced and the start and end dates of production;

(b) whether it relates to:

(i) electricity; or

(ii) heating or cooling;

(c) the identity, location, type and capacity of the installation where the energy was produced;

(d) whether and to what extent the installation has benefited from investment support, whether and to what extent the unit of energy has benefited in any other way from a national support scheme, and the type of support scheme;

(e) the date on which the installation became operational; and

(f) the date and country of issue and a unique identification number.

7. Where an electricity supplier is required to prove the share or quantity of energy from renewable sources in its energy mix for the purposes of Article 3(6) of Directive 2003/54/EC, it may do so by using its guarantees of origin.

8. The amount of energy from renewable sources corresponding to guarantees of origin transferred by an electricity supplier to a third party shall be deducted from the share of energy from renewable sources in its energy mix for the purposes of Article 3(6) of Directive 2003/54/EC.

9. **Contracting Parties** shall recognise guarantees of origin issued by other **Contracting Parties** in accordance with this Directive exclusively as proof of the elements referred to in paragraph 1 and paragraph 6(a) to (f). A **Contracting Party** may refuse to recognise a guarantee of origin only when it has well-founded doubts about its accuracy, reliability or veracity. The **Contracting Party** shall notify the **Energy Community Secretariat** of such a refusal and its justification.

**10. If the Energy Community Secretariat finds that a refusal to recognise a guarantee of origin is unfounded, the Energy Community Secretariat may issue an opinion inviting the Contracting Party in question to recognise it.**

11. A **Contracting Party** may introduce, in conformity with **Energy Community** law, objective, transparent and non-discriminatory criteria for the use of guarantees of origin in complying with the obligations laid down in Article 3(6) of Directive 2003/54/EC.

12. Where energy suppliers market energy from renewable sources to consumers with a reference to environmental or other benefits of energy from renewable sources, **Contracting Parties** may require those energy suppliers to make available, in summary form, information on the amount or

share of energy from renewable sources that comes from installations or increased capacity that became operational after **18 December 2012**.

### **Article 16**

#### **Access to and operation of the grids**

1. **Contracting Parties** shall take the appropriate steps to develop transmission and distribution grid infrastructure, intelligent networks, storage facilities and the electricity system, in order to allow the secure operation of the electricity system as it accommodates the further development of electricity production from renewable energy sources, including interconnection between **Contracting Parties** and between **Contracting Parties** and third countries. **Contracting Parties** shall also take appropriate steps to accelerate authorisation procedures for grid infrastructure and to coordinate approval of grid infrastructure with administrative and planning procedures.

2. Subject to requirements relating to the maintenance of the reliability and safety of the grid, based on transparent and non-discriminatory criteria defined by the competent national authorities:

(a) **Contracting Parties** shall ensure that transmission system operators and distribution system operators in their territory guarantee the transmission and distribution of electricity produced from renewable energy sources;

(b) **Contracting Parties** shall also provide for either priority access or guaranteed access to the grid-system of electricity produced from renewable energy sources;

(c) **Contracting Parties** shall ensure that when dispatching electricity generating installations, transmission system operators shall give priority to generating installations using renewable energy sources in so far as the secure operation of the national electricity system permits and based on transparent and non-discriminatory criteria. **Contracting Parties** shall ensure that appropriate grid and market-related operational measures are taken in order to minimise the curtailment of electricity produced from renewable energy sources. If significant measures are taken to curtail the renewable energy sources in order to guarantee the security of the national electricity system and security of energy supply, **Contracting Parties** shall ensure that the responsible system operators report to the competent regulatory authority on those measures and indicate which corrective measures they intend to take in order to prevent inappropriate curtailments.

3. **Contracting Parties** shall require transmission system operators and distribution system operators to set up and make public their standard rules relating to the bearing and sharing of costs of technical adaptations, such as grid connections and grid reinforcements, improved operation of the grid and rules on the non-discriminatory implementation of the grid codes, which are necessary in order to integrate new producers feeding electricity produced from renewable energy sources into the interconnected grid.

Those rules shall be based on objective, transparent and non-discriminatory criteria taking particular account of all the costs and benefits associated with the connection of those producers to the grid and of the particular circumstances of producers located in peripheral regions and in regions of low population density. Those rules may provide for different types of connection.

4. Where appropriate, **Contracting Parties** may require transmission system operators and distribution system operators to bear, in full or in part, the costs referred to in paragraph 3. **Contracting**

**Parties** shall review and take the necessary measures to improve the frameworks and rules for the bearing and sharing of costs referred to in paragraph 3 by 30 June 2011 and every two years thereafter to ensure the integration of new producers as referred to in that paragraph.

5. **Contracting Parties** shall require transmission system operators and distribution system operators to provide any new producer of energy from renewable sources wishing to be connected to the system with the comprehensive and necessary information required, including:

- (a) a comprehensive and detailed estimate of the costs associated with the connection;
- (b) a reasonable and precise timetable for receiving and processing the request for grid connection;
- (c) a reasonable indicative timetable for any proposed grid connection.

**Contracting Parties** may allow producers of electricity from renewable energy sources wishing to be connected to the grid to issue a call for tender for the connection work.

6. The sharing of costs referred in paragraph 3 shall be enforced by a mechanism based on objective, transparent and non-discriminatory criteria taking into account the benefits which initially and subsequently connected producers as well as transmission system operators and distribution system operators derive from the connections.

7. **Contracting Parties** shall ensure that the charging of transmission and distribution tariffs does not discriminate against electricity from renewable energy sources, including in particular electricity from renewable energy sources produced in peripheral regions, such as island regions, and in regions of low population density. **Contracting Parties** shall ensure that the charging of transmission and distribution tariffs does not discriminate against gas from renewable energy sources.

8. **Contracting Parties** shall ensure that tariffs charged by transmission system operators and distribution system operators for the transmission and distribution of electricity from plants using renewable energy sources reflect realisable cost benefits resulting from the plant's connection to the network. Such cost benefits could arise from the direct use of the low-voltage grid.

9. Where relevant, **Contracting Parties** shall assess the need to extend existing gas network infrastructure to facilitate the integration of gas from renewable energy sources.

10. Where relevant, **Contracting Parties** shall require transmission system operators and distribution system operators in their territory to publish technical rules in line with Article 6 of Directive 2003/55/EC of the European Parliament and of the Council of 26 June 2003 concerning the common rules for the internal market in natural gas, in particular regarding network connection rules that include gas quality, gas odouration and gas pressure requirements. **Contracting Parties** shall also require transmission and distribution system operators to publish the connection tariffs to connect renewable gas sources based on transparent and non-discriminatory criteria.

11. **Contracting Parties** in their national renewable energy action plans shall assess the necessity to build new infrastructure for district heating and cooling produced from renewable energy sources in order to achieve the 2020 national target referred to in Article 3(1). Subject to that assessment, **Contracting Parties** shall, where relevant, take steps with a view to developing a district heating infrastructure to accommodate the development of heating and cooling production from large biomass, solar and geothermal facilities.

## **Article 17**

### **Sustainability criteria for biofuels and bioliquids**

1. Irrespective of whether the raw materials were cultivated inside or outside the territory of the **Energy Community**, energy from biofuels and bioliquids shall be taken into account for the purposes referred to in points (a), (b) and (c) only if they fulfil the sustainability criteria set out in paragraphs 2 to 6:

- (a) measuring compliance with the requirements of this Directive concerning national targets;
- (b) measuring compliance with renewable energy obligations;
- (c) eligibility for financial support for the consumption of biofuels and bioliquids.

However, biofuels and bioliquids produced from waste and residues, other than agricultural, aquaculture, fisheries and forestry residues, need only fulfil the sustainability criteria set out in paragraph 2 in order to be taken into account for the purposes referred to in points (a), (b) and (c).

2. The greenhouse gas emission saving from the use of biofuels and bioliquids taken into account for the purposes referred to in points (a), (b) and (c) of paragraph 1 shall be at least 35%.

With effect from 1 January 2017, the greenhouse gas emission saving from the use of biofuels and bioliquids taken into account for the purposes referred to in points (a), (b) and (c) of paragraph 1 shall be at least 50%. From 1 January 2018 that greenhouse gas emission saving shall be at least 60% for biofuels and bioliquids produced in installations in which production started on or after 1 January 2017.

The greenhouse gas emission saving from the use of biofuels and bioliquids shall be calculated in accordance with Article 19(1).

In the case of biofuels and bioliquids produced by installations that were in operation on 23 January 2008, the first subparagraph shall apply from 1 April 2013.

3. Biofuels and bioliquids taken into account for the purposes referred to in points (a), (b) and (c) of paragraph 1 shall not be made from raw material obtained from land with high biodiversity value, namely land that had one of the following statuses in or after January 2008, whether or not the land continues to have that status:

(a) primary forest and other wooded land, namely forest and other wooded land of native species, where there is no clearly visible indication of human activity and the ecological processes are not significantly disturbed;

(b) areas designated:

- (i) by law or by the relevant competent authority for nature protection purposes; or
- (ii) for the protection of rare, threatened or endangered ecosystems or species recognised by international agreements or included in lists drawn up by intergovernmental organisations or the International Union for the Conservation of Nature, subject to their recognition in accordance with the second subparagraph of Article 18(4);<sup>8</sup>

unless evidence is provided that the production of that raw material did not interfere with those nature protection purposes;

<sup>8</sup> Under Article 3(1)(f) of Decision 2012/04/MC-EnC, the second subparagraph of Article 18(4) of the Directive is not applicable.

(c) highly biodiverse grassland that is:

(i) natural, namely grassland that would remain grassland in the absence of human intervention and which maintains the natural species composition and ecological characteristics and processes; or

(ii) non-natural, namely grassland that would cease to be grassland in the absence of human intervention and which is species-rich and not degraded, unless evidence is provided that the harvesting of the raw material is necessary to preserve its grassland status.

4. Biofuels and bioliquids taken into account for the purposes referred to in points (a), (b) and (c) of paragraph 1 shall not be made from raw material obtained from land with high carbon stock, namely land that had one of the following statuses in January 2008 and no longer has that status:

(a) wetlands, namely land that is covered with or saturated by water permanently or for a significant part of the year;

(b) continuously forested areas, namely land spanning more than one hectare with trees higher than five metres and a canopy cover of more than 30%, or trees able to reach those thresholds *in situ*;

(c) land spanning more than one hectare with trees higher than five metres and a canopy cover of between 10% and 30%, or trees able to reach those thresholds *in situ*, unless evidence is provided that the carbon stock of the area before and after conversion is such that, when the methodology laid down in part C of Annex V is applied, the conditions laid down in paragraph 2 of this Article would be fulfilled.

The provisions of this paragraph shall not apply if, at the time the raw material was obtained, the land had the same status as it had in January 2008.

5. Biofuels and bioliquids taken into account for the purposes referred to in points (a), (b) and (c) of paragraph 1 shall not be made from raw material obtained from land that was peatland in January 2008, unless evidence is provided that the cultivation and harvesting of that raw material does not involve drainage of previously undrained soil.

6. Agricultural raw materials cultivated in the **Energy Community** and used for the production of biofuels and bioliquids taken into account for the purposes referred to in points (a), (b) and (c) of paragraph 1 shall be obtained in accordance with the requirements and standards under the provisions referred to under the heading "Environment" in part A and in point 9 of Annex II to Council Regulation (EC) No 73/2009 of 19 January 2009 establishing common rules for direct support schemes for farmers under the common agricultural policy and establishing certain support schemes for farmers and in accordance with the minimum requirements for good agricultural and environmental condition defined pursuant to Article 6(1) of that Regulation.

7. <...>

8. For the purposes referred to in points (a), (b) and (c) of paragraph 1, Contracting Parties shall not refuse to take into account, on other sustainability grounds, biofuels and bioliquids obtained in compliance with this Article.

9. <...>

## Article 18

### Verification of compliance with the sustainability criteria for biofuels and bioliquids

1. Where biofuels and bioliquids are to be taken into account for the purposes referred to in points (a), (b) and (c) of Article 17(1), **Contracting Parties** shall require economic operators to show that the sustainability criteria set out in Article 17(2) to (5) have been fulfilled. For that purpose they shall require economic operators to use a mass balance system which:

(a) allows consignments of raw material or biofuel with differing sustainability characteristics to be mixed;

(b) requires information about the sustainability characteristics and sizes of the consignments referred to in point (a) to remain assigned to the mixture; and

(c) provides for the sum of all consignments withdrawn from the mixture to be described as having the same sustainability characteristics, in the same quantities, as the sum of all consignments added to the mixture.

2. <...>

3. **Contracting Parties** shall take measures to ensure that economic operators submit reliable information and make available to the **Contracting Party**, on request, the data that were used to develop the information. **Contracting Parties** shall require economic operators to arrange for an adequate standard of independent auditing of the information submitted, and to provide evidence that this has been done. The auditing shall verify that the systems used by economic operators are accurate, reliable and protected against fraud. It shall evaluate the frequency and methodology of sampling and the robustness of the data.

The information referred to in the first subparagraph shall include in particular information on compliance with the sustainability criteria set out in Article 17(2) to (5), appropriate and relevant information on measures taken for soil, water and air protection, the restoration of degraded land, the avoidance of excessive water consumption in areas where water is scarce and appropriate and relevant information concerning measures taken in order to take into account the issues referred to in the second subparagraph of Article 17(7).

<...>

The obligations laid down in this paragraph shall apply whether the biofuels or bioliquids are produced within the **Energy Community** or imported.

**Contracting Parties** shall submit to the **Energy Community Secretariat**, in aggregated form, the information referred to in the first subparagraph of this paragraph. The **Energy Community Secretariat** shall publish that information on the transparency platform referred to in Article 24 in summary form preserving the confidentiality of commercially sensitive information.

4. The **Energy Community** shall endeavour to conclude bilateral or multilateral agreements with third countries containing provisions on sustainability criteria that correspond to those of this Directive. <...> When those agreements are concluded, due consideration shall be given to measures taken for the conservation of areas that provide, in critical situations, basic ecosystem services (such as watershed protection and erosion control), for soil, water and air protection, indirect land-use changes, the restoration of degraded land, the avoidance of excessive water consumption in areas

where water is scarce and to the issues referred to in the second subparagraph of Article 17(7).<sup>9</sup>

5. **[Voluntary national or international schemes setting standards for the production of biomass products must meet]** adequate standards of reliability, transparency and independent auditing. In the case of schemes to measure greenhouse gas emission saving, such schemes shall also comply with the methodological requirements in Annex V. Lists of areas of high biodiversity value as referred to in Article 17(3)(b)(ii) shall meet adequate standards of objectivity and coherence with internationally recognised standards and provide for appropriate appeal procedures.<sup>10</sup>

6. <...>

7. When an economic operator provides proof or data obtained in accordance with an agreement or scheme that has been the subject of a decision pursuant to paragraph 4,<sup>11</sup> to the extent covered by that decision, a **Contracting Party** shall not require the supplier to provide further evidence of compliance with the sustainability criteria set out in Article 17(2) to (5) nor information on measures referred to in the second subparagraph of paragraph 3 of this Article.

8. <...>

9. <...>

## Article 19

### Calculation of the greenhouse gas impact of biofuels and bioliquids

1. For the purposes of Article 17(2), the greenhouse gas emission saving from the use of biofuel and bioliquids shall be calculated as follows:

(a) where a default value for greenhouse gas emission saving for the production pathway is laid down in part A or B of Annex V and where the el value for those biofuels or bioliquids calculated in accordance with point 7 of part C of Annex V is equal to or less than zero, by using that default value;

(b) by using an actual value calculated in accordance with the methodology laid down in part C of Annex V; or

(c) by using a value calculated as the sum of the factors of the formula referred to in point 1 of part C of Annex V, where disaggregated default values in part D or E of Annex V may be used for some factors, and actual values, calculated in accordance with the methodology laid down in part C of Annex V, for all other factors.

2. By 31 March 2010, **Contracting Parties** shall submit to the **Energy Community Secretariat** a report including a list of those areas on their territory classified as level 2 in the nomenclature of territorial units for statistics (NUTS) or as a more disaggregated NUTS level in accordance with Regulation (EC) No 1059/2003 of the European Parliament and of the Council of 26 May 2003 on the establishment of a common classification of territorial units for statistics (NUTS) where the typical greenhouse gas emissions from cultivation of agricultural raw materials can be expected to be lower than or equal to the emissions reported under the heading 'Disaggregated default values for

<sup>9</sup> Under Article 3(1)(f) of Decision 2012/04/MC-EnC, Article 17(7) of the Directive is not applicable.

<sup>10</sup> Article 18(5) of Directive 2009/28/EC relates to decision-making powers of the European Commission.

<sup>11</sup> Not displayed here.

cultivation' in part D of Annex V to this Directive, accompanied by a description of the method and data used to establish that list. That method shall take into account soil characteristics, climate and expected raw material yields.

3. The default values in part A of Annex V for biofuels, and the disaggregated default values for cultivation in part D of Annex V for biofuels and bioliquids, may be used only when their raw materials are:

- (a) cultivated outside the **Energy Community**;
- (b) cultivated in the **Energy Community** in areas included in the lists referred to in paragraph 2; or
- (c) waste or residues other than agricultural, aquaculture and fisheries residues.

For biofuels and bioliquids not falling under points (a), (b) or (c), actual values for cultivation shall be used.

4. <...>

5. <...>

6. <...>

7. Annex V may be adapted to technical and scientific progress, including by the addition of values for further biofuel production pathways for the same or for other raw materials and by modifying the methodology laid down in part C. <...>

8. Detailed definitions, including technical specifications required for the categories set out in point 9 of part C of Annex V shall be established. <...>

## **Article 20**

### **Implementing measures**

The implementing measures referred to in the second subparagraph of Article 17(3), the third subparagraph of Article 18(3), Article 18(6), Article 18(8), Article 19(5), the first subparagraph of Article 19(7), and Article 19(8) shall also take full account of the purposes of Article 7a of Directive 98/70/EC.

## **Article 21**

### **Specific provisions related to energy from renewable sources in transport**

1. **Contracting Parties** shall ensure that information is given to the public on the availability and environmental benefits of all different renewable sources of energy for transport. When the percentages of biofuels, blended in mineral oil derivatives, exceed 10% by volume, **Contracting Parties** shall require this to be indicated at the sales points.

2. For the purposes of demonstrating compliance with national renewable energy obligations placed on operators and the target for the use of energy from renewable sources in all forms of transport referred to in Article 3(4), the contribution made by biofuels produced from wastes, residues, non-food cellulosic material, and ligno-cellulosic material shall be considered to be twice that made by other biofuels.

## Article 22

### Reporting by the Contracting Parties

**Contracting Parties shall submit a report to the Secretariat on progress in the promotion and use of energy from renewable sources by 31 December 2014 and every two years thereafter. This progress report should cover those points referred to in Article 22 of Directive 2009/28/EC.**<sup>12</sup>

The report shall detail, in particular:

- (a) the sectoral (electricity, heating and cooling, and transport) and overall shares of energy from renewable sources in the preceding two calendar years and the measures taken or planned at national level to promote the growth of energy from renewable sources taking into account the indicative trajectory in part B of Annex I, in accordance with Article 5;
- (b) the introduction and functioning of support schemes and other measures to promote energy from renewable sources, and any developments in the measures used with respect to those set out in the **Contracting Party's** national renewable energy action plan, and information on how supported electricity is allocated to final customers for purposes of Article 3(6) of Directive 2003/54/EC;
- (c) how, where applicable, the **Contracting Party** has structured its support schemes to take into account renewable energy applications that give additional benefits in relation to other, comparable applications, but may also have higher costs, including biofuels made from wastes, residues, non-food cellulosic material, and ligno-cellulosic material;
- (d) the functioning of the system of guarantees of origin for electricity and heating and cooling from renewable energy sources and the measures taken to ensure the reliability and protection against fraud of the system;
- (e) progress made in evaluating and improving administrative procedures to remove regulatory and non-regulatory barriers to the development of energy from renewable sources;
- (f) measures taken to ensure the transmission and distribution of electricity produced from renewable energy sources, and to improve the framework or rules for bearing and sharing of costs referred to in Article 16(3);
- (g) developments in the availability and use of biomass resources for energy purposes;
- (h) changes in commodity prices and land use within the **Contracting Party** associated with its increased use of biomass and other forms of energy from renewable sources;
- (i) the development and share of biofuels made from wastes, residues, non-food cellulosic material, and ligno-cellulosic material;
- (j) the estimated impact of the production of biofuels and bioliquids on biodiversity, water resources, water quality and soil quality within the **Contracting Party**;
- (k) the estimated net greenhouse gas emission saving due to the use of energy from renewable sources;
- (l) the estimated excess production of energy from renewable sources compared to the indicative trajectory which could be transferred to other **Contracting Parties**, as well as the estimated potential for joint projects, until 2020;

<sup>12</sup> The text displayed here corresponds to Article 15(1) of Decision 2012/04/MC-EnC.

(m) the estimated demand for energy from renewable sources to be satisfied by means other than domestic production until 2020; and

(n) information on how the share of biodegradable waste in waste used for producing energy has been estimated, and what steps have been taken to improve and verify such estimates.

2. In estimating net greenhouse gas emission saving from the use of biofuels, the **Contracting Party** may, for the purpose of the reports referred to in paragraph 1, use the typical values given in part A and part B of Annex V.

3. In its first report, the **Contracting Party** shall outline whether it intends to:

(a) establish a single administrative body responsible for processing authorisation, certification and licensing applications for renewable energy installations and providing assistance to applicants;

(b) provide for automatic approval of planning and permit applications for renewable energy installations where the authorising body has not responded within the set time limits; or

(c) indicate geographical locations suitable for exploitation of energy from renewable sources in land-use planning and for the establishment of district heating and cooling.

4. In each report the **Contracting Party** may correct the data of the previous reports.

### Article 23

#### Monitoring and reporting by the Energy Community Secretariat

**The Secretariat shall monitor and review the application of Directive 2009/28/EC in the Contracting Parties. It shall submit an overall progress report to the Ministerial Council for the first time by 30 June 2015, and thereafter every two years. This progress report should cover those points referred to in Article 23 of Directive 2009/28/EC.**<sup>13</sup>

1. The **Energy Community Secretariat** shall monitor the origin of biofuels and bioliquids consumed in the **Energy Community** and the impact of their production, including impact as a result of displacement, on land use in the **Energy Community** and the main third countries of supply. Such monitoring shall be based on **Contracting Parties'** reports, submitted pursuant to Article 22(1), and those of relevant third countries, intergovernmental organisations, scientific studies and any other relevant pieces of information. The **Energy Community Secretariat** shall also monitor the commodity price changes associated with the use of biomass for energy and any associated positive and negative effects on food security. The **Energy Community Secretariat** shall monitor all installations to which Article 19(6) applies.<sup>14</sup>

2. The **Energy Community Secretariat** shall maintain a dialogue and exchange information with third countries and biofuel producers, consumer organisations and civil society concerning the general implementation of the measures in this Directive relating to biofuels and bioliquids. It shall,

<sup>13</sup> The text displayed here corresponds to Article 15(2) of Decision 2012/04/MC-EnC.

<sup>14</sup> The second subparagraph of Article 19(6) of Directive 2009/28/EC (not displayed here) reads as follows: *"Such a proposal [by the Commission, related to a methodology for emissions from carbon stock changes caused by indirect land-use changes] shall include the necessary safeguards to provide certainty for investment undertaken before that methodology is applied. With respect to installations that produced biofuels before the end of 2013, the application of the measures referred to in the first subparagraph shall not, until 31 December 2017, lead to biofuels produced by those installations being deemed to have failed to comply with the sustainability requirements of this Directive if they would otherwise have done so, provided that those biofuels achieve a greenhouse gas emission saving of at least 45%. This shall apply to the capacities of the installations of biofuels at the end of 2012."*

within that framework, pay particular attention to the impact biofuel production may have on food prices.

3. <...>

4. In reporting on greenhouse gas emission saving from the use of biofuels, the **Energy Community Secretariat** shall use the values reported by **Contracting Parties** and shall evaluate whether and how the estimate would change if co-products were accounted for using the substitution approach.

5. In its reports, the **Energy Community Secretariat** shall, in particular, analyse:

(a) the relative environmental benefits and costs of different biofuels, the effects of the **Energy Community's** import policies thereon, the security of supply implications and the ways of achieving a balanced approach between domestic production and imports;

(b) the impact of increased demand for biofuel on sustainability in the **Energy Community** and in third countries, considering economic and environmental impacts, including impacts on biodiversity;

(c) the scope for identifying, in a scientifically objective manner, geographical areas of high biodiversity value that are not covered in Article 17(3);

(d) the impact of increased demand for biomass on biomass using sectors;

(e) the availability of biofuels made from waste, residues, non-food cellulosic material and ligno-cellulosic material; and

(f) indirect land-use changes in relation to all production pathways.

The **Energy Community Secretariat** shall, if appropriate, propose corrective action.

6. On the basis of the reports submitted by **Contracting Parties** pursuant to Article 22(3), the **Energy Community Secretariat** shall analyse the effectiveness of measures taken by **Contracting Parties** on establishing a single administrative body responsible for processing authorisation, certification and licensing applications and providing assistance to applicants.

7. <...>

8. **For the first time by 30 June 2015, and thereafter every two years**<sup>15</sup> the **Energy Community Secretariat** shall present a report, addressing, in particular, the following elements:

(a) a review of the minimum greenhouse gas emission saving thresholds to apply from the dates referred to in the second subparagraph of Article 17(2), on the basis of an impact assessment taking into account, in particular, technological developments, available technologies and the availability of first and second-generation bio-fuels with a high level of greenhouse gas emission saving;

(b) with respect to the target referred to in Article 3(4), a review of:

(i) the cost-efficiency of the measures to be implemented to achieve the target;

(ii) an assessment of the feasibility of reaching the target whilst ensuring the sustainability of biofuels production in the **Energy Community** and in third countries, and considering economic, environmental and social impacts, including indirect effects and impacts on biodiversity, as well as the commercial availability of second-generation biofuels;

(iii) the impact of the implementation of the target on the availability of foodstuffs at affordable prices;

(iv) the commercial availability of electric, hybrid and hydrogen powered vehicles, as well as the

<sup>15</sup> Article 15(2) of Decision 2012/04/MC-EnC.

methodology chosen to calculate the share of energy from renewable sources consumed in the transport sector;

(v) the evaluation of specific market conditions, considering, in particular, markets on which transport fuels represent more than half of the final energy consumption, and markets which are fully dependent on imported biofuels;

(c) an evaluation of the implementation of this Directive, in particular with regard to cooperation mechanisms, in order to ensure that, together with the possibility for the **Contracting Parties** to continue to use national support schemes referred to in Article 3(3), those mechanisms enable Contracting Parties to achieve the national targets defined in Annex I on the best cost-benefit basis, of technological developments, <...>

<...>

9. <...>

10. <...>

## Article 24

### Transparency platform

1. The **Energy Community Secretariat** shall establish an online public transparency platform. That platform shall serve to increase transparency, and facilitate and promote cooperation between **Contracting Parties**, in particular concerning statistical transfers referred to in Article 6 and joint projects referred to in Articles 7 and 9. In addition, the platform may be used to make public relevant information which the **Energy Community Secretariat** or a **Contracting Party** deems to be of key importance to this Directive and to the achievement of its objectives.

2. The **Energy Community Secretariat** shall make public on the transparency platform the following information, where appropriate in aggregated form, preserving the confidentiality of commercially sensitive information:

- (a) **Contracting Parties'** national renewable energy action plans;
- (b) **Contracting Parties'** forecast documents referred to in Article 4(3), complemented as soon as possible with the **Energy Community Secretariat's** summary of excess production and estimated import demand;
- (c) **Contracting Parties'** offers to cooperate on statistical transfers or joint projects, upon request of the **Contracting Party** concerned;
- (d) the information referred to in Article 6(2) on the statistical transfers between **Contracting Parties**;
- (e) the information referred to in Article 7(2) and (3) and Article 9(4) and (5) on joint projects;
- (f) **Contracting Parties'** national reports referred to in Article 22;
- (g) the **Energy Community Secretariat** reports referred to in Article 23(3).

However, upon request of the **Contracting Party** that submitted the information, the **Energy Community Secretariat** shall not make public **Contracting Parties'** forecast documents referred to in Article 4(3), or the information in **Contracting Parties'** national reports referred to in Article 22(1) (l) and (m).

**Article 25****Committees**

&lt;...&gt;

**Article 26****Amendments and repeal**

&lt;...&gt;

**Article 27****Transposition<sup>16</sup>**

1. Without prejudice to Article 4(1), (2) and (3), each **Contracting Party shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive, as adapted by the present Decision, by 1 January 2014.**<sup>17</sup> They shall forthwith inform the Energy Community Secretariat thereof.

When **Contracting Parties** adopt measures, they shall contain a reference to this Directive or shall be accompanied by such a reference on the occasion of their official publication. The methods of making such a reference shall be laid down by the Contracting Parties.

**2. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by this Directive.**

**Article 10 of Decision 2012/04/MC-EnC****Guidelines**

**1. The Energy Community shall endeavour to adopt Guidelines from the European Commission under Annexes IV, V and VII of Directive 2009/28/EC.**

**2. The relevant Guidelines, which may need to be adapted to the institutional framework of the Energy Community, shall be adopted by the Permanent High Level Group, following the procedure laid down in Article 79 of the Treaty.**

**Article 16 of Decision 2012/04/MC-EnC****Review based on the experience**

**Based on the experience and progress in compliance with the requirements of EUROSTAT methodology for energy statistics, and taking into account the reports presented by the Secretariat under Article 15(2), the Ministerial Council, based on a proposal from the European Commission, may review the scope of the adaptations provided for in the present decision.**

<sup>16</sup> Adapted by Article 2 of Decision 2012/04/MC-EnC.

<sup>17</sup> In accordance with the Accession Protocol, the corresponding date for Georgia is 31 December 2018.

**The European Commission may make such a proposal upon duly motivated request by a Contracting Party.**

***Articles 28 and 29***

**Entry into force and Addressees<sup>18</sup>**

**This Decision enters into force upon its adoption and is addressed to the Contracting Parties.**

---

<sup>18</sup> The text displayed here corresponds to Article 17 of Decision 2012/04/MC-EnC.

## ANNEX I

NATIONAL OVERALL TARGETS FOR THE SHARE OF ENERGY FROM RENEWABLE SOURCES IN GROSS FINAL CONSUMPTION OF ENERGY IN 2020<sup>19</sup>A. *National overall targets*

	Share of energy from renewable sources in gross final consumption of energy, 2009 (S <sub>2009</sub> )	Target for share of energy from renewable sources in gross final consumption of energy, 2020 (S <sub>2020</sub> )
Albania	31.2%	38%
Bosnia and Herzegovina	34.0%	40%
Croatia	12.6% <sup>20</sup>	20%
Former Yugoslav Republic of Macedonia	21.9%	28%
Moldova	11.9%	17%
Montenegro	26.3%	33%
Serbia	21.2%	27%
Ukraine	5.5%	11%
Kosovo*	18.9%	25%

\* This designation is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo declaration of independence.

B. *Indicative trajectory*

The indicative trajectory referred to in Article 3(2) shall consist of the following shares of energy from renewable sources:

$S_{2009} + 0.20 (S_{2020} - S_{2009})$ , as an average for the two-year period 2011 to 2012;

$S_{2009} + 0.30 (S_{2020} - S_{2009})$ , as an average for the two-year period 2013 to 2014;

$S_{2009} + 0.45 (S_{2020} - S_{2009})$ , as an average for the two-year period 2015 to 2016; and

$S_{2009} + 0.65 (S_{2020} - S_{2009})$ , as an average for the two-year period 2017 to 2018,

where

$S_{2009}$  = the share for that **Contracting Party** in 2009 as indicated in the table in part A,

and

$S_{2020}$  = the share for that **Contracting Party** in 2020 as indicated in the table in part A.

<sup>19</sup> In order to be able to achieve the national objectives set out in this Annex, it is underlined that the State aid guidelines for environmental protection recognise the continued need for national mechanisms of support for the promotion of energy from renewable sources.

<sup>20</sup> The base year for Croatia is 2005, not 2009.

## ANNEX II

### NORMALISATION RULE FOR ACCOUNTING FOR ELECTRICITY GENERATED FROM HYDROPOWER AND WIND POWER

The following rule shall be applied for the purpose of accounting for electricity generated from hydropower in a given **Contracting Party**:

$$Q_{N(\text{norm})} = C_N \times \left[ \sum_{i=N-14}^N \frac{Q_i}{C_i} \right] / 15$$

where:

N = reference year;

$Q_{N(\text{norm})}$  = normalised electricity generated by all hydropower plants of the **Contracting Party** in year N, for accounting purposes;

$Q_i$  = the quantity of electricity actually generated in year i by all hydropower plants of the **Contracting Party** measured in GWh, excluding production from pumped storage units using water that has previously been pumped uphill;

$C_i$  = the total installed capacity, net of pumped storage, of all hydropower plants of the **Contracting Party** at the end of year i, measured in MW.

The following rule shall be applied for the purpose of accounting for electricity generated from wind power in a given **Contracting Party**:

$$Q_{N(\text{norm})} = \frac{C_N + C_{N-1}}{2} \times \frac{\sum_{i=N-n}^N Q_i}{\sum_{j=N-n}^N \left( \frac{C_j + C_{j-1}}{2} \right)}$$

where:

N = reference year;

$Q_{N(\text{norm})}$  = normalised electricity generated by all wind power plants of the **Contracting Party** in year N, for accounting purposes;

$Q_i$  = the quantity of electricity actually generated in year i by all wind power plants of the **Contracting Party** measured in GWh;

$C_j$  = the total installed capacity of all the wind power plants of the **Contracting Party** at the end of year j, measured in MW;

n = 4 or the number of years preceding year N for which capacity and production data are available for the **Contracting Party** in question, whichever is lower.

## ANNEX III

## ENERGY CONTENT OF TRANSPORT FUELS

Fuel	Energy content by weight (lower calorific value, MJ/kg)	Energy content by volume (lower calorific value MJ/l)
Bioethanol (ethanol produced from biomass)	27	21
Bio-ETBE (ethyl-tertio-butyl-ether produced on the basis of bioethanol)	36 (of which 37% from renewable sources)	27 (of which 37% from renewable sources)
Biomethanol (methanol produced from biomass, to be used as biofuel)	20	16
Bio-MTBE (methyl-tertio-butyl-ether produced on the basis of bio-methanol)	35 (of which 22% from renewable sources)	26 (of which 22% from renewable sources)
Bio-DME (dimethylether produced from biomass, to be used as biofuel)	28	19
Bio-TAFE (tertiary-amyl-ethyl-ether produced on the basis of bio-ethanol)	38 (of which 29% from renewable sources)	29 (of which 29% from renewable sources)
Biobutanol (butanol produced from biomass, to be used as biofuel)	33	27
Biodiesel (methyl-ester produced from vegetable or animal oil, of diesel quality, to be used as biofuel)	37	33
Fischer-Tropsch diesel (a synthetic hydrocarbon or mixture of synthetic hydrocarbons produced from biomass)	44	34
Hydrotreated vegetable oil (vegetable oil thermochemically treated with hydrogen)	44	34
Pure vegetable oil (oil produced from oil plants through pressing, extraction or comparable procedures, crude or refined but chemically unmodified, when compatible with the type of engines involved and the corresponding emission requirements)	37	34
Biogas (a fuel gas produced from biomass and/or from the biodegradable fraction of waste, that can be purified to natural gas quality, to be used as biofuel, or wood gas)	50	34
Petrol	43	32
Diesel	43	36

## ANNEX IV

### CERTIFICATION OF INSTALLERS

The certification schemes or equivalent qualification schemes referred to in Article 14(3) shall be based on the following criteria:

1. The certification or qualification process shall be transparent and clearly defined by the **Contracting Party** or the administrative body they appoint.
2. Biomass, heat pump, shallow geothermal and solar photovoltaic and solar thermal installers shall be certified by an accredited training programme or training provider.
3. The accreditation of the training programme or provider shall be effected by **Contracting Parties** or administrative bodies they appoint. The accrediting body shall ensure that the training programme offered by the training provider has continuity and regional or national coverage. The training provider shall have adequate technical facilities to provide practical training, including some laboratory equipment or corresponding facilities to provide practical training. The training provider shall also offer in addition to the basic training, shorter refresher courses on topical issues, including on new technologies, to enable life-long learning in installations. The training provider may be the manufacturer of the equipment or system, institutes or associations.
4. The training leading to installer certification or qualification shall include both theoretical and practical parts. At the end of the training, the installer must have the skills required to install the relevant equipment and systems to meet the performance and reliability needs of the customer, incorporate quality craftsmanship, and comply with all applicable codes and standards, including energy and eco-labelling.
5. The training course shall end with an examination leading to a certificate or qualification. The examination shall include a practical assessment of successfully installing biomass boilers or stoves, heat pumps, shallow geothermal installations, solar photovoltaic or solar thermal installations.
6. The certification schemes or equivalent qualification schemes referred to in Article 14(3) shall take due account of the following guidelines:
  - (a) Accredited training programmes should be offered to installers with work experience, who have undergone, or are undergoing, the following types of training:
    - (i) in the case of biomass boiler and stove installers: training as a plumber, pipe fitter, heating engineer or technician of sanitary and heating or cooling equipment as a prerequisite;
    - (ii) in the case of heat pump installers: training as a plumber or refrigeration engineer and have basic electrical and plumbing skills (cutting pipe, soldering pipe joints, gluing pipe joints, lagging, sealing fittings, testing for leaks and installation of heating or cooling systems) as a prerequisite;
    - (iii) in the case of a solar photovoltaic or solar thermal installer: training as a plumber or electrician and have plumbing, electrical and roofing skills, including knowledge of soldering pipe joints, gluing pipe joints, sealing fittings, testing for plumbing leaks, ability to connect wiring, familiar with basic roof materials, flashing and sealing methods as a prerequisite; or
    - (iv) a vocational training scheme to provide an installer with adequate skills corresponding to a three years education in the skills referred to in point (a), (b) or (c) including both classroom and workplace learning.

(b) The theoretical part of the biomass stove and boiler installer training should give an overview of the market situation of biomass and cover ecological aspects, biomass fuels, logistics, fire protection, related subsidies, combustion techniques, firing systems, optimal hydraulic solutions, cost and profitability comparison as well as the design, installation, and maintenance of biomass boilers and stoves. The training should also provide good knowledge of any European standards for technology and biomass fuels, such as pellets, and biomass related national and **Energy Community** law.

(c) The theoretical part of the heat pump installer training should give an overview of the market situation for heat pumps and cover geothermal resources and ground source temperatures of different regions, soil and rock identification for thermal conductivity, regulations on using geothermal resources, feasibility of using heat pumps in buildings and determining the most suitable heat pump system, and knowledge about their technical requirements, safety, air filtering, connection with the heat source and system layout. The training should also provide good knowledge of any European standards for heat pumps, and of relevant national and **Energy Community** law. The installer should demonstrate the following key competences:

- (i) a basic understanding of the physical and operation principles of a heat pump, including characteristics of the heat pump circle: context between low temperatures of the heat sink, high temperatures of the heat source, and the efficiency of the system, determination of the coefficient of performance (COP) and seasonal performance factor (SPF);
- (ii) an understanding of the components and their function within a heat pump circle, including the compressor, expansion valve, evaporator, condenser, fixtures and fittings, lubricating oil, refrigerant, superheating and sub-cooling and cooling possibilities with heat pumps; and
- (iii) the ability to choose and size the components in typical installation situations, including determining the typical values of the heat load of different buildings and for hot water production based on energy consumption, determining the capacity of the heat pump on the heat load for hot water production, on the storage mass of the building and on interruptible current supply; determine buffer tank component and its volume and integration of a second heating system.

(d) The theoretical part of the solar photovoltaic and solar thermal installer training should give an overview of the market situation of solar products and cost and profitability comparisons, and cover ecological aspects, components, characteristics and dimensioning of solar systems, selection of accurate systems and dimensioning of components, determination of the heat demand, fire protection, related subsidies, as well as the design, installation, and maintenance of solar photovoltaic and solar thermal installations. The training should also provide good knowledge of any European standards for technology, and certification such as Solar Keymark, and related national and **Energy Community** law. The installer should demonstrate the following key competences:

- (i) the ability to work safely using the required tools and equipment and implementing safety codes and standards and identify plumbing, electrical and other hazards associated with solar installations;
- (ii) the ability to identify systems and their components specific to active and passive systems, including the mechanical design, and determine the components' location and system layout and configuration;
- (iii) the ability to determine the required installation area, orientation and tilt for the solar photovoltaic and solar water heater, taking account of shading, solar access, structural integrity, the appropriateness of the installation for the building or the climate and identify different in-

stallation methods suitable for roof types and the balance of system equipment required for the installation; and

(iv) for solar photovoltaic systems in particular, the ability to adapt the electrical design, including determining design currents, selecting appropriate conductor types and ratings for each electrical circuit, determining appropriate size, ratings and locations for all associated equipment and subsystems and selecting an appropriate interconnection point.

(e) The installer certification should be time restricted, so that a refresher seminar or event would be necessary for continued certification.

## ANNEX V

## RULES FOR CALCULATING THE GREENHOUSE GAS IMPACT OF BIOFUELS, BIOLIQUIDS AND THEIR FOSSIL FUEL COMPARATORS

*A. Typical and default values for biofuels if produced with no net carbon emissions from land-use change*

Biofuel production pathway	Typical greenhouse gas emission saving	Default greenhouse gas emission saving
sugar beet ethanol	61%	52%
wheat ethanol (process fuel not specified)	32%	16%
wheat ethanol (lignite as process fuel in CHP plant)	32%	16%
wheat ethanol (natural gas as process fuel in conventional boiler)	45%	34%
wheat ethanol (natural gas as process fuel in CHP plant)	53%	47%
wheat ethanol (straw as process fuel in CHP plant)	69%	69%
corn (maize) ethanol, Community produced (natural gas as process fuel in CHP plant)	56%	49%
sugar cane ethanol	71%	71%
the part from renewable sources of ethyl-tertio-butyl-ether (ETBE)	Equal to that of ethanol production pathway used	
the part from renewable sources of tertiary-amyl-ethyl-ether (TAEE)	Equal to that of ethanol production pathway used	
rape seed biodiesel	45%	38%
sunflower biodiesel	58%	51%
soybean biodiesel	40%	31%
palm oil biodiesel (process not specified)	36%	19%
palm oil biodiesel (process with methane capture at oil mill)	62%	56%
waste vegetable or animal (*) oil biodiesel	88%	83%
hydrotreated vegetable oil from rape seed	51%	47%
hydrotreated vegetable oil from sunflower	65%	62%
hydrotreated vegetable oil from palm oil (process not specified)	40%	26%
hydrotreated vegetable oil from palm oil (process with methane capture at oil mill)	68%	65%
pure vegetable oil from rape seed	58%	57%
biogas from municipal organic waste as compressed natural gas	80%	73%
biogas from wet manure as compressed natural gas	84%	81%
biogas from dry manure as compressed natural gas	86%	82%

(\*) Not including animal oil produced from animal by-products classified as category 3 material in accordance with Regulation (EC) No 1774/2002 of the European Parliament and of the Council of 3 October 2002 laying down health rules on animal-by products not intended for human consumption.

*B. Estimated typical and default values for future biofuels that were not on the market or were on the market only in negligible quantities in January 2008, if produced with no net carbon emissions from land-use change*

Biofuel production pathway	Typical green-house gas emission saving	Default green-house gas emission saving
wheat straw ethanol	87%	85%
waste wood ethanol	80%	74%
farmed wood ethanol	76%	70%
waste wood Fischer-Tropsch diesel	95%	95%
farmed wood Fischer-Tropsch diesel	93%	93%
waste wood dimetylether (DME)	95%	95%
farmed wood DME	92%	92%
waste wood methanol	94%	94%
farmed wood methanol	91%	91%
the part from renewable sources of methyl-tertio-butyl-ether (MTBE)	Equal to that of methanol production pathway used	

### C. Methodology

1. Greenhouse gas emissions from the production and use of transport fuels, biofuels and bioliquids shall be calculated as:

$$E = e_{ec} + e_l + e_p + e_{td} + e_u - e_{sca} - e_{ccs} - e_{ccr} - e_{ee}$$

where

E = total emissions from the use of the fuel;

$e_{ec}$  = emissions from the extraction or cultivation of raw materials;

$e_l$  = annualised emissions from carbon stock changes caused by land-use change;

$e_p$  = emissions from processing;

$e_{td}$  = emissions from transport and distribution;

$e_u$  = emissions from the fuel in use;

$e_{sca}$  = emission saving from soil carbon accumulation via improved agricultural management;

$e_{ccs}$  = emission saving from carbon capture and geological storage;

$e_{ccr}$  = emission saving from carbon capture and replacement; and

$e_{ee}$  = emission saving from excess electricity from cogeneration.

Emissions from the manufacture of machinery and equipment shall not be taken into account.

2. Greenhouse gas emissions from fuels, E, shall be expressed in terms of grams of CO<sub>2</sub> equivalent per MJ of fuel, gCO<sub>2eq</sub>/MJ.

3. By derogation from point 2, for transport fuels, values calculated in terms of gCO<sub>2eq</sub>/MJ may be adjusted to take into account differences between fuels in useful work done, expressed in terms of

km/MJ. Such adjustments shall be made only where evidence of the differences in useful work done is provided.

4. Greenhouse gas emission saving from biofuels and bioliquids shall be calculated as:

$$\text{SAVING} = (E_F - E_B)/E_F,$$

where

$E_B$  = total emissions from the biofuel or bioliquid; and

$E_F$  = total emissions from the fossil fuel comparator.

5. The greenhouse gases taken into account for the purposes of point 1 shall be  $\text{CO}_2$ ,  $\text{N}_2\text{O}$  and  $\text{CH}_4$ . For the purpose of calculating  $\text{CO}_2$  equivalence, those gases shall be valued as follows:

$\text{CO}_2$  : 1

$\text{N}_2\text{O}$  : 296

$\text{CH}_4$  : 23

6. Emissions from the extraction or cultivation of raw materials,  $e_{\text{ecr}}$ , shall include emissions from the extraction or cultivation process itself; from the collection of raw materials; from waste and leakages; and from the production of chemicals or products used in extraction or cultivation. Capture of  $\text{CO}_2$  in the cultivation of raw materials shall be excluded. Certified reductions of greenhouse gas emissions from flaring at oil production sites anywhere in the world shall be deducted. Estimates of emissions from cultivation may be derived from the use of averages calculated for smaller geographical areas than those used in the calculation of the default values, as an alternative to using actual values.

7. Annualised emissions from carbon stock changes caused by land-use change,  $e_1$ , shall be calculated by dividing total emissions equally over 20 years. For the calculation of those emissions the following rule shall be applied:

$$e_1 = (CS_R - CS_A) \times 3.664 \times 1/20 \times 1/P - e_b \text{ (}^1\text{)},$$

<sup>(1)</sup> The quotient obtained by dividing the molecular weight of  $\text{CO}_2$  (44,010 g/mol) by the molecular weight of carbon (12,011 g/mol) is equal to 3,664.

where

$e_1$  = annualised greenhouse gas emissions from carbon stock change due to land-use change (measured as mass of  $\text{CO}_2$ -equivalent per unit biofuel energy);

$CS_R$  = the carbon stock per unit area associated with the reference land use (measured as mass of carbon per unit area, including both soil and vegetation). The reference land use shall be the land use in January 2008 or 20 years before the raw material was obtained, whichever was the later;

$CS_A$  = the carbon stock per unit area associated with the actual land use (measured as mass of carbon per unit area, including both soil and vegetation). In cases where the carbon stock accumulate over more than one year, the value attributed to  $CS_A$  shall be the estimated stock per unit area after 20 years or when the crop reaches maturity, whichever the earlier,

$P$  = the productivity of the crop (measured as biofuel or bioliquid energy per unit area per year); and

$e_b$  = bonus of 29  $\text{gCO}_{2\text{eq}}/\text{MJ}$  biofuel of bioliquid if biomass is obtained from restored degraded land under the conditions provided for in point 8.

8. The bonus of  $29 \text{ gCO}_{2\text{eq}}/\text{MJ}$  shall be attributed if evidence is provided that the land:

- (a) was not in use for agriculture or any other activity in January 2008; and
- (b) falls into one of the following categories:
  - (i) severely degraded land, including such land that was formerly in agricultural use;
  - (ii) heavily contaminated land.

The bonus of  $29 \text{ gCO}_{2\text{eq}}/\text{MJ}$  shall apply for a period of up to 10 years from the date of conversion of the land to agricultural use, provided that a steady increase in carbon stocks as well as a sizable reduction in erosion phenomena for land falling under (i) are ensured and that soil contamination for land falling under (ii) is reduced.

9. The categories referred to in point 8(b) are defined as follows:

- (a) "severely degraded land" means land that, for a significant period of time, has either been significantly salinated or presented significantly low organic matter content and has been severely eroded;
- (b) "heavily contaminated land" means land that is unfit for the cultivation of food and feed due to soil contamination.

Such land shall include land that has been the subject of a Commission decision in accordance with the fourth subparagraph of Article 18(4).<sup>21</sup>

10. The Commission shall adopt, by 31 December 2009, guidelines for the calculation of land carbon stocks drawing on the 2006 IPCC Guidelines for National Greenhouse Gas Inventories - volume 4. The Commission guidelines shall serve as the basis for the calculation of land carbon stocks for the purposes of this Directive.

11. Emissions from processing,  $e_{p,r}$ , shall include emissions from the processing itself; from waste and leakages; and from the production of chemicals or products used in processing.

In accounting for the consumption of electricity not produced within the fuel production plant, the greenhouse gas emission intensity of the production and distribution of that electricity shall be assumed to be equal to the average emission intensity of the production and distribution of electricity in a defined region. By derogation from this rule, producers may use an average value for an individual electricity production plant for electricity produced by that plant, if that plant is not connected to the electricity grid.

12. Emissions from transport and distribution,  $e_{td,r}$ , shall include emissions from the transport and storage of raw and semi-finished materials and from the storage and distribution of finished materials. Emissions from transport and distribution to be taken into account under point 6 shall not be covered by this point.

13. Emissions from the fuel in use,  $e_{u,r}$ , shall be taken to be zero for biofuels and bioliquids.

14. Emission saving from carbon capture and geological storage  $e_{\text{ccs},r}$ , that have not already been accounted for in  $e_{p,r}$ , shall be limited to emissions avoided through the capture and sequestration of emitted  $\text{CO}_2$  directly related to the extraction, transport, processing and distribution of fuel.

15. Emission saving from carbon capture and replacement,  $e_{\text{ccr},r}$ , shall be limited to emissions avoided through the capture of  $\text{CO}_2$  of which the carbon originates from biomass and which is used to replace fossil-derived  $\text{CO}_2$  used in commercial products and services.

<sup>21</sup> Under Article 3(1)(f) of Decision 2012/04/MC-EnC, the fourth subparagraph of Article 18(4) of the Directive is not applicable.

16. Emission saving from excess electricity from cogeneration,  $e_{ee}$ , shall be taken into account in relation to the excess electricity produced by fuel production systems that use cogeneration except where the fuel used for the cogeneration is a co-product other than an agricultural crop residue. In accounting for that excess electricity, the size of the cogeneration unit shall be assumed to be the minimum necessary for the cogeneration unit to supply the heat that is needed to produce the fuel. The greenhouse gas emission saving associated with that excess electricity shall be taken to be equal to the amount of greenhouse gas that would be emitted when an equal amount of electricity was generated in a power plant using the same fuel as the cogeneration unit.

17. Where a fuel production process produces, in combination, the fuel for which emissions are being calculated and one or more other products (co-products), greenhouse gas emissions shall be divided between the fuel or its intermediate product and the co-products in proportion to their energy content (determined by lower heating value in the case of co-products other than electricity).

18. For the purposes of the calculation referred to in point 17, the emissions to be divided shall be  $e_{ec} + e_l$  + those fractions of  $e_p$ ,  $e_{td}$  and  $e_{ee}$  that take place up to and including the process step at which a co-product is produced. If any allocation to co-products has taken place at an earlier process step in the life-cycle, the fraction of those emissions assigned in the last such process step to the intermediate fuel product shall be used for this purpose instead of the total of those emissions.

In the case of biofuels and bioliquids, all co-products, including electricity that does not fall under the scope of point 16, shall be taken into account for the purposes of that calculation, except for agricultural crop residues, including straw, bagasse, husks, cobs and nut shells. Co-products that have a negative energy content shall be considered to have an energy content of zero for the purpose of the calculation.

Wastes, agricultural crop residues, including straw, bagasse, husks, cobs and nut shells, and residues from processing, including crude glycerine (glycerine that is not refined), shall be considered to have zero life-cycle greenhouse gas emissions up to the process of collection of those materials.

In the case of fuels produced in refineries, the unit of analysis for the purposes of the calculation referred to in point 17 shall be the refinery.

19. For biofuels, for the purposes of the calculation referred to in point 4, the fossil fuel comparator  $E_f$  shall be the latest available actual average emissions from the fossil part of petrol and diesel consumed in the **Energy Community** as reported under Directive 98/70/EC. If no such data are available, the value used shall be  $83.8 \text{ gCO}_{2\text{eq}}/\text{MJ}$ .

For bioliquids used for electricity production, for the purposes of the calculation referred to in point 4, the fossil fuel comparator  $E_f$  shall be  $91 \text{ gCO}_{2\text{eq}}/\text{MJ}$ .

For bioliquids used for heat production, for the purposes of the calculation referred to in point 4, the fossil fuel comparator  $E_f$  shall be  $77 \text{ gCO}_{2\text{eq}}/\text{MJ}$ .

For bioliquids used for cogeneration, for the purposes of the calculation referred to in point 4, the fossil fuel comparator  $E_f$  shall be  $85 \text{ gCO}_{2\text{eq}}/\text{MJ}$ .

*D. Disaggregated default values for biofuels and bioliquids*

Disaggregated default values for cultivation: "e<sub>ec</sub>" as defined in part C of this Annex

Biofuel production pathway	Typical greenhouse gas emissions (gCO <sub>2e</sub> q/MJ)	Default greenhouse gas emissions (gCO <sub>2e</sub> q/MJ)
sugar beet ethanol	12	12
wheat ethanol	23	23
corn (maize) ethanol, Community produced	20	20
sugar cane ethanol	14	14
the part from renewable sources of ETBE	Equal to that of ethanol production pathway used	
the part from renewable sources of TAE	Equal to that of ethanol production pathway used	
rape seed biodiesel	29	29
sunflower biodiesel	18	18
soybean biodiesel	19	19
palm oil biodiesel	14	14
waste vegetable or animal (*) oil biodiesel	0	0
hydrotreated vegetable oil from rape seed	30	30
hydrotreated vegetable oil from sunflower	18	18
hydrotreated vegetable oil from palm oil	15	15
pure vegetable oil from rape seed	30	30
biogas from municipal organic waste as compressed natural gas	0	0
biogas from wet manure as compressed natural gas	0	0
biogas from dry manure as compressed natural gas	0	0

(\*) Not including animal oil produced from animal by-products classified as category 3 material in accordance with Regulation (EC) 1774/2002.

Disaggregated default values for processing (including excess electricity): " $e_p - e_{ee}$ " as defined in part C of this Annex

Biofuel and bioliquid production pathway	Typical greenhouse gas emissions (gCO <sub>2e</sub> /MJ)	Default greenhouse gas emissions (gCO <sub>2e</sub> /MJ)
sugar beet ethanol	19	26
wheat ethanol (process not specified)	32	45
wheat ethanol (lignite as process fuel in CHP plant)	32	45
wheat ethanol (natural gas as process fuel in conventional boiler)	21	30
wheat ethanol (natural gas as process fuel in CHP plant)	14	19

Biofuel and bioliquid production pathway	Typical greenhouse gas emissions (gCO <sub>2e</sub> /MJ)	Default greenhouse gas emissions (gCO <sub>2e</sub> /MJ)
wheat ethanol	1	1
corn (maize) ethanol, Community produced (natural gas as process fuel in CHP plant)	15	21
sugar cane ethanol	1	1
the part from renewable sources of ETBE	Equal to that of ethanol production pathway used	
the part from renewable sources of TAAE	Equal to that of ethanol production pathway used	
rape seed biodiesel	16	22
sunflower biodiesel	16	22
soybean biodiesel	18	26
palm oil biodeisel (process not specified)	35	49
palm oil biodeisel (process with methane capture at oil mill)	13	18
waste vegetable or animal oil biodiesel	9	13
hydrotreated vegetable oil from rape seed	10	13
hydrotreated vegetable oil from sunflower	10	13
hydrotreated vegetable oil from palm oil (process not specified)	30	42
hydrotreated vegetable oil from palm oil (process with methane capture at oil mill)	7	9
pure vegetable oil from rape seed	4	5

## ANNEX VI

## MINIMUM REQUIREMENTS FOR THE HARMONISED TEMPLATE FOR NATIONAL RENEWABLE ENERGY ACTION PLANS

### 1. *Expected final energy consumption:*

Gross final energy consumption in electricity, transport and heating and cooling for 2020 taking into account the effects of energy efficiency policy measures.

### 2. *National sectoral 2020 targets and estimated shares of energy from renewable sources in electricity, heating and cooling and transport:*

- (a) target share of energy from renewable sources in electricity in 2020;
- (b) estimated trajectory for the share of energy from renewable sources in electricity;
- (c) target share of energy from renewable sources in heating and cooling in 2020;
- (d) estimated trajectory for the share of energy from renewable sources in heating and cooling;
- (e) estimated trajectory for the share of energy from renewable sources in transport;
- (f) national indicative trajectory as referred to in Article 3(2) and part B of Annex I.

### 3. *Measures for achieving the targets:*

- (a) overview of all policies and measures concerning the promotion of the use of energy from renewable sources;
- (b) specific measures to fulfil the requirements of Articles 13, 14 and 16, including the need to extend or reinforce existing infrastructure to facilitate the integration of the quantities of energy from renewable sources needed to achieve the 2020 national target, measures to accelerate the authorisation procedures, measures to reduce non-technological barriers and measures concerning Articles 17 to 21;
- (c) support schemes for the promotion of the use of energy from renewable sources in electricity applied by the **Contracting Party** or a group of **Contracting Parties**;
- (d) support schemes for the promotion of the use of energy from renewable sources in heating and cooling applied by the **Contracting Party** or a group of **Contracting Parties**;
- (e) support schemes for the promotion of the use of energy from renewable sources in transport applied by the **Contracting Party** or a group of **Contracting Parties**;
- (f) specific measures on the promotion of the use of energy from biomass, especially for new biomass mobilisation taking into account:
  - (i) biomass availability: both domestic potential and imports;
  - (ii) measures to increase biomass availability, taking into account other biomass users (agriculture and forest-based sectors);
- (g) planned use of statistical transfers between **Contracting Parties** and planned participation in joint projects with other **Contracting Parties** and third countries:
  - (i) the estimated excess production of energy from renewable sources compared to the indicative trajectory which could be transferred to other **Contracting Parties**;
  - (ii) the estimated potential for joint projects;

(iii) the estimated demand for energy from renewable sources to be satisfied by means other than domestic production.

*4. Assessments:*

(a) the total contribution expected of each renewable energy technology to meet the mandatory 2020 targets and the indicative trajectory for the shares of energy from renewable sources in electricity, heating and cooling and transport;

(b) the total contribution expected of the energy efficiency and energy saving measures to meet the mandatory 2020 targets and the indicative trajectory for the shares of energy from renewable sources in electricity, heating and cooling and transport.

## ANNEX VII

### ACCOUNTING OF ENERGY FROM HEAT PUMPS

The amount of aérothermal, géothermal or hydrothermal energy captured by heat pumps to be considered energy from renewable sources for the purposes of this Directive, ERES, shall be calculated in accordance with the following formula:

$$E_{RES} = Q_{usable} * (1 - 1/SPF)$$

where

- $Q_{usable}$  = the estimated total usable heat delivered by heat pumps fulfilling the criteria referred to in Article 5(4), implemented as follows: Only heat pumps for which  $SPF > 1.15 * 1/\eta$  shall be taken into account,
- SPF = the estimated average seasonal performance factor for those heat pumps,
- $\eta$  is the ratio between total gross production of electricity and the primary energy consumption for electricity production and shall be calculated as an EU average based on Eurostat data.

---

## **PART II**

ACQUIS COMMUNAUTAIRE

ENERGY EFFICIENCY

## **DIRECTIVE 2012/27/EU of 25 October 2012 on energy efficiency, amending Directives 2009/125/EC and 2010/30/EU and repealing Directives 2004/8/EC and 2006/32/EC**

Incorporated and adapted by Ministerial Council Decision 2015/08/MC-EnC of 16 October 2015 on the implementation of the EU Directive 2012/27/EU on energy efficiency

*The adaptations made by Ministerial Council Decision 2015/08/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) The Union is facing unprecedented challenges resulting from increased dependence on energy imports and scarce energy resources, and the need to limit climate change and to overcome the economic crisis. Energy efficiency is a valuable means to address these challenges. It improves the Union's security of supply by reducing primary energy consumption and decreasing energy imports. It helps to reduce greenhouse gas emissions in a cost-effective way and thereby to mitigate climate change. Shifting to a more energy-efficient economy should also accelerate the spread of innovative technological solutions and improve the competitiveness of industry in the Union, boosting economic growth and creating high quality jobs in several sectors related to energy efficiency.

(2) The Conclusions of the European Council of 8 and 9 March 2007 emphasised the need to increase energy efficiency in the Union to achieve the objective of saving 20% of the Union's primary energy consumption by 2020 compared to projections. The conclusions of the European Council of 4 February 2011 emphasised that the 2020 20% energy efficiency target as agreed by the June 2010 European Council, which is presently not on track, must be delivered. Projections made in 2007 showed a primary energy consumption in 2020 of 1 842 Mtoe. A 20% reduction results in 1 474 Mtoe in 2020, i.e. a reduction of 368 Mtoe as compared to projections.

(3) The Conclusions of the European Council of 17 June 2010 confirmed the energy efficiency target as one of the headline targets of the Union's new strategy for jobs and smart, sustainable and inclusive growth ('Europe 2020 Strategy'). Under this process and in order to implement this objective at national level, Member States are required to set national targets in close dialogue with the Commission and to indicate, in their National Reform Programmes, how they intend to achieve them.

(4) The Commission Communication of 10 November 2010 on Energy 2020 places energy efficiency at the core of the Union energy strategy for 2020 and outlines the need for a new energy efficiency strategy that will enable all Member States to decouple energy use from economic growth.

(5) In its resolution of 15 December 2010 on the Revision of the Energy Efficiency Action Plan, the European Parliament called on the Commission to include in its revised Energy Efficiency Action Plan measures to close the gap to reach the overall Union energy efficiency objective in 2020.

(6) One of the initiatives of the Europe 2020 Strategy is the flagship resource-efficient Europe adopted by the Commission on 26 January 2011. This identifies energy efficiency as a major element in ensuring the sustainability of the use of energy resources.

(7) The Conclusions of the European Council of 4 February 2011 acknowledged that the Union energy efficiency target is not on track and that determined action is required to tap the considerable potential for higher energy savings in buildings, transport, products and processes. Those conclu-

sions also provide that the implementation of the Union energy efficiency target will be reviewed by 2013 and further measures considered if necessary.

(8) On 8 March 2011, the Commission adopted its Communication on an Energy Efficiency Plan 2011. The Communication confirmed that the Union is not on track to achieve its energy efficiency target. This is despite the progress in national energy efficiency policies outlined in the first National Energy Efficiency Action Plans submitted by Member States in fulfilment of the requirements of Directive 2006/32/EC of the European Parliament and of the Council of 5 April 2006 on energy end-use efficiency and energy services. Initial analysis of the second Action Plans confirms that the Union is not on track. To remedy that, the Energy Efficiency Plan 2011 spelled out a series of energy efficiency policies and measures covering the full energy chain, including energy generation, transmission and distribution; the leading role of the public sector in energy efficiency; buildings and appliances; industry; and the need to empower final customers to manage their energy consumption. Energy efficiency in the transport sector was considered in parallel in the White Paper on Transport, adopted on 28 March 2011. In particular, Initiative 26 of the White Paper calls for appropriate standards for CO<sub>2</sub> emissions of vehicles in all modes, where necessary supplemented by requirements on energy efficiency to address all types of propulsion systems.

(9) On 8 March 2011, the Commission also adopted a Roadmap for moving to a competitive low carbon economy in 2050, identifying the need from this perspective for more focus on energy efficiency.

(10) In this context it is necessary to update the Union's legal framework for energy efficiency with a Directive pursuing the overall objective of the energy efficiency target of saving 20% of the Union's primary energy consumption by 2020, and of making further energy efficiency improvements after 2020. To that end, this Directive should establish a common framework to promote energy efficiency within the Union and lay down specific actions to implement some of the proposals included in the Energy Efficiency Plan 2011 and achieve the significant unrealised energy saving potentials it identifies.

(11) Decision No 406/2009/EC of the European Parliament and of the Council of 23 April 2009 on the effort of Member States to reduce their greenhouse gas emissions to meet the Community's greenhouse gas emission reduction commitments up to 2020 requires the Commission to assess and report by 2012 on the progress of the Union and its Member States towards the objective of reducing energy consumption by 20% by 2020 compared to projections. It also states that, to help Member States meet the Union's greenhouse gas emission reduction commitments, the Commission should propose, by 31 December 2012, strengthened or new measures to accelerate energy efficiency improvements. This Directive responds to this requirement. It also contributes to meeting the goals set out in the Roadmap for moving to a competitive low carbon economy in 2050, in particular by reducing greenhouse gas emissions from the energy sector, and to achieving zero emission electricity production by 2050.

(12) An integrated approach has to be taken to tap all the existing energy saving potential, encompassing savings in the energy supply and the end-use sectors. At the same time, the provisions of Directive 2004/8/EC of the European Parliament and of the Council of 11 February 2004 on promotion of cogeneration based on a useful heat demand in the internal energy market and Directive 2006/32/EC should be strengthened.

(13) It would be preferable for the 20% energy efficiency target to be achieved as a result of the cu-

mulative implementation of specific national and European measures promoting energy efficiency in different fields. Member States should be required to set indicative national energy efficiency targets, schemes and programmes. These targets and the individual efforts of each Member State should be evaluated by the Commission, alongside data on the progress made, to assess the likelihood of achieving the overall Union target and the extent to which the individual efforts are sufficient to meet the common goal. The Commission should therefore closely monitor the implementation of national energy efficiency programmes through its revised legislative framework and within the Europe 2020 process. When setting the indicative national energy efficiency targets, Member States should be able to take into account national circumstances affecting primary energy consumption such as remaining cost-effective energy-saving potential, changes in energy imports and exports, development of all sources of renewable energies, nuclear energy, carbon capture and storage, and early action. When undertaking modelling exercises, the Commission should consult Member States on model assumptions and draft model results in a timely and transparent manner. Improved modelling of the impact of energy efficiency measures and of the stock and performance of technologies is needed.

(14) Directive 2009/28/EC of the European Parliament and of the Council of 23 April 2009 on the promotion of the use of energy from renewable sources states that Cyprus and Malta, due to their insular and peripheral character, rely on aviation as a mode of transport, which is essential for their citizens and their economy. As a result, Cyprus and Malta have a gross final consumption of energy in national air transport which is disproportionately high, i.e. more than three times the Community average in 2005, and are thus disproportionately affected by the current technological and regulatory constraints.

(15) The total volume of public spending is equivalent to 19% of the Union's gross domestic product. For this reason the public sector constitutes an important driver to stimulate market transformation towards more efficient products, buildings and services, as well as to trigger behavioural changes in energy consumption by citizens and enterprises. Furthermore, decreasing energy consumption through energy efficiency improvement measures can free up public resources for other purposes. Public bodies at national, regional and local level should fulfil an exemplary role as regards energy efficiency.

(16) Bearing in mind that the Council conclusions of 10 June 2011 on the Energy Efficiency Plan 2011 stressed that buildings represent 40% of the Union's final energy consumption, and in order to capture the growth and employment opportunities in the skilled trades and construction sectors, as well as in the production of construction products and in professional activities such as architecture, consultancy and engineering, Member States should establish a long-term strategy beyond 2020 for mobilising investment in the renovation of residential and commercial buildings with a view to improving the energy performance of the building stock. That strategy should address cost-effective deep renovations which lead to a refurbishment that reduces both the delivered and the final energy consumption of a building by a significant percentage compared with the pre-renovation levels leading to a very high energy performance. Such deep renovations could also be carried out in stages.

(17) The rate of building renovation needs to be increased, as the existing building stock represents the single biggest potential sector for energy savings. Moreover, buildings are crucial to achieving the Union objective of reducing greenhouse gas emissions by 80-95% by 2050 compared to 1990. Buildings owned by public bodies account for a considerable share of the building stock and have high visibility in public life. It is therefore appropriate to set an annual rate of renovation of buildings

owned and occupied by central government on the territory of a Member State to upgrade their energy performance. This renovation rate should be without prejudice to the obligations with regard to nearly-zero energy buildings set in Directive 2010/31/EU of the European Parliament and of the Council of 19 May 2010 on the energy performance of buildings. The obligation to renovate central government buildings in this Directive complements that Directive, which requires Member States to ensure that when existing buildings undergo major renovation their energy performance is upgraded so that they meet minimum energy performance requirements. It should be possible for Member States to take alternative cost-efficient measures to achieve an equivalent improvement of the energy performance of the buildings within their central government estate. The obligation to renovate floor area of central government buildings should apply to the administrative departments whose competence extends over the whole territory of a Member State. When in a given Member State and for a given competence no such relevant administrative department exists that covers the whole territory, the obligation should apply to those administrative departments whose competences cover collectively the whole territory.

(18) A number of municipalities and other public bodies in the Member States have already put into place integrated approaches to energy saving and energy supply, for example via sustainable energy action plans, such as those developed under the Covenant of Mayors initiative, and integrated urban approaches which go beyond individual interventions in buildings or transport modes. Member States should encourage municipalities and other public bodies to adopt integrated and sustainable energy efficiency plans with clear objectives, to involve citizens in their development and implementation and to adequately inform them about their content and progress in achieving objectives. Such plans can yield considerable energy savings, especially if they are implemented by energy management systems that allow the public bodies concerned to better manage their energy consumption. Exchange of experience between cities, towns and other public bodies should be encouraged with respect to the more innovative experiences.

(19) With regard to the purchase of certain products and services and the purchase and rent of buildings, central governments which conclude public works, supply or service contracts should lead by example and make energy-efficient purchasing decisions. This should apply to the administrative departments whose competence extends over the whole territory of a Member State. When in a given Member State and for a given competence no such relevant administrative department exists that covers the whole territory, the obligation should apply to those administrative departments whose competences cover collectively the whole territory. The provisions of the Union's public procurement directives should not however be affected. For products other than those covered by the energy efficiency requirements for purchasing in this Directive, Member States should encourage public bodies to take into account the energy efficiency of purchase.

(20) An assessment of the possibility of establishing a 'white certificate' scheme at Union level has shown that, in the current situation, such a system would create excessive administrative costs and that there is a risk that energy savings would be concentrated in a number of Member States and not introduced across the Union. The objective of such a Union-level scheme could be better achieved, at least at this stage, by means of national energy efficiency obligation schemes for energy utilities or other alternative policy measures that achieve the same amount of energy savings. It is appropriate for the level of ambition of such schemes to be established in a common framework at Union level while providing significant flexibility to Member States to take fully into account the national organisation of market actors, the specific context of the energy sector and final customers' habits.

The common framework should give energy utilities the option of offering energy services to all final customers, not only to those to whom they sell energy. This increases competition in the energy market because energy utilities can differentiate their product by providing complementary energy services. The common framework should allow Member States to include requirements in their national scheme that pursue a social aim, in particular in order to ensure that vulnerable customers have access to the benefits of higher energy efficiency. Member States should determine, on the basis of objective and non-discriminatory criteria, which energy distributors or retail energy sales companies should be obliged to achieve the end-use energy savings target laid down in this Directive.

Member States should in particular be allowed not to impose this obligation on small energy distributors, small retail energy sales companies and small energy sectors to avoid disproportionate administrative burdens. The Commission Communication of 25 June 2008 sets out principles that should be taken into account by Member States that decide to abstain from applying this possibility. As a means of supporting national energy efficiency initiatives, obligated parties under national energy efficiency obligation schemes could fulfil their obligations by contributing annually to an Energy Efficiency National Fund an amount that is equal to the investments required under the scheme.

(21) Given the over-arching imperative of restoring sustainability to public finances and of fiscal consolidation, in the implementation of particular measures falling within the scope of this Directive, due regard should be accorded to the cost-effectiveness at Member State level of implementing energy efficiency measures on the basis of an appropriate level of analysis and evaluation.

(22) The requirement to achieve savings of the annual energy sales to final customers relative to what energy sales would have been does not constitute a cap on sales or energy consumption. Member States should be able to exclude all or part of the sales of energy, by volume, used in industrial activities listed in Annex I to Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community for the calculation of the energy sales to final customers, as it is recognised that certain sectors or subsectors within these activities may be exposed to a significant risk of carbon leakage. It is appropriate that Member States are aware of the costs of schemes in order to be able to accurately assess the costs of measures.

(23) Without prejudice to the requirements in Article 7 and with a view to limiting the administrative burden, each Member State may group all individual policy measures to implement Article 7 into a comprehensive national energy efficiency programme.

(24) To tap the energy savings potential in certain market segments where energy audits are generally not offered commercially (such as small and medium-sized enterprises (SMEs)), Member States should develop programmes to encourage SMEs to undergo energy audits. Energy audits should be mandatory and regular for large enterprises, as energy savings can be significant. Energy audits should take into account relevant European or International Standards, such as EN ISO 50001 (Energy Management Systems), or EN 16247-1 (Energy Audits), or, if including an energy audit, EN ISO 14000 (Environmental Management Systems) and thus be also in line with the provisions of Annex VI to this Directive as such provisions do not go beyond the requirements of these relevant standards. A specific European standard on energy audits is currently under development.

(25) Where energy audits are carried out by in-house experts, the necessary independence would require these experts not to be directly engaged in the activity audited.

(26) When designing energy efficiency improvement measures, account should be taken of efficien-

cy gains and savings obtained through the widespread application of cost-effective technological innovations such as smart meters. Where smart meters have been installed, they should not be used by companies for unjustified back billing.

(27) In relation to electricity, and in accordance with Directive 2009/72/EC of the European Parliament and of the Council of 13 July 2009 concerning common rules for the internal market in electricity, where the roll-out of smart meters is assessed positively, at least 80% of consumers should be equipped with intelligent metering systems by 2020. In relation to gas, and in accordance with Directive 2009/73/EC of the European Parliament and of the Council of 13 July 2009 concerning common rules for the internal market in natural gas, where the roll-out of intelligent metering systems is assessed positively, Member States or any competent authority they designate, should prepare a timetable for the implementation of intelligent metering systems.

(28) Use of individual meters or heat cost allocators for measuring individual consumption of heating in multi-apartment buildings supplied by district heating or common central heating is beneficial when final customers have a means to control their own individual consumption. Therefore, their use makes sense only in buildings where radiators are equipped with thermostatic radiator valves.

(29) In some multi-apartment buildings supplied by district heating or common central heating, the use of accurate individual heat meters would be technically complicated and costly due to the fact that the hot water used for heating enters and leaves the apartments at several points. It can be assumed that individual metering of heat consumption in multi-apartment buildings is, nevertheless, technically possible when the installation of individual meters would not require changing the existing in-house piping for hot water heating in the building. In such buildings, measurements of individual heat consumption can then be carried out by means of individual heat cost allocators installed on each radiator.

(30) Directive 2006/32/EC requires Member States to ensure that final customers are provided with competitively priced individual meters that accurately reflect their actual energy consumption and provide information on actual time of use. In most cases, this requirement is subject to the conditions that it should be technically possible, financially reasonable, and proportionate in relation to the potential energy savings. When a connection is made in a new building or a building undergoes major renovations, as defined in Directive 2010/31/EU, such individual meters should, however, always be provided. Directive 2006/32/EC also requires that clear billing based on actual consumption should be provided frequently enough to enable consumers to regulate their own energy use.

(31) Directives 2009/72/EC and 2009/73/EC require Member States to ensure the implementation of intelligent metering systems to assist the active participation of consumers in the electricity and gas supply markets. As regards electricity, where the roll-out of smart meters is found to be cost-effective, at least 80% of consumers must be equipped with intelligent metering systems by 2020. As regards natural gas, no deadline is given but the preparation of a timetable is required. Those Directives also state that final customers must be properly informed of actual electricity/gas consumption and costs frequently enough to enable them to regulate their own consumption.

(32) The impact of the provisions on metering and billing in Directives 2006/32/EC, 2009/72/EC and 2009/73/EC on energy saving has been limited. In many parts of the Union, these provisions have not led to customers receiving up-to-date information about their energy consumption, or billing based on actual consumption at a frequency which studies show is needed to enable customers to regulate their energy use. In the sectors of space heating and hot water in multi-apartment buildings

the insufficient clarity of these provisions has also led to numerous complaints from citizens.

(33) In order to strengthen the empowerment of final customers as regards access to information from the metering and billing of their individual energy consumption, bearing in mind the opportunities associated with the process of the implementation of intelligent metering systems and the roll out of smart meters in the Member States, it is important that the requirements of Union law in this area be made clearer. This should help reduce the costs of the implementation of intelligent metering systems equipped with functions enhancing energy saving and support the development of markets for energy services and demand management. Implementation of intelligent metering systems enables frequent billing based on actual consumption. However, there is also a need to clarify the requirements for access to information and fair and accurate billing based on actual consumption in cases where smart meters will not be available by 2020, including in relation to metering and billing of individual consumption of heating, cooling and hot water in multi-unit buildings supplied by district heating/cooling or own common heating system installed in such buildings.

(34) When designing energy efficiency improvement measures, Member States should take due account of the need to ensure the correct functioning of the internal market and the coherent implementation of the *acquis*, in accordance with the Treaty on the Functioning of the European Union.

(35) High-efficiency cogeneration and district heating and cooling has significant potential for saving primary energy, which is largely untapped in the Union. Member States should carry out a comprehensive assessment of the potential for high-efficiency cogeneration and district heating and cooling. These assessments should be updated, at the request of the Commission, to provide investors with information concerning national development plans and contribute to a stable and supportive investment environment. New electricity generation installations and existing installations which are substantially refurbished or whose permit or licence is updated should, subject to a cost-benefit analysis showing a cost-benefit surplus, be equipped with high-efficiency cogeneration units to recover waste heat stemming from the production of electricity. This waste heat could then be transported where it is needed through district heating networks. The events that trigger a requirement for authorisation criteria to be applied will generally be events that also trigger requirements for permits under Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions and for authorisation under Directive 2009/72/EC.

(36) It may be appropriate for nuclear power installations, or electricity generation installations that are intended to make use of geological storage permitted under Directive 2009/31/EC of the European Parliament and of the Council of 23 April 2009 on the geological storage of carbon dioxide, to be located in places where the recovery of waste heat through high-efficiency cogeneration or by supplying a district heating or cooling network is not cost-effective. Member States should therefore be able to exempt those installations from the obligation to carry out a cost-benefit analysis for providing the installation with equipment allowing the recovery of waste heat by means of a high-efficiency cogeneration unit. It should also be possible to exempt peak-load and back-up electricity generation installations which are planned to operate under 1 500 operating hours per year as a rolling average over a period of five years from the requirement to also provide heat.

(37) It is appropriate for Member States to encourage the introduction of measures and procedures to promote cogeneration installations with a total rated thermal input of less than 20 MW in order to encourage distributed energy generation.

(38) High-efficiency cogeneration should be defined by the energy savings obtained by combined

production instead of separate production of heat and electricity. The definitions of cogeneration and high-efficiency cogeneration used in Union legislation should be without prejudice to the use of different definitions in national legislation for purposes other than those of the Union legislation in question. To maximise energy savings and avoid energy saving opportunities being missed, the greatest attention should be paid to the operating conditions of cogeneration units.

(39) To increase transparency for the final customer to be able to choose between electricity from cogeneration and electricity produced by other techniques, the origin of high-efficiency cogeneration should be guaranteed on the basis of harmonised efficiency reference values. Guarantee of origin schemes do not by themselves imply a right to benefit from national support mechanisms. It is important that all forms of electricity produced from high-efficiency cogeneration can be covered by guarantees of origin. Guarantees of origin should be distinguished from exchangeable certificates.

(40) The specific structure of the cogeneration and district heating and cooling sectors, which include many small and medium-sized producers, should be taken into account, especially when reviewing the administrative procedures for obtaining permission to construct cogeneration capacity or associated networks, in application of the 'Think Small First' principle.

(41) Most Union businesses are SMEs. They represent an enormous energy saving potential for the Union. To help them adopt energy efficiency measures, Member States should establish a favourable framework aimed at providing SMEs with technical assistance and targeted information.

(42) Directive 2010/75/EU includes energy efficiency among the criteria for determining the Best Available Techniques that should serve as a reference for setting the permit conditions for installations within its scope, including combustion installations with a total rated thermal input of 50 MW or more. However, that Directive gives Member States the option not to impose requirements relating to energy efficiency on combustion units or other units emitting carbon dioxide on the site, for the activities listed in Annex I to Directive 2003/87/EC. Member States could include information on energy efficiency levels in their reporting under Directive 2010/75/EU.

(43) Member States should establish, on the basis of objective, transparent and non-discriminatory criteria, rules governing the bearing and sharing of costs of grid connections and grid reinforcements and for technical adaptations needed to integrate new producers of electricity produced from high-efficiency cogeneration, taking into account guidelines and codes developed in accordance with Regulation (EC) No 714/2009 of the European Parliament and of the Council of 13 July 2009 on conditions for access to the network for cross-border exchanges in electricity and Regulation (EC) No 715/2009 of the European Parliament and of the Council of 13 July 2009 on conditions for access to the natural gas transmission networks. Producers of electricity generated from high-efficiency cogeneration should be allowed to issue a call for tender for the connection work. Access to the grid system for electricity produced from high-efficiency cogeneration, especially for small scale and micro-cogeneration units, should be facilitated. In accordance with Article 3(2) of Directive 2009/72/EC and Article 3(2) of Directive 2009/73/EC, Member States may impose public service obligations, including in relation to energy efficiency, on undertakings operating in the electricity and gas sectors.

(44) Demand response is an important instrument for improving energy efficiency, since it significantly increases the opportunities for consumers or third parties nominated by them to take action on consumption and billing information and thus provides a mechanism to reduce or shift consumption, resulting in energy savings in both final consumption and, through the more optimal use of networks and generation assets, in energy generation, transmission and distribution.

(45) Demand response can be based on final customers' responses to price signals or on building automation. Conditions for, and access to, demand response should be improved, including for small final consumers. Taking into account the continuing deployment of smart grids, Member States should therefore ensure that national energy regulatory authorities are able to ensure that network tariffs and regulations incentivise improvements in energy efficiency and support dynamic pricing for demand response measures by final customers. Market integration and equal market entry opportunities for demand-side resources (supply and consumer loads) alongside generation should be pursued. In addition, Member States should ensure that national energy regulatory authorities take an integrated approach encompassing potential savings in the energy supply and the end-use sectors.

(46) A sufficient number of reliable professionals competent in the field of energy efficiency should be available to ensure the effective and timely implementation of this Directive, for instance as regards compliance with the requirements on energy audits and implementation of energy efficiency obligation schemes. Member States should therefore put in place certification schemes for the providers of energy services, energy audits and other energy efficiency improvement measures.

(47) It is necessary to continue developing the market for energy services to ensure the availability of both the demand for and the supply of energy services. Transparency, for example by means of lists of energy services providers, can contribute to this. Model contracts, exchange of best practice and guidelines, in particular for energy performance contracting, can also help stimulate demand. As in other forms of third-party financing arrangements, in an energy performance contract the beneficiary of the energy service avoids investment costs by using part of the financial value of energy savings to repay the investment fully or partially carried out by a third party.

(48) There is a need to identify and remove regulatory and non-regulatory barriers to the use of energy performance contracting and other third-party financing arrangements for energy savings. These barriers include accounting rules and practices that prevent capital investments and annual financial savings resulting from energy efficiency improvement measures from being adequately reflected in the accounts for the whole life of the investment. Obstacles to the renovating of the existing building stock based on a split of incentives between the different actors concerned should also be tackled at national level.

(49) Member States and regions should be encouraged to make full use of the Structural Funds and the Cohesion Fund to trigger investments in energy efficiency improvement measures. Investment in energy efficiency has the potential to contribute to economic growth, employment, innovation and a reduction in fuel poverty in households, and therefore makes a positive contribution to economic, social and territorial cohesion. Potential areas for funding include energy efficiency measures in public buildings and housing, and providing new skills to promote employment in the energy efficiency sector.

(50) Member States should encourage the use of financing facilities to further the objectives of this Directive. Such financing facilities could include financial contributions and fines from non-fulfilment of certain provisions of this Directive; resources allocated to energy efficiency under Article 10(3) of Directive 2003/87/EC; resources allocated to energy efficiency in the multiannual financial framework, in particular cohesion, structural and rural development funds, and dedicated European financial instruments, such as the European Energy Efficiency Fund.

(51) Financing facilities could be based, where applicable, on resources allocated to energy efficiency from Union project bonds; resources allocated to energy efficiency from the European Investment

Bank and other European financial institutions, in particular the European Bank for Reconstruction and Development and the Council of Europe Development Bank; resources leveraged in financial institutions; national resources, including through the creation of regulatory and fiscal frameworks encouraging the implementation of energy efficiency initiatives and programmes; revenues from annual emission allocations under Decision No 406/2009/EC.

(52) The financing facilities could in particular use those contributions, resources and revenues to enable and encourage private capital investment, in particular drawing on institutional investors, while using criteria ensuring the achievement of both environmental and social objectives for the granting of funds; make use of innovative financing mechanisms (e.g. loan guarantees for private capital, loan guarantees to foster energy performance contracting, grants, subsidised loans and dedicated credit lines, third party financing systems) that reduce the risks of energy efficiency projects and allow for cost-effective renovations even among low and medium revenue households; be linked to programmes or agencies which will aggregate and assess the quality of energy saving projects, provide technical assistance, promote the energy services market and help to generate consumer demand for energy services.

(53) The financing facilities could also provide appropriate resources to support training and certification programmes which improve and accredit skills for energy efficiency; provide resources for research on and demonstration and acceleration of uptake of small-scale and micro- technologies to generate energy and the optimisation of the connections of those generators to the grid; be linked to programmes undertaking action to promote energy efficiency in all dwellings to prevent energy poverty and stimulate landlords letting dwellings to render their property as energy-efficient as possible; provide appropriate resources to support social dialogue and standard-setting aiming at improving energy efficiency and ensuring good working conditions and health and safety at work.

(54) Available Union financial instruments and innovative financing mechanisms should be used to give practical effect to the objective of improving the energy performance of public bodies' buildings. In that respect, Member States may use their revenues from annual emission allocations under Decision No 406/2009/EC in the development of such mechanisms on a voluntary basis and taking into account national budgetary rules.

(55) In the implementation of the 20% energy efficiency target, the Commission will have to monitor the impact of new measures on Directive 2003/87/EC establishing the Union's emissions trading scheme (ETS) in order to maintain the incentives in the emissions trading system rewarding low carbon investments and preparing the ETS sectors for the innovations needed in the future. It will need to monitor the impact on those industry sectors which are exposed to a significant risk of carbon leakage as determined in Commission Decision 2010/2/EU of 24 December 2009 determining, pursuant to Directive 2003/87/EC of the European Parliament and of the Council, a list of sectors and subsectors which are deemed to be exposed to a significant risk of carbon leakage, in order to ensure that this Directive promotes and does not impede the development of these sectors.

(56) Directive 2006/32/EC requires Member States to adopt, and aim to achieve, an overall national indicative energy savings target of 9% by 2016, to be reached by deploying energy services and other energy efficiency improvement measures. That Directive states that the second Energy Efficiency Plan adopted by the Member States shall be followed, as appropriate and where necessary, by Commission proposals for additional measures, including extending the period of application of targets. If a report concludes that insufficient progress has been made towards achieving the indicative national targets laid down by that Directive, these proposals are to address the level and nature

of the targets. The impact assessment accompanying this Directive finds that the Member States are on track to achieve the 9% target, which is substantially less ambitious than the subsequently adopted 20% energy saving target for 2020, and therefore there is no need to address the level of the targets.

(57) The Intelligent Energy Europe Programme established by Decision No 1639/2006/EC of the European Parliament and of the Council of 24 October 2006 establishing a Competitiveness and Innovation Framework Programme (2007 to 2013) has been instrumental in creating an enabling environment for the proper implementation of the Union's sustainable energy policies, by removing market barriers such as insufficient awareness and capacity of market actors and institutions, national technical or administrative barriers to the proper functioning of the internal energy market or underdeveloped labour markets to match the low-carbon economy challenge. Many of those barriers are still relevant.

(58) In order to tap the considerable energy-saving potential of energy-related products, the implementation of Directive 2009/125/EC of the European Parliament and of the Council of 21 October 2009 establishing a framework for the setting of ecodesign requirements for energy-related products and Directive 2010/30/EU of the European Parliament and of the Council of 19 May 2010 on the indication by labelling and standard product information of the consumption of energy and other resources by energy-related products should be accelerated and widened. Priority should be given to products offering the highest energy-saving potential as identified by the Ecodesign Working Plan and the revision, where appropriate, of existing measures.

(59) In order to clarify the conditions under which Member States can set energy performance requirements under Directive 2010/31/EU whilst respecting Directive 2009/125/EC and its implementing measures, Directive 2009/125/EC should be amended accordingly.

(60) Since the objective of this Directive, namely to achieve the Union's energy efficiency target of 20% by 2020 and pave the way towards further energy efficiency improvements beyond 2020, cannot be sufficiently achieved by the Member States without taking additional energy efficiency measures, and can be better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve that objective.

(61) In order to permit adaptation to technical progress and changes in the distribution of energy sources, the power to adopt acts in accordance with Article 290 of the Treaty on the Functioning of the European Union should be delegated to the Commission in respect of the review of the harmonised efficiency reference values laid down on the basis of Directive 2004/8/EC and in respect of the values, calculation methods, default primary energy coefficient and requirements in the Annexes to this Directive. It is of particular importance that the Commission carry out appropriate consultations during its preparatory work, including at expert level. The Commission, when preparing and drawing up delegated acts, should ensure a simultaneous, timely and appropriate transmission of relevant documents to the European Parliament and the Council.

(62) In order to ensure uniform conditions for the implementation of this Directive, implementing powers should be conferred on the Commission. Those powers should be exercised in accordance with Regulation (EU) No 182/2011 of the European Parliament and of the Council of 16 February 2011 laying down the rules and general principles concerning mechanisms for control by Member

States of the Commission's exercise of implementing powers.

(63) All substantive provisions of Directives 2004/8/EC and 2006/32/EC should be repealed, except Article 4(1) to (4) of, and Annexes I, III and IV to Directive 2006/32/EC. Those latter provisions should continue to apply until the deadline for the achievement of the 9% target. Article 9(1) and (2) of Directive 2010/30/EU, which provides for an obligation for Member States only to endeavour to procure products having the highest energy efficiency class, should be deleted.

(64) The obligation to transpose this Directive into national law should be limited to those provisions that represent a substantive change as compared with Directives 2004/8/EC and 2006/32/EC. The obligation to transpose the provisions which are unchanged arises under those Directives.

(65) This Directive should be without prejudice to the obligations of the Member States relating to the time limits for transposition into national law and application of Directives 2004/8/EC and 2006/32/EC.

(66) In accordance with the Joint Political Declaration of Member States and the Commission on explanatory documents of 28 September 2011, Member States have undertaken to accompany, in justified cases, the notification of their transposition measures with one or more documents explaining the relationship between the components of a directive and the corresponding parts of national transposition instruments. With regard to this Directive, the legislator considers the transmission of such documents to be justified.

## CHAPTER I

### SUBJECT MATTER, SCOPE, DEFINITIONS AND ENERGY EFFICIENCY TARGETS

#### *Article 1*

#### Subject matter and scope

**1. This Directive establishes a common framework of measures for the promotion of energy efficiency within the Energy Community, to set a 20% headline target on energy efficiency in the Energy Community in 2020 and to pave the way for further energy efficiency improvements beyond that date.**

**It lays down rules designed to remove barriers in the energy market and overcome market failures that impede efficiency in the supply and use of energy, and provides for the establishment of indicative national energy efficiency targets for 2020.**

2. The requirements laid down in this Directive are minimum requirements and shall not prevent any **Contracting Party** from maintaining or introducing more stringent measures. Such measures shall be compatible with **Energy Community** law. Where national legislation provides for more stringent measures, the **Contracting Party** shall notify such legislation to **the Energy Community Secretariat**<sup>1</sup>.

<sup>1</sup> The text displayed here corresponds to Article 1(2) of Ministerial Council Decision 2015/08/MC-EnC.

## **Article 2**

### **Definitions**

For the purposes of this Directive, the following definitions shall apply:

- (1) 'energy' means all forms of energy products, combustible fuels, heat, renewable energy, electricity, or any other form of energy, as defined in Article 2(d) of Regulation (EC) No 1099/2008 of the European Parliament and of the Council of 22 October 2008 on energy statistics<sup>2</sup>;
- (2) 'primary energy consumption' means gross inland consumption, excluding non-energy uses;
- (3) 'final energy consumption' means all energy supplied to industry, transport, households, services and agriculture. It excludes deliveries to the energy transformation sector and the energy industries themselves;
- (4) 'energy efficiency' means the ratio of output of performance, service, goods or energy, to input of energy;
- (5) 'energy savings' means an amount of saved energy determined by measuring and/or estimating consumption before and after implementation of an energy efficiency improvement measure, whilst ensuring normalisation for external conditions that affect energy consumption;
- (6) 'energy efficiency improvement' means an increase in energy efficiency as a result of technological, behavioural and/or economic changes;
- (7) 'energy service' means the physical benefit, utility or good derived from a combination of energy with energy-efficient technology or with action, which may include the operations, maintenance and control necessary to deliver the service, which is delivered on the basis of a contract and in normal circumstances has proven to result in verifiable and measurable or estimable energy efficiency improvement or primary energy savings;
- (8) 'public bodies' means 'contracting authorities' as defined in Directive 2004/18/EC of the European Parliament and of the Council of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts;
- (9) 'central government' means all administrative departments whose competence extends over the whole territory of a **Contracting Party**;
- (10) 'total useful floor area' means the floor area of a building or part of a building, where energy is used to condition the indoor climate;
- (11) 'energy management system' means a set of interrelated or interacting elements of a plan which sets an energy efficiency objective and a strategy to achieve that objective;
- (12) 'European standard' means a standard adopted by the European Committee for Standardisation, the European Committee for Electrotechnical Standardisation or the European Telecommunications Standards Institute and made available for public use;
- (13) 'international standard' means a standard adopted by the International Standardisation Organisation and made available to the public;
- (14) 'obligated party' means an energy distributor or retail energy sales company that is bound by the national energy efficiency obligation schemes referred to in Article 7;

<sup>2</sup> Incorporated by Ministerial Council Decision 2012/02/MC-EnC of 18 October 2012 concerning the implementation of the rules of energy statistics in the Energy Community.

- (15) 'entrusted party' means a legal entity with delegated power from a government or other public body to develop, manage or operate a financing scheme on behalf of the government or other public body;
- (16) 'participating party' means an enterprise or public body that has committed itself to reaching certain objectives under a voluntary agreement, or is covered by a national regulatory policy instrument;
- (17) 'implementing public authority' means a body governed by public law which is responsible for the carrying out or monitoring of energy or carbon taxation, financial schemes and instruments, fiscal incentives, standards and norms, energy labelling schemes, training or education;
- (18) 'policy measure' means a regulatory, financial, fiscal, voluntary or information provision instrument formally established and implemented in a **Contracting Party** to create a supportive framework, requirement or incentive for market actors to provide and purchase energy services and to undertake other energy efficiency improvement measures;
- (19) 'individual action' means an action that leads to verifiable, and measurable or estimable, energy efficiency improvements and is undertaken as a result of a policy measure;
- (20) 'energy distributor' means a natural or legal person, including a distribution system operator, responsible for transporting energy with a view to its delivery to final customers or to distribution stations that sell energy to final customers;
- (21) **'distribution system operator' means 'distribution system operator' as defined in Directive 2009/72/EC and Directive 2009/73/EC respectively, as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC;**
- (22) 'retail energy sales company' means a natural or legal person who sells energy to final customers;
- (23) 'final customer' means a natural or legal person who purchases energy for own end use;
- (24) 'energy service provider' means a natural or legal person who delivers energy services or other energy efficiency improvement measures in a final customer's facility or premises;
- (25) 'energy audit' means a systematic procedure with the purpose of obtaining adequate knowledge of the existing energy consumption profile of a building or group of buildings, an industrial or commercial operation or installation or a private or public service, identifying and quantifying cost-effective energy savings opportunities, and reporting the findings;
- (26) 'small and medium-sized enterprises' or 'SMEs' means enterprises as defined in Title I of the Annex to Commission Recommendation 2003/361/EC of 6 May 2003 concerning the definition of micro, small and medium-sized enterprises; the category of micro, small and medium-sized enterprises is made up of enterprises which employ fewer than 250 persons and which have an annual turnover not exceeding EUR 50 million, and/or an annual balance sheet total not exceeding EUR 43 million;
- (27) 'energy performance contracting' means a contractual arrangement between the beneficiary and the provider of an energy efficiency improvement measure, verified and monitored during the whole term of the contract, where investments (work, supply or service) in that measure are paid for in relation to a contractually agreed level of energy efficiency improvement or other agreed energy performance criterion, such as financial savings;
- (28) 'smart metering system' or 'intelligent metering system' means an electronic system that can measure energy consumption, providing more information than a conventional meter, and can

transmit and receive data using a form of electronic communication;

(29) **'transmission system operator' means 'transmission system operator' as defined in Directive 2009/72/EC and Directive 2009/73/EC respectively, as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC;**

(30) 'cogeneration' means the simultaneous generation in one process of thermal energy and electrical or mechanical energy;

(31) 'economically justifiable demand' means demand that does not exceed the needs for heating or cooling and which would otherwise be satisfied at market conditions by energy generation processes other than cogeneration;

(32) 'useful heat' means heat produced in a cogeneration process to satisfy economically justifiable demand for heating or cooling;

(33) 'electricity from cogeneration' means electricity generated in a process linked to the production of useful heat and calculated in accordance with the methodology laid down in Annex I;

(34) 'high-efficiency cogeneration' means cogeneration meeting the criteria laid down in Annex II;

(35) 'overall efficiency' means the annual sum of electricity and mechanical energy production and useful heat output divided by the fuel input used for heat produced in a cogeneration process and gross electricity and mechanical energy production;

(36) 'power-to-heat ratio' means the ratio of electricity from cogeneration to useful heat when operating in full cogeneration mode using operational data of the specific unit;

(37) 'cogeneration unit' means a unit that is able to operate in cogeneration mode;

(38) 'small-scale cogeneration unit' means a cogeneration unit with installed capacity below 1 MW<sub>e</sub>;

(39) 'micro-cogeneration unit' means a cogeneration unit with a maximum capacity below 50 kW<sub>e</sub>;

(40) 'plot ratio' means the ratio of the building floor area to the land area in a given territory;

(41) 'efficient district heating and cooling' means a district heating or cooling system using at least 50% renewable energy, 50% waste heat, 75% cogenerated heat or 50% of a combination of such energy and heat;

(42) 'efficient heating and cooling' means a heating and cooling option that, compared to a baseline scenario reflecting a business-as-usual situation, measurably reduces the input of primary energy needed to supply one unit of delivered energy within a relevant system boundary in a cost-effective way, as assessed in the cost-benefit analysis referred to in this Directive, taking into account the energy required for extraction, conversion, transport and distribution;

(43) 'efficient individual heating and cooling' means an individual heating and cooling supply option that, compared to efficient district heating and cooling, measurably reduces the input of non-renewable primary energy needed to supply one unit of delivered energy within a relevant system boundary or requires the same input of non-renewable primary energy but at a lower cost, taking into account the energy required for extraction, conversion, transport and distribution;

(44) 'substantial refurbishment' means a refurbishment whose cost exceeds 50% of the investment cost for a new comparable unit;

(45) 'aggregator' means a demand service provider that combines multiple short-duration consumer loads for sale or auction in organised energy markets.

### Article 3

#### Energy efficiency targets

1. Each **Contracting Party** shall set an indicative national energy efficiency target, based on either primary or final energy consumption, primary or final energy savings, or energy intensity. **Contracting Parties** shall notify those targets to the **Energy Community Secretariat** in accordance with Article 24(1) and Annex XIV Part 1. When doing so, they shall also express those targets in terms of an absolute level of primary energy consumption and final energy consumption in 2020 and shall explain how, and on the basis of which data, this has been calculated.

When setting those targets, **Contracting Parties** shall take into account:

- (a) **that the Energy Community's 2020 energy consumption has to be no more than 187 Mtoe of primary energy or no more than 133 Mtoe of final energy;**
- (b) the measures provided for in this Directive;
- (c) the measures adopted to reach the national energy saving targets adopted pursuant to Article 4(1) of Directive 2006/32/EC, **as incorporated and adapted by the Ministerial Council Decision 2009/05/MC-EnC;** and
- (d) other measures to promote energy efficiency within **Contracting Parties**, and at **the Energy Community** level.

When setting those targets, **Contracting Parties** may also take into account national circumstances affecting primary energy consumption, such as:

- (a) remaining cost-effective energy-saving potential;
- (b) GDP evolution and forecast;
- (c) changes of energy imports and exports;
- (d) development of all sources of renewable energies, nuclear energy, carbon capture and storage; and
- (e) early action.

2. **By 30 June 2018, the Energy Community Secretariat shall assess progress achieved and whether the Energy Community is likely to achieve energy consumption of no more than 187 Mtoe of primary energy and/or no more than 133 Mtoe of final energy in 2020<sup>3</sup>.**

3. In carrying out the review referred to in paragraph 2, the **Energy Community Secretariat** shall:

- (a) sum the national indicative energy efficiency targets reported by **Contracting Parties**;
- (b) assess whether the sum of those targets can be considered a reliable guide to whether the **Energy Community** as a whole is on track, taking into account the evaluation of the first annual report in accordance with Article 24(1), and the evaluation of the National Energy Efficiency Action Plans in accordance with Article 24(2);
- (c) take into account complementary analysis arising from:
  - (i) an assessment of progress in energy consumption, and in energy consumption in relation to economic activity, at **Energy Community** level, including progress in the efficiency of energy supply in **Contracting Parties** that have based their national indicative targets on final energy

<sup>3</sup> The text displayed here corresponds to Article 3(4) of Ministerial Council Decision 2015/08/MC-EnC.

consumption or final energy savings, including progress due to these **Contracting Parties'** compliance with Chapter III of this Directive;

(ii) results from modelling exercises in relation to future trends in energy consumption at **Energy Community** level;

(d) **compare the results under points (a) to (c) with the energy consumption of no more than 187 Mtoe of primary energy and/or no more than 133 Mtoe of final energy in 2020.**

## CHAPTER II EFFICIENCY IN ENERGY USE

### *Article 4*

#### **Building renovation**

**Contracting Parties** shall establish a long-term strategy for mobilising investment in the renovation of the national stock of residential and commercial buildings, both public and private. This strategy shall encompass:

(a) an overview of the national building stock based, as appropriate, on statistical sampling;

(b) identification of cost-effective approaches to renovations relevant to the building type and climatic zone;

(c) policies and measures to stimulate cost-effective deep renovations of buildings, including staged deep renovations;

(d) a forward-looking perspective to guide investment decisions of individuals, the construction industry and financial institutions;

(e) an evidence-based estimate of expected energy savings and wider benefits.

**A first version of the strategy shall be published by 30 March 2017 and updated every three years thereafter and submitted to the Energy Community Secretariat as part of the National Energy Efficiency Action Plans<sup>4</sup>.**

### *Article 5*

#### **Exemplary role of public bodies' buildings**

1. Without prejudice to Article 7 of Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, each **Contracting Party** shall ensure that, as from **1 December 2017**, **1%** of the total floor area of heated and/or cooled buildings owned and occupied by its central government is renovated each year to meet at least the minimum energy performance requirements that it has set in application of Article 4 of Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**.

The **1%** rate shall be calculated on the total floor area of buildings with a total useful floor area over 500 m<sup>2</sup> owned and occupied by the central government of the **Contracting Party** concerned that,

<sup>4</sup> The text displayed here corresponds to Article 3(6) of Ministerial Council Decision 2015/08/MC-EnC.

on 1 January of each year, do not meet the national minimum energy performance requirements set in application of Article 4 of Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**. That threshold shall be lowered to 250 m<sup>2</sup> as of **1 January 2019**.

Where a **Contracting Party** requires that the obligation to renovate each year **1%** of the total floor area extends to floor area owned and occupied by administrative departments at a level below central government, the **1%** rate shall be calculated on the total floor area of buildings with a total useful floor area over 500 m<sup>2</sup> and, as of **1 January 2019**, over 250 m<sup>2</sup> owned and occupied by central government and by these administrative departments of the **Contracting Party** concerned that, on 1 January of each year, do not meet the national minimum energy performance requirements set in application of Article 4 of Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**.

When implementing measures for the comprehensive renovation of central government buildings in accordance with the first subparagraph, **Contracting Parties** may choose to consider the building as a whole, including the building envelope, equipment, operation and maintenance.

**Contracting Parties** shall require that central government buildings with the poorest energy performance be a priority for energy efficiency measures, where cost-effective and technically feasible.

2. **Contracting Parties** may decide not to set or apply the requirements referred to in paragraph 1 to the following categories of buildings:

(a) buildings officially protected as part of a designated environment, or because of their special architectural or historical merit, in so far as compliance with certain minimum energy performance requirements would unacceptably alter their character or appearance;

(b) buildings owned by the armed forces or central government and serving national defence purposes, apart from single living quarters or office buildings for the armed forces and other staff employed by national defence authorities;

(c) buildings used as places of worship and for religious activities.

3. If a **Contracting Party** renovates more than **1%** of the total floor area of central government buildings in a given year, it may count the excess towards the annual renovation rate of any of the three previous or following years.

4. **Contracting Parties** may count towards the annual renovation rate of central government buildings new buildings occupied and owned as replacements for specific central government buildings demolished in any of the two previous years, or buildings that have been sold, demolished or taken out of use in any of the two previous years due to more intensive use of other buildings.

5. For the purposes of paragraph 1, by **1 January 2017**, **Contracting Parties** shall establish and make publicly available an inventory of heated and/or cooled central government buildings with a total useful floor area over 500 m<sup>2</sup> and, as of **1 January 2019**, over 250 m<sup>2</sup>, excluding buildings exempted on the basis of paragraph 2. The inventory shall contain the following data:

(a) the floor area in m<sup>2</sup>; and

(b) the energy performance of each building or relevant energy data.

6. Without prejudice to Article 7 of Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, **Contracting Parties** may opt for an alternative approach to paragraphs 1 to 5 of this Article, whereby they take other cost-effective measures, in-

cluding deep renovations and measures for behavioural change of occupants, to achieve, by 2020, an amount of energy savings in eligible buildings owned and occupied by their central government that is at least equivalent to that required in paragraph 1, reported on an annual basis.

For the purpose of the alternative approach, **Contracting Parties** may estimate the energy savings that paragraphs 1 to 4 would generate by using appropriate standard values for the energy consumption of reference central government buildings before and after renovation and according to estimates of the surface of their stock. The categories of reference central government buildings shall be representative of the stock of such buildings.

**Contracting Parties** opting for the alternative approach shall notify to **Energy Community Secretariat**, by **1 January 2017**, the alternative measures that they plan to adopt, showing how they would achieve an equivalent improvement in the energy performance of the buildings within the central government estate.

7. **Contracting Parties** shall encourage public bodies, including at regional and local level, and social housing bodies governed by public law, with due regard for their respective competences and administrative set-up, to:

(a) adopt an energy efficiency plan, freestanding or as part of a broader climate or environmental plan, containing specific energy saving and efficiency objectives and actions, with a view to following the exemplary role of central government buildings laid down in paragraphs 1, 5 and 6;

(b) put in place an energy management system, including energy audits, as part of the implementation of their plan;

(c) use, where appropriate, energy service companies, and energy performance contracting to finance renovations and implement plans to maintain or improve energy efficiency in the long term.

## **Article 6**

### **Purchasing by public bodies**

1. **Contracting Parties** shall ensure that central governments purchase only products, services and buildings with high energy-efficiency performance, insofar as that is consistent with cost-effectiveness, economical feasibility, wider sustainability, technical suitability, as well as sufficient competition, as referred to in Annex III.

**The obligation set out in the first subparagraph shall apply to contracts for the purchase of products, services and buildings by public bodies in so far as such contracts have a value equal to or greater than the thresholds laid in each Contracting Party's national legislation. Each Contracting Party shall submit its national thresholds to the Energy Community Secretariat, by 15 October 2017<sup>5</sup>.**

2. The obligation referred to in paragraph 1 shall apply to the contracts of the armed forces only to the extent that its application does not cause any conflict with the nature and primary aim of the activities of the armed forces.

<...><sup>6</sup>

<sup>5</sup> The text displayed here corresponds to Article 3(10) of Ministerial Council Decision 2015/08/MC-EnC.

<sup>6</sup> The second sentence in Article 6(2) is not applicable, in accordance with Article 3(11) of Decision 2015/08/MC-EnC.

3. **Contracting Parties** shall encourage public bodies, including at regional and local levels, with due regard to their respective competences and administrative set-up, to follow the exemplary role of their central governments to purchase only products, services and buildings with high energy-efficiency performance. **Contracting Parties** shall encourage public bodies, when tendering service contracts with significant energy content, to assess the possibility of concluding long-term energy performance contracts that provide long-term energy savings.

4. Without prejudice to paragraph 1, when purchasing a product package covered as a whole by a delegated act adopted under Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, **Contracting Parties** may require that the aggregate energy efficiency shall take priority over the energy efficiency of individual products within that package, by purchasing the product package that complies with the criterion of belonging to the highest energy efficiency class.

### **Article 7**

#### **Energy efficiency obligation schemes**

1. Each **Contracting Party** shall set up an energy efficiency obligation scheme. That scheme shall ensure that energy distributors and/or retail energy sales companies that are designated as obligated parties under paragraph 4 operating in each **Contracting Party's** territory achieve a cumulative end-use energy savings target by 31 December 2020, without prejudice to paragraph 2.

**That target shall be at least equivalent to achieving new savings each year from 1 January 2017 to 31 December 2020 of 0,7% of the annual energy sales to final customers of all energy distributors or all retail energy sales companies by volume, averaged over the most recent three-year period prior to 1 January 2016. The sales of energy, by volume, used in transport may be partially or fully excluded from this calculation<sup>7</sup>.**

**Contracting Parties** shall decide how the calculated quantity of new savings referred to in the second subparagraph is to be phased over the period.

2. Subject to paragraph 3, each **Contracting Party** may:

(a) **carry out the calculation required by the second subparagraph of paragraph 1 using values of 0,5% in 2017 and 2018; 0,7% in 2019 and 2020;**

(b) exclude from the calculation all or part of the sales, by volume, of energy used in industrial activities listed in Annex I to Directive 2003/87/EC;

(c) allow energy savings achieved in the energy transformation, distribution and transmission sectors, including efficient district heating and cooling infrastructure, as a result of the implementation of the requirements set out in Article 14(4), point (b) of Article 14(5) and Article 15(1) to (6) and (9) to be counted towards the amount of energy savings required under paragraph 1; and

(d) count energy savings resulting from individual actions newly implemented since 31 December 2008 that continue to have an impact in 2020 and that can be measured and verified, towards the amount of energy savings referred to in paragraph 1.

3. The application of paragraph 2 shall not lead to a reduction of more than 25% of the amount of

<sup>7</sup> The text displayed here corresponds to Article 3(11) of Ministerial Council Decision 2015/08/MC-EnC.

energy savings referred to in paragraph 1. **Contracting Parties** making use of paragraph 2 shall notify that fact to the **Energy Community Secretariat by 15 October 2017**, including the elements listed under paragraph 2 to be applied and a calculation showing their impact on the amount of energy savings referred to in paragraph 1.

4. Without prejudice to the calculation of energy savings for the target in accordance with the second subparagraph of paragraph 1, each **Contracting Party** shall, for the purposes of the first subparagraph of paragraph 1, designate, on the basis of objective and non-discriminatory criteria, obligated parties amongst energy distributors and/or retail energy sales companies operating in its territory and may include transport fuel distributors or transport fuel retailers operating in its territory. The amount of energy savings to fulfil the obligation shall be achieved by the obligated parties among final customers, designated, as appropriate, by the **Contracting Party**, independently of the calculation made pursuant to paragraph 1, or, if **Contracting Parties** so decide, through certified savings stemming from other parties as described in point (b) of paragraph 7.

5. **Contracting Parties** shall express the amount of energy savings required of each obligated party in terms of either final or primary energy consumption. The method chosen for expressing the required amount of energy savings shall also be used for calculating the savings claimed by obligated parties. The conversion factors set out in Annex IV shall apply.

6. **Contracting Parties** shall ensure that the savings stemming from paragraphs 1, 2 and 9 of this Article and Article 20(6) are calculated in accordance with points (1) and (2) of Annex V. They shall put in place measurement, control and verification systems under which at least a statistically significant proportion and representative sample of the energy efficiency improvement measures put in place by the obligated parties is verified. That measurement, control and verification shall be conducted independently of the obligated parties.

7. Within the energy efficiency obligation scheme, **Contracting Parties** may:

(a) include requirements with a social aim in the saving obligations they impose, including by requiring a share of energy efficiency measures to be implemented as a priority in households affected by energy poverty or in social housing;

(b) permit obligated parties to count towards their obligation certified energy savings achieved by energy service providers or other third parties, including when obligated parties promote measures through other State-approved bodies or through public authorities that may or may not involve formal partnerships and may be in combination with other sources of finance. Where **Contracting Parties** so permit, they shall ensure that an approval process is in place which is clear, transparent and open to all market actors, and which aims at minimising the costs of certification;

(c) allow obligated parties to count savings obtained in a given year as if they had instead been obtained in any of the four previous or three following years.

8. Once a year, **Contracting Parties** shall publish the energy savings achieved by each obligated party, or each sub-category of obligated party, and in total under the scheme.

**Contracting Parties** shall ensure that obligated parties provide on request:

(a) aggregated statistical information on their final customers (identifying significant changes to previously submitted information); and

(b) current information on final customers' consumption, including, where applicable, load profiles, customer segmentation and geographical location of customers, while preserving the integrity and

confidentiality of private or commercially sensitive information in compliance with applicable **Energy Community** law.

Such a request shall be made not more than once a year.

9. As an alternative to setting up an energy efficiency obligation scheme under paragraph 1, **Contracting Parties** may opt to take other policy measures to achieve energy savings among final customers, provided those policy measures meet the criteria set out in paragraphs 10 and 11. The annual amount of new energy savings achieved through this approach shall be equivalent to the amount of new energy savings required by paragraphs 1, 2 and 3. Provided that equivalence is maintained, **Contracting Parties** may combine obligation schemes with alternative policy measures, including national energy efficiency programmes.

The policy measures referred to in the first subparagraph may include, but are not restricted to, the following policy measures or combinations thereof:

- (a) energy or CO<sub>2</sub> taxes that have the effect of reducing end-use energy consumption;
- (b) financing schemes and instruments or fiscal incentives that lead to the application of energy-efficient technology or techniques and have the effect of reducing end-use energy consumption;
- (c) regulations or voluntary agreements that lead to the application of energy-efficient technology or techniques and have the effect of reducing end-use energy consumption;
- (d) standards and norms that aim at improving the energy efficiency of products and services, including buildings and vehicles, except where these are mandatory and applicable in **Contracting Parties** under **Energy Community** law;
- (e) energy labelling schemes, with the exception of those that are mandatory and applicable in the **Contracting Parties** under **Energy Community** law;
- (f) training and education, including energy advisory programmes, that lead to the application of energy-efficient technology or techniques and have the effect of reducing end-use energy consumption.

**Contracting Parties** shall notify to the **Energy Community Secretariat**, by **15 March 2017**, the policy measures that they plan to adopt for the purposes of the first subparagraph and Article 20(6), following the framework provided in point 4 of Annex V, and showing how they would achieve the required amount of savings. In the case of the policy measures referred to in the second subparagraph and in Article 20(6), this notification shall demonstrate how the criteria in paragraph 10 are met. In the case of policy measures other than those referred to in the second subparagraph or in Article 20(6), **Contracting Parties** shall explain how an equivalent level of savings, monitoring and verification is achieved. The Commission may make suggestions for modifications in the three months following notification.

10. Without prejudice to paragraph 11, the criteria for the policy measures taken pursuant to the second subparagraph of paragraph 9 and Article 20(6) shall be as follows:

- (a) <...>
- (b) the responsibility of each entrusted party, participating party or implementing public authority, whichever is relevant, is defined;
- (c) the energy savings that are to be achieved are determined in a transparent manner;
- (d) the amount of energy savings required or to be achieved by the policy measure are expressed in

- either final or primary energy consumption, using the conversion factors set out in Annex IV;
- (e) energy savings are calculated using the methods and principles provided in points (1) and (2) of Annex V;
- (f) energy savings are calculated using the methods and principles provided in point 3 of Annex V;
- (g) an annual report of the energy savings achieved is provided by participating parties unless not feasible and made publicly available;
- (h) monitoring of the results is ensured and appropriate measures are envisaged if the progress is not satisfactory;
- (i) a control system is put in place that also includes independent verification of a statistically significant proportion of the energy efficiency improvement measures; and
- (j) data on the annual trend of energy savings are published annually.

11. **Contracting Parties** shall ensure that the taxes referred to in point (a) of the second subparagraph of paragraph 9 comply with the criteria listed in points (a), (b), (c), (d), (f), (h) and (j) of paragraph 10.

**Contracting Parties** shall ensure that the regulations and voluntary agreements referred to in point (c) of the second subparagraph of paragraph 9 comply with the criteria listed in points (a), (b), (c), (d), (e), (g), (h), (i) and (j) of paragraph 10.

**Contracting Parties** shall ensure that the other policy measures referred to in the second subparagraph of paragraph 9 and the Energy Efficiency National Funds referred to in Article 20(6) comply with the criteria listed in points (a), (b), (c), (d), (e), (h), (i) and (j) of paragraph 10.

12. **Contracting Parties** shall ensure that when the impact of policy measures or individual actions overlaps, no double counting of energy savings is made.

## **Article 8**

### **Energy audits and energy management systems**

1. **Contracting Parties** shall promote the availability to all final customers of high quality energy audits which are cost-effective and:

- (a) carried out in an independent manner by qualified and/or accredited experts according to qualification criteria; or
- (b) implemented and supervised by independent authorities under national legislation.

The energy audits referred to in the first subparagraph may be carried out by in-house experts or energy auditors provided that the **Contracting Party** concerned has put in place a scheme to assure and check their quality, including, if appropriate, an annual random selection of at least a statistically significant percentage of all the energy audits they carry out.

For the purpose of guaranteeing the high quality of the energy audits and energy management systems, **Contracting Parties** shall establish transparent and non-discriminatory minimum criteria for energy audits based on Annex VI.

Energy audits shall not include clauses preventing the findings of the audit from being transferred to any qualified/accredited energy service provider, on condition that the customer does not object.

2. **Contracting Parties** shall develop programmes to encourage SMEs to undergo energy audits and the subsequent implementation of the recommendations from these audits.

On the basis of transparent and non-discriminatory criteria and without prejudice to Union State aid law, **Contracting Parties** may set up support schemes for SMEs, including if they have concluded voluntary agreements, to cover costs of an energy audit and of the implementation of highly cost-effective recommendations from the energy audits, if the proposed measures are implemented.

**Contracting Parties** shall bring to the attention of SMEs, including through their respective representative intermediary organisations, concrete examples of how energy management systems could help their businesses. The Commission and **the Energy Community Secretariat** shall assist **Contracting Parties** by supporting the exchange of best practices in this domain.

3. **Contracting Parties** shall also develop programmes to raise awareness among households about the benefits of such audits through appropriate advice services.

**Contracting Parties** shall encourage training programmes for the qualification of energy auditors in order to facilitate sufficient availability of experts.

4. **Contracting Parties** shall ensure that enterprises that are not SMEs are subject to an energy audit carried out in an independent and cost-effective manner by qualified and/or accredited experts or implemented and supervised by independent authorities under national legislation by **5 November 2018** and at least every four years from the date of the previous energy audit.

5. Energy audits shall be considered as fulfilling the requirements of paragraph 4 when they are carried out in an independent manner, on the basis of minimum criteria based on Annex VI, and implemented under voluntary agreements concluded between organisations of stakeholders and an appointed body and supervised by the **Contracting Party** concerned, or other bodies to which the competent authorities have delegated the responsibility concerned, or by the Commission.

Access of market participants offering energy services shall be based on transparent and non-discriminatory criteria.

6. Enterprises that are not SMEs and that are implementing an energy or environmental management system - certified by an independent body according to the relevant European or International Standards - shall be exempted from the requirements of paragraph 4, provided that **Contracting Parties** ensure that the management system concerned includes an energy audit on the basis of the minimum criteria based on Annex VI.

7. Energy audits may stand alone or be part of a broader environmental audit. **Contracting Parties** may require that an assessment of the technical and economic feasibility of connection to an existing or planned district heating or cooling network shall be part of the energy audit.

Without prejudice to Union State aid law, **Contracting Parties** may implement incentive and support schemes for the implementation of recommendations from energy audits and similar measures.

## **Article 9**

### **Metering**

1. **Contracting Parties** shall ensure that, in so far as it is technically possible, financially reasonable and proportionate in relation to the potential energy savings, final customers for electricity, natural

gas, district heating, district cooling and domestic hot water are provided with competitively priced individual meters that accurately reflect the final customer's actual energy consumption and that provide information on actual time of use.

Such a competitively priced individual meter shall always be provided when:

(a) an existing meter is replaced, unless this is technically impossible or not cost-effective in relation to the estimated potential savings in the long term;

(b) a new connection is made in a new building or a building undergoes major renovations, as set out in Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**.

2. Where, and to the extent that, **Contracting Parties** implement intelligent metering systems and roll out smart meters for natural gas and/or electricity in accordance with Directives 2009/72/EC and 2009/73/EC **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC**:

(a) they shall ensure that the metering systems provide to final customers information on actual time of use and that the objectives of energy efficiency and benefits for final customers are fully taken into account when establishing the minimum functionalities of the meters and the obligations imposed on market participants;

(b) they shall ensure the security of the smart meters and data communication, and the privacy of final customers, in compliance with relevant Union data protection and privacy legislation;

(c) in the case of electricity and at the request of the final customer, they shall require meter operators to ensure that the meter or meters can account for electricity put into the grid from the final customer's premises;

(d) they shall ensure that if final customers request it, metering data on their electricity input and off-take is made available to them or to a third party acting on behalf of the final customer in an easily understandable format that they can use to compare deals on a like-for-like basis;

(e) they shall require that appropriate advice and information be given to customers at the time of installation of smart meters, in particular about their full potential with regard to meter reading management and the monitoring of energy consumption.

3. Where heating and cooling or hot water are supplied to a building from a district heating network or from a central source servicing multiple buildings, a heat or hot water meter shall be installed at the heating exchanger or point of delivery.

In multi-apartment and multi-purpose buildings with a central heating/cooling source or supplied from a district heating network or from a central source serving multiple buildings, individual consumption meters shall also be installed by **30 November 2019** to measure the consumption of heat or cooling or hot water for each unit where technically feasible and cost-efficient. Where the use of individual meters is not technically feasible or not cost-efficient, to measure heating, individual heat cost allocators shall be used for measuring heat consumption at each radiator, unless it is shown by the **Contracting Party** in question that the installation of such heat cost allocators would not be cost-efficient. In those cases, alternative cost-efficient methods of heat consumption measurement may be considered.

Where multi-apartment buildings are supplied from district heating or cooling, or where own common heating or cooling systems for such buildings are prevalent, **Contracting Parties** may introduce transparent rules on the allocation of the cost of thermal or hot water consumption in such

buildings to ensure transparency and accuracy of accounting for individual consumption. Where appropriate, such rules shall include guidelines on the way to allocate costs for heat and/or hot water that is used as follows:

- (a) hot water for domestic needs;
- (b) heat radiated from the building installation and for the purpose of heating the common areas (where staircases and corridors are equipped with radiators);
- (c) for the purpose of heating apartments.

## **Article 10**

### **Billing information**

1. Where final customers do not have smart meters as referred to in Directives 2009/72/EC and 2009/73/EC **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC, Contracting Parties** shall ensure, by **30 November 2017**, that billing information is accurate and based on actual consumption, in accordance with point 1.1 of Annex VII, for all the sectors covered by this Directive, including energy distributors, distribution system operators and retail energy sales companies, where this is technically possible and economically justified.

This obligation may be fulfilled by a system of regular self-reading by the final customers whereby they communicate readings from their meter to the energy supplier. Only when the final customer has not provided a meter reading for a given billing interval shall billing be based on estimated consumption or a flat rate.

2. Meters installed in accordance with Directives 2009/72/EC and 2009/73/EC **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC**, shall enable accurate billing information based on actual consumption. **Contracting Parties** shall ensure that final customers have the possibility of easy access to complementary information on historical consumption allowing detailed self-checks.

Complementary information on historical consumption shall include:

- (a) cumulative data for at least the three previous years or the period since the start of the supply contract if this is shorter. The data shall correspond to the intervals for which frequent billing information has been produced; and
- (b) detailed data according to the time of use for any day, week, month and year. These data shall be made available to the final customer via the internet or the meter interface for the period of at least the previous 24 months or the period since the start of the supply contract if this is shorter.

3. Independently of whether smart meters have been installed or not, **Contracting Parties**:

- (a) shall require that, to the extent that information on the energy billing and historical consumption of final customers is available, it be made available, at the request of the final customer, to an energy service provider designated by the final customer;
- (b) shall ensure that final customers are offered the option of electronic billing information and bills and that they receive, on request, a clear and understandable explanation of how their bill was derived, especially where bills are not based on actual consumption;
- (c) shall ensure that appropriate information is made available with the bill to provide final customers

with a comprehensive account of current energy costs, in accordance with Annex VII;

(d) may lay down that, at the request of the final customer, the information contained in these bills shall not be considered to constitute a request for payment. In such cases, **Contracting Parties** shall ensure that suppliers of energy sources offer flexible arrangements for actual payments;

(e) shall require that information and estimates for energy costs are provided to consumers on demand in a timely manner and in an easily understandable format enabling consumers to compare deals on a like-for-like basis.

### **Article 11**

#### **Cost of access to metering and billing information**

1. **Contracting Parties** shall ensure that final customers receive all their bills and billing information for energy consumption free of charge and that final customers also have access to their consumption data in an appropriate way and free of charge.

2. Notwithstanding paragraph 1, the distribution of costs of billing information for the individual consumption of heating and cooling in multi-apartment and multi-purpose buildings pursuant to Article 9(3) shall be carried out on a non-profit basis. Costs resulting from the assignment of this task to a third party, such as a service provider or the local energy supplier, covering the measuring, allocation and accounting for actual individual consumption in such buildings, may be passed onto the final customers to the extent that such costs are reasonable.

### **Article 12**

#### **Consumer information and empowering programme**

1. **Contracting Parties** shall take appropriate measures to promote and facilitate an efficient use of energy by small energy customers, including domestic customers. These measures may be part of a national strategy.

2. For the purposes of paragraph 1, these measures shall include one or more of the elements listed under point (a) or (b):

(a) a range of instruments and policies to promote behavioural change which may include:

- (i) fiscal incentives;
- (ii) access to finance, grants or subsidies;
- (iii) information provision;
- (iv) exemplary projects;
- (v) workplace activities;

(b) ways and means to engage consumers and consumer organisations during the possible roll-out of smart meters through communication of:

- (i) cost-effective and easy-to-achieve changes in energy use;
- (ii) information on energy efficiency measures.

**Article 13****Penalties**

**Contracting Parties** shall lay down the rules on penalties applicable in case of non-compliance with the national provisions adopted pursuant to Articles 7 to 11 and Article 18(3) and shall take the necessary measures to ensure that they are implemented. The penalties provided for shall be effective, proportionate and dissuasive. **Contracting Parties** shall notify those provisions to the **Energy Community Secretariat** by **15 October 2017** and shall notify it without delay of any subsequent amendment affecting them.

**CHAPTER III****EFFICIENCY IN ENERGY SUPPLY****Article 14****Promotion of efficiency in heating and cooling**

1. By **30 November 2018**, **Contracting Parties** shall carry out and notify to the **Energy Community Secretariat** a comprehensive assessment of the potential for the application of high-efficiency cogeneration and efficient district heating and cooling, containing the information set out in Annex VIII. If they have already carried out an equivalent assessment, they shall notify it to the **Energy Community Secretariat**.

<...><sup>8</sup>

At the request of the Commission, the assessment shall be updated and notified to the Commission every five years. The Commission shall make any such request at least one year before the due date.

2. **Contracting Parties** shall adopt policies which encourage the due taking into account at local and regional levels of the potential of using efficient heating and cooling systems, in particular those using high-efficiency cogeneration. Account shall be taken of the potential for developing local and regional heat markets.

3. For the purpose of the assessment referred to in paragraph 1, **Contracting Parties** shall carry out a cost-benefit analysis covering their territory based on climate conditions, economic feasibility and technical suitability in accordance with Part 1 of Annex IX. The cost-benefit analysis shall be capable of facilitating the identification of the most resource- and cost-efficient solutions to meeting heating and cooling needs. That cost-benefit analysis may be part of an environmental assessment under Directive 2001/42/EC of the European Parliament and of the Council of 27 June 2001 on the assessment of the effects of certain plans and programmes on the environment.

4. Where the assessment referred to in paragraph 1 and the analysis referred to in paragraph 3 identify a potential for the application of high-efficiency cogeneration and/or efficient district heating and cooling whose benefits exceed the costs, **Contracting Parties** shall take adequate measures for efficient district heating and cooling infrastructure to be developed and/or to accommodate the

<sup>8</sup> Not applicable in accordance with Article 3(11) of Decision 2015/08/MC-EnC.

development of high-efficiency cogeneration and the use of heating and cooling from waste heat and renewable energy sources in accordance with paragraphs 1, 5, and 7.

Where the assessment referred to in paragraph 1 and the analysis referred to in paragraph 3 do not identify a potential whose benefits exceed the costs, including the administrative costs of carrying out the cost-benefit analysis referred to in paragraph 5, the **Contracting Party** concerned may exempt installations from the requirements laid down in that paragraph.

5. **Contracting Parties** shall ensure that a cost-benefit analysis in accordance with Part 2 of Annex IX is carried out when, after **15 October 2017**:

- (a) a new thermal electricity generation installation with a total thermal input exceeding 20 MW is planned, in order to assess the cost and benefits of providing for the operation of the installation as a high-efficiency cogeneration installation;
- (b) an existing thermal electricity generation installation with a total thermal input exceeding 20 MW is substantially refurbished, in order to assess the cost and benefits of converting it to high-efficiency cogeneration;
- (c) an industrial installation with a total thermal input exceeding 20 MW generating waste heat at a useful temperature level is planned or substantially refurbished, in order to assess the cost and benefits of utilising the waste heat to satisfy economically justified demand, including through cogeneration, and of the connection of that installation to a district heating and cooling network;
- (d) a new district heating and cooling network is planned or in an existing district heating or cooling network a new energy production installation with a total thermal input exceeding 20 MW is planned or an existing such installation is to be substantially refurbished, in order to assess the cost and benefits of utilising the waste heat from nearby industrial installations.

The fitting of equipment to capture carbon dioxide produced by a combustion installation with a view to its being geologically stored as provided for in Directive 2009/31/EC shall not be considered as refurbishment for the purpose of points (b), (c) and (d) of this paragraph.

**Contracting Parties** may require the cost-benefit analysis referred to in points (c) and (d) to be carried out in cooperation with the companies responsible for the operation of the district heating and cooling networks.

6. **Contracting Parties** may exempt from paragraph 5:

- (a) those peak load and back-up electricity generating installations which are planned to operate under 1 500 operating hours per year as a rolling average over a period of five years, based on a verification procedure established by the **Contracting Parties** ensuring that this exemption criterion is met;
- (b) nuclear power installations;
- (c) installations that need to be located close to a geological storage site approved under Directive 2009/31/EC.

**Contracting Parties** may also lay down thresholds, expressed in terms of the amount of available useful waste heat, the demand for heat or the distances between industrial installations and district heating networks, for exempting individual installations from the provisions of points (c) and (d) of paragraph 5.

**Contracting Parties** shall notify exemptions adopted under this paragraph to the **Energy Community Secretariat** by **15 October 2017** and any subsequent changes to them thereafter.

7. **Contracting Parties** shall adopt authorisation criteria as referred to in Article 7 of Directive 2009/72/EC **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC** or equivalent permit criteria, to:

- (a) take into account the outcome of the comprehensive assessment referred to in paragraph 1;
- (b) ensure that the requirements of paragraph 5 are fulfilled; and
- (c) take into account the outcome of cost-benefit analysis referred to in paragraph 5.

8. **Contracting Parties** may exempt individual installations from being required, by the authorisation and permit criteria referred to in paragraph 7, to implement options whose benefits exceed their costs, if there are imperative reasons of law, ownership or finance for so doing. In these cases the **Contracting Party** concerned shall submit a reasoned notification of its decision to the **Energy Community Secretariat** within three months of the date of taking it.

9. Paragraphs 5, 6, 7 and 8 of this Article shall apply to installations covered by Directive 2010/75/EU, **as incorporated and adapted by the Ministerial Council decision 2013/06/MC-EnC** without prejudice to the requirements of that Directive.

10. On the basis of the harmonised efficiency reference values referred to in point (f) of Annex II, **Contracting Parties** shall ensure that the origin of electricity produced from high-efficiency cogeneration can be guaranteed according to objective, transparent and non-discriminatory criteria laid down by each **Contracting Party**. They shall ensure that this guarantee of origin complies with the requirements and contains at least the information specified in Annex X. **Contracting Parties** shall mutually recognise their guarantees of origin, exclusively as proof of the information referred to in this paragraph. Any refusal to recognise a guarantee of origin as such proof, in particular for reasons relating to the prevention of fraud, must be based on objective, transparent and non-discriminatory criteria. **Contracting Parties** shall notify the **Energy Community Secretariat** of such refusal and its justification. In the event of refusal to recognise a guarantee of origin, the Commission may adopt a decision to compel the refusing party to recognise it, in particular with regard to objective, transparent and non-discriminatory criteria on which such recognition is based.

The Commission shall be empowered to review, by means of delegated acts in accordance with Article 23 of this Directive, the harmonised efficiency reference values laid down in Commission Implementing Decision 2011/877/EU on the basis of Directive 2004/8/EC by 31 December 2014.

11. **Contracting Parties** shall ensure that any available support for cogeneration is subject to the electricity produced originating from high-efficiency cogeneration and the waste heat being effectively used to achieve primary energy savings. Public support to cogeneration and district heating generation and networks shall be subject to State aid rules, where applicable.

## **Article 15**

### **Energy transformation, transmission and distribution**

1. **Contracting Parties** shall ensure that national energy regulatory authorities pay due regard to energy efficiency in carrying out the regulatory tasks specified in Directives 2009/72/EC and 2009/73/EC **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC** regarding their decisions on the operation of the gas and electricity infrastructure.

**Contracting Parties** shall in particular ensure that national energy regulatory authorities, through

the development of network tariffs and regulations, within the framework of Directive 2009/72/EC **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC** and taking into account the costs and benefits of each measure, provide incentives for grid operators to make available system services to network users permitting them to implement energy efficiency improvement measures in the context of the continuing deployment of smart grids.

Such systems services may be determined by the system operator and shall not adversely impact the security of the system.

For electricity, **Contracting Parties** shall ensure that network regulation and network tariffs fulfil the criteria in Annex XI, taking into account guidelines and codes developed pursuant to Regulation (EC) No 714/2009, **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC**.

2. **Contracting Parties** shall ensure, by **15 October 2018**, that:

(a) an assessment is undertaken of the energy efficiency potentials of their gas and electricity infrastructure, in particular regarding transmission, distribution, load management and interoperability, and connection to energy generating installations, including access possibilities for micro energy generators;

(b) concrete measures and investments are identified for the introduction of cost-effective energy efficiency improvements in the network infrastructure, with a timetable for their introduction.

3. **Contracting Parties** may permit components of schemes and tariff structures with a social aim for net-bound energy transmission and distribution, provided that any disruptive effects on the transmission and distribution system are kept to the minimum necessary and are not disproportionate to the social aim.

4. **Contracting Parties** shall ensure the removal of those incentives in transmission and distribution tariffs that are detrimental to the overall efficiency (including energy efficiency) of the generation, transmission, distribution and supply of electricity or those that might hamper participation of demand response, in balancing markets and ancillary services procurement. **Contracting Parties** shall ensure that network operators are incentivised to improve efficiency in infrastructure design and operation, and, within the framework of Directive 2009/72/EC **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC**, that tariffs allow suppliers to improve consumer participation in system efficiency, including demand response, depending on national circumstances.

5. Without prejudice to Article 16(2) of Directive 2009/28/EC and taking into account Article 15 of Directive 2009/72/EC **as incorporated and adapted by Ministerial Council Decision 2011/02/MC-EnC** and the need to ensure continuity in heat supply, **Contracting Parties** shall ensure that, subject to requirements relating to the maintenance of the reliability and safety of the grid, based on transparent and non-discriminatory criteria set by the competent national authorities, transmission system operators and distribution system operators when they are in charge of dispatching the generating installations in their territory:

(a) guarantee the transmission and distribution of electricity from high-efficiency cogeneration;

(b) provide priority or guaranteed access to the grid of electricity from high-efficiency cogeneration;

(c) when dispatching electricity generating installations, provide priority dispatch of electricity from high-efficiency cogeneration in so far as the secure operation of the national electricity system permits.

**Contracting Parties** shall ensure that rules relating to the ranking of the different access and dispatch priorities granted in their electricity systems are clearly explained in detail and published. When providing priority access or dispatch for high-efficiency cogeneration, **Contracting Parties** may set rankings as between, and within different types of, renewable energy and high-efficiency cogeneration and shall in any case ensure that priority access or dispatch for energy from variable renewable energy sources is not hampered.

In addition to the obligations laid down by the first subparagraph, transmission system operators and distribution system operators shall comply with the requirements set out in Annex XII.

**Contracting Parties** may particularly facilitate the connection to the grid system of electricity produced from high-efficiency cogeneration from small-scale and micro-cogeneration units. **Contracting Parties** shall, where appropriate, take steps to encourage network operators to adopt a simple notification 'install and inform' process for the installation of micro-cogeneration units to simplify and shorten authorisation procedures for individual citizens and installers.

6. Subject to the requirements relating to the maintenance of the reliability and safety of the grid, **Contracting Parties** shall take the appropriate steps to ensure that, where this is technically and economically feasible with the mode of operation of the high-efficiency cogeneration installation, high-efficiency cogeneration operators can offer balancing services and other operational services at the level of transmission system operators or distribution system operators. Transmission system operators and distribution system operators shall ensure that such services are part of a services bidding process which is transparent, non-discriminatory and open to scrutiny.

Where appropriate, **Contracting Parties** may require transmission system operators and distribution system operators to encourage high-efficiency cogeneration to be sited close to areas of demand by reducing the connection and use-of-system charges.

7. **Contracting Parties** may allow producers of electricity from high-efficiency cogeneration wishing to be connected to the grid to issue a call for tender for the connection work.

8. **Contracting Parties** shall ensure that national energy regulatory authorities encourage demand side resources, such as demand response, to participate alongside supply in wholesale and retail markets.

Subject to technical constraints inherent in managing networks, **Contracting Parties** shall ensure that transmission system operators and distribution system operators, in meeting requirements for balancing and ancillary services, treat demand response providers, including aggregators, in a non-discriminatory manner, on the basis of their technical capabilities.

Subject to technical constraints inherent in managing networks, **Contracting Parties** shall promote access to and participation of demand response in balancing, reserve and other system services markets, *inter alia* by requiring national energy regulatory authorities or, where their national regulatory systems so require, transmission system operators and distribution system operators in close cooperation with demand service providers and consumers, to define technical modalities for participation in these markets on the basis of the technical requirements of these markets and the capabilities of demand response. Such specifications shall include the participation of aggregators.

9. When reporting under Directive 2010/75/EU, **as incorporated and adapted by the Ministerial Council decision 2013/06/MC-EnC**, and without prejudice to Article 9(2) of that Directive, **Contracting Parties** shall consider including information on energy efficiency levels of installations undertaking the combustion of fuels with total rated thermal input of 50 MW or more in the light

of the relevant best available techniques developed in accordance with Directive 2010/75/EU, **as incorporated and adapted by the Ministerial Council decision 2013/06/MC-EnC**, and Directive 2008/1/EC of the European Parliament and of the Council of 15 January 2008 concerning integrated pollution prevention and control.

**Contracting Parties** may encourage operators of installations referred to in the first subparagraph to improve their annual average net operational rates.

## CHAPTER IV

### HORIZONTAL PROVISIONS

#### *Article 16*

#### **Availability of qualification, accreditation and certification schemes**

1. Where a **Contracting Party** considers that the national level of technical competence, objectivity and reliability is insufficient, it shall ensure that, by **31 December 2017**, certification and/or accreditation schemes and/or equivalent qualification schemes, including, where necessary, suitable training programmes, become or are available for providers of energy services, energy audits, energy managers and installers of energy-related building elements as defined in Article 2(9) of Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**.

2. **Contracting Parties** shall ensure that the schemes referred to in paragraph 1 provide transparency to consumers, are reliable and contribute to national energy efficiency objectives.

3. **Contracting Parties** shall make publicly available the certification and/or accreditation schemes or equivalent qualification schemes referred to in paragraph 1 and shall cooperate among themselves and with the Commission **and the Energy Community Secretariat** on comparisons between, and recognition of, the schemes.

**Contracting Parties** shall take appropriate measures to make consumers aware of the availability of qualification and/or certification schemes in accordance with Article 18(1).

#### *Article 17*

#### **Information and training**

1. **Contracting Parties** shall ensure that information on available energy efficiency mechanisms and financial and legal frameworks is transparent and widely disseminated to all relevant market actors, such as consumers, builders, architects, engineers, environmental and energy auditors, and installers of building elements as defined in Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**.

**Contracting Parties** shall encourage the provision of information to banks and other financial institutions on possibilities of participating, including through the creation of public/private partnerships, in the financing of energy efficiency improvement measures.

2. **Contracting Parties** shall establish appropriate conditions for market operators to provide ade-

quate and targeted information and advice to energy consumers on energy efficiency.

3. The Commission shall review the impact of its measures to support the development of platforms, involving, *inter alia*, the European social dialogue bodies in fostering training programmes for energy efficiency, and shall bring forward further measures if appropriate. The Commission shall encourage European social partners in their discussions on energy efficiency.

4. **Contracting Parties** shall, with the participation of stakeholders, including local and regional authorities, promote suitable information, awareness-raising and training initiatives to inform citizens of the benefits and practicalities of taking energy efficiency improvement measures.

5. The Commission shall encourage the exchange and wide dissemination of information on best energy efficiency practices in **Contracting Parties**.

### Article 18

#### Energy services

1. **Contracting Parties** shall promote the energy services market and access for SMEs to this market by:

(a) disseminating clear and easily accessible information on:

- (i) available energy service contracts and clauses that should be included in such contracts to guarantee energy savings and final customers' rights;
- (ii) financial instruments, incentives, grants and loans to support energy efficiency service projects;

(b) encouraging the development of quality labels, *inter alia*, by trade associations;

(c) making publicly available and regularly updating a list of available energy service providers who are qualified and/or certified and their qualifications and/or certifications in accordance with Article 16, or providing an interface where energy service providers can provide information;

(d) supporting the public sector in taking up energy service offers, in particular for building refurbishment, by:

- (i) providing model contracts for energy performance contracting which include at least the items listed in Annex XIII;
- (ii) providing information on best practices for energy performance contracting, including, if available, cost-benefit analysis using a life-cycle approach;

(e) providing a qualitative review in the framework of the National Energy Efficiency Action Plan regarding the current and future development of the energy services market.

2. **Contracting Parties** shall support the proper functioning of the energy services market, where appropriate, by:

(a) identifying and publicising point(s) of contact where final customers can obtain the information referred to in paragraph 1;

(b) taking, if necessary, measures to remove the regulatory and non-regulatory barriers that impede the uptake of energy performance contracting and other energy efficiency service models for the identification and/or implementation of energy saving measures;

(c) considering putting in place or assigning the role of an independent mechanism, such as an

ombudsman, to ensure the efficient handling of complaints and out-of-court settlement of disputes arising from energy service contracts;

(d) enabling independent market intermediaries to play a role in stimulating market development on the demand and supply sides.

3. **Contracting Parties** shall ensure that energy distributors, distribution system operators and retail energy sales companies refrain from any activities that may impede the demand for and delivery of energy services or other energy efficiency improvement measures, or hinder the development of markets for such services or measures, including foreclosing the market for competitors or abusing dominant positions.

### **Article 19**

#### **Other measures to promote energy efficiency**

1. **Contracting Parties** shall evaluate and if necessary take appropriate measures to remove regulatory and non-regulatory barriers to energy efficiency, without prejudice to the basic principles of the property and tenancy law of the **Contracting Parties**, in particular as regards:

(a) the split of incentives between the owner and the tenant of a building or among owners, with a view to ensuring that these parties are not deterred from making efficiency-improving investments that they would otherwise have made by the fact that they will not individually obtain the full benefits or by the absence of rules for dividing the costs and benefits between them, including national rules and measures regulating decision-making processes in multi-owner properties;

(b) legal and regulatory provisions, and administrative practices, regarding public purchasing and annual budgeting and accounting, with a view to ensuring that individual public bodies are not deterred from making investments in improving energy efficiency and minimising expected life-cycle costs and from using energy performance contracting and other third-party financing mechanisms on a long-term contractual basis.

Such measures to remove barriers may include providing incentives, repealing or amending legal or regulatory provisions, or adopting guidelines and interpretative communications, or simplifying administrative procedures. The measures may be combined with the provision of education, training and specific information and technical assistance on energy efficiency.

2. The evaluation of barriers and measures referred to in paragraph 1 shall be notified to the Commission **and the Energy Community Secretariat** in the first National Energy Efficiency Action Plan referred to in Article 24(2). The Commission **and the Energy Community Secretariat** shall encourage the sharing of national best practices in this regard.

### **Article 20**

#### **Energy Efficiency National Fund, Financing and Technical Support**

1. Without prejudice to Articles 107 and 108 of the Treaty on the Functioning of the European Union, **Contracting Parties** shall facilitate the establishment of financing facilities, or use of existing ones, for energy efficiency improvement measures to maximise the benefits of multiple streams of

financing.

2. The Commission shall, where appropriate, directly or via the European financial institutions, assist **Contracting Parties** in setting up financing facilities and technical support schemes with the aim of increasing energy efficiency in different sectors.

3. The Commission **and the Energy Community Secretariat** shall facilitate the exchange of best practice between the competent national or regional authorities or bodies, e.g. through annual meetings of the regulatory bodies, public databases with information on the implementation of measures by **Contracting Parties**, and country comparison.

4. **Contracting Parties** may set up an Energy Efficiency National Fund. The purpose of this fund shall be to support national energy efficiency initiatives.

5. **Contracting Parties** may allow for the obligations set out in Article 5(1) to be fulfilled by annual contributions to the Energy Efficiency National Fund of an amount equal to the investments required to achieve those obligations.

6. **Contracting Parties** may provide that obligated parties can fulfil their obligations set out in Article 7(1) by contributing annually to the Energy Efficiency National Fund an amount equal to the investments required to achieve those obligations.

7. **Contracting Parties** may use their revenues from annual emission allocations under Decision No 406/2009/EC for the development of innovative financing mechanisms to give practical effect to the objective in Article 5 of improving the energy performance of buildings.

### **Article 21**

#### **Conversion factors**

For the purpose of comparison of energy savings and conversion to a comparable unit, the conversion factors set out in Annex IV shall apply unless the use of other conversion factors can be justified.

## **CHAPTER V**

### **FINAL PROVISIONS**

#### **Article 22**

##### **Delegated acts**

<...>

#### **Article 23**

##### **Exercise of the delegation**

<...>

## Article 24

### Review and monitoring of implementation

1. **By 30 June each year as from 2017, Contracting Parties shall report on the progress achieved towards national energy efficiency targets, in accordance with Part 1 of Annex XIV.**

2. By **30 April 2019**, and every three years thereafter, **Contracting Parties** shall submit National Energy Efficiency Action Plans. The National Energy Efficiency Action Plans shall cover significant energy efficiency improvement measures and expected and/ or achieved energy savings, including those in the supply, transmission and distribution of energy as well as energy end-use, in view of achieving the national energy efficiency targets referred to in Article 3(1). The National Energy Efficiency Action Plans shall be complemented with updated estimates of expected overall primary energy consumption in 2020, as well as estimated levels of primary energy consumption in the sectors indicated in Part 1 of Annex XIV.

**The National Energy Efficiency Action Plans shall in any case include the information specified in Annex XIV.**

3. The Commission shall evaluate the annual reports and the National Energy Efficiency Action Plans and assess the extent to which **Contracting Parties** have made progress towards the achievement of the national energy efficiency targets required by Article 3(1) and towards the implementation of this Directive. The Commission shall send its assessment to the European Parliament and the Council. Based on its assessment of the reports and the National Energy Efficiency Action Plans, the Commission may issue recommendations to **Contracting Parties**.

4. <...>

5. The Commission shall review the continued need for the possibility of exemptions set out in Article 14(6) for the first time in the assessment of the first National Energy Efficiency Action Plan and every three years thereafter. Where the review shows that any of the criteria for these exemptions can no longer be justified taking into account the availability of heat load and the real operating conditions of the exempted installations, the Commission shall propose appropriate measures.

6. **Contracting Parties** shall submit to the **Energy Community Secretariat** before 30 April each year statistics on national electricity and heat production from high and low efficiency cogeneration, in accordance with the methodology shown in Annex I, in relation to total heat and electricity production. They shall also submit annual statistics on cogeneration heat and electricity capacities and fuels for cogeneration, and on district heating and cooling production and capacities, in relation to total heat and electricity production and capacities. **Contracting Parties** shall submit statistics on primary energy savings achieved by application of cogeneration in accordance with the methodology shown in Annex II.

7. **By 30 June 2018 the Energy Community Secretariat shall submit the assessment referred to in Article 3(2) to the Ministerial Council of the Energy Community, accompanied, if necessary, by proposals for further measures.**

8. **The Energy Community Secretariat shall review the effectiveness of the implementation of Article 6 by 5 November 2018 and shall submit a report to the Ministerial Council of the Energy Community. That report shall be accompanied, if appropriate, by proposals for**

**further measures.**

9. **By 30 May 2019, the Energy Community Secretariat shall submit a report to the Ministerial Council of the Energy Community on the implementation of Article 7. That report shall be accompanied, if appropriate, by a legislative proposal for one or more of the following purposes:**

- (a) to change the final date laid down in Article 7(1);
- (b) to review the requirements laid down in Article 7(1), (2) and (3);
- (c) to establish additional common requirements, in particular as regards the matters referred to in Article 7(7).

10. **By 30 September 2020, the Commission shall assess the progress made by Contracting Parties in removing the regulatory and non-regulatory barriers referred to in Article 19(1). This assessment shall be followed, if appropriate, by proposals for further measures.**

11. The Commission shall make the reports referred to in paragraphs 1 and 2 publicly available.

**Article 25****Online platform**

The Commission shall establish an online platform in order to foster the practical implementation of this Directive at national, regional and local levels. That platform shall support the exchange of experiences on practices, benchmarking, networking activities, as well as innovative practices.

**Article 26****Committee procedure**

<...>

**Article 27****Amendments and repeals<sup>9</sup>**

**1. Article 1 of the Ministerial Council Decision 2009/05/MC-EnC is repealed from 15 October 2017. By way of exception, Article 4(1) to (4) of Directive 2006/32/EC<sup>10</sup> as incorporated and**

<sup>9</sup> The text displayed here corresponds to Article 3(36) of Ministerial Council Decision 2015/08/MC-EnC.

<sup>10</sup> Article 4 of Directive 2006/32/EC reads: "1. Contracting Parties shall adopt and aim to achieve an overall national indicative energy savings target of 9% for the ninth year of application of this Directive, to be reached by way of energy services and other energy efficiency improvement measures. Contracting Parties shall take cost-effective, practicable and reasonable measures designed to contribute towards achieving this target.

*This national indicative energy savings target shall be set and calculated in accordance with the provisions and methodology set out in Annex I. For purposes of comparison of energy savings and for conversion to a comparable unit, the conversion factors set out in Annex II shall apply unless the use of other conversion factors can be justified. Examples of eligible energy efficiency improvement measures are given in Annex III. A general framework for the measurement and verification of energy savings is given in Annex IV. The national energy savings in relation to the national indicative energy savings target shall be measured as from 1 January 2008.*

2. For the purpose of the first Energy Efficiency Action Plan (EEAP) to be submitted in accordance with Article 14, each Contracting Party shall establish an intermediate national indicative energy savings target for the third year of application of this Directive, and provide an overview of its strategy for the achievement of the intermediate and overall targets. This

adapted by Ministerial Council Decision 2009/05/MC-EnC thereof and Annexes I, III and IV thereto, shall continue to apply, without prejudice to the obligations of the Contracting Parties relating to the time-limit for its transposition into national law. Article 4(1) to (4) of, and Annexes I, III and IV of Directive 2006/32/EC as incorporated and adapted by Ministerial Council Decision 2009/05/MC-EnC, shall cease to apply with effect from 1 January 2020. References to Directive 2006/32/EC shall be construed as references to this Directive and shall be read in accordance with the correlation table set out in Annex XV.

2. Article 9(1) and (2) of Directive 2010/30/EU, as incorporated and adapted by Ministerial Council Decision 2010/01/MC-EnC shall cease to apply from 15 October 2017.

## **Article 28**

### **Transposition**

1. **Contracting Parties shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 15 October 2017.**<sup>11</sup>

Notwithstanding the first subparagraph, **Contracting Parties** shall bring into force the laws, regulations and administrative provisions necessary to comply with Article 4, the first subparagraph of Article 5(1), Article 5(5), Article 5(6), the last subparagraph of Article 7(9), Article 14(6), Article 19(2), Article 24(1) and Article 24(2) and point (4) of Annex V by the dates specified therein.

They shall forthwith communicate to the **Energy Community Secretariat the text of those provisions.**

When **Contracting Parties** adopt those provisions, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. **Contracting Parties** shall determine how such reference is to be made.

2. **Contracting Parties** shall communicate to the **Energy Community Secretariat** the text of the main provisions of national law which they adopt in the field covered by this Directive.

**Each Contracting Party shall transpose and implement Directive 2012/27/EU of the European Parliament and of the Council of 25 October 2012 on energy efficiency, amending Directives 2009/125/EC and 2010/30/EU and repealing Directives 2004/8/EC and 2006/32/EC by 15 October 2017.**

**They shall forthwith inform the Energy Community Secretariat thereof.**

**Transposition shall be made without changes to the structure and text of Directive 2012/27/EU other than translation.**<sup>12</sup>

---

*intermediate target shall be realistic and consistent with the overall national indicative energy savings target referred to in paragraph 1.*

*The Secretariat shall give an opinion on whether the intermediate national indicative target appears realistic and consistent with the overall target.*

3. *Each Contracting Party shall draw up programmes and measures to improve energy efficiency.*

4. *Contracting Parties shall assign to one or more new or existing authorities or agencies the overall control and responsibility for overseeing the framework set up in relation to the target mentioned in paragraph 1. These bodies shall thereafter verify the energy savings as a result of energy services and other energy efficiency improvement measures, including existing national energy efficiency improvement measures, and report the results."*

<sup>11</sup> In accordance with the Accession Protocol, the corresponding date for Georgia is 31 December 2018.

<sup>12</sup> The text displayed here corresponds to Article 1 of Ministerial Council Decision 2015/08/MC-EnC.

**Article 29**  
**Entry into force**

**This Directive shall enter into force on the date of its adoption by the Ministerial Council.**

**Article 30**  
**Addressees**

**This Decision enters into force upon its adoption and is addressed to the Contracting Parties.<sup>13</sup>**

<sup>13</sup> The text displayed here corresponds to Article 4 of Ministerial Council Decision 2015/08/MC-EnC.

## ANNEX I

### General principles for the calculation of electricity from cogeneration

#### PART I

##### General principles

Values used for calculation of electricity from cogeneration shall be determined on the basis of the expected or actual operation of the unit under normal conditions of use. For micro- cogeneration units the calculation may be based on certified values.

(a) Electricity production from cogeneration shall be considered equal to total annual electricity production of the unit measured at the outlet of the main generators;

(i) in cogeneration units of types (b), (d), (e), (f), (g) and (h) referred to in Part II with an annual overall efficiency set by **Contracting Parties** at a level of at least 75%, and

(ii) in cogeneration units of types (a) and (c) referred to in Part II with an annual overall efficiency set by **Contracting Parties** at a level of at least 80%.

(b) In cogeneration units with an annual overall efficiency below the value referred to in point (i) of point (a) (cogeneration units of types (b), (d), (e), (f), (g), and (h) referred to in Part II) or with an annual overall efficiency below the value referred to in point (ii) of point (a) (cogeneration units of types (a) and (c) referred to in Part II) cogeneration is calculated according to the following formula:

$$E_{\text{CHP}} = H_{\text{CHP}} * C$$

where:

$E_{\text{CHP}}$  is the amount of electricity from cogeneration;

$C$  is the power-to-heat ratio;

$H_{\text{CHP}}$  is the amount of useful heat from cogeneration (calculated for this purpose as total heat production minus any heat produced in separate boilers or by live steam extraction from the steam generator before the turbine).

The calculation of electricity from cogeneration must be based on the actual power-to-heat ratio. If the actual power-to-heat ratio of a cogeneration unit is not known, the following default values may be used, in particular for statistical purposes, for units of types (a), (b), (c), (d) and (e) referred to in Part II provided that the calculated cogeneration electricity is less or equal to total electricity production of the unit:

Type of the unit	Default power to heat ratio, C
Combined cycle gas turbine with heat recovery	0,95
Steam back pressure turbine	0,45
Steam condensing extraction turbine	0,45
Gas turbine with heat recovery	0,55
Internal combustion engine	0,75

If **Contracting Parties** introduce default values for power-to-heat ratios for units of types (f), (g), (h), (i), (j) and (k) referred to in Part II, such default values shall be published and shall be notified to

the **Energy Community Secretariat**.

(c) If a share of the energy content of the fuel input to the cogeneration process is recovered in chemicals and recycled this share can be subtracted from the fuel input before calculating the overall efficiency used in points (a) and (b).

(d) **Contracting Parties** may determine the power-to-heat ratio as the ratio of electricity to useful heat when operating in cogeneration mode at a lower capacity using operational data of the specific unit.

(e) **Contracting Parties** may use other reporting periods than one year for the purpose of the calculations according to points (a) and (b).

## PART II

### Cogeneration technologies covered by this Directive

- (a) Combined cycle gas turbine with heat recovery
- (b) Steam back pressure turbine
- (c) Steam condensing extraction turbine
- (d) Gas turbine with heat recovery
- (e) Internal combustion engine
- (f) Microturbines
- (g) Stirling engines
- (h) Fuel cells
- (i) Steam engines
- (j) Organic Rankine cycles
- (k) Any other type of technology or combination thereof falling under the definition laid down in Article 2(30).

When implementing and applying the general principles for the calculation of electricity from cogeneration, **Contracting Parties** shall use the detailed Guidelines established by Commission Decision 2008/952/EC of 19 November 2008 establishing detailed guidelines for the implementation and application of Annex II to Directive 2004/8/EC of the European Parliament and of the Council.

## ANNEX II

### Methodology for determining the efficiency of the cogeneration process

Values used for calculation of efficiency of cogeneration and primary energy savings shall be determined on the basis of the expected or actual operation of the unit under normal conditions of use.

#### (a) High-efficiency cogeneration

For the purpose of this Directive high-efficiency cogeneration shall fulfil the following criteria:

- cogeneration production from cogeneration units shall provide primary energy savings calculated according to point (b) of at least 10% compared with the references for separate production of heat and electricity,
- production from small-scale and micro-cogeneration units providing primary energy savings may qualify as high-efficiency cogeneration.

#### (b) Calculation of primary energy savings

The amount of primary energy savings provided by cogeneration production defined in accordance with Annex I shall be calculated on the basis of the following formula:

$$PES = \left( 1 - \frac{1}{\frac{CHP H_{\eta}}{Ref H_{\eta}} + \frac{CHP E_{\eta}}{Ref E_{\eta}}} \right) \times 100 \%$$

where:

**PES** is primary energy savings.

**CHP H<sub>η</sub>** is the heat efficiency of the cogeneration production defined as annual useful heat output divided by the fuel input used to produce the sum of useful heat output and electricity from cogeneration.

**Ref H<sub>η</sub>** is the efficiency reference value for separate heat production.

**CHP E<sub>η</sub>** is the electrical efficiency of the cogeneration production defined as annual electricity from cogeneration divided by the fuel input used to produce the sum of useful heat output and electricity from cogeneration. Where a cogeneration unit generates mechanical energy, the annual electricity from cogeneration may be increased by an additional element representing the amount of electricity which is equivalent to that of mechanical energy. This additional element does not create a right to issue guarantees of origin in accordance with Article 14(10).

**Ref E<sub>η</sub>** is the efficiency reference value for separate electricity production.

#### (c) Calculations of energy savings using alternative calculation

**Contracting Parties** may calculate primary energy savings from a production of heat and electricity and mechanical energy as indicated below without applying Annex I to exclude the non-cogenerated heat and electricity parts of the same process. Such a production can be regarded as high-efficiency

cogeneration provided it fulfils the efficiency criteria in point (a) of this Annex and, for cogeneration units with an electrical capacity larger than 25 MW, the overall efficiency is above 70%. However, specification of the quantity of electricity from cogeneration produced in such a production, for issuing a guarantee of origin and for statistical purposes, shall be determined in accordance with Annex I.

If primary energy savings for a process are calculated using alternative calculation as indicated above the primary energy savings shall be calculated using the formula in point (b) of this Annex replacing: 'CHP  $H\eta$ ' with ' $H\eta$ ' and 'CHP  $E\eta$ ' with ' $E\eta$ ', where:

$H\eta$  shall mean the heat efficiency of the process, defined as the annual heat output divided by the fuel input used to produce the sum of heat output and electricity output.

$E\eta$  shall mean the electricity efficiency of the process, defined as the annual electricity output divided by the fuel input used to produce the sum of heat output and electricity output. Where a cogeneration unit generates mechanical energy, the annual electricity from cogeneration may be increased by an additional element representing the amount of electricity which is equivalent to that of mechanical energy. This additional element will not create a right to issue guarantees of origin in accordance with Article 14(10).

(d) **Contracting Parties** may use other reporting periods than one year for the purpose of the calculations according to points (b) and (c) of this Annex.

(e) For micro-cogeneration units the calculation of primary energy savings may be based on certified data.

(f) Efficiency reference values for separate production of heat and electricity

The harmonised efficiency reference values shall consist of a matrix of values differentiated by relevant factors, including year of construction and types of fuel, and must be based on a well-documented analysis taking, *inter alia*, into account data from operational use under realistic conditions, fuel mix and climate conditions as well as applied cogeneration technologies.

The efficiency reference values for separate production of heat and electricity in accordance with the formula set out in point (b) shall establish the operating efficiency of the separate heat and electricity production that cogeneration is intended to substitute.

The efficiency reference values shall be calculated according to the following principles:

1. For cogeneration units the comparison with separate electricity production shall be based on the principle that the same fuel categories are compared.
2. Each cogeneration unit shall be compared with the best available and economically justifiable technology for separate production of heat and electricity on the market in the year of construction of the cogeneration unit.
3. The efficiency reference values for cogeneration units older than 10 years of age shall be fixed on the reference values of units of 10 years of age.
4. The efficiency reference values for separate electricity production and heat production shall reflect the climatic differences between **Contracting Parties**.

## ANNEX III

### Energy efficiency requirements for purchasing products, services and buildings by central government

Central governments that purchase products, services or buildings, insofar as this is consistent with cost-effectiveness, economical feasibility, wider sustainability, technical suitability, as well as sufficient competition, shall:

(a) where a product is covered by a delegated act adopted under Directive 2010/30/EU **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** or by a related Commission implementing directive, purchase only the products that comply with the criterion of belonging to the highest energy efficiency class possible in the light of the need to ensure sufficient competition;

(b) <...>

(c) <...>

(d) <...>

(e) require in their tenders for service contracts that service providers use, for the purposes of providing the services in question, only products that comply with the requirements referred to in points (a) to (d), when providing the services in question. This requirement shall apply only to new products purchased by service providers partially or wholly for the purpose of providing the service in question;

(f) purchase, or make new rental agreements for, only buildings that comply at least with the minimum energy performance requirements referred to in Article 5(1) unless the purpose of the purchase is:

(i) to undertake deep renovation or demolition;

(ii) in the case of public bodies, to re-sell the building without using it for public body's own purposes; or

(iii) to preserve it as a building officially protected as part of a designated environment, or because of its special architectural or historical merit.

Compliance with these requirements shall be verified by means of the energy performance certificates referred to in Article 11 of Directive 2010/31/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**.

## ANNEX IV

Energy content of selected fuels for end use – conversion table<sup>14</sup>

Energy commodity	kJ (NCV)	kgoe (NCV)	kWh (NCV)
1 kg coke	28 500	0,676	7,917
1 kg hard coal	17 200 — 30 700	0,411 — 0,733	4,778 — 8,528
1 kg brown coal briquettes	20 000	0,478	5,556
1 kg black lignite	10 500 — 21 000	0,251 — 0,502	2,917 — 5,833
1 kg brown coal	5 600 — 10 500	0,134 — 0,251	1,556 — 2,917
1 kg oil shale	8 000 — 9 000	0,191 — 0,215	2,222 — 2,500
1 kg peat	7 800 — 13 800	0,186 — 0,330	2,167 — 3,833
1 kg peat briquettes	16 000 — 16 800	0,382 — 0,401	4,444 — 4,667
1 kg residual fuel oil (heavy oil)	40 000	0,955	11,111
1 kg light fuel oil	42 300	1,010	11,750
1 kg motor spirit (petrol)	44 000	1,051	12,222
1 kg paraffin	40 000	0,955	11,111
1 kg liquefied petroleum gas	46 000	1,099	12,778
1 kg natural gas <sup>(1)</sup>	47 200	1,126	13,10
1 kg liquefied natural gas	45 190	1,079	12,553
1 kg wood (25% humidity) <sup>(2)</sup>	13 800	0,330	3,833
1 kg pellets/wood bricks	16 800	0,401	4,667
1 kg waste	7 400 — 10 700	0,177 — 0,256	2,056 — 2,972
1 MJ derived heat	1 000	0,024	0,278
1 kWh electrical energy	3 600	0,086	1 <sup>(3)</sup>
Source: Eurostat			

<sup>(1)</sup> 93% methane.

<sup>(2)</sup> **Contracting Parties** may apply other values depending on the type of wood most used in the respective **Contracting Party**.

<sup>(3)</sup> Applicable when energy savings are calculated in primary energy terms using a bottom-up approach based on final energy consumption. For savings in kWh electricity **Contracting Parties** may apply a default coefficient of 2,5. **Contracting Parties** may apply a different coefficient provided they can justify it.

<sup>14</sup> **Contracting Parties** may apply different conversion factors if these can be justified.

## ANNEX V

### Common methods and principles for calculating the impact of energy efficiency obligations schemes or other policy measures under Article 7(1), (2) and (9) and Article 20(6)

1. Methods for calculating energy savings for the purposes of Article 7(1) and (2), and points (b), (c), (d), (e) and (f) of the second subparagraph of Article 7(9), and Article 20(6).

Obligated, participating or entrusted parties, or implementing public authorities may use one or more of the following methods for calculating energy savings:

(a) deemed savings, by reference to the results of previous independently monitored energy improvements in similar installations. The generic approach is termed '*ex-ante*';

(b) metered savings, whereby the savings from the installation of a measure, or package of measures, is determined by recording the actual reduction in energy use, taking due account of factors such as additionality, occupancy, production levels and the weather which may affect consumption. The generic approach is termed '*ex-post*';

(c) scaled savings, whereby engineering estimates of savings are used. This approach may only be used where establishing robust measured data for a specific installation is difficult or disproportionately expensive, e.g. replacing a compressor or electric motor with a different kWh rating than that for which independent information on savings has been measured, or where they are carried out on the basis of nationally established methodologies and benchmarks by qualified or accredited experts that are independent of the obligated, participating or entrusted parties involved;

(d) surveyed savings, where consumers' response to advice, information campaigns, labelling or certification schemes, or smart metering is determined. This approach may only be used for savings resulting from changes in consumer behaviour. It may not be used for savings resulting from the installation of physical measures.

2. In determining the energy saving for an energy efficiency measure for the purposes of Article 7(1) and (2), and points (b), (c), (d), (e) and (f) of the second subparagraph of Article 7(9), and Article 20(6) the following principles shall apply:

(a) <...>

(b) to account for climatic variations between regions, **Contracting Parties** may choose to adjust the savings to a standard value or to accord different energy savings in accordance with the temperature variations between regions;

(c) the activities of the obligated, participating or entrusted party must be demonstrably material to the achievement of the claimed savings;

(d) savings from an individual action may not be claimed by more than one party;

(e) calculation of energy savings shall take into account the lifetime of savings. This may be done by counting the savings each individual action will achieve between its implementation date and 31 December 2020. Alternatively, **Contracting Parties** may adopt another method that is estimated to achieve at least the same total quantity of savings. When using other methods, **Contracting Parties** shall ensure that the total amount of energy savings calculated with these other methods does not exceed the amount of energy savings that would have been the result of their calculation when

counting the savings each individual action will achieve between its implementation date and 31 December 2020. **Contracting Parties** shall describe in detail in their first National Energy Efficiency Action Plan according to Annex XIV to this Directive, which other methods they have used and which provisions have been made to ensure this binding calculation requirement; and

(f) actions by obligated, participating or entrusted parties, either individually or together, which aim to result in lasting transformation of products, equipment, or markets to a higher level of energy efficiency are permitted; and

(g) in promoting the uptake of energy efficiency measures, **Contracting Parties** shall ensure that quality standards for products, services and installation of measures are maintained. Where such standards do not exist, **Contracting Parties** shall work with obligated, participating or entrusted parties to introduce them.

3. In determining the energy saving from policy measures applied under point (a) of the second subparagraph of Article 7(9), the following principles shall apply:

(a) <...>

(b) recent and representative official data on price elasticities shall be used for calculation of the impact; and

(c) the energy savings from accompanying taxation policy instruments, including fiscal incentives or payment to a fund, shall be accounted separately.

4. Notification of methodology

**Contracting Parties** shall by **15 November 2017** notify the **Energy Community Secretariat** of their proposed detailed methodology for operation of the energy efficiency obligation schemes and for the purposes of Article 7(9) and Article 20(6). Except in the case of taxes, such notification shall include details of:

(a) obligated, participating or entrusted parties, or implementing public authorities;

(b) target sectors;

(c) the level of the energy saving target or expected savings to be achieved over the whole and intermediate periods;

(d) the duration of the obligation period and intermediate periods;

(e) eligible measure categories;

(f) calculation methodology, including how additionality and materiality are to be determined and which methodologies and benchmarks are used for engineering estimates;

(g) lifetimes of measures;

(h) approach taken to address climatic variations within the **Contracting Party**;

(i) quality standards;

(j) monitoring and verification protocols and how the independence of these from the obligated, participating or entrusted parties is ensured;

(k) audit protocols; and

(l) how the need to fulfil the requirement in the second subparagraph of Article 7(1) is taken into account.

In the case of taxes, the notification shall include details of:

- (a) target sectors and segment of taxpayers;
- (b) implementing public authority;
- (c) expected savings to be achieved;
- (d) duration of the taxation measure and intermediate periods; and
- (e) calculation methodology, including which price elasticities are used.

## ANNEX VI

### **Minimum criteria for energy audits including those carried out as part of energy management systems**

The energy audits referred to in Article 8 shall be based on the following guidelines:

- (a) be based on up-to-date, measured, traceable operational data on energy consumption and (for electricity) load profiles;
- (b) comprise a detailed review of the energy consumption profile of buildings or groups of buildings, industrial operations or installations, including transportation;
- (c) build, whenever possible, on life-cycle cost analysis (LCCA) instead of Simple Payback Periods (SPP) in order to take account of long-term savings, residual values of long-term investments and discount rates;
- (d) be proportionate, and sufficiently representative to permit the drawing of a reliable picture of overall energy performance and the reliable identification of the most significant opportunities for improvement.

Energy audits shall allow detailed and validated calculations for the proposed measures so as to provide clear information on potential savings.

The data used in energy audits shall be storable for historical analysis and tracking performance.

## ANNEX VII

### Minimum requirements for billing and billing information based on actual consumption

#### 1. Minimum requirements for billing

##### 1.1. Billing based on actual consumption

In order to enable final customers to regulate their own energy consumption, billing should take place on the basis of actual consumption at least once a year, and billing information should be made available at least quarterly, on request or where the consumers have opted to receive electronic billing or else twice yearly. Gas used only for cooking purposes may be exempted from this requirement.

##### 1.2. Minimum information contained in the bill

**Contracting Parties** shall ensure that, where appropriate, the following information is made available to final customers in clear and understandable terms in or with their bills, contracts, transactions, and receipts at distribution stations:

- (a) current actual prices and actual consumption of energy;
- (b) comparisons of the final customer's current energy consumption with consumption for the same period in the previous year, preferably in graphic form;
- (c) contact information for final customers' organisations, energy agencies or similar bodies, including website addresses, from which information may be obtained on available energy efficiency improvement measures, comparative end-user profiles and objective technical specifications for energy-using equipment. In addition, wherever possible and useful, **Contracting Parties** shall ensure that comparisons with an average normalised or benchmarked final customer in the same user category are made available to final customers in clear and understandable terms, in, with or signposted to within, their bills, contracts, transactions, and receipts at distribution stations.

##### 1.3. Advice on energy efficiency accompanying bills and other feedback to final customers

When sending contracts and contract changes, and in the bills customers receive or through websites addressing individual customers, energy distributors, distribution system operators and retail energy sales companies shall inform their customers in a clear and understandable manner of contact information for independent consumer advice centres, energy agencies or similar institutions, including their internet addresses, where they can obtain advice on available energy efficiency measures, benchmark profiles for their energy consumption and technical specifications of energy using appliances that can serve to reduce the consumption of these appliances.

## ANNEX VIII

### Potential for efficiency in heating and cooling

1. The comprehensive assessment of national heating and cooling potentials referred to in Article 14(1) shall include:

- (a) a description of heating and cooling demand;
- (b) a forecast of how this demand will change in the next 10 years, taking into account in particular the evolution of demand in buildings and the different sectors of industry;
- (c) a map of the national territory, identifying, while preserving commercially sensitive information:
  - (i) heating and cooling demand points, including:
    - municipalities and conurbations with a plot ratio of at least 0,3, and
    - industrial zones with a total annual heating and cooling consumption of more than 20 GWh;
  - (ii) existing and planned district heating and cooling infrastructure;
  - (iii) potential heating and cooling supply points, including:
    - electricity generation installations with a total annual electricity production of more than 20 GWh, and
    - waste incineration plants,
    - existing and planned cogeneration installations using technologies referred to in Part II of Annex I, and district heating installations;
- (d) identification of the heating and cooling demand that could be satisfied by high-efficiency cogeneration, including residential micro-cogeneration, and by district heating and cooling;
- (e) identification of the potential for additional high-efficiency cogeneration, including from the refurbishment of existing and the construction of new generation and industrial installations or other facilities generating waste heat;
- (f) identification of energy efficiency potentials of district heating and cooling infrastructure;
- (g) strategies, policies and measures that may be adopted up to 2020 and up to 2030 to realise the potential in point (e) in order to meet the demand in point (d), including, where appropriate, proposals to:
  - (i) increase the share of cogeneration in heating and cooling production and in electricity production;
  - (ii) develop efficient district heating and cooling infrastructure to accommodate the development of high-efficiency cogeneration and the use of heating and cooling from waste heat and renewable energy sources;
  - (iii) encourage new thermal electricity generation installations and industrial plants producing waste heat to be located in sites where a maximum amount of the available waste heat will be recovered to meet existing or forecasted heat and cooling demand;
  - (iv) encourage new residential zones or new industrial plants which consume heat in their production processes to be located where available waste heat, as identified in the comprehensive

assessment, can contribute to meeting their heat and cooling demands. This could include proposals that support the clustering of a number of individual installations in the same location with a view to ensuring an optimal matching between demand and supply for heat and cooling;

(v) encourage thermal electricity generating installations, industrial plants producing waste heat, waste incineration plants and other waste-to-energy plants to be connected to the local district heating or cooling network;

(vi) encourage residential zones and industrial plants which consume heat in their production processes to be connected to the local district heating or cooling network;

(h) the share of high-efficiency cogeneration and the potential established and progress achieved under Directive 2004/8/EC;

(i) an estimate of the primary energy to be saved;

(j) an estimate of public support measures to heating and cooling, if any, with the annual budget and identification of the potential aid element. This does not prejudice a separate notification of the public support schemes for a State aid assessment.

2. To the extent appropriate, the comprehensive assessment may be made up of an assembly of regional or local plans and strategies.

## ANNEX IX

### Cost-benefit analysis

#### PART 1

##### General principles of the cost-benefit analysis

The purpose of preparing cost-benefit analyses in relation to measures for promoting efficiency in heating and cooling as referred to in Article 14(3) is to provide a decision base for qualified prioritisation of limited resources at society level.

The cost-benefit analysis may either cover a project assessment or a group of projects for a broader local, regional or national assessment in order to establish the most cost-effective and beneficial heating or cooling option for a given geographical area for the purpose of heat planning.

Cost-benefit analyses for the purposes of Article 14(3) shall include an economic analysis covering socio-economic and environmental factors.

The cost-benefit analyses shall include the following steps and considerations:

(a) Establishing a system boundary and geographical boundary

The scope of the cost-benefit analyses in question determines the relevant energy system. The geographical boundary shall cover a suitable well-defined geographical area, e.g. a given region or metropolitan area, to avoid selecting sub-optimised solutions on a project by project basis.

(b) Integrated approach to demand and supply options

The cost-benefit analysis shall take into account all relevant supply resources available within the system and geographical boundary, using the data available, including waste heat from electricity generation and industrial installations and renewable energy, and the characteristics of, and trends in heat and cooling demand.

(c) Constructing a baseline

The purpose of the baseline is to serve as a reference point, to which the alternative scenarios are evaluated.

(d) Identifying alternative scenarios

All relevant alternatives to the baseline shall be considered. Scenarios that are not feasible due to technical reasons, financial reasons, national regulation or time constraints may be excluded at an early stage of the cost-benefit analysis if justified based on careful, explicit and well-documented considerations.

Only high-efficiency cogeneration, efficient district heating and cooling or efficient individual heating and cooling supply options should be taken into account in the cost-benefit analysis as alternative scenarios compared to the baseline.

(e) Method for the calculation of cost-benefit surplus

(i) The total long-term costs and benefits of heat or cooling supply options shall be assessed and compared.

(ii) The criterion for evaluation shall be the net present value (NPV) criterion.

(iii) The time horizon shall be chosen such that all relevant costs and benefits of the scenarios

are included. For example, for a gas-fired power plant an appropriate time horizon could be 25 years, for a district heating system, 30 years, or for heating equipment such as boilers 20 years.

(f) Calculation and forecast of prices and other assumptions for the economic analysis

(i) **Contracting Parties** shall provide assumptions, for the purpose of the cost-benefit analyses, on the prices of major input and output factors and the discount rate.

(ii) The discount rate used in the economic analysis for the calculation of net present value shall be chosen according to European or national guidelines.<sup>15</sup>

(iii) **Contracting Parties** shall use national, European or international energy price development forecasts if appropriate in their national and/or regional/local context.

(iv) The prices used in the economic analysis shall reflect the true socio economic costs and benefits and should include external costs, such as environmental and health effects, to the extent possible, i.e. when a market price exists or when it is already included in European or national regulation.

(g) Economic analysis: Inventory of effects

The economic analyses shall take into account all relevant economic effects.

**Contracting Parties** may assess and take into account in decision making costs and energy savings from the increased flexibility in energy supply and from a more optimal operation of the electricity networks, including avoided costs and savings from reduced infrastructure investment, in the analysed scenarios.

The costs and benefits taken into account shall include at least the following:

(i) Benefits

- Value of output to the consumer (heat and electricity)
- External benefits such as environmental and health benefits, to the extent possible

(ii) Costs

- Capital costs of plants and equipments
- Capital costs of the associated energy networks
- Variable and fixed operating costs
- Energy costs
- Environmental and health cost, to the extent possible

(h) Sensitivity analysis:

A sensitivity analysis shall be included to assess the costs and benefits of a project or group of projects based on different energy prices, discount rates and other variable factors having a significant impact on the outcome of the calculations. The **Contracting Parties** shall designate the competent authorities responsible for carrying out the cost-benefit analyses under Article 14. **Contracting Parties** may require competent local, regional and national authorities or operators of individual installations to carry out the economic and financial analysis. They shall provide the detailed methodologies and assumptions in accordance with this Annex and establish and make public the procedures for the economic analysis.

<sup>15</sup> The national discount rate chosen for the purpose of economic analysis should take into account data provided by the European Central Bank.

## PART 2

### Principles for the purpose of Article 14(5) and (7)

The cost-benefit analyses shall provide information for the purpose of the measures in Article 14(5) and (7):

If an electricity-only installation or an installation without heat recovery is planned, a comparison shall be made between the planned installations or the planned refurbishment and an equivalent installation producing the same amount of electricity or process heat, but recovering the waste heat and supplying heat through high-efficiency cogeneration and/or district heating and cooling networks.

Within a given geographical boundary the assessment shall take into account the planned installation and any appropriate existing or potential heat demand points that could be supplied from it, taking into account rational possibilities (for example, technical feasibility and distance).

The system boundary shall be set to include the planned installation and the heat loads, such as building(s) and industrial process. Within this system boundary the total cost of providing heat and power shall be determined for both cases and compared.

Heat loads shall include existing heat loads, such as an industrial installation or an existing district heating system, and also, in urban areas, the heat load and costs that would exist if a group of buildings or part of a city were provided with and/or connected into a new district heating network.

The cost-benefit analysis shall be based on a description of the planned installation and the comparison installation(s), covering electrical and thermal capacity, as applicable, fuel type, planned usage and the number of planned operating hours annually, location and electricity and thermal demand.

For the purpose of the comparison, the thermal energy demand and the types of heating and cooling used by the nearby heat demand points shall be taken into account. The comparison shall cover infrastructure related costs for the planned and comparison installation.

Cost-benefit analyses for the purposes of Article 14(5) shall include an economic analysis covering a financial analysis reflecting actual cash flow transactions from investing in and operating individual installations.

Projects with positive cost-benefit outcome are those where the sum of discounted benefits in the economic and financial analysis exceeds the sum of discounted costs (cost-benefit surplus).

**Contracting Parties** shall set guiding principles for the methodology, assumptions and time horizon for the economic analysis.

**Contracting Parties** may require that the companies responsible for the operation of thermal electric generation installations, industrial companies, district heating and cooling networks, or other parties influenced by the defined system boundary and geographical boundary, contribute data for use in assessing the costs and benefits of an individual installation.

## ANNEX X

### Guarantee of origin for electricity produced from high-efficiency cogeneration

- (a) **Contracting Parties** shall take measures to ensure that:
- (i) the guarantee of origin of the electricity produced from high-efficiency cogeneration:
    - enable producers to demonstrate that the electricity they sell is produced from high-efficiency cogeneration and is issued to this effect in response to a request from the producer,
    - is accurate, reliable and fraud-resistant,
    - is issued, transferred and cancelled electronically;
  - (ii) the same unit of energy from high-efficiency cogeneration is taken into account only once.
- (b) The guarantee of origin referred to in Article 14(10) shall contain at least the following information:
- (i) the identity, location, type and capacity (thermal and electrical) of the installation where the energy was produced;
  - (ii) the dates and places of production;
  - (iii) the lower calorific value of the fuel source from which the electricity was produced;
  - (iv) the quantity and the use of the heat generated together with the electricity;
  - (v) the quantity of electricity from high-efficiency cogeneration in accordance with Annex II that the guarantee represents;
  - (vi) the primary energy savings calculated in accordance with Annex II based on the harmonised efficiency reference values indicated in point (f) of Annex II;
  - (vii) the nominal electric and thermal efficiency of the plant;
  - (viii) whether and to what extent the installation has benefited from investment support;
  - (ix) whether and to what extent the unit of energy has benefited in any other way from a national support scheme, and the type of support scheme;
  - (x) the date on which the installation became operational; and
  - (xi) the date and country of issue and a unique identification number.

The guarantee of origin shall be of the standard size of 1 MWh. It shall relate to the net electricity output measured at the station boundary and exported to the grid.

## ANNEX XI

### **Energy efficiency criteria for energy network regulation and for electricity network tariffs**

1. Network tariffs shall be cost-reflective of cost-savings in networks achieved from demand-side and demand- response measures and distributed generation, including savings from lowering the cost of delivery or of network investment and a more optimal operation of the network.

2. Network regulation and tariffs shall not prevent network operators or energy retailers making available system services for demand response measures, demand management and distributed generation on organised electricity markets, in particular:

(a) the shifting of the load from peak to off-peak times by final customers taking into account the availability of renewable energy, energy from cogeneration and distributed generation;

(b) energy savings from demand response of distributed consumers by energy aggregators;

(c) demand reduction from energy efficiency measures undertaken by energy service providers, including energy service companies;

(d) the connection and dispatch of generation sources at lower voltage levels;

(e) the connection of generation sources from closer location to the consumption; and

(f) the storage of energy. For the purposes of this provision the term 'organised electricity markets' shall include over-the-counter markets and electricity exchanges for trading energy, capacity, balancing and ancillary services in all timeframes, including forward, day-ahead and intra-day markets.

3. Network or retail tariffs may support dynamic pricing for demand response measures by final customers, such as:

(a) time-of-use tariffs;

(b) critical peak pricing;

(c) real time pricing; and

(d) peak time rebates.

## ANNEX XII

### **Energy efficiency requirements for transmission system operators and distribution system operators**

Transmission system operators and distribution system operators shall:

- (a) set up and make public their standard rules relating to the bearing and sharing of costs of technical adaptations, such as grid connections and grid reinforcements, improved operation of the grid and rules on the non-discriminatory implementation of the grid codes, which are necessary in order to integrate new producers feeding electricity produced from high-efficiency cogeneration into the interconnected grid;
- (b) provide any new producer of electricity produced from high-efficiency cogeneration wishing to be connected to the system with the comprehensive and necessary information required, including:
  - (i) a comprehensive and detailed estimate of the costs associated with the connection;
  - (ii) a reasonable and precise timetable for receiving and processing the request for grid connection;
  - (iii) a reasonable indicative timetable for any proposed grid connection. The overall process to become connected to the grid should be no longer than 24 months, bearing in mind what is reasonably practicable and non-discriminatory;
- (c) provide standardised and simplified procedures for the connection of distributed high-efficiency cogeneration producers to facilitate their connection to the grid.

The standard rules referred to in point (a) shall be based on objective, transparent and non-discriminatory criteria taking particular account of all the costs and benefits associated with the connection of those producers to the grid. They may provide for different types of connection.

## ANNEX XIII

### **Minimum items to be included in energy performance contracts with the public sector or in the associated tender specifications**

- Clear and transparent list of the efficiency measures to be implemented or the efficiency results to be obtained.
- Guaranteed savings to be achieved by implementing the measures of the contract.
- Duration and milestones of the contract, terms and period of notice.
- Clear and transparent list of the obligations of each contracting party.
- Reference date(s) to establish achieved savings.
- Clear and transparent list of steps to be performed to implement a measure or package of measures and, where relevant, associated costs.
- Obligation to fully implement the measures in the contract and documentation of all changes made during the project.
- Regulations specifying the inclusion of equivalent requirements in any subcontracting with third parties.
- Clear and transparent display of financial implications of the project and distribution of the share of both parties in the monetary savings achieved (i.e. remuneration of the service provider).
- Clear and transparent provisions on measurement and verification of the guaranteed savings achieved, quality checks and guarantees.
- Provisions clarifying the procedure to deal with changing framework conditions that affect the content and the outcome of the contract (i.e. changing energy prices, use intensity of an installation).
- Detailed information on the obligations of each of the contracting party and of the penalties for their breach.

## ANNEX XIV

### General framework for reporting

#### PART 1

##### General framework for annual reports

The annual reports referred to in Article 24(1) provide a basis for the monitoring of the progress towards national 2020 targets. **Contracting Parties** shall ensure that the reports include the following minimum information:

- (a) an estimate of following indicators in the year before last (year X<sup>16</sup> (1) - 2):
- (i) primary energy consumption;
  - (ii) total final energy consumption;
  - (iii) final energy consumption by sector
    - industry
    - transport (split between passenger and freight transport, if available)
    - households
    - services;
  - (iv) gross value added by sector
    - industry
    - services;
  - (v) disposable income of households;
  - (vi) gross domestic product (GDP);
  - (vii) electricity generation from thermal power generation;
  - (viii) electricity generation from combined heat and power;
  - (ix) heat generation from thermal power generation;
  - (x) heat generation from combined heat and power plants, including industrial waste heat;
  - (xi) fuel input for thermal power generation;
  - (xii) passenger kilometres (pkm), if available;
  - (xiii) tonne kilometres (tkm), if available;
  - (xiv) combined transport kilometres (pkm + tkm), in case (xii) and (xiii) are not available;
  - (xv) population.

In sectors where energy consumption remains stable or is growing, Contracting Parties shall analyse the reasons for it and attach their appraisal to the estimates.

The second and subsequent reports shall also include points (b) to (e):

- (b) updates on major legislative and non-legislative measures implemented in the previous year which contribute towards the overall national energy efficiency targets for 2020;

<sup>16</sup> X = current year

(c) the total building floor area of the buildings with a total useful floor area over 500 m<sup>2</sup> and as of **1 January 2019** over 250 m<sup>2</sup> owned and occupied by the **Contracting Parties** central government that, on 1 January of the year in which the report is due, did not meet the energy performance requirements referred to in Article 5(1);

(d) the total building floor area of heated and/or cooled buildings owned and occupied by the **Contracting Parties** central government that was renovated in the previous year referred to in Article 5(1) or the amount of energy savings in eligible buildings owned and occupied by their central government as referred to in Article 5(6);

(e) energy savings achieved through the national energy efficiency obligation schemes referred to in Article 7(1) or the alternative measures adopted in application of Article 7(9).

The first report shall also include the national target referred to in Article 3(1).

In the annual reports referred to in Article 24(1) **Contracting Parties** may also include additional national targets. These may be related in particular to the statistical indicators enumerated in point (a) of this Part or combinations thereof, such as primary or final energy intensity or sectoral energy intensities.

## PART 2

### General framework for National Energy Efficiency Action Plans

National Energy Efficiency Action Plans referred to in Article 24(2) shall provide a framework for the development of national energy efficiency strategies.

The National Energy Efficiency Action Plans shall cover significant energy efficiency improvement measures and expected/achieved energy savings, including those in the supply, transmission and distribution of energy as well as energy end-use. Contracting Parties shall ensure that the National Energy Efficiency Action Plans include the following minimum information:

#### 1. Targets and strategies

- the indicative national energy efficiency target for 2020 as required by Article 3(1),
- the national indicative energy savings target set in Article 4(1) of Directive 2006/32/EC, **as incorporated and adapted by the Ministerial Council Decision 2009/05/MC-EnC**,
- other existing energy efficiency targets addressing the whole economy or specific sectors.

#### 2. Measures and energy savings

The National Energy Efficiency Action Plans shall provide information on measures adopted or planned to be adopted in view of implementing the main elements of this Directive and on their related savings.

##### (a) Primary energy savings

The National Energy Efficiency Action Plans shall list significant measures and actions taken towards primary energy saving in all sectors of the economy. For every measure or package of measures/actions estimations of expected savings for 2020 and savings achieved by the time of the reporting shall be provided.

Where available, information on other impacts/benefits of the measures (greenhouse gas emissions reduction, improved air quality, job creation, etc.) and the budget for the implementation should be provided.

### (b) Final energy savings

The first and second National Energy Efficiency Action Plans shall include the results with regard to the fulfilment of the final energy savings target set out in Article 4(1) and (2) of the Directive 2006/32/EC, **as incorporated and adapted by the Ministerial Council Decision 2009/05/MC-EnC**. If calculation/estimation of savings per measure is not available, sector level energy reduction shall be shown due to (the combination) of measures.

The first and second National Energy Efficiency Action Plans shall also include the measurement and/or calculation methodology used for calculating the energy savings. If the 'recommended methodology'<sup>17</sup> is applied, the National Energy Efficiency Action Plan should provide references to this.

### 3. Specific information related to this Directive

#### 3.1. Public bodies (Article 5)

National Energy Efficiency Action Plans shall include the list of public bodies having developed an energy efficiency plan in accordance with Article 5(7).

#### 3.2. Energy efficiency obligations (Article 7)

National Energy Efficiency Action Plans shall include the national coefficients chosen in accordance with Annex IV.

The first National Energy Efficiency Action Plan shall include a short description of the national scheme referred to in Article 7(1) or the alternative measures adopted in application of Article 7(9).

#### 3.3. Energy audits and management systems (Article 8)

National Energy Efficiency Action Plans shall include:

- (a) the number of energy audits carried out in the previous period;
- (b) the number of energy audits carried out in large enterprises in the previous period;
- (c) the number of large companies in their territory, with an indication of the number of those to which Article 8(5) is applicable.

#### 3.4. Promotion of efficient heating and cooling (Article 14)

National Energy Efficiency Action Plans shall include an assessment of the progress achieved in implementing the comprehensive assessment referred to in Article 14(1).

#### 3.5. Energy transmission and distribution (Article 15)

The first National Energy Efficiency Action Plan and the subsequent reports due every 10 years thereafter shall include the assessment made, the measures and investments identified to utilise the energy efficiency potentials of gas and electricity infrastructure referred to in Article 15(2).

**3.6. Contracting Parties** shall report, as part of their National Energy Efficiency Action Plans, on the measures undertaken to enable and develop demand response as referred to in Article 15.

#### 3.7. Availability of qualification, accreditation and certification schemes (Article 16)

National Energy Efficiency Action Plans shall include information on the available qualification, accreditation and certification schemes or equivalent qualification schemes for the providers of energy services, energy audits and energy efficiency improvement measures.

<sup>17</sup> Recommendations on Measurement and Verification Methods in the framework of the Directive 2006/32/EC on Energy End-Use Efficiency and Energy Services.

### 3.8. Energy Services (Article 18)

National Energy Efficiency Action Plans shall include an internet link to the website where the list or the interface of energy services providers referred to in point (c) of Article 18(1) can be accessible.

### 3.9. Other measures to promote energy efficiency (Article 19)

The first National Energy Efficiency Action Plan shall include a list of the measures referred to in Article 19(1).

## **DIRECTIVE 2010/31/EU of 19 May 2010 on the energy performance of buildings**

Incorporated and adapted by Ministerial Council Decision 2010/02/MC-EnC of 24 September 2010 amending Decision 2009/05/MC-EnC of 18 December 2009 on the implementation of certain Directives on Energy Efficiency.

*The adaptations made by Ministerial Council Decision 2010/02/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2002/91/EC of the European Parliament and of the Council of 16 December 2002 on the energy performance of buildings has been amended. Since further substantive amendments are to be made, it should be recast in the interests of clarity.

(2) An efficient, prudent, rational and sustainable utilisation of energy applies, *inter alia*, to oil products, natural gas and solid fuels, which are essential sources of energy, but also the leading sources of carbon dioxide emissions.

(3) Buildings account for 40% of total energy consumption in the Union. The sector is expanding, which is bound to increase its energy consumption. Therefore, reduction of energy consumption and the use of energy from renewable sources in the buildings sector constitute important measures needed to reduce the Union's energy dependency and greenhouse gas emissions. Together with an increased use of energy from renewable sources, measures taken to reduce energy consumption in the Union would allow the Union to comply with the Kyoto Protocol to the United Nations Framework Convention on Climate Change (UNFCCC), and to honour both its long term commitment to maintain the global temperature rise below 2 °C, and its commitment to reduce, by 2020, overall greenhouse gas emissions by at least 20% below 1990 levels, and by 30% in the event of an international agreement being reached. Reduced energy consumption and an increased use of energy from renewable sources also have an important part to play in promoting security of energy supply, technological developments and in creating opportunities for employment and regional development, in particular in rural areas.

(4) Management of energy demand is an important tool enabling the Union to influence the global energy market and hence the security of energy supply in the medium and long term.

(5) The European Council of March 2007 emphasised the need to increase energy efficiency in the Union so as to achieve the objective of reducing by 20% the Union's energy consumption by 2020 and called for a thorough and rapid implementation of the priorities established in the Commission Communication entitled "Action plan for energy efficiency: realising the potential". That action plan identified the significant potential for cost-effective energy savings in the buildings sector. The European Parliament, in its resolution of 31 January 2008, called for the strengthening of the provisions of Directive 2002/91/EC, and has called at various times, on the latest occasion in its resolution of 3 February 2009 on the Second Strategic Energy Review, for the 20% energy efficiency target in 2020 to be made binding. Moreover, Decision No 406/2009/EC of the European Parliament and of the Council of 23 April 2009 on the effort of Member States to reduce their greenhouse gas emissions to meet the Community's greenhouse gas emission reduction commitments up to 2020, sets national binding targets for CO<sub>2</sub> reduction for which energy efficiency in the building sector will be crucial,

and Directive 2009/28/EC of the European Parliament and of the Council of 23 April 2009 on the promotion of the use of energy from renewable sources provides for the promotion of energy efficiency in the context of a binding target for energy from renewable sources accounting for 20% of total Union energy consumption by 2020.

(6) The European Council of March 2007 reaffirmed the Union's commitment to the Union-wide development of energy from renewable sources by endorsing a mandatory target of a 20% share of energy from renewable sources by 2020. Directive 2009/28/EC establishes a common framework for the promotion of energy from renewable sources.

(7) It is necessary to lay down more concrete actions with a view to achieving the great unrealised potential for energy savings in buildings and reducing the large differences between Member States' results in this sector.

(8) Measures to improve further the energy performance of buildings should take into account climatic and local conditions as well as indoor climate environment and cost-effectiveness. These measures should not affect other requirements concerning buildings such as accessibility, safety and the intended use of the building.

(9) The energy performance of buildings should be calculated on the basis of a methodology, which may be differentiated at national and regional level. That includes, in addition to thermal characteristics, other factors that play an increasingly important role such as heating and air-conditioning installations, application of energy from renewable sources, passive heating and cooling elements, shading, indoor air-quality, adequate natural light and design of the building. The methodology for calculating energy performance should be based not only on the season in which heating is required, but should cover the annual energy performance of a building. That methodology should take into account existing European standards.

(10) It is the sole responsibility of Member States to set minimum requirements for the energy performance of buildings and building elements. Those requirements should be set with a view to achieving the cost-optimal balance between the investments involved and the energy costs saved throughout the lifecycle of the building, without prejudice to the right of Member States to set minimum requirements which are more energy efficient than cost-optimal energy efficiency levels. Provision should be made for the possibility for Member States to review regularly their minimum energy performance requirements for buildings in the light of technical progress.

(11) The objective of cost-effective or cost-optimal energy efficiency levels may, in certain circumstances, for example in the light of climatic differences, justify the setting by Member States of cost-effective or cost-optimal requirements for building elements that would in practice limit the installation of building products that comply with standards set by Union legislation, provided that such requirements do not constitute an unjustifiable market barrier.

(12) When setting energy performance requirements for technical building systems, Member States should use, where available and appropriate, harmonised instruments, in particular testing and calculation methods and energy efficiency classes developed under measures implementing Directive 2009/125/EC of the European Parliament and of the Council of 21 October 2009 establishing a framework for the setting of ecodesign requirements for energy-related products and Directive 2010/30/EU of the European Parliament and of the Council of 19 May 2010 on the indication by labelling and standard product information of the consumption of energy and other resources by energy-related products, with a view to ensuring coherence with related initiatives and minimise, to

the extent possible, potential fragmentation of the market.

(13) This Directive is without prejudice to Articles 107 and 108 of the Treaty on the Functioning of the European Union (TFEU). The term “incentive” used in this Directive should not therefore be interpreted as constituting State aid.

(14) The Commission should lay down a comparative methodology framework for calculating cost-optimal levels of minimum energy performance requirements. Member States should use this framework to compare the results with the minimum energy performance requirements which they have adopted. Should significant discrepancies, i.e. exceeding 15%, exist between the calculated cost-optimal levels of minimum energy performance requirements and the minimum energy performance requirements in force, Member States should justify the difference or plan appropriate steps to reduce the discrepancy. The estimated economic lifecycle of a building or building element should be determined by Member States, taking into account current practices and experience in defining typical economic lifecycles. The results of this comparison and the data used to reach these results should be regularly reported to the Commission. These reports should enable the Commission to assess and report on the progress of Member States in reaching cost-optimal levels of minimum energy performance requirements.

(15) Buildings have an impact on long-term energy consumption. Given the long renovation cycle for existing buildings, new, and existing buildings that are subject to major renovation, should therefore meet minimum energy performance requirements adapted to the local climate. As the application of alternative energy supply systems is not generally explored to its full potential, alternative energy supply systems should be considered for new buildings, regardless of their size, pursuant to the principle of first ensuring that energy needs for heating and cooling are reduced to cost-optimal levels.

(16) Major renovations of existing buildings, regardless of their size, provide an opportunity to take cost-effective measures to enhance energy performance. For reasons of cost-effectiveness, it should be possible to limit the minimum energy performance requirements to the renovated parts that are most relevant for the energy performance of the building. Member States should be able to choose to define a “major renovation” either in terms of a percentage of the surface of the building envelope or in terms of the value of the building. If a Member State decides to define a major renovation in terms of the value of the building, values such as the actuarial value, or the current value based on the cost of reconstruction, excluding the value of the land upon which the building is situated, could be used.

(17) Measures are needed to increase the number of buildings which not only fulfil current minimum energy performance requirements, but are also more energy efficient, thereby reducing both energy consumption and carbon dioxide emissions. For this purpose Member States should draw up national plans for increasing the number of nearly zero-energy buildings and regularly report such plans to the Commission.

(18) Union financial instruments and other measures are being put into place or adapted with the aim of stimulating energy efficiency-related measures. Such financial instruments at Union level include, *inter alia*, Regulation (EC) No 1080/2006 of the European Parliament and of the Council of 5 July 2006 on the European Regional Development Fund, amended to allow increased investments in energy efficiency in housing; the public-private partnership on a “European energy-efficient buildings” initiative to promote green technologies and the development of energy-efficient systems and materials in new and renovated buildings; the EC-European Investment Bank (EIB) initiative

“EU sustainable energy financing initiative” which aims to enable, *inter alia*, investments for energy efficiency and the EIB-led “Marguerite Fund”: the 2020 European Fund for Energy, Climate Change and Infrastructure; Council Directive 2009/47/EC of 5 May 2009 amending Directive 2006/112/EC as regards reduced rates of value added tax, structural and cohesion funds instrument Jeremie (Joint European Resources for micro to medium enterprises); the Energy Efficiency Finance Facility; the Competitiveness and Innovation Framework Programme including the Intelligent Energy Europe II Programme focused specifically on removing market barriers related to energy efficiency and energy from renewable sources through for example the technical assistance facility ELENA (European Local Energy Assistance); the Covenant of Mayors; the Entrepreneurship and Innovation programme; the ICT Policy Support Programme 2010, and the Seventh Research Framework Programme. The European Bank for Reconstruction and Development also provides funding with the aim of stimulating energy-efficiency-related measures.

(19) Union financial instruments should be used to give practical effect to the objectives of this Directive, without however substituting national measures. In particular, they should be used for providing appropriate and innovative means of financing to catalyse investment in energy efficiency measures. They could play an important role in the development of national, regional and local energy efficiency funds, instruments, or mechanisms, which deliver such financing possibilities to private property owners, to small and medium-sized enterprises and to energy efficiency service companies.

(20) In order to provide the Commission with adequate information, Member States should draw up lists of existing and proposed measures, including those of a financial nature, other than those required by this Directive, which promote the objectives of this Directive. The existing and proposed measures listed by Member States may include, in particular, measures that aim to reduce existing legal and market barriers and encourage investments and/or other activities to increase the energy efficiency of new and existing buildings, thus potentially contributing to reducing energy poverty. Such measures could include, but should not be limited to, free or subsidised technical assistance and advice, direct subsidies, subsidised loan schemes or low interest loans, grant schemes and loan guarantee schemes. The public authorities and other institutions which provide those measures of a financial nature could link the application of such measures to the indicated energy performance and the recommendations from energy performance certificates.

(21) In order to limit the reporting burden on Member States it should be possible to integrate the reports required by this Directive into the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC of the European Parliament and of the Council of 5 April 2006 on energy end-use efficiency and energy services. The public sector in each Member State should lead the way in the field of energy performance of buildings, and therefore the national plans should set more ambitious targets for the buildings occupied by public authorities.

(22) The prospective buyer and tenant of a building or building unit should, in the energy performance certificate, be given correct information about the energy performance of the building and practical advice on improving such performance. Information campaigns may serve to further encourage owners and tenants to improve the energy performance of their building or building unit. Owners and tenants of commercial buildings should also be encouraged to exchange information regarding actual energy consumption, in order to ensure that all the data are available to make informed decisions about necessary improvements. The energy performance certificate should also provide information about the actual impact of heating and cooling on the energy needs of the building, on its primary energy consumption and on its carbon dioxide emissions.

(23) Public authorities should lead by example and should endeavour to implement the recommendations included in the energy performance certificate. Member States should include within their national plans measures to support public authorities to become early adopters of energy efficiency improvements and to implement the recommendations included in the energy performance certificate as soon as feasible.

(24) Buildings occupied by public authorities and buildings frequently visited by the public should set an example by showing that environmental and energy considerations are being taken into account and therefore those buildings should be subject to energy certification on a regular basis. The dissemination to the public of information on energy performance should be enhanced by clearly displaying these energy performance certificates, in particular in buildings of a certain size which are occupied by public authorities or which are frequently visited by the public, such as shops and shopping centres, supermarkets, restaurants, theatres, banks and hotels.

(25) Recent years have seen a rise in the number of air-conditioning systems in European countries. This creates considerable problems at peak load times, increasing the cost of electricity and disrupting the energy balance. Priority should be given to strategies which enhance the thermal performance of buildings during the summer period. To that end, there should be focus on measures which avoid overheating, such as shading and sufficient thermal capacity in the building construction, and further development and application of passive cooling techniques, primarily those that improve indoor climatic conditions and the micro-climate around buildings.

(26) Regular maintenance and inspection of heating and air-conditioning systems by qualified personnel contributes to maintaining their correct adjustment in accordance with the product specification and in that way ensures optimal performance from an environmental, safety and energy point of view. An independent assessment of the entire heating and air-conditioning system should occur at regular intervals during its lifecycle in particular before its replacement or upgrading. In order to minimise the administrative burden on building owners and tenants, Member States should endeavour to combine inspections and certifications as far as possible.

(27) A common approach to the energy performance certification of buildings and to the inspection of heating and air-conditioning systems, carried out by qualified and/or accredited experts, whose independence is to be guaranteed on the basis of objective criteria, will contribute to a level playing field as regards efforts made in Member States to energy saving in the buildings sector and will introduce transparency for prospective owners or users with regard to energy performance in the Union property market. In order to ensure the quality of energy performance certificates and of the inspection of heating and air-conditioning systems throughout the Union, an independent control mechanism should be established in each Member State.

(28) Since local and regional authorities are critical for the successful implementation of this Directive, they should be consulted and involved, as and when appropriate in accordance with applicable national legislation, on planning issues, the development of programmes to provide information, training and awareness-raising, and on the implementation of this Directive at national or regional level. Such consultations may also serve to promote the provision of adequate guidance to local planners and building inspectors to carry out the necessary tasks. Furthermore, Member States should enable and encourage architects and planners to properly consider the optimal combination of improvements in energy efficiency, use of energy from renewable sources and use of district heating and cooling when planning, designing, building and renovating industrial or residential areas.

(29) Installers and builders are critical for the successful implementation of this Directive. Therefore, an adequate number of installers and builders should, through training and other measures, have the appropriate level of competence for the installation and integration of the energy efficient and renewable energy technology required.

(30) Member States should take account of Directive 2005/36/EC of the European Parliament and of the Council of 7 September 2005 on the recognition of professional qualifications with regard to the mutual recognition of professional experts which are addressed by this Directive, and the Commission should continue its activities under the Intelligent Energy Europe Programme on guidelines and recommendations for standards for the training of such professional experts.

(31) In order to enhance the transparency of energy performance in the Union's non-residential property market, uniform conditions for a voluntary common certification scheme for the energy performance of non-residential buildings should be established. In accordance with Article 291 TFEU, rules and general principles concerning mechanisms for control by Member States of the Commission's exercise of implementing powers shall be laid down in advance by a regulation adopted in accordance with the ordinary legislative procedure. Pending the adoption of that new regulation, Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission continues to apply, with the exception of the regulatory procedure with scrutiny, which is not applicable.

(32) The Commission should be empowered to adopt delegated acts in accordance with Article 290 TFEU in respect of the adaptation to technical progress of certain parts of the general framework set out in Annex I, and in respect of the establishment of a methodology framework for calculating cost-optimal levels of minimum energy performance requirements. It is of particular importance that the Commission carry out appropriate consultations during its preparatory work, including at expert level.

(33) Since the objective of this Directive, namely of enhancing the energy performance of buildings, cannot be sufficiently achieved by the Member States, due to the complexity of the buildings sector and the inability of the national housing markets to adequately address the challenges of energy efficiency, and can by the reason of the scale and the effects of the action be better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principles of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve that objective.

(34) The obligation to transpose this Directive into national law should be confined to those provisions which represent a substantive change as compared with Directive 2002/91/EC. The obligation to transpose the provisions which are unchanged arises under that Directive.

(35) This Directive should be without prejudice to the obligations of the Member States relating to the time limits for transposition into national law and application of the Directive 2002/91/EC.

(36) In accordance with point 34 of the Interinstitutional Agreement on better law-making, Member States are encouraged to draw up, for themselves and in the interest of the Union, their own tables, illustrating, as far as possible, the correlation between this Directive and the transposition measures, and to make them public.

## **Article 1**

### **Subject matter**

1. This Directive promotes the improvement of the energy performance of buildings within the **Energy Community**, taking into account outdoor climatic and local conditions, as well as indoor climate requirements and cost-effectiveness.
2. This Directive lays down requirements as regards:
  - (a) the common general framework for a methodology for calculating the integrated energy performance of buildings and building units;
  - (b) the application of minimum requirements to the energy performance of new buildings and new building units;
  - (c) the application of minimum requirements to the energy performance of:
    - (i) existing buildings, building units and building elements that are subject to major renovation;
    - (ii) building elements that form part of the building envelope and that have a significant impact on the energy performance of the building envelope when they are retrofitted or replaced; and
    - (iii) technical building systems whenever they are installed, replaced or upgraded;
  - (d) national plans for increasing the number of nearly zero-energy buildings;
  - (e) energy certification of buildings or building units;
  - (f) regular inspection of heating and air-conditioning systems in buildings; and
  - (g) independent control systems for energy performance certificates and inspection reports.
3. The requirements laid down in this Directive are minimum requirements and shall not prevent any **Contracting Party** from maintaining or introducing more stringent measures. Such measures shall be compatible with the Treaty on the Functioning of the European Union. They shall be notified to the **Secretariat**.

## **Article 2**

### **Definitions**

For the purpose of this Directive, the following definitions shall apply:

1. "building" means a roofed construction having walls, for which energy is used to condition the indoor climate;
2. "nearly zero-energy building" means a building that has a very high energy performance, as determined in accordance with Annex I. The nearly zero or very low amount of energy required should be covered to a very significant extent by energy from renewable sources, including energy from renewable sources produced on-site or nearby;
3. "technical building system" means technical equipment for the heating, cooling, ventilation, hot water, lighting or for a combination thereof, of a building or building unit;
4. "energy performance of a building" means the calculated or measured amount of energy needed to meet the energy demand associated with a typical use of the building, which includes, *inter alia*,

energy used for heating, cooling, ventilation, hot water and lighting;

5. "primary energy" means energy from renewable and non-renewable sources which has not undergone any conversion or transformation process;

6. "energy from renewable sources" means energy from renewable non-fossil sources, namely wind, solar, aerothermal, geothermal, hydrothermal and ocean energy, hydropower, biomass, landfill gas, sewage treatment plant gas and biogases;

7. "building envelope" means the integrated elements of a building which separate its interior from the outdoor environment;

8. "building unit" means a section, floor or apartment within a building which is designed or altered to be used separately;

9. "building element" means a technical building system or an element of the building envelope;

10. "major renovation" means the renovation of a building where:

(a) the total cost of the renovation relating to the building envelope or the technical building systems is higher than 25% of the value of the building, excluding the value of the land upon which the building is situated; or

(b) more than 25% of the surface of the building envelope undergoes renovation; **Contracting Parties** may choose to apply option (a) or (b).

11. "European standard" means a standard adopted by the European Committee for Standardisation, the European Committee for Electrotechnical Standardisation or the European Telecommunications Standards Institute and made available for public use;

12. "energy performance certificate" means a certificate recognised by a **Contracting Party** or by a legal person designated by it, which indicates the energy performance of a building or building unit, calculated according to a methodology adopted in accordance with Article 3;

13. "cogeneration" means simultaneous generation in one process of thermal energy and electrical and/or mechanical energy;

14. "cost-optimal level" means the energy performance level which leads to the lowest cost during the estimated economic lifecycle, where:

(a) the lowest cost is determined taking into account energy-related investment costs, maintenance and operating costs (including energy costs and savings, the category of building concerned, earnings from energy produced), where applicable, and disposal costs, where applicable; and

(b) the estimated economic lifecycle is determined by each **Contracting Party**. It refers to the remaining estimated economic lifecycle of a building where energy performance requirements are set for the building as a whole, or to the estimated economic lifecycle of a building element where energy performance requirements are set for building elements.

The cost-optimal level shall lie within the range of performance levels where the cost benefit analysis calculated over the estimated economic lifecycle is positive;

15. "air-conditioning system" means a combination of the components required to provide a form of indoor air treatment, by which temperature is controlled or can be lowered;

16. "boiler" means the combined boiler body-burner unit, designed to transmit to fluids the heat released from burning;

17. "effective rated output" means the maximum calorific output, expressed in kW, specified and

guaranteed by the manufacturer as being deliverable during continuous operation while complying with the useful efficiency indicated by the manufacturer;

18. “heat pump” means a machine, a device or installation that transfers heat from natural surroundings such as air, water or ground to buildings or industrial applications by reversing the natural flow of heat such that it flows from a lower to a higher temperature. For reversible heat pumps, it may also move heat from the building to the natural surroundings;

19. “district heating” or “district cooling” means the distribution of thermal energy in the form of steam, hot water or chilled liquids, from a central source of production through a network to multiple buildings or sites, for the use of space or process heating or cooling.

### **Article 3**

#### **Adoption of a methodology for calculating the energy performance of buildings**

**Contracting Parties** shall apply a methodology for calculating the energy performance of buildings in accordance with the common general framework set out in Annex I.

This methodology shall be adopted at national or regional level.

### **Article 4**

#### **Setting of minimum energy performance requirements**

1. **Contracting Parties** shall take the necessary measures to ensure that minimum energy performance requirements for buildings or building units are set with a view to achieving cost-optimal levels. The energy performance shall be calculated in accordance with the methodology referred to in Article 3. Cost-optimal levels shall be calculated in accordance with the comparative methodology framework referred to in Article 5 once the framework is in place.

**Contracting Parties** shall take the necessary measures to ensure that minimum energy performance requirements are set for building elements that form part of the building envelope and that have a significant impact on the energy performance of the building envelope when they are replaced or retrofitted, with a view to achieving cost-optimal levels.

When setting requirements, **Contracting Parties** may differentiate between new and existing buildings and between different categories of buildings.

These requirements shall take account of general indoor climate conditions, in order to avoid possible negative effects such as inadequate ventilation, as well as local conditions and the designated function and the age of the building.

A **Contracting Party** shall not be required to set minimum energy performance requirements which are not cost-effective over the estimated economic lifecycle.

Minimum energy performance requirements shall be reviewed at regular intervals which shall not be longer than five years and, if necessary, shall be updated in order to reflect technical progress in the building sector.

2. **Contracting Parties** may decide not to set or apply the requirements referred to in paragraph 1 to the following categories of buildings:

- (a) buildings officially protected as part of a designated environment or because of their special architectural or historical merit, in so far as compliance with certain minimum energy performance requirements would unacceptably alter their character or appearance;
- (b) buildings used as places of worship and for religious activities;
- (c) temporary buildings with a time of use of two years or less, industrial sites, workshops and non-residential agricultural buildings with low energy demand and non-residential agricultural buildings which are in use by a sector covered by a national sectoral agreement on energy performance;
- (d) residential buildings which are used or intended to be used for either less than four months of the year or, alternatively, for a limited annual time of use and with an expected energy consumption of less than 25% of what would be the result of all-year use;
- (e) stand-alone buildings with a total useful floor area of less than 50 m<sup>2</sup>.

### Article 5

#### Calculation of cost-optimal levels of minimum energy performance requirements

1. The Commission shall establish by means of delegated acts in accordance with Articles 23, 24 and 25 by 30 June 2011 a comparative methodology framework for calculating cost-optimal levels of minimum energy performance requirements for buildings and building elements.

The comparative methodology framework shall be established in accordance with Annex III and shall differentiate between new and existing buildings and between different categories of buildings.

2. **Contracting Parties** shall calculate cost-optimal levels of minimum energy performance requirements using the comparative methodology framework established in accordance with paragraph 1 and relevant parameters, such as climatic conditions and the practical accessibility of energy infrastructure, and compare the results of this calculation with the minimum energy performance requirements in force.

**Contracting Parties** shall report to the **Secretariat** all input data and assumptions used for those calculations and the results of those calculations. The report may be included in the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC. **Contracting Parties** shall submit those reports to the **Secretariat** at regular intervals, which shall not be longer than five years. The first report shall be submitted by **30 June 2013**.

3. If the result of the comparison performed in accordance with paragraph 2 shows that the minimum energy performance requirements in force are significantly less energy efficient than cost-optimal levels of minimum energy performance requirements, the **Contracting Party** concerned shall justify this difference in writing to the **Secretariat** in the report referred to in paragraph 2, accompanied, to the extent that the gap cannot be justified, by a plan outlining appropriate steps to significantly reduce the gap by the next review of the energy performance requirements as referred to in Article 4(1).

4. The **Secretariat** shall publish a report on the progress of the **Contracting Parties** in reaching cost-optimal levels of minimum energy performance requirements.

## **Article 6**

### **New buildings**

1. **Contracting Parties** shall take the necessary measures to ensure that new buildings meet the minimum energy performance requirements set in accordance with Article 4.

For new buildings, **Contracting Parties** shall ensure that, before construction starts, the technical, environmental and economic feasibility of high-efficiency alternative systems such as those listed below, if available, is considered and taken into account:

- (a) decentralised energy supply systems based on energy from renewable sources;
- (b) cogeneration;
- (c) district or block heating or cooling, particularly where it is based entirely or partially on energy from renewable sources;
- (d) heat pumps.

2. **Contracting Parties** shall ensure that the analysis of alternative systems referred to in paragraph 1 is documented and available for verification purposes.

3. That analysis of alternative systems may be carried out for individual buildings or for groups of similar buildings or for common typologies of buildings in the same area. As far as collective heating and cooling systems are concerned, the analysis may be carried out for all buildings connected to the system in the same area.

## **Article 7**

### **Existing buildings**

**Contracting Parties** shall take the necessary measures to ensure that when buildings undergo major renovation, the energy performance of the building or the renovated part thereof is upgraded in order to meet minimum energy performance requirements set in accordance with Article 4 in so far as this is technically, functionally and economically feasible.

Those requirements shall be applied to the renovated building or building unit as a whole. Additionally or alternatively, requirements may be applied to the renovated building elements.

**Contracting Parties** shall in addition take the necessary measures to ensure that when a building element that forms part of the building envelope and has a significant impact on the energy performance of the building envelope, is retrofitted or replaced, the energy performance of the building element meets minimum energy performance requirements in so far as this is technically, functionally and economically feasible.

**Contracting Parties** shall determine these minimum energy performance requirements in accordance with Article 4.

**Contracting Parties** shall encourage, in relation to buildings undergoing major renovation, the consideration and taking into account of high-efficiency alternative systems, as referred to in Article 6(1), in so far as this is technically, functionally and economically feasible.

## **Article 8**

### **Technical building systems**

1. **Contracting Parties** shall, for the purpose of optimising the energy use of technical building systems, set system requirements in respect of the overall energy performance, the proper installation, and the appropriate dimensioning, adjustment and control of the technical building systems which are installed in existing buildings. **Contracting Parties** may also apply these system requirements to new buildings.

System requirements shall be set for new, replacement and upgrading of technical building systems and shall be applied in so far as they are technically, economically and functionally feasible.

The system requirements shall cover at least the following:

- (a) heating systems;
  - (b) hot water systems;
  - (c) air-conditioning systems;
  - (d) large ventilation systems;
- or a combination of such systems.

2. **Contracting Parties** shall encourage the introduction of intelligent metering systems whenever a building is constructed or undergoes major renovation, whilst ensuring that this encouragement is in line with point 2 of Annex I to Directive 2009/72/EC of the European Parliament and of the Council of 13 July 2009 concerning common rules for the internal market in electricity. **Contracting Parties** may furthermore encourage, where appropriate, the installation of active control systems such as automation, control and monitoring systems that aim to save energy.

## **Article 9**

### **Nearly zero-energy buildings**

1. **Contracting Parties** shall ensure that:

- (a) by **30 June 2021**, all new buildings are nearly zero-energy buildings; and
- (b) after **30 June 2019**, new buildings occupied and owned by public authorities are nearly zero-energy buildings.

**Contracting Parties** shall draw up national plans for increasing the number of nearly zero-energy buildings. These national plans may include targets differentiated according to the category of building.

2. **Contracting Parties** shall furthermore, following the leading example of the public sector, develop policies and take measures such as the setting of targets in order to stimulate the transformation of buildings that are refurbished into nearly zero-energy buildings, and inform the Secretariat thereof in their national plans referred to in paragraph 1.

3. The national plans shall include, *inter alia*, the following elements:

- (a) the **Contracting Party's** detailed application in practice of the definition of nearly zero-energy buildings, reflecting their national, regional or local conditions, and including a numerical indicator

of primary energy use expressed in kWh/m<sup>2</sup> per year. Primary energy factors used for the determination of the primary energy use may be based on national or regional yearly average values and may take into account relevant European standards;

(b) intermediate targets for improving the energy performance of new buildings, by 2015, with a view to preparing the implementation of paragraph 1;

(c) information on the policies and financial or other measures adopted in the context of paragraphs 1 and 2 for the promotion of nearly zero-energy buildings, including details of national requirements and measures concerning the use of energy from renewable sources in new buildings and existing buildings undergoing major renovation in the context of Article 13(4) of Directive 2009/28/EC and Articles 6 and 7 of this Directive.

4. The **Secretariat** shall evaluate the national plans referred to in paragraph 1, notably the adequacy of the measures envisaged by the **Contracting Party** in relation to the objectives of this Directive. The **Secretariat**, taking due account of the principle of subsidiarity, may request further specific information regarding the requirements set out in paragraphs 1, 2 and 3. In that case, the **Contracting Party** concerned shall submit the requested information or propose amendments within nine months following the request from the Secretariat. **Following its evaluation, the Secretariat may propose a recommendation to the Ministerial Council.**

5. The **Secretariat** shall by **31 December 2013** and every three years thereafter publish a report on the progress of **Contracting Parties** in increasing the number of nearly zero-energy buildings. On the basis of that report the **Secretariat** shall develop an action plan and, if necessary, propose measures to increase the number of those buildings and encourage best practices as regards the cost-effective transformation of existing buildings into nearly zero-energy buildings.

6. **Contracting Parties** may decide not to apply the requirements set out in points (a) and (b) of paragraph 1 in specific and justifiable cases where the cost-benefit analysis over the economic lifecycle of the building in question is negative. **Contracting Parties** shall inform the **Secretariat** of the principles of the relevant legislative regimes.

## **Article 10**

### **Financial incentives and market barriers**

1. In view of the importance of providing appropriate financing and other instruments to catalyse the energy performance of buildings and the transition to nearly zero-energy buildings, **Contracting Parties** shall take appropriate steps to consider the most relevant such instruments in the light of national circumstances.

2. **Contracting Parties** shall draw up, by **30 June 2013**, a list of existing and, if appropriate, proposed measures and instruments including those of a financial nature, other than those required by this Directive, which promote the objectives of this Directive.

**Contracting Parties** shall update this list every three years. **Contracting Parties** shall communicate these lists to the **Secretariat**, which they may do by including them in the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC.

3. The **Secretariat** shall examine the effectiveness of the listed existing and proposed measures referred to in paragraph 2 as well as of relevant Union instruments, in supporting the implementation

of this Directive. On the basis of that examination, and taking due account of the principle of subsidiarity, the **Secretariat** may provide advice <...> as regards specific national schemes and coordination with Union and international financial institutions. The **Secretariat** may include its examination and possible advice or recommendations in its report on the National Energy Efficiency Plans referred to in Article 14(5) of Directive 2006/32/EC.

4. The **Secretariat** shall, where appropriate, assist upon request **Contracting Parties** in setting up national or regional financial support programmes with the aim of increasing energy efficiency in buildings, especially of existing buildings, by supporting the exchange of best practice between the responsible national or regional authorities or bodies.

5. In order to improve financing in support of the implementation of this Directive and taking due account of the principle of subsidiarity, the Commission shall, preferably by 2011, present an analysis on, in particular:

(a) the effectiveness, the appropriateness of the level, and the actual amount used, of structural funds and framework programmes that were used for increasing energy efficiency in buildings, especially in housing;

(b) the effectiveness of the use of funds from the EIB and other public finance institutions;

(c) the coordination of Union and national funding and other forms of support that can act as a leverage for stimulating investments in energy efficiency and the adequacy of such funds for achieving Union objectives.

On the basis of that analysis, and in accordance with the multiannual financial framework, the Commission may subsequently submit, if it considers this appropriate, proposals with respect to Union instruments to the European Parliament and the Council.

6. **Contracting Parties** shall take account of the cost-optimal levels of energy performance when providing incentives for the construction or major renovation of buildings.

7. The provisions of this Directive shall not prevent **Contracting Parties** from providing incentives for new buildings, renovations or building elements which go beyond the cost-optimal levels.

## **Article 11**

### **Energy performance certificates**

1. **Contracting Parties** shall lay down the necessary measures to establish a system of certification of the energy performance of buildings. The energy performance certificate shall include the energy performance of a building and reference values such as minimum energy performance requirements in order to make it possible for owners or tenants of the building or building unit to compare and assess its energy performance.

The energy performance certificate may include additional information such as the annual energy consumption for non-residential buildings and the percentage of energy from renewable sources in the total energy consumption.

2. The energy performance certificate shall include recommendations for the cost-optimal or cost-effective improvement of the energy performance of a building or building unit, unless there is no reasonable potential for such improvement compared to the energy performance requirements in force.

The recommendations included in the energy performance certificate shall cover:

(a) measures carried out in connection with a major renovation of the building envelope or technical building system(s); and

(b) measures for individual building elements independent of a major renovation of the building envelope or technical building system(s).

3. The recommendations included in the energy performance certificate shall be technically feasible for the specific building and may provide an estimate for the range of payback periods or cost-benefits over its economic lifecycle.

4. The energy performance certificate shall provide an indication as to where the owner or tenant can receive more detailed information, including as regards the cost-effectiveness of the recommendations made in the energy performance certificate. The evaluation of cost effectiveness shall be based on a set of standard conditions, such as the assessment of energy savings and underlying energy prices and a preliminary cost forecast. In addition, it shall contain information on the steps to be taken to implement the recommendations. Other information on related topics, such as energy audits or incentives of a financial or other nature and financing possibilities may also be provided to the owner or tenant.

5. Subject to national rules, **Contracting Parties** shall encourage public authorities to take into account the leading role which they should play in the field of energy performance of buildings, *inter alia*, by implementing the recommendations included in the energy performance certificate issued for buildings owned by them within its validity period.

6. Certification for building units may be based:

(a) on a common certification of the whole building; or

(b) on the assessment of another representative building unit with the same energy-relevant characteristics in the same building.

7. Certification for single-family houses may be based on the assessment of another representative building of similar design and size with a similar actual energy performance quality if such correspondence can be guaranteed by the expert issuing the energy performance certificate.

8. The validity of the energy performance certificate shall not exceed 10 years.

9. The Commission shall, by 2011, in consultation with the relevant sectors, adopt a voluntary common European Union certification scheme for the energy performance of non-residential buildings. That measure shall be adopted in accordance with the advisory procedure referred to in Article 26(2). **Contracting Parties** are encouraged to recognise or use the scheme, or use part thereof by adapting it to national circumstances.

## Article 12

### Issue of energy performance certificates

1. **Contracting Parties** shall ensure that an energy performance certificate is issued for:

(a) buildings or building units which are constructed, sold or rented out to a new tenant; and

(b) buildings where a total useful floor area over 500 m<sup>2</sup> is occupied by a public authority and frequently visited by the public. On **30 September 2015**, this threshold of 500 m<sup>2</sup> shall be lowered to

250 m<sup>2</sup>.

The requirement to issue an energy performance certificate does not apply where a certificate, issued in accordance with either Directive 2002/91/EC or this Directive, for the building or building unit concerned is available and valid.

2. **Contracting Parties** shall require that, when buildings or building units are constructed, sold or rented out, the energy performance certificate or a copy thereof is shown to the prospective new tenant or buyer and handed over to the buyer or new tenant.

3. Where a building is sold or rented out in advance of construction, **Contracting Parties** may require the seller to provide an assessment of its future energy performance, as a derogation from paragraphs 1 and 2; in this case, the energy performance certificate shall be issued at the latest once the building has been constructed.

4. **Contracting Parties** shall require that when:

- buildings having an energy performance certificate,
- building units in a building having an energy performance certificate, and
- building units having an energy performance certificate,

are offered for sale or for rent, the energy performance indicator of the energy performance certificate of the building or the building unit, as applicable, is stated in the advertisements in commercial media.

5. The provisions of this Article shall be implemented in accordance with applicable national rules on joint ownership or common property.

6. **Contracting Parties** may exclude the categories of buildings referred to in Article 4(2) from the application of paragraphs 1, 2, 4 and 5 of this Article.

7. The possible effects of energy performance certificates in terms of legal proceedings, if any, shall be decided in accordance with national rules.

### **Article 13**

#### **Display of energy performance certificates**

1. **Contracting Parties** shall take measures to ensure that where a total useful floor area over 500 m<sup>2</sup> of a building for which an energy performance certificate has been issued in accordance with Article 12(1) is occupied by public authorities and frequently visited by the public, the energy performance certificate is displayed in a prominent place clearly visible to the public.

**On 30 September 2015**, this threshold of 500 m<sup>2</sup> shall be lowered to 250 m<sup>2</sup>.

2. **Contracting Parties** shall require that where a total useful floor area over 500 m<sup>2</sup> of a building for which an energy performance certificate has been issued in accordance with Article 12(1) is frequently visited by the public, the energy performance certificate is displayed in a prominent place clearly visible to the public.

3. The provisions of this Article do not include an obligation to display the recommendations included in the energy performance certificate.

## Article 14

### Inspection of heating systems

1. **Contracting Parties** shall lay down the necessary measures to establish a regular inspection of the accessible parts of systems used for heating buildings, such as the heat generator, control system and circulation pump(s), with boilers of an effective rated output for space heating purposes of more than 20 kW. That inspection shall include an assessment of the boiler efficiency and the boiler sizing compared with the heating requirements of the building. The assessment of the boiler sizing does not have to be repeated as long as no changes were made to the heating system or as regards the heating requirements of the building in the meantime.

**Contracting Parties** may reduce the frequency of such inspections or lighten them as appropriate, where an electronic monitoring and control system is in place.

2. **Contracting Parties** may set different inspection frequencies depending on the type and effective rated output of the heating system whilst taking into account the costs of the inspection of the heating system and the estimated energy cost savings that may result from the inspection.

3. Heating systems with boilers of an effective rated output of more than 100 kW shall be inspected at least every two years.

For gas boilers, this period may be extended to four years.

4. As an alternative to paragraphs 1, 2 and 3 **Contracting Parties** may opt to take measures to ensure the provision of advice to users concerning the replacement of boilers, other modifications to the heating system and alternative solutions to assess the efficiency and appropriate size of the boiler. The overall impact of this approach shall be equivalent to that arising from the provisions set out in paragraphs 1, 2 and 3.

Where **Contracting Parties** choose to apply the measures referred to in the first subparagraph, they shall submit to the **Secretariat** a report on the equivalence of those measures to measures referred to in paragraphs 1, 2 and 3 of this Article by **30 June 2013** at the latest. **Contracting Parties** shall submit these reports to the **Secretariat** every three years. The reports may be included in the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC.

5. After receiving the national report from a **Contracting Party** about the application of the option as described in paragraph 4, the **Secretariat** may request further specific information regarding the requirements and equivalence of the measures set out in that paragraph. In that case, the Contracting Party concerned shall present the requested information or propose amendments within nine months.

## Article 15

### Inspection of air-conditioning systems

1. **Contracting Parties** shall lay down the necessary measures to establish a regular inspection of the accessible parts of air-conditioning systems of an effective rated output of more than 12 kW. The inspection shall include an assessment of the air-conditioning efficiency and the sizing compared to the cooling requirements of the building. The assessment of the sizing does not have to be repeated

as long as no changes were made to this air-conditioning system or as regards the cooling requirements of the building in the meantime.

**Contracting Parties** may reduce the frequency of such inspections or lighten them, as appropriate, where an electronic monitoring and control system is in place.

2. The **Contracting Parties** may set different inspection frequencies depending on the type and effective rated output of the air-conditioning system, whilst taking into account the costs of the inspection of the air-conditioning system and the estimated energy cost savings that may result from the inspection.

3. In laying down the measures referred to in paragraphs 1 and 2 of this Article, **Contracting Parties** shall, as far as is economically and technically feasible, ensure that inspections are carried out in accordance with the inspection of heating systems and other technical systems referred to in Article 14 of this Directive and the inspection of leakages referred to in Regulation (EC) No 842/2006 of the European Parliament and of the Council of 17 May 2006 on certain fluorinated greenhouse gases.

4. As an alternative to paragraphs 1, 2 and 3 **Contracting Parties** may opt to take measures to ensure the provision of advice to users on the replacement of air-conditioning systems or on other modifications to the air-conditioning system which may include inspections to assess the efficiency and appropriate size of the air-conditioning system. The overall impact of this approach shall be equivalent to that arising from the provisions set out in paragraphs 1, 2 and 3.

Where **Contracting Parties** apply the measures referred to in the first subparagraph, they shall, by **30 June 2013** at the latest, submit to the Secretariat a report on the equivalence of those measures to the measures referred to in paragraphs 1, 2 and 3 of this Article. Contracting Parties shall submit these reports to the Secretariat every three years. The reports may be included in the Energy Efficiency Action Plans referred to in Article 14(2) of Directive 2006/32/EC.

5. After receiving the national report from a **Contracting Party** about the application of the option as described in paragraph 4, the **Secretariat** may request further specific information regarding the requirements and equivalence of the measures set in that paragraph. In this case, the **Contracting Party** concerned shall present the requested information or propose amendments within nine months.

## **Article 16**

### **Reports on the inspection of heating and air-conditioning systems**

1. An inspection report shall be issued after each inspection of a heating or air-conditioning system. The inspection report shall contain the result of the inspection performed in accordance with Article 14 or 15 and include recommendations for the cost-effective improvement of the energy performance of the inspected system.

The recommendations may be based on a comparison of the energy performance of the system inspected with that of the best available feasible system and a system of similar type for which all relevant components achieve the level of energy performance required by the applicable legislation.

2. The inspection report shall be handed over to the owner or tenant of the building.

### **Article 17**

#### **Independent experts**

**Contracting Parties** shall ensure that the energy performance certification of buildings and the inspection of heating systems and air-conditioning systems are carried out in an independent manner by qualified and/or accredited experts, whether operating in a self-employed capacity or employed by public bodies or private enterprises.

Experts shall be accredited taking into account their competence.

**Contracting Parties** shall make available to the public information on training and accreditations.

**Contracting Parties** shall ensure that either regularly updated lists of qualified and/or accredited experts or regularly updated lists of accredited companies which offer the services of such experts are made available to the public.

### **Article 18**

#### **Independent control system**

1. **Contracting Parties** shall ensure that independent control systems for energy performance certificates and reports on the inspection of heating and air-conditioning systems are established in accordance with Annex II. **Contracting Parties** may establish separate systems for the control of energy performance certificates and for the control of reports on the inspection of heating and air-conditioning systems.

2. The **Contracting Parties** may delegate the responsibilities for implementing the independent control systems.

Where the **Contracting Parties** decide to do so, they shall ensure that the independent control systems are implemented in compliance with Annex II.

3. **Contracting Parties** shall require the energy performance certificates and the inspection reports referred to in paragraph 1 to be made available to the competent authorities or bodies on request.

### **Article 19**

#### **Review**

The Commission, assisted by the Committee established by Article 26, shall evaluate this Directive by 1 January 2017 at the latest, in the light of the experience gained and progress made during its application, and, if necessary, make proposals.

### **Article 20**

#### **Information**

1. **Contracting Parties** shall take the necessary measures to inform the owners or tenants of build-

ings or building units of the different methods and practices that serve to enhance energy performance.

2. **Contracting Parties** shall in particular provide information to the owners or tenants of buildings on energy performance certificates and inspection reports, their purpose and objectives, on cost-effective ways to improve the energy performance of the building and, where appropriate, on financial instruments available to improve the energy performance of the building.

At the request of the **Contracting Parties, the Secretariat** shall assist **Contracting Parties** in staging information campaigns for the purposes of paragraph 1 and the first subparagraph of this paragraph, which may be dealt with in Union programmes.

3. **Contracting Parties** shall ensure that guidance and training are made available for those responsible for implementing this Directive. Such guidance and training shall address the importance of improving energy performance, and shall enable consideration of the optimal combination of improvements in energy efficiency, use of energy from renewable sources and use of district heating and cooling when planning, designing, building and renovating industrial or residential areas.

4. The Commission is invited to continuously improve its information services, in particular the website that has been set up as a European portal for energy efficiency in buildings directed towards citizens, professionals and authorities, in order to assist **Contracting Parties** in their information and awareness-raising efforts. Information displayed on this website might include links to relevant European Union and national, regional and local legislation, links to Europa websites that display the National Energy Efficiency Action Plans, links to available financial instruments, as well as best practice examples at national, regional and local level. In the context of the European Regional Development Fund, the Commission shall continue and further intensify its information services with the aim of facilitating the use of available funds by providing assistance and information to interested stakeholders, including national, regional and local authorities, on funding possibilities, taking into account the latest changes in the regulatory framework.

## **Article 21**

### **Consultation**

In order to facilitate the effective implementation of the Directive, **Contracting Parties** shall consult the stakeholders involved, including local and regional authorities, in accordance with the national legislation applicable and as relevant. Such consultation is of particular importance for the application of Articles 9 and 20.

## **Article 22**

### **Adaptation of Annex I to technical progress**

The Commission shall adapt points 3 and 4 of Annex I to technical progress by means of delegated acts in accordance with Articles 23, 24 and 25.

**Article 23****Exercise of delegation**

1. The powers to adopt the delegated acts referred to in Article 22 shall be conferred on the Commission for a period of five years beginning on 8 July 2010. The Commission shall make a report in respect of the delegated powers not later than six months before the end of the five-year period. The delegation of powers shall be automatically extended for periods of an identical duration, unless the European Parliament or the Council revokes it in accordance with Article 24.
2. Without prejudice to the deadline referred to in Article 5(1), the powers to adopt the delegated acts referred to in Article 5 shall be conferred on the Commission until 30 June 2012.
3. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the **Ministerial Council, who shall put it on the agenda of its next meeting.**
4. The powers to adopt delegated acts are conferred on the Commission subject to the conditions laid down in Articles 24 and 25.

**Article 24****Revocation of the delegation**

**The Ministerial Council may object to the application of a delegated act to the Contracting Parties of the Energy Community at the meeting following notification. If, at that meeting, the Ministerial Council has not objected to the delegated act, it shall become binding on the Contracting Parties, subject to possible adaptation. If the Ministerial Council objects to a delegated act, it shall not be applicable in the Energy Community. The Ministerial Council shall state the reasons for objecting to the delegated act.**

**Article 25****Objections to delegated acts**

1. The European Parliament or the Council may object to a delegated act within a period of two months from the date of notification.  
At the initiative of the European Parliament or the Council that period shall be extended by two months.
2. If, on expiry of that period, neither the European Parliament nor the Council has objected to the delegated act it shall be published in the Official Journal of the European Union and shall enter into force on the date stated therein.  
The delegated act may be published in the Official Journal of the European Union and enter into force before the expiry of that period, if the European Parliament and the Council have both informed the Commission of their intention not to raise objections.
3. If the European Parliament or the Council objects to a delegated act, it shall not enter into force. The institution which objects shall state the reasons for objecting to the delegated act.

**Article 26****Committee procedure**

1. The Commission shall be assisted by a Committee.
2. Where reference is made to this paragraph, Articles 3 and 7 of Decision 1999/468/EC shall apply, having regard to the provisions of Article 8 thereof.

**Article 27****Penalties**

**Contracting Parties** shall lay down the rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive and shall take all measures necessary to ensure that they are implemented. The penalties provided for must be effective, proportionate and dissuasive. **Contracting Parties** shall communicate those provisions to the **Secretariat** by **31 March 2013** at the latest and shall notify it without delay of any subsequent amendment affecting them.

**Article 28****Transposition**

1. **Contracting Parties** shall adopt and publish, by **30 September 2012**<sup>1</sup> at the latest, the laws, regulations and administrative provisions necessary to comply with Articles 2 to 18, and with Articles 20 and 27.

They shall apply those provisions as far as Articles 2, 3, 9, 11, 12, 13, 17, 18, 20 and 27 are concerned, from **31 March 2013** at the latest.

They shall apply those provisions as far as Articles 4, 5, 6, 7, 8, 14, 15 and 16 are concerned, to buildings occupied by the public authorities from **31 March 2013** at the latest and to other buildings from **30 September 2013** at the latest.

They may defer the application of Article 12(1) and (2) to single building units that are rented out, until **31 March 2016**. This shall however not result in fewer certificates being issued than would have been the case under the application of the Directive 2002/91/EC in the **Contracting Party** concerned.

When **Contracting Parties** adopt measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. They shall also include a statement that references in existing laws, regulations and administrative provisions to Directive 2002/91/EC shall be construed as references to this Directive. **Contracting Parties** shall determine how such reference is to be made and how that statement is to be formulated.

2. **Contracting Parties** shall communicate to the **Secretariat** the text of the main provisions of national law which they adopt in the field covered by this Directive.

<sup>1</sup> In accordance with the Accession Protocol, the corresponding date for Georgia is 30 June 2019.

**Article 29****Repeal**

Directive 2002/91/EC, as amended by the Regulation indicated in Annex IV, Part A, is hereby repealed with effect from 1 February 2012, without prejudice to the obligations of the **Contracting Parties** relating to the time limit for transposition into national law and application of the Directive set out in Annex IV, Part B.

References to Directive 2002/91/EC shall be construed as references to this Directive and shall be read in accordance with the correlation table in Annex V.

**Articles 30 and 31****Entry into force and Addressees<sup>2</sup>**

**This Decision [2010/02/MC-EnC] enters into force upon its adoption and is addressed to the Contracting Parties.**

**The Secretariat shall monitor and review the implementation of Directive 2010/31/EU in the Contracting Parties and shall submit a progress report to the Permanent High Level Group by 31 March 2013.<sup>3</sup>**

---

<sup>2</sup> The text displayed here corresponds to Article 3 of Decision 2010/02/MC-EnC.

<sup>3</sup> The text displayed here corresponds to Article 1(4) of Decision 2010/02/MC-EnC.

## ANNEX I

### **Common general framework for the calculation of energy performance of buildings (referred to in Article 3)**

1. The energy performance of a building shall be determined on the basis of the calculated or actual annual energy that is consumed in order to meet the different needs associated with its typical use and shall reflect the heating energy needs and cooling energy needs (energy needed to avoid overheating) to maintain the envisaged temperature conditions of the building, and domestic hot water needs.

2. The energy performance of a building shall be expressed in a transparent manner and shall include an energy performance indicator and a numeric indicator of primary energy use, based on primary energy factors per energy carrier, which may be based on national or regional annual weighted averages or a specific value for on-site production.

The methodology for calculating the energy performance of buildings should take into account European standards and shall be consistent with relevant Union legislation, including Directive 2009/28/EC.

3. The methodology shall be laid down taking into consideration at least the following aspects:

(a) the following actual thermal characteristics of the building including its internal partitions:

- (i) thermal capacity;
- (ii) insulation;
- (iii) passive heating;
- (iv) cooling elements; and
- (v) thermal bridges;

(b) heating installation and hot water supply, including their insulation characteristics;

(c) air-conditioning installations;

(d) natural and mechanical ventilation which may include air-tightness;

(e) built-in lighting installation (mainly in the non-residential sector);

(f) the design, positioning and orientation of the building, including outdoor climate;

(g) passive solar systems and solar protection;

(h) indoor climatic conditions, including the designed indoor climate;

(i) internal loads.

4. The positive influence of the following aspects shall, where relevant in the calculation, be taken into account:

(a) local solar exposure conditions, active solar systems and other heating and electricity systems based on energy from renewable sources;

(b) electricity produced by cogeneration;

(c) district or block heating and cooling systems;

(d) natural lighting.

5. For the purpose of the calculation buildings should be adequately classified into the following categories:

- (a) single-family houses of different types;
- (b) apartment blocks;
- (c) offices;
- (d) educational buildings;
- (e) hospitals;
- (f) hotels and restaurants;
- (g) sports facilities;
- (h) wholesale and retail trade services buildings;
- (i) other types of energy-consuming buildings.

## ANNEX II

### **Independent control systems for energy performance certificates and inspection reports**

1. The competent authorities or bodies to which the competent authorities have delegated the responsibility for implementing the independent control system shall make a random selection of at least a statistically significant percentage of all the energy performance certificates issued annually and subject those certificates to verification.

The verification shall be based on the options indicated below or on equivalent measures:

(a) validity check of the input data of the building used to issue the energy performance certificate and the results stated in the certificate;

(b) check of the input data and verification of the results of the energy performance certificate, including the recommendations made;

(c) full check of the input data of the building used to issue the energy performance certificate, full verification of the results stated in the certificate, including the recommendations made, and on-site visit of the building, if possible, to check correspondence between specifications given in the energy performance certificate and the building certified.

2. The competent authorities or bodies to which the competent authorities have delegated the responsibility for implementing the independent control system shall make a random selection of at least a statistically significant percentage of all the inspection reports issued annually and subject those reports to verification.

## ANNEX III

### Comparative methodology framework to identify cost-optimal levels of energy performance requirements for buildings and building elements

The comparative methodology framework shall enable **Contracting Parties** to determine the energy performance of buildings and building elements and the economic aspects of measures relating to the energy performance, and to link them with a view to identifying the cost-optimal level.

The comparative methodology framework shall be accompanied by guidelines outlining how to apply this framework in the calculation of cost-optimal performance levels.

The comparative methodology framework shall allow for taking into account use patterns, outdoor climate conditions, investment costs, building category, maintenance and operating costs (including energy costs and savings), earnings from energy produced, where applicable, and disposal costs, where applicable. It should be based on relevant European standards relating to this Directive.

The Commission shall also provide:

- guidelines to accompany the comparative methodology framework; these guidelines will serve to enable the **Contracting Parties** to undertake the steps listed below,
- information on estimated long-term energy price developments.

For the application of the comparative methodology framework by **Contracting Parties**, general conditions, expressed by parameters, shall be laid down at **Contracting Party** level.

The comparative methodology framework shall require **Contracting Parties** to:

- define reference buildings that are characterised by and representative of their functionality and geographic location, including indoor and outdoor climate conditions. The reference buildings shall cover residential and non-residential buildings, both new and existing ones,
- define energy efficiency measures to be assessed for the reference buildings. These may be measures for individual buildings as a whole, for individual building elements, or for a combination of building elements,
- assess the final and primary energy need of the reference buildings and the reference buildings with the defined energy efficiency measures applied,
- calculate the costs (i.e. the net present value) of the energy efficiency measures (as referred to in the second indent) during the expected economic lifecycle applied to the reference buildings (as referred to in the first indent) by applying the comparative methodology framework principles.

By calculating the costs of the energy efficiency measures during the expected economic lifecycle, the cost-effectiveness of different levels of minimum energy performance requirements is assessed by the **Contracting Parties**. This will allow the determination of cost-optimal levels of energy performance requirements.

## REGULATION (EU) 2017/1369 of 4 July 2017 setting a framework for energy labelling and repealing Directive 2010/30/EU

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) The Union is committed to building an Energy Union with a forward looking climate policy. Energy efficiency is a crucial element of the Union's 2030 Climate and Energy Policy Framework and is key to moderating energy demand.

(2) Energy labelling enables customers to make informed choices based on the energy consumption of energy-related products. Information on efficient and sustainable energy-related products makes a significant contribution to energy savings and to reducing energy bills, while at the same time promoting innovation and investments into the production of more energy efficient products. Improving the efficiency of energy-related products through informed customer choice and harmonising related requirements at Union level benefits also manufacturers, industry and the Union economy overall.

(3) The Commission reviewed the effectiveness of Directive 2010/30/EU of the European Parliament and of the Council and identified the need to update the energy labelling framework to improve its effectiveness.

(4) It is appropriate to replace Directive 2010/30/EU by a Regulation which maintains essentially the same scope, but modifies and enhances some of its provisions in order to clarify and update their content, taking into account the technological progress for energy efficiency in products achieved over recent years. As the energy consumption of means of transport for persons or goods is directly and indirectly regulated by other Union law and policies, it is appropriate to continue to exempt them from the scope of this Regulation, including means of transport with a motor that stays in the same location during operation, such as elevators, escalators and conveyor belts.

(5) It is appropriate to clarify that all products placed on the Union market for the first time, including second-hand imported products, should fall under the scope of this Regulation. However, products that are made available on the Union market for a second or additional time should not be included.

(6) A Regulation is the appropriate legal instrument as it imposes clear and detailed rules which preclude divergent transposition by Member States and thus ensures a higher degree of harmonisation across the Union. A harmonised regulatory framework at Union rather than at Member State level reduces costs for manufacturers, ensures a level playing field and ensures the free movement of goods across the internal market.

(7) Moderating energy demand is recognised as a key action in the European Energy Security Strategy set out in the Commission Communication of 28 May 2014. The Energy Union Framework Strategy set out in the Commission Communication of 25 February 2015 further emphasised the energy efficiency first principle and the need to fully implement existing Union energy law. The Roadmap for the Energy Union Framework Strategy set out in that Communication provided for a review of the energy efficiency

framework for products in 2015. This Regulation improves the legislative and enforcement framework for energy labelling.

(8) Improving the efficiency of energy-related products through informed customer choice benefits the Union economy, reduces energy demand and saves customers money on energy bills, contributes to innovation and investment in energy efficiency, and enables industries which develop and produce the most energy efficient products to gain a competitive advantage. It also contributes to the achievement of the Union's 2020 and 2030 energy-efficiency targets, as well as to the Union's goals for the environment and climate change. Furthermore, it aims to have a positive impact on the environmental performance of the energy-related products and their parts, including use of resources other than energy.

(9) This Regulation contributes to the development, recognition by customers and market uptake of energy smart products, which can be activated to interact with other appliances and systems, including the energy grid itself, in order to improve energy efficiency or the uptake of renewable energies, reduce energy consumption and foster innovation in Union industry.

(10) The provision of accurate, relevant and comparable information on the specific energy consumption of energy-related products facilitates the customer's choice in favour of products which consume less energy and other essential resources during use. A standardised mandatory label for energy-related products is an effective means by which to provide potential customers with comparable information on the energy efficiency of energy-related products. The label should be supplemented by a product information sheet. The label should be easily recognisable, simple and concise. To that end, the existing dark green to red colour scale of the label should be retained as the basis for informing customers about the energy efficiency of products. In order for the label to be of real use for customers looking for energy and cost savings, the steps of the label scale should correspond to significant energy and cost savings for customers. For the majority of product groups, the label should, where appropriate, also indicate the absolute energy consumption in addition to the label scale, in order to allow customers to predict the direct impact of their choices on their energy bills. However, it is impossible to provide the same information with regard to energy-related products that do not themselves consume energy.

(11) The classification using letters from A to G has been shown to be cost effective for customers. It is intended that its uniform application across product groups raises transparency and understanding among customers. In situations where because of ecodesign measures pursuant to Directive 2009/125/EC of the European Parliament and of the Council products can no longer fall into class 'E', 'F' or 'G', those classes should nonetheless be shown on the label in grey. In exceptional and duly justified cases, such as reaching insufficient savings across the full spectrum of the seven classes, the label should be able to contain fewer classes than a regular A to G scale. In those cases the dark green to red colour scale of the label should be retained for the remaining classes and should apply only to new products that are placed on the market or put into service.

(12) Where a supplier places a product on the market, each unit of the product should be accompanied by a label in paper form complying with the requirements of the relevant delegated act. The relevant delegated act should set out the most effective way of displaying the labels, taking into account the implications for customers, suppliers and dealers, and could provide that the label is printed on the packaging of the product. The dealer should display the label supplied together with the unit of the product in the position required by the relevant delegated act. The label displayed should be clearly visible and identifiable as the label belonging to the product in question, without the customer having to read the brand name and model number on the label, and should attract the attention of the customer browsing

through the product displayed.

(13) Without affecting the obligation of the supplier to provide a printed label together with each unit of a product, advances in digital technology could allow for the use of electronic labels in addition to the printed energy label. The dealer should also be able to download the product information sheet from the product database.

(14) Where it is not feasible to display the energy label, such as in certain forms of distance selling, visual advertisements and technical promotional material, potential customers should be provided at least with the energy class of the product and the range of the efficiency classes available on the label.

(15) Manufacturers respond to the energy label by developing and placing on the market ever more efficient products. In parallel, they tend to discontinue the production of less efficient products, stimulated to do so by Union law relating to ecodesign. This technological development leads to the majority of product models populating the highest classes of the energy label. Further product differentiation may be necessary to enable customers to compare products properly, leading to the need to rescale labels. This Regulation should therefore lay down detailed arrangements for rescaling in order to maximise legal certainty for suppliers and dealers.

(16) For several labels established by delegated acts adopted pursuant to Directive 2010/30/EU, products are available only or mostly in the top classes. This reduces the effectiveness of the labels. The classes on existing labels, depending on the product group have varying scales, where the top class can be anything between classes A to A+++ . As a result, when customers compare labels across different product groups, they could be led to believe that better energy classes exist for a particular label than those that are displayed. To avoid such potential confusion, it is appropriate to carry out, as a first step, an initial rescaling of existing labels, in order to ensure a homogeneous A to G scale for three categories of products pursuant to this Regulation.

(17) Energy labelling of space and water heating products was introduced only recently and the rate of technological progress in those product groups is relatively slow. The current labelling scheme makes a clear distinction between conventional fossil fuel technologies that are at best class A, and technologies that use renewable energy, which are often significantly more expensive, for which classes A+, A++ and A+++ are reserved. Substantial energy savings can already be achieved by the most efficient fossil fuel technologies, which would make it appropriate to continue promoting them as class A. As the market for space and water heating products is likely to move slowly towards more renewable technologies, it is appropriate to rescale the energy labels for those products later.

(18) Following initial rescaling, the frequency of further rescaling should be determined by reference to the percentage of products sold that are in the top classes. Further rescaling should take into account the speed of technological progress and the need to avoid over burdening suppliers and dealers, and, in particular, small businesses. Therefore, a timescale of approximately 10 years would be desirable for the frequency of rescaling. A newly rescaled label should leave the top class empty to encourage technological progress, provide for regulatory stability, limit the frequency of rescaling and enable ever more efficient products to be developed and recognised. In exceptional cases, where technology is expected to develop more rapidly, no products should fall within the top two classes at the moment of introduction of the newly rescaled label.

(19) Before rescaling, the Commission should carry out an appropriate preparatory study.

(20) When a label for a product group is rescaled, confusion on the part of customers should be avoided

by replacing the labels on the affected products displayed in shops within a short timeframe, and by organising adequate consumer information campaigns clearly indicating that a new version of the label has been introduced.

(21) In the case of a rescaled label, suppliers should provide both the existing and the rescaled labels to dealers for a certain period. The replacement of the existing labels on products on display, including on the internet, with the rescaled labels should take place as quickly as possible after the date of replacement specified in the delegated act on the rescaled label. Dealers should not display the rescaled labels before the date of replacement.

(22) It is necessary to provide for a clear and proportionate distribution of obligations corresponding to the role of each operator in the supply and distribution process. Economic operators should be responsible for compliance in relation to their respective roles in the supply chain and should ensure that they make available on the market only products which comply with this Regulation and the delegated acts adopted pursuant thereto.

(23) In order for customers to retain confidence in the energy label, other labels that mimic the energy label should not be allowed to be used for energy-related products and non-energy-related products. Where energy-related products are not covered by delegated acts, Member States should be able to maintain or introduce new national schemes for the labelling of such products. Additional labels, marks, symbols or inscriptions that are likely to mislead or confuse customers with respect to the consumption of energy for the product concerned should not be allowed for the same reason. Labels provided for pursuant to Union law, such as the labelling of tyres with respect to fuel efficiency and other environmental parameters, and additional labels such as the EU Energy Star and EU Ecolabel should not be considered to be misleading or confusing.

(24) Increasingly, customers are offered software or firmware updates of their products after the products have been placed on the market and put into use. While such updates are typically intended to improve product performance, they may also impact the energy efficiency and other product parameters indicated on the energy label. If those changes are to the detriment of what is indicated on the label, customers should be informed about those changes and should be given the option of accepting or refusing the update.

(25) In order to ensure legal certainty, it is necessary to clarify that rules on Union market surveillance and control of products entering the Union market provided for in Regulation (EC) No 765/2008 of the European Parliament and of the Council apply to energy-related products. Given the principle of free movement of goods, it is imperative that Member States' market surveillance authorities cooperate with each other effectively. Such cooperation on energy labelling should be reinforced through support by the Commission of the Administrative Cooperation Groups (AdCos) on Ecodesign and Energy Labelling.

(26) The Commission proposal for a new regulation on market surveillance of products integrates the provisions of Regulation (EC) No 765/2008, Directive 2001/95/EC of the European Parliament and of the Council and several sector-specific Union harmonisation legislative acts. That proposal includes provisions on safeguard clauses contained in Decision No 768/2008/EC of the European Parliament and of the Council, which would apply to all Union harmonisation legislative acts. For so long as the new regulation is still under consideration by the co-legislators, it is appropriate to refer to Regulation (EC) No 765/2008 and to include safeguard clauses in this Regulation.

(27) Market surveillance activities covered by Regulation (EC) No 765/2008 are not directed exclusively

towards the protection of health and safety, but are also applicable to the enforcement of Union law which seek to safeguard other public interests, including energy efficiency. In line with the Commission Communication entitled '20 actions for safer and compliant products for Europe: a multi-annual action plan for the surveillance of products in the EU' of 13 February 2013, the Union general risk assessment methodology has been updated so that it covers all risks, including those relating to energy labelling.

(28) Coherent and cost-effective market surveillance activity throughout the Union also requires well-structured, comprehensive archiving and sharing of all pertinent information among Member States on national activities in this context, including a reference to notifications required by this Regulation. The Information and Communication System on Market Surveillance (ICSMS) database established by the Commission is well-suited for the purpose of forming a complete database of market surveillance information, and its use should therefore be strongly encouraged.

(29) In order to set up a useful tool for consumers, to allow for alternative ways for dealers to receive product information sheets, to facilitate the monitoring of compliance and to provide up-to-date market data for the regulatory process on revisions of product-specific labels and information sheets, the Commission should set up and maintain a product database consisting of a public and a compliance part, which should be accessible via an online portal.

(30) Without prejudice to the Member States' market surveillance obligations and to suppliers' obligations to check product conformity, suppliers should make the required product compliance information available electronically in the product database. The information relevant for consumers and dealers should be made publicly available in the public part of the product database. That information should be made available as open data so as to give mobile application developers and other comparison tools the opportunity to use it. Easy direct access to the public part of the product database should be facilitated by user-oriented tools, such as a dynamic quick response code (QR code), included on the printed label.

(31) The compliance part of the product database should be subject to strict data protection rules. The required specific parts of the technical documentation in the compliance part should be made available both to market surveillance authorities and to the Commission. Where some technical information is so sensitive that it would be inappropriate to include it in the category of technical documentation as detailed in delegated acts adopted pursuant to this Regulation, market surveillance authorities should retain the power to access that information when necessary in accordance with the duty of cooperation on suppliers or by way of additional parts of the technical documentation uploaded to the product database by suppliers on a voluntary basis.

(32) In order for the product database to be of use as soon as possible, registration should be mandatory for all models the units of which are placed on the market as from the date of entry into force of this Regulation. For models, the units of which are placed on the market before the date of entry into force of this Regulation and which are no longer marketed, registration should be optional. An appropriate transitional period should be provided for the development of the database and to allow suppliers to comply with their registration obligation. When any changes with relevance for the label and the product information sheet are made to a product already on the market, the product should be considered to be a new model and the supplier should register it in the product database. The Commission, in cooperation with market surveillance authorities and suppliers, should pay special attention to the transitional process until the full implementation of the public and compliance parts of the product database.

(33) The penalties applicable to infringements of the provisions of this Regulation and delegated acts

adopted pursuant thereto should be effective, proportionate and dissuasive.

(34) In order to promote energy efficiency, climate mitigation and environmental protection, Member States should be able to create incentives for the use of energy-efficient products. Member States are free to decide on the nature of such incentives. Such incentives should comply with Union State aid rules and should not constitute unjustifiable market barriers. This Regulation does not prejudice the outcome of any future State aid procedure that may be undertaken in accordance with Articles 107 and 108 of the Treaty on the Functioning of the European Union (TFEU) in respect of such incentives.

(35) Energy consumption, performance and other information concerning the products covered by product-specific requirements under this Regulation should be measured by using reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art measurements and calculation methods. In the interests of the proper functioning of the internal market, standards should be harmonised at Union level. Such methods and standards should, to the extent possible, take into account the real-life usage of a given product, reflect average consumer behaviour and be robust in order to deter intentional and unintentional circumvention. Energy labels should reflect the comparative performance of the actual use of products, within the constraints due to the need of reliable and reproducible laboratory testing. Suppliers should therefore not be allowed to include software or hardware that automatically alters the performance of the product in test conditions. In the absence of published standards at the time of application of product-specific requirements, the Commission should publish, in the *Official Journal of the European Union*, transitional measurement and calculation methods in relation to those product-specific requirements. Once a reference to such a standard has been published, compliance with it should provide a presumption of conformity with measurement methods for those product-specific requirements adopted on the basis of this Regulation.

(36) The Commission should provide a long-term working plan for the revision of labels for particular energy-related products including an indicative list of further energy-related products for which an energy label could be established. The working plan should be implemented starting with a technical, environmental and economic analysis of the product groups concerned. That analysis should also look at supplementary information including the possibility and cost of providing consumers with information on the performance of an energy-related product, such as its energy consumption, durability or environmental performance, in coherence with the objective to promote a circular economy. Such supplementary information should improve the intelligibility and effectiveness of the label towards consumers and should not lead to any negative impact on consumers.

(37) Suppliers of products marketed in accordance with Directive 2010/30/EU before the date of entry into force of this Regulation should continue to be subject to the obligation to make available an electronic version of the technical documentation of the products concerned upon request of the market surveillance authorities. Appropriate transitional provisions should ensure legal certainty and continuity in this respect.

(38) In addition, in order to ensure a seamless transition to this Regulation, the existing requirements laid down in delegated acts adopted pursuant to Article 10 of Directive 2010/30/EU and Commission Directive 96/60/EC should continue to apply to the relevant product groups until they are repealed or replaced by delegated acts adopted pursuant to this Regulation. The application of those existing requirements is without prejudice to the application of the obligations under this Regulation.

(39) In order to establish specific product groups of energy-related products in accordance with a set of specific criteria and in order to establish product-specific labels and information sheets, the power to

adopt acts in accordance with Article 290 TFEU should be delegated to the Commission. It is of particular importance that the Commission carry out appropriate consultations during its preparatory work, including at expert level, and that those consultations be conducted in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law Making. In particular, to ensure equal participation in the preparation of delegated acts, the European Parliament and the Council receive all documents at the same time as Member States' experts, and their experts systematically have access to meetings of Commission expert groups dealing with the preparation of delegated acts.

(40) In order to ensure uniform conditions for the implementation of this Regulation, implementing powers for determining under the Union safeguard procedure whether a national measure is justified or not and for establishing detailed requirements concerning the operational details relating to the product database should be conferred on the Commission. Those powers should be exercised in accordance with Regulation (EU) No 182/2011 of the European Parliament and of the Council.

(41) Since the objectives of this Regulation, namely to allow customers to choose more efficient products by supplying relevant information, cannot be sufficiently achieved by the Member States but can rather, by further developing the harmonised regulatory framework and ensuring a level playing field for manufacturers, be better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality as set out in that Article, this Regulation does not go beyond what is necessary in order to achieve those objectives.

(42) This Regulation should be without prejudice to the obligations of the Member States relating to the time-limits for transposition into national law and the date of application of Directive 2010/30/EU.

(43) Directive 2010/30/EU should therefore be repealed.

## **Article 1**

### **Subject-matter and scope**

1. This Regulation lays down a framework that applies to energy-related products ('products') placed on the market or put into service. It provides for the labelling of those products and the provision of standard product information regarding energy efficiency, the consumption of energy and of other resources by products during use and supplementary information concerning products, thereby enabling customers to choose more efficient products in order to reduce their energy consumption.

2. This Regulation does not apply to:

- (a) second-hand products, unless they are imported from a third country;
- (b) means of transport for persons or goods.

## **Article 2**

### **Definitions**

For the purposes of this Regulation the following definitions apply:

- (1) 'energy-related product' or 'product' means a good or system with an impact on energy consumption during use which is placed on the market or put into service, including parts with an impact on energy consumption during use which are placed on the market or put into service for customers and that are intended to be incorporated into products;
- (2) 'product group' means a group of products which have the same main functionality;
- (3) 'system' means a combination of several goods which when put together perform a specific function in an expected environment and of which the energy efficiency can then be determined as a single entity;
- (4) 'model' means a version of a product of which all units share the same technical characteristics relevant for the label and the product information sheet and the same model identifier;
- (5) 'model identifier' means the code, usually alphanumeric, which distinguishes a specific product model from other models with the same trade mark or the same supplier's name;
- (6) 'equivalent model' means a model which has the same technical characteristics relevant for the label and the same product information sheet, but which is placed on the market or put into service by the same supplier as another model with a different model identifier;
- (7) 'making available on the market' means the supply of a product for distribution or use on the **markets of the Contracting Parties** in the course of a commercial activity, whether in return for payment or free of charge;
- (8) 'placing on the market' means the first making available of a product on the **markets of the Contracting Parties**;
- (9) 'putting into service' means the first use of a product for its intended purpose on the **markets of the Contracting Parties**;
- (10) 'manufacturer' means a natural or legal person who manufactures a product or has a product designed or manufactured, and markets that product under its name or trademark;
- (11) 'authorised representative' means a natural or legal person established in the **Energy Community** who has received a written mandate from the manufacturer to act on its behalf in relation to specified tasks;
- (12) 'importer' means a natural or legal person established in the **Energy Community** who places a product from a third country on the **markets of the Contracting Parties**;
- (13) 'dealer' means a retailer or other natural or legal person who offers for sale, hire, or hire purchase, or displays products to customers or installers in the course of a commercial activity, whether or not in return for payment;
- (14) 'supplier' means a manufacturer established in the **Energy Community**, the authorised representative of a manufacturer who is not established in the **Energy Community**, or an importer, who places a product on the **markets of the Contracting Parties**;
- (15) 'distance selling' means the offer for sale, hire or hire purchase by mail order, catalogue, internet, telemarketing or by any other method by which the potential customer cannot be expected to see the product displayed;
- (16) 'customer' means a natural or legal person who buys, hires or receives a product for own use whether or not acting for purposes which are outside its trade, business, craft or profession;
- (17) 'energy efficiency' means the ratio of output of performance, service, goods or energy to input of

energy;

(18) 'harmonised standard' means standard as defined in point (c) of Article 2(1) of Regulation (EU) No 1025/2012 of the European Parliament and of the Council;

(19) 'label' means a graphic diagram, either in printed or electronic form, including a closed scale using only letters from A to G, each letter representing a class and each class corresponding to energy savings, in seven different colours from dark green to red, in order to inform customers about energy efficiency and energy consumption; it includes rescaled labels and labels with fewer classes and colours in accordance with Article 11(10) and (11);

(20) 'rescaling' means an exercise making the requirements for achieving the energy class on a label for a particular product group more stringent;

(21) 'rescaled label' means a label for a particular product group that has undergone rescaling and is distinguishable from labels before rescaling while preserving a visual and perceptible coherence of all labels;

(22) 'product information sheet' means a standard document containing information relating to a product, in printed or electronic form;

(23) 'technical documentation' means documentation sufficient to enable market surveillance authorities to assess the accuracy of the label and the product information sheet of a product, including test reports or similar technical evidence;

(24) 'supplementary information' means information, as specified in a delegated act, on the functional and environmental performance of a product;

(25) <...><sup>1</sup>

(26) 'verification tolerance' means the maximum admissible deviation of the measurement and calculation results of the verification tests performed by, or on behalf of, market surveillance authorities, compared to the values of the declared or published parameters, reflecting deviation arising from interlaboratory variation.

### Article 3

#### General obligations of suppliers

1. The supplier shall ensure that products that are placed on the market are accompanied, for each individual unit, free of charge, with accurate printed labels and with product information sheets in accordance with this Regulation and the relevant delegated acts.

<...><sup>2</sup>

Delegated acts may provide that the label is printed on the packaging of the product.

**2. The supplier shall deliver printed label, including any rescaled labels, and product information sheets, to the dealer free of charge, promptly and in any event within five working days upon the dealer's request.**

3. The supplier shall ensure the accuracy of the labels and product information sheets that it provides and shall produce technical documentation sufficient to enable the accuracy to be assessed.

<sup>1</sup> Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC

<sup>2</sup> The second subparagraph of Article 3(1) is not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC

4. Once a unit of a model is in service, the supplier shall request explicit consent from the customer regarding any changes intended to be introduced to the unit by means of updates that would be detrimental to the parameters of the energy efficiency label for that unit, as set out in the relevant delegated act. The supplier shall inform the customer of the objective of the update and of the changes in the parameters, including any change in the label class. For a period proportionate to the average lifespan of the product, the supplier shall give the customer the option of refusing the update without avoidable loss of functionality.

5. The supplier shall not place on the market products that have been designed so that a model's performance is automatically altered in test conditions with the objective of reaching a more favourable level for any of the parameters specified in the relevant delegated act or included in any of the documentation provided with the product.

**6. After the final unit of a model has been placed on the market, the supplier shall keep the information concerning that model for a period of 15 years. Where appropriate in relation to the average life span of a product, a shorter retention period may be provided for by relevant delegated acts.**

#### **Article 4**

<...><sup>3</sup>

#### **Article 5**

##### **Obligations of dealers**

1. The dealer shall:

(a) display, in a visible manner, including for online distance selling, the label provided by the supplier or made available in accordance with paragraph 2 for units of a model covered by the relevant delegated act; and,

(b) make available to customers the product information sheet, including, upon request, in physical form at the point of sale.

2. Where, notwithstanding Article 3(1), the dealer does not have a label, it shall request one from the supplier in accordance with Article 3(2).

3. Where, notwithstanding Article 3(1), the dealer does not have a product information sheet, it shall request one from the supplier in accordance with Article 3(2); or, if it chooses to do so, print or download one for electronic display from the product database, if those functions are available for the relevant product.

---

<sup>3</sup> Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC

## **Article 6**

### **Other obligations of suppliers and dealers**

The supplier and the dealer shall:

- (a) make reference to the energy efficiency class of the product and the range of the efficiency classes available on the label in visual advertisements or technical promotional material for a specific model in accordance with the relevant delegated act;
- (b) cooperate with market surveillance authorities and take immediate action to remedy any case of non-compliance with the requirements set out in this Regulation and the relevant delegated acts, which falls under their responsibility, at their own initiative or when required to do so by market surveillance authorities;
- (c) for products covered by delegated acts, not provide or display other labels, marks, symbols or inscriptions which do not comply with the requirements of this Regulation and the relevant delegated acts, if doing so would be likely to mislead or confuse customers with respect to the consumption of energy or other resources during use;
- (d) for products not covered by delegated acts, not supply or display labels which mimic the labels provided for under this Regulation and the relevant delegated acts;
- (e) for non-energy related products, not supply or display labels which mimic the labels provided for in this Regulation or in delegated acts.

Point (d) in the first subparagraph shall not affect labels provided for in national law, unless those labels are provided for in delegated acts.

## **Article 7**

### **Obligations of Contracting Parties**

1. **Contracting Parties** shall not impede the placing on the market or putting into service, within their territories, of products which comply with this Regulation and the relevant delegated acts.
2. Where **Contracting Parties** provide incentives for a product specified in a delegated act, those incentives shall aim at the highest two significantly populated classes of energy efficiency, or at higher classes as laid down in that delegated act.
3. **Contracting Parties** shall ensure that the introduction of labels and rescaling of labels is accompanied by educational and promotional information campaigns on energy labelling, if appropriate in cooperation with suppliers and dealers. The **Secretariat** shall support cooperation and the exchange of best practices in relation to those campaigns, including through the recommendation of common key messages.
4. **Contracting Parties** shall lay down the rules on penalties and enforcement mechanisms applicable to infringements of this Regulation and the delegated acts, and shall take all measures necessary to ensure that they are implemented. The penalties provided for shall be effective, proportionate and dissuasive. Rules which fulfil the requirements of Article 15 of **Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, shall be considered to fulfil the requirements of this paragraph as regards penalties.

**Contracting Parties** shall, by **1 January 2020**, notify the **Secretariat** of the rules referred to in the first subparagraph that have not previously been notified to the **Secretariat**, and shall notify the **Secretariat**, without delay, of any subsequent amendment affecting them.

### **Article 8**

#### **Market surveillance and control of products entering the markets of Contracting Parties**

**1. The Secretariat shall encourage and support cooperation and the exchange of information on market surveillance relating to the labelling of products between national authorities of the Contracting Parties that are responsible for market surveillance or in charge of the control of products entering the Contracting Parties' markets, and between them and the Secretariat, inter alia.**

**Such exchanges of information shall also be conducted when test results indicate that the product complies with this Regulation and the relevant delegated act.**

**2. Contracting Parties' general market surveillance programmes or sector specific programmes, where applicable, shall include actions to ensure the effective enforcement of this Regulation.**

**3. For the purposes of the preceding paragraphs, national market surveillance authorities and the Secretariat shall take into account guidelines for the enforcement of this Regulation, in particular as regards best practices for product testing and the sharing of information, developed under Article 8(4) of Regulation (EU) 2017/1369 in the European Union.**

**4. Market surveillance authorities shall have the right to recover from the supplier the costs of document inspection and physical product testing in case of non-compliance with this Regulation or the relevant delegated acts.**

### **Article 9**

#### **Procedure at national level for dealing with products presenting a risk**

**1. Where the market surveillance authorities of one Contracting Party have sufficient reason to believe that a product covered by this Regulation presents a risk to aspects of public interest protection covered by this Regulation, such as environmental and consumer protection aspects, they shall carry out an evaluation in relation to the product concerned covering all energy labelling requirements relevant to the risk and laid down in this Regulation or in the relevant delegated act. Suppliers and dealers shall cooperate as necessary with the market surveillance authorities for the purpose of that evaluation.**

**2. Where, in the course of the evaluation referred to in paragraph 1, the market surveillance authorities find that the product does not comply with the requirements laid down in this Regulation or in the relevant delegated act, they shall without delay require the supplier, or where appropriate, the dealer, to take all appropriate corrective action to bring the product into compliance with those requirements, where appropriate to withdraw the product from the market, or where appropriate, to recall it within a reasonable period, commensurate with the nature of the risk as they may prescribe.**

<...><sup>4</sup>

3. Where the market surveillance authorities consider that a case of non-compliance as referred to in paragraph 2 is not restricted to their national territory, they shall inform the **Secretariat** and the other **Contracting Parties** of the results of the evaluation and of the action which they have required the supplier or dealer to take.

4. The supplier or, where appropriate, the dealer shall ensure that all appropriate corrective or restrictive action in accordance with paragraph 2 is taken in respect of all the products concerned that it has made available on the market throughout the **Energy Community**.

5. Where the supplier or, where appropriate, the dealer does not take adequate corrective action within the period referred to in paragraph 2, the market surveillance authorities shall take all appropriate provisional measures to prohibit or restrict the availability of the product on their national market, to withdraw the product from that market, or to recall it.

6. The market surveillance authorities shall inform the **Secretariat** and the other **Contracting Parties** without delay of the measures taken pursuant to paragraph 5. That information shall include all available details, in particular:

- (a) the data necessary for the identification of the non-compliant product;
- (b) the origin of the product;
- (c) the nature of the non-compliance alleged and the risk involved;
- (d) the nature and duration of the national measures taken and the arguments put forward by the supplier or, where appropriate, the dealer.

In particular, the market surveillance authorities shall indicate whether the non-compliance is due to either failure of the product to meet requirements relating to aspects of public interest protection laid down in this Regulation or shortcomings in the harmonised standards referred to in Article 13 conferring a presumption of conformity.

7. **Contracting Parties** other than the **Contracting Party** initiating the procedure shall without delay inform the **Secretariat** and the other **Contracting Parties** of any measures adopted and of any additional information at their disposal relating to the non-compliance of the product concerned, and, in the event of disagreement with the notified national measure, of their objections.

8. Where, within 60 days of receipt of the information referred to in paragraph 6, no objection has been raised by either a **Contracting Party**, or the **Secretariat** in respect of a provisional measure taken by a **Contracting Party**, that measure shall be deemed to be justified.

9. **Contracting Parties** shall ensure that appropriate restrictive measures, such as withdrawal of the product from their market, are taken in respect of the product concerned, without delay.

## **Article 10**

### **Energy Community safeguard procedure**

**1. Where, on completion of the procedure set out in Article 9(4) and (5), objections are raised against a measure taken by a Contracting Party, or where the Secretariat considers**

<sup>4</sup> The second subparagraph of Article 9(2) is not applicable, in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC

**a national measure to be contrary to Energy Community law, the Secretariat shall, without delay, consult the Contracting Party, and the supplier or, where appropriate, the dealer and shall evaluate the national measure.**

**On the basis of the results of that evaluation, the Secretariat shall decide whether the national measure is justified or not and may suggest an appropriate alternative measure. The Secretariat shall seek consent from the European Commission before taking such decision.**

2. The **Secretariat** shall address its decision to all **Contracting Parties** and shall immediately communicate it to them and to the supplier or dealer concerned.

3. If the national measure is considered to be justified, all **Contracting Parties** shall take the measures necessary to ensure that the non-compliant product is withdrawn from their market, and shall inform the **Secretariat** and Commission accordingly. If the national measure is considered to be unjustified, the **Contracting Party** concerned shall withdraw the measure.

**4. Where the national measure is considered to be justified and the non-compliance of the product is attributed to shortcomings in the harmonised standards referred to in Article 9(6) of this Regulation, the Secretariat shall inform the Commission thereof.**

5. Corrective or restrictive measures pursuant to Article 9(2), (4), (5) or (9), or Article 10(3) shall be extended to all units of a non-compliant model and of its equivalent models, except those units for which the supplier demonstrates that they are compliant.

### **Article 11**

#### **Use of rescaled labels**

<...><sup>5</sup>

**13. Where, pursuant to Article 11(1) or (3) of Regulation (EU) 2017/1369 in the European Union, a label has been rescaled:**

(a) the supplier shall, when placing a product on the market, provide both the existing and the rescaled labels and the product information sheets to the dealer for a period beginning four months before the date specified in the relevant delegated act for starting the display of the rescaled label.

By way of derogation from the first subparagraph of this point, if the existing and the rescaled label require different testing of the model, the supplier may choose not to supply the existing label with units of models placed on the market or put into service during the four-month period before the date specified in the relevant delegated act for starting the display of the rescaled label if no units belonging to the same model or equivalent models were placed on the market or put into service before the start of the four-month period. In that case, the dealer shall not offer those units for sale before that date. The supplier shall notify the dealer concerned of that consequence as soon as possible, including when it includes such units in its offers to dealers.

(b) the supplier shall, for products placed on the market or put into service before the four-month period, deliver the rescaled label on request from the dealer in accordance with Article 3(2) as from the start of that period. For such products, the dealer shall obtain a rescaled label in accordance with Article 5(2).

<sup>5</sup> Article 11(1) to (12) is not applicable, in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC

By way of derogation from the first subparagraph of this point:

(i) a dealer who is unable to obtain a rescaled label in accordance with the first subparagraph of this point for units already in its stock because the supplier has ceased its activities shall be permitted to sell those units exclusively with the non-rescaled label until nine months after the date specified in the relevant delegated act for starting the display of the rescaled label; or

(ii) if the non-rescaled and the rescaled label require different testing of the model, the supplier is exempt from the obligation to supply a rescaled label for units placed on the market or put into service before the four month period, if no units belonging to same model or equivalent models are placed on the market or put into service after the start of the four-month period. In that case, the dealer shall be permitted to sell those units exclusively with the non-rescaled label until nine months after the date specified in the relevant delegated act for starting the display of the rescaled label.

(c) the dealer shall replace the existing labels on products on display, both in shops and online, with the rescaled labels within 14 working days after the date specified in the relevant delegated act for starting the display of the rescaled label. The dealer shall not display the rescaled labels before that date.

**By way of derogation from points (a), (b) and (c) of this paragraph, relevant delegated acts may provide for specific rules for energy labels printed on the packaging.**

### **Article 12**

#### **Product database**

<...><sup>6</sup>

### **Article 13**

#### **Harmonised standards**

**Where harmonised standards referred to in Article 13 of Regulation (EU) 2017/1369 in the European Union are applied during the conformity assessment of a product, the model shall be presumed to be in conformity with the relevant measurement and calculation requirements of the delegated act.**

### **Article 14**

#### **Consultation Forum**

<...><sup>7</sup>

<sup>6</sup> Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC

<sup>7</sup> *ibid.*

**Article 15**

**Working plan**

<...><sup>8</sup>

**Article 16**

**Relevant delegated acts**

1. The European Commission may propose to the Ministerial Council the incorporation of relevant delegated acts supplementing Regulation (EU) 2017/1369 in the Energy Community.
2. The Ministerial Council shall decide upon the incorporation and adaptation of these relevant delegated acts at the meeting following the proposal. Upon adoption of a relevant Decision, relevant delegated acts shall be transposed and implemented by all Contracting Parties.

**Article 17**

**Exercise of the delegation**

<...><sup>9</sup>

**Article 18**

**Committee procedure**

<...><sup>10</sup>

**Article 19**

**Evaluation and report**

**By 2 August 2025, the Secretariat shall assess the implementation of this Regulation and submit a report to the Ministerial Council.**

---

<sup>8</sup> Not applicable in accordance with Article 3(1)(a) of Decision 2018/03/MC-EnC

<sup>9</sup> *ibid.*

<sup>10</sup> *ibid.*

## **Article 20**

### **Repeal and transitional measures**

1. **Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, is repealed with effect from **1 January 2020**.
2. References to the repealed Directive shall be construed as references to this Regulation and shall be read in accordance with the correlation table set out in Annex II.
3. For models, the units of which were placed on the market or put into service in accordance with **Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, before **1 January 2020**, the supplier shall, for a period ending five years after the final unit was manufactured, make an electronic version of the technical documentation available for inspection within 10 days of a request received from **Contracting Parties** or the **Secretariat**.
4. **Delegated acts adopted pursuant to Article 10 of Directive 2010/30/EU and Directive 96/60/EC, as incorporated and adapted by the Ministerial Council, shall remain in force until they are repealed by a Decision adopted by the Ministerial Council taken under Article 16 of this Regulation.**

Obligations under this Regulation shall apply in relation to product groups covered by delegated acts adopted pursuant to Article 10 of **Directive 2010/30/EU and by Directive 96/60/EC, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**.

5. **With regard to product groups already covered by relevant delegated acts adopted pursuant to Directive 2010/30/EU as incorporated and adapted by the Ministerial Council, or to Directive 96/60/EC as incorporated and adapted by the Ministerial Council, the energy efficiency classification established by Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, may continue to apply until the date on which the delegated acts introducing rescaled labels become applicable.**

## **Article 21**

### **Entry into force and application**

**This Regulation shall enter into force on the day of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.**

**Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.**

## **DELEGATED REGULATION (EU) 2017/254 of 30 November 2016 amending Delegated Regulations (EU) 1059/2010, (EU) 1060/2010, (EU) 1061/2010, (EU) 1062/2010, (EU) 626/2011, (EU) 392/2012, (EU) 874/2012, (EU) 665/2013, (EU) 811/2013, (EU) 812/2013, (EU) 65/2014, (EU) 1254/2014, (EU) 2015/1094, (EU) 2015/1186 and (EU) 2015/1187 with regard to the use of tolerances in verification procedures**

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Experience gained in implementing Commission Delegated Regulations adopted on the basis of Directive 2010/30/EU has revealed that the verification tolerances laid down in the delegated acts, and intended for use only by market surveillance authorities, have been used by some suppliers to establish the values required to be provided in the technical documentation or to interpret those values with a view to achieving a better energy labelling classification or to suggest, in other ways, better performance of their products.

(2) The verification tolerances are designed to allow for variations that emerge in the measurements taken during verification tests, which are due to the differences in the measurement equipment used by suppliers and surveillance authorities across the Union. Verification tolerances should not be used by the supplier for establishing the values in the technical documentation or for interpreting those values in order to achieve a better energy labelling classification or to suggest better performance than has actually been measured and calculated. The parameters declared or published by the supplier should not be more favourable for the supplier than the values contained in the technical documentation.

(3) To ensure fair competition, to realise the energy savings that the Regulations were designed to achieve, and to provide consumers with accurate information about the energy efficiency and functional performance of products, it should be clarified that the verification tolerances set out in the delegated acts may only be used by Member State authorities, for the purpose of verifying compliance.

(4) Commission Delegated Regulations (EU) No 1059/2010, (EU) No 1060/2010, (EU) No 1061/2010, (EU) No 1062/2010, (EU) No 626/2011, (EU) No 392/2012, (EU) No 874/2012, (EU) No 665/2013, (EU) No 811/2013, (EU) No 812/2013, (EU) No 65/2014, (EU) No 1254/2014, (EU) 2015/1094, (EU) 2015/1186 and (EU) 2015/1187 should therefore be amended accordingly.

### **Article 1**

#### **Amendments to Delegated Regulation (EU) No 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

Annex V to Delegated Regulation (EU) No 1059/2010, **as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**, is amended in accordance with Annex I to this Delegated Regulation.

**Amendments to Delegated Regulation (EU) 2015/1187**

Annex X to Delegated Regulation (EU) 2015/1187 is amended in accordance with Annex XV to this Delegated Regulation.

***Article 16***

**Entry into force and application**

**This Regulation shall enter into force on the date of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.**

**Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.**

## ANNEX I

### Amendments to Annex V to Delegated Regulation (EU) No 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Annex V is replaced by the following:

#### 'ANNEX V

#### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Parties** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household dishwasher models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if, for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as

equivalent household dishwasher models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

**Contracting Parties'** authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in **a dedicated section of the website of the Energy Community**. The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 1

**Verification tolerances**

<b>Parameters</b>	<b>Verification tolerances</b>
Annual energy consumption ( $AE_c$ )	The determined value shall not exceed the declared value of $AE_c$ by more than 10 %.
Water consumption ( $W_t$ )	The determined value shall not exceed the declared value of $W_t$ by more than 10 %.
Drying efficiency index ( $I_d$ )	The determined value shall not be less than the declared value of $I_d$ by more than 19 %.
Energy consumption ( $E_t$ )	The determined value shall not exceed the declared value of $E_t$ by more than 10 %. Where three additional units need to be selected, the arithmetic mean of the determined values of these three units shall not exceed the declared value of $E_t$ by more than 6 %.
Programme time ( $T_t$ )	The determined value shall not exceed the declared values $T_t$ by more than 10 %.
Power consumption in off mode and left-on mode ( $P_o$ and $P_l$ )	The determined value of power consumption $P_o$ and $P_l$ of more than 1,00 W shall not exceed the declared values of $P_o$ and $P_l$ by more than 10 %. The determined value of power consumption $P_o$ and $P_l$ of less than or equal to 1,00 W shall not exceed the declared value of $P_o$ and $P_l$ by more than 0,10 W.
Duration of left-on mode ( $T_l$ )	The determined value shall not exceed the declared value of $T_l$ by more than 10 %.
Airborne acoustical noise emissions	The determined value shall meet the declared value.'

## ANNEX II

### Amendments to Annex VII to Delegated Regulation (EU) No 1060/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Annex VII is replaced by the following:

#### 'ANNEX VII

#### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household refrigerating appliance models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as

equivalent household refrigerating appliance models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annexes VI and VIII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 1

### Verification tolerances

Parameters	Verification tolerances
Gross volume	The determined value shall not be less than the declared value by more than 3 % or 1 litre, whichever is the greater value.
Storage volume	The determined value shall not be less than the declared value by more than 3 % or 1 litre, whichever is the greater value. Where the volumes of the cellar compartment and the fresh food storage compartment can be adjusted, relative to one another, by the user, the volume shall be tested when the cellar compartment is adjusted to its minimum volume.
Freezing capacity	The determined value shall not be less than the declared value by more than 10 %.
Energy consumption	The determined value shall not exceed the declared value ( $E_{24h}$ ) by more than 10 %.
Humidity of wine storage appliances	The determined value for the relative humidity observed in testing shall not exceed the declared range by more than 10 % in any direction.
Airborne acoustical noise emissions	The determined value shall meet the declared value.'

## ANNEX III

### Amendments to Annex V to Delegated Regulation (EU) No 1061/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

Annex V is replaced by the following:

## ‘ANNEX V

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household washing machine models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household washing machine models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.
- (7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

**Contracting Parties’** authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including

methods set out in documents whose reference numbers have been published for that purpose in the **a dedicated section of the website of the Energy Community**. The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 1

**Verification tolerances**

Parameters	Verification tolerances
Annual energy consumption ( $AE_c$ )	The determined value shall not exceed the declared value of $AE_c$ by more than 10 %.
Energy consumption ( $E_t$ )	The determined value shall not exceed the declared value of $E_t$ by more than 10 %. Where three additional units need to be selected, the arithmetic mean of the determined values of these three units shall not exceed the declared value of $E_t$ by more than 6 %.
Programme time ( $T$ )	The determined value shall not exceed the declared values $T_t$ by more than 10 %.
Water consumption ( $W_t$ )	The determined value shall not exceed the declared value of $W_t$ by more than 10 %.
Remaining moisture content ( $D$ )	The determined value shall not exceed the declared value of $D$ by more than 10 %.
Spin speed	The determined value shall not be less than the declared value by more than 10 %.
Power consumption in off mode and left-on mode ( $P_o$ and $P_l$ )	Determined values of power consumption $P_o$ and $P_l$ of more than 1,00 W shall not exceed the declared values of $P_o$ and $P_l$ by more than 10 %. The determined values of power consumption $P_o$ and $P_l$ of less than or equal to 1,00 W shall not exceed the declared values of $P_o$ and $P_l$ by more than 0,10 W.
Duration of the left-on mode ( $T$ )	The determined value shall not exceed the declared value of $T_l$ by more than 10 %.
Airborne acoustical noise emissions	The determined value shall meet the declared value.'

## ANNEX IV

### Amendments to Annexes VII and VIII to Delegated Regulation (EU) No 1062/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

(1) Annex VII is amended as follows:

- (a) In part 2, subparagraph (iv) of paragraph (a) is deleted.
- (b) Part 3 is deleted.
- (c) In part 4, the title is replaced by the following:

**'4. Measurements of peak luminance ratio referred to in Table 2 of Annex VIII'.**

(2) Annex VIII is replaced by the following:

## 'ANNEX VIII

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 2.
- (3) If the result referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 2.

(6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 2 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 2

**Verification tolerances**

<b>Parameters</b>	<b>Verification tolerances</b>
On-mode power consumption	The determined value shall not exceed the declared value by more than 7 %.
Off-mode/standby power consumption	The determined value shall not exceed the declared value by more than 0,10 W.
Peak luminance ratio	The determined value shall not be lower than 60 % of the peak luminance of the brightest on-mode condition provided by the television.'

**ANNEX V**

**Amendments to Annex VIII to Delegated Regulation (EU) No 626/2011, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

Annex VIII is replaced by the following:

**'ANNEX VIII**

**Product compliance verification by market surveillance authorities**

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche

shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.
- (7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 1

**Verification tolerances**

<b>Parameters</b>	<b>Verification tolerances</b>
Seasonal energy efficiency ratio (SEER)	The determined value shall not be lower than the declared value by more than 8 %.
Seasonal coefficient of performance (SCOP)	The determined value shall not be lower than the declared value by more than 8 %.
Power consumption in off mode	The determined value shall not exceed the declared value by more than 10 %.
Power consumption in standby mode	The determined value shall not exceed the declared value by more than 10 %.
Energy efficiency ratio ( $EER_{rated}$ )	The determined value shall not be lower than the declared value by more than 10 %.
Coefficient of performance ( $COP_{rated}$ )	The determined value shall not be lower than the declared value by more than 10 %.
Sound power level	The determined value shall not exceed the declared value by more than 2 dB(A).'

**ANNEX VI****Amendments to Annex V to Delegated Regulation (EU) No 392/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

Annex V is replaced by the following:

**'ANNEX V****Product compliance verification by market surveillance authorities**

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**

(declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household tumble drier models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household tumble drier models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

**Contracting Parties'** authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in **a dedicated section of the website of the Energy Community**. The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 1

**Verification tolerances**

<b>Parameters</b>	<b>Verification tolerances</b>
Weighted annual energy consumption ( $AE_c$ )	The determined value shall not exceed the declared value of $AE_c$ by more than 6 %.
Weighted energy consumption ( $E_i$ )	The determined value shall not exceed the declared value of $E_i$ by more than 6 %.
Weighted condensation efficiency ( $C_i$ )	The determined value shall not be less than the declared value of $C_i$ by more than 6 %.
Weighted programme time ( $T_i$ )	The determined value shall not exceed the declared value of $T_i$ by more than 6 %.
Power consumption in off mode and left-on mode ( $P_o$ and $P_i$ )	The determined values of power consumption $P_o$ and $P_i$ of more than 1,00 W shall not exceed the declared values of $P_o$ and $P_i$ by more than 6 %. The determined value of power consumption $P_o$ and $P_i$ of less than or equal to 1,00 W shall not exceed the declared values of $P_o$ and $P_i$ by more than 0,10 W.
Duration of the left-on mode ( $T$ )	The determined value shall not exceed the declared value of $T_i$ by more than 6 %.
Sound power level, $L_{WA}$	The determined value shall not exceed the declared value of $L_{WA}$ .

**ANNEX VII****Amendments to Annex V to Delegated Regulation (EU) No 874/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

Annex V is replaced by the following:

**'ANNEX V****Product compliance verification by market surveillance authorities**

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

## 1. VERIFICATION PROCEDURE FOR ELECTRICAL LAMPS AND LED MODULES MARKETED AS INDIVIDUAL PRODUCTS

(1) The **Contracting Party** authorities shall verify a sample batch of a minimum of 20 lamps of the same model from the same supplier, where possible obtained in equal proportions from four randomly selected sources.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when testing the units of model, the arithmetical mean of the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) is within the respective tolerance of 10 %.

(3) If the results referred to in points 2(a), (b) or (c) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to point 3.

The **Contracting Party** authorities shall use measurement procedures that reflect generally recognised, current best practice and are reliable, accurate and reproducible, including methods set out in documents whose reference numbers have been published for that purpose in **a dedicated section of the website of the Energy Community**. The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerance of 10 % and shall only use the procedure described in points 1 to 4 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

## 2. VERIFICATION PROCEDURE FOR LUMINAIRES INTENDED TO BE MARKETED OR MARKETED TO THE END-USER

The luminaire shall be considered to comply with the requirements laid down in this Regulation if it is accompanied by the required product information, if it is claimed to be compatible with all the lamp energy efficiency classes it is compatible with, and if, when applying state-of-the-art methods and criteria for assessing compatibility, it is found to be compatible with the lamp energy efficiency classes with which it is claimed to be compatible pursuant to points (2)(IV)(a) and (b) of part 2 of Annex I.'

## ANNEX VIII

### Amendments to Annex VII to Delegated Regulation (EU) No 665/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex VII is replaced by the following:

## 'ANNEX VII

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 4.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent vacuum cleaner models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent vacuum cleaner in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 4.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as

equivalent vacuum cleaner models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VI.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 4 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 4

#### Verification tolerances

Parameters	Verification tolerances
Annual energy consumption	The determined value shall not exceed the declared value by more than 10 %.
Dust pick-up on carpet	The determined value shall not be lower than the declared value by more than 0,03.
Dust pick-up on hard floor	The determined value shall not be lower than the declared value by more than 0,03.
Dust re-emission	The determined value shall not exceed the declared value by more than 15 %.
Sound power level	The determined value shall not exceed the declared value.'

## ANNEX IX

### Amendments to Annex VIII to Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex VIII is replaced by the following:

#### 'ANNEX VIII

#### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 16.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 16.
- (6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.
- (7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 16 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 16

**Verification tolerances**

<b>Parameters</b>	<b>Verification tolerances</b>
Space-heating energy efficiency, $\eta_s$	The determined value shall not be lower than the declared value by more than 8 %.
Water-heating energy efficiency, $\eta_{wh}$	The determined value shall not be lower than the declared value by more than 8 %.
Sound power level	The determined value shall not exceed the declared value by more than 2 dB(A).
Class of the temperature control	The class of the temperature controls corresponds to the declared class of the unit.
Collector efficiency, $\eta_{col}$	The determined value shall not be lower than the declared value by more than 5 %.
Standing loss, $S$	The determined value shall not exceed the declared value by more than 5 %.
Auxiliary electricity consumption, $Q_{aux}$	The determined value shall not exceed the declared value by more than 5 %.'

**ANNEX X****Amendments to Annex IX to Delegated Regulation (EU) No 812/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

Annex IX is replaced by the following:

**'ANNEX IX****Product compliance verification by market surveillance authorities**

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**

(declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 9.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all other equivalent water heater models, hot water storage tanks models, solar device models or package of water heater and solar device models shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different equivalent models.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 9.

(6) If the result referred to in point 5 is not achieved, the model and all other equivalent water heater models, hot water storage tanks models, solar device models or package of water heater and solar device models shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VII and Annex VIII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 9 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 9

#### Verification tolerances

Parameters	Verification tolerances
Daily electricity consumption, $Q_{elec}$	The determined value shall not exceed the declared value by more than 5 %.
Sound power level, $L_{WA}$ , indoors and/or outdoors	The determined value shall not exceed the declared value by more than 2 dB.
Daily fuel consumption, $Q_{fuel}$	The determined value shall not exceed the declared value by more than 5 %.

Weekly fuel consumption with smart controls, $Q_{fuel,week,smart}$	The determined value shall not exceed the declared value by more than 5 %.
Weekly electricity consumption with smart controls, $Q_{elec,week,smart}$	The determined value shall not exceed the declared value by more than 5 %.
Weekly fuel consumption without smart controls, $Q_{fuel,week}$	The determined value shall not exceed the declared value by more than 5 %.
Weekly electricity consumption without smart controls, $Q_{elec,week}$	The determined value shall not exceed the declared value by more than 5 %.
Storage volume, $V$	The determined value shall not be lower than the declared value by more than 2 %.
Collector aperture area, $A_{sol}$	The determined value shall not be lower than the declared value by more than 2 %.
Pump power consumption, $sol_{pump}$	The determined value shall not exceed the declared value by more than 3 %.
Standby power consumption, $sol_{standby}$	The determined value shall not exceed the declared value by more than 5 %.
Standing loss, $S$	The determined value shall not exceed the declared value by more than 5 %.'

## ANNEX XI

### Amendments to Annex VIII to Delegated Regulation (EU) No 65/2014, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Annex VIII is replaced by the following:

## 'ANNEX VIII

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**

(declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 6.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 6.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex II.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 6 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 6

**Verification tolerances**

<b>Parameters</b>	<b>Verification tolerances</b>
Mass of the oven, $M$	The determined value shall not exceed the declared value of $M$ by more than 5 %.
Volume of the cavity of the oven, $V$	The determined value shall not be lower than the declared value of $V$ by more than 5 %.
$EC_{\text{electric cavity}}$ , $EC_{\text{gas cavity}}$	The determined values shall not exceed the declared values of $EC_{\text{electric cavity}}$ and $EC_{\text{gas cavity}}$ by more than 5 %.
$W_{\text{BEP}}$ , $W_L$	The determined values shall not exceed the declared values of $W_{\text{BEP}}$ and $W_L$ by more than 5 %.
$Q_{\text{BEP}}$ , $P_{\text{BEP}}$	The determined values shall not be lower than the declared values of $Q_{\text{BEP}}$ and $P_{\text{BEP}}$ by more than 5 %.
$Q_{\text{max}}$	The determined value shall not exceed the declared value of $Q_{\text{max}}$ by more than 8 %.
$E_{\text{middle}}$	The determined value shall not be lower than the declared value of $E_{\text{middle}}$ by more than 5 %.
$GFE_{\text{hood}}$	The determined value shall not be lower than the declared value of $GFE_{\text{hood}}$ by more than 5 %.
$P_o$ , $P_s$	The determined values of power consumption $P_o$ and $P_s$ shall not exceed the declared values of $P_o$ and $P_s$ by more than 10 %. The determined values of power consumption $P_o$ and $P_s$ of less than or equal to 1,00 W shall not exceed the declared values of $P_o$ and $P_s$ by more than 0,10 W.
Sound power level, $L_{\text{WA}}$	The determined value shall not exceed the declared value of $L_{\text{WA}}$ .

**ANNEX XII****Amendments to Annex IX to Delegated Regulation (EU) No 1254/2014**

Annex IX is replaced by the following:

**'ANNEX IX****Product compliance verification by market surveillance authorities**

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties**

shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all other equivalent models shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different equivalent models.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model and all other equivalent models shall be considered not to comply with this Delegated Regulation.
- (7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VIII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 1

#### Verification tolerances

Parameters	Verification tolerances
SPI	The determined value shall be no more than 1,07 times the declared value.
Thermal efficiency RVU	The determined value shall be no less than 0,93 times the declared value.
Sound power level	The determined value shall be no more than the declared value plus 2 dB.

## ANNEX XIII

### Amendments to Annex X to Delegated Regulation (EU) 2015/1094

Annex X is replaced by the following:

#### 'ANNEX X

#### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-Enc** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 4.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all equivalent professional refrigerated storage cabinets that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 4.
- (6) If the result referred to in point 5 is not achieved, the model and all equivalent professional refrigerated storage cabinets that have been listed as equivalent models in the supplier's technical documentation

shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annexes VIII and IX.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 4 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 4

#### Verification tolerances

Parameters	Verification tolerances
Net volume	The determined value shall not be lower than the declared value by more than 3 %.
Energy consumption ( $E_{24h}$ )	The determined value shall not exceed the declared value by more than 10 %.'

## ANNEX XIV

### Amendments to Annex IX to Delegated Regulation (EU) 2015/1186

Annex IX is replaced by the following:

#### 'ANNEX IX

#### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-Enc**

(declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 6. The unit shall be tested with a fuel with characteristics in the same range as the fuel that was used by the supplier to perform the measurements described in Annex VIII.

(3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.

(5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 6.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VIII.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 6 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

Table 6

**Verification tolerances**

<b>Parameter</b>	<b>Verification tolerance</b>
Energy efficiency index	The determined value shall not be lower than the declared value by more than 8 %.

## ANNEX XV

### Amendments to Annex X to Delegated Regulation (EU) 2015/1187

Annex X is replaced by the following:

#### ‘ANNEX X

##### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by **Contracting Party** authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the **Contracting Parties** shall apply the following procedure:

- (1) The **Contracting Party** authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC** (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the **Contracting Party** authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 5. The unit shall be tested with a fuel with characteristics in the same range as the fuel that was used by the supplier to perform measurements according to Annex VIII.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier’s technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the **Contracting Party** authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier’s technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective verification tolerances given in Table 5.

(6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

(7) The **Contracting Party** authorities shall provide all relevant information to the authorities of the other **Contracting Parties** and to the **Secretariat** without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The **Contracting Party** authorities shall use the measurement and calculation methods set out in Annex VIII and IX.

The **Contracting Party** authorities shall only apply the verification tolerances that are set out in Table 5 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

*Table 5*

**Verification tolerances**

<b>Parameter</b>	<b>Verification tolerance</b>
Energy efficiency index	The determined value shall not be lower than the declared value by more than 6 %.'

## **DELEGATED REGULATION (EU) 518/2014 of 5 March 2014 amending Delegated Regulations (EU) 1059/2010, (EU) 1060/2010, (EU) 1061/2010, (EU) 1062/2010, (EU) 626/2011, (EU) 392/2012, (EU) 874/2012, (EU) 665/2013, (EU) 811/2013 and (EU) 812/2013 with regard to labelling of energy-related products on the internet**

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to lay down details relating to the labelling of energy-related products by means of delegated acts which contain measures that ensure that potential end-users are provided with the information specified on the label and in the product fiche in case of distance selling, including mail order, by catalogue, telemarketing or through the internet.

(2) Currently, it is specified that in the case of distance selling the information on the label is to be presented in a specific order. However, there is currently no requirement to display the label itself or the product fiche. Therefore, the ability of end-users to make better informed decisions about their purchases is affected in the case of distance selling because they are neither guided by the colour scale of the label, nor are they informed as to which energy labelling class is the best for the product group or provided with the additional information which is contained in the fiche.

(3) Distance selling through the internet is increasingly becoming a significant share of the sales of energy-related products. When selling through the internet, it is possible to display the label and the fiche without involving an additional administrative burden. Therefore, dealers should display the label and fiche when selling through the internet.

(4) For the label and fiche to be displayed on the internet, suppliers should for each model of an energy-related product provide dealers with an electronic version of the label and the fiche, e.g. through making them available on a website where they can be downloaded by dealers.

(5) In order to implement the requirements of this Regulation as part of normal business cycles, suppliers should be obliged to make the label and fiche available electronically only for new models, including upgrades of existing models, which in practical terms means those with a new model identifier. For existing models supply of an electronic label and fiche should be on a voluntary basis.

(6) Since displaying the label and the fiche next to the product may require more screen space, it should be allowed to have them displayed using a nested display.

(7) Commission Delegated Regulations (EU) No 1059/2010, (EU) No 1060/2010, (EU) No 1061/2010, (EU) No 1062/2010, (EU) No 626/2011, (EU) No 392/2012, (EU) No 874/2012, (EU) No 665/2013, (EU) No 811/2013, and (EU) No 812/2013 should therefore be amended accordingly.

### **Article 1**

#### **Amendments to Delegated Regulation (EU) No 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

Delegated Regulation (EU) No 1059/2010, **as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) the following point (f) is added:

'(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household dishwasher model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other household dishwasher models;';

(b) the following point (g) is added:

'(g) an electronic product fiche as set out in Annex II is made available to dealers for each household dishwasher model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other household dishwasher models.';

(2) in Article 4, point (b) is replaced by the following:

'(b) household dishwashers offered for sale, hire or hire- purchase where the end-user cannot be expected to see the household dishwasher displayed, are marketed with the information provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;';

(3) a new Annex VIII is added in accordance with Annex I to this Regulation.

### **Article 2**

#### **Amendments to Delegated Regulation (EU) No 1060/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

Delegated Regulation (EU) No 1060/2010, **as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) the following point (f) is added:

'(f) an electronic label in the format and containing the information set out in Annex II is made available to dealers for each household refrigerating appliance model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other household refrigerating appliance models;';

(b) the following point (g) is added:

'(g) an electronic product fiche as set out in Annex III is made available to dealers for each household refrigerating appliance model placed on the market from **1 January 2020** with a new model iden-

tifier. It may also be made available to dealers for other household refrigerating appliance models.;

(2) in Article 4, point (b) is replaced by the following:

'(b) household refrigerating appliances offered for sale, hire or hire purchase where the end-user cannot be expected to see the product displayed, are marketed with the information to be provided by the suppliers in accordance with Annex V. Where the offer for is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex X shall apply instead.;

(3) a new Annex X is added in accordance with Annex II to this Regulation.

### **Article 3**

#### **Amendments to Delegated Regulation (EU) No 1061/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

Delegated Regulation (EU) No 1061/2010, **as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) the following point (f) is added:

'(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household washing machine model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other household washing machine models.;

(b) the following point (g) is added:

'(g) an electronic product fiche as set out in Annex II is made available to dealers for each household washing machine model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other household washing machine models.;

(2) in Article 4, point (b) is replaced by the following:

'(b) household washing machines offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed are marketed with the information to be provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead.;

(3) a new Annex VIII is added in accordance with Annex III to this Regulation.

### **Article 4**

#### **Amendments to Delegated Regulation (EU) No 1062/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

Delegated Regulation (EU) No 1062/2010, **as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (f) is added:

'(f) an electronic label in the format and containing the information set out in Annex V is made available to dealers for each television model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other television models;';

(b) in paragraph 1, the following point (g) is added:

'(g) an electronic product fiche as set out in Annex III is made available to dealers for each television model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other television models;';

(2) in Article 4, point (b) is replaced by the following:

'(b) televisions offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the television displayed, are marketed with the information to be provided by the suppliers in accordance with Annex VI. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1)(f) and 3(1)(g) the provisions in Annex IX shall apply instead;';

(3) a new Annex IX is added in accordance with Annex IV to this Regulation.

### **Article 5**

#### **Amendments to Delegated Regulation (EU) No 626/2011, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

Delegated Regulation (EU) No 626/2011, **as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (h) is added:

'(h) an electronic label in the format and containing the information set out in Annex III is made available to dealers for each air conditioner model placed on the market from **1 January 2020** with a new model identifier, respecting energy efficiency classes set out in Annex II. It may also be made available to dealers for other air conditioner models;';

(b) in paragraph 1, the following point (i) is added:

'(i) an electronic product fiche as set out in Annex IV is made available to dealers for each air conditioner model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other air conditioner models;';

(2) in Article 4, point (b) is replaced by the following:

'(b) air conditioners offered for sale, hire or hire purchase where the end-user cannot be expected to see the product displayed, are marketed with the information provided by suppliers in accordance with Annexes IV and VI. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1)(h) and 3(1)(i) the provisions of Annex IX shall apply instead;';

(3) a new Annex IX is added in accordance with Annex V to this Regulation.

### Article 6

#### Amendments to Delegated Regulation (EU) No 392/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Delegated Regulation (EU) No 392/2012, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) the following point (f) is added:

'(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household tumble drier model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other household tumble drier models;';

(b) the following point (g) is added:

'(g) an electronic product fiche as set out in Annex II is made available to dealers for each household tumble drier model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other household tumble drier models.';

(2) in Article 4, point (b) is replaced by the following:

'(b) household tumble driers offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, are marketed with the information provided by suppliers in accordance with Annex IV to this Regulation. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;';

(3) a new Annex VIII is added in accordance with Annex VI to this Regulation.

### Article 7

#### Amendments to Delegated Regulation (EU) No 874/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Delegated Regulation (EU) No 874/2012, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (f) is added:

'(f) an electronic label in the format and containing the information set out in point 1 of Annex I is made available to dealers for each lamp model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other lamp models.';

(b) in paragraph 2, the following point (e) is added:

'(e) an electronic label in the format and containing information set out in point 2 of Annex I is

made available to dealers for each luminaire model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other luminaire models.’;

(2) Article 4 is amended as follows:

(a) in paragraph 1, point (a) is replaced by the following:

‘(a) each model offered for sale, hire or hire-purchase where the final owner cannot be expected to see the product displayed is marketed with the information to be provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label has been made available in accordance with Article 3(1)(f) the provisions in Annex VIII shall apply instead.’;

(b) in paragraph 2, the following point (d) is added:

‘(d) each model offered for sale, hire or hire-purchase through the internet and for which an electronic label has been made available in accordance with Article 3(2)(e) is accompanied by the label in accordance with Annex VIII.’;

(3) a new Annex VIII is added in accordance with Annex VII to this Regulation.

### **Article 8**

#### **Amendments to Delegated Regulation (EU) No 665/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

Delegated Regulation (EU) No 665/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in Annex II is made available to dealers for each vacuum cleaner model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other vacuum cleaner models.’;

(b) in paragraph 1, the following point (g) is added:

‘(g) an electronic product fiche as set out in Annex III is made available to dealers for each vacuum cleaner model placed on the market from **1 January 2020** with a new model identifier. It may also be made available to dealers for other vacuum cleaner models.’;

(2) in Article 4, point (b) is replaced by the following:

‘(b) vacuum cleaners offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, are marketed with the information provided by suppliers in accordance with Annex V to this Regulation. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1)(f) and 3(1)(g) the provisions in Annex VIII shall apply instead.’;

(3) a new Annex VIII is added in accordance with Annex VIII to this Regulation.

### Article 9

#### Amendments to Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (f) is added in the first subparagraph:

‘(f) an electronic label in the format and containing the information set out in point 1.1 of Annex III is made available to dealers for each space heater model conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;’;

(b) in paragraph 1, the following point (g) is added in the first subparagraph:

‘(g) an electronic product fiche as set out in point 1 of Annex IV is made available to dealers for each space heater model, whereby for heat pump space heaters models, the electronic product fiche is made available to dealers at least for the heat generator.’;

(c) in paragraph 1, the following subparagraph is added:

‘From **1 January 2020** an electronic label in the format and containing the information set out in point 1.2 of Annex III shall be made available to dealers for each space heater model conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II.’;

(d) in paragraph 2, the following point (f) is added in the first subparagraph:

‘(f) an electronic label in the format and containing the information set out in point 2.1 of Annex III is made available to dealers for each combination heater model conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;’;

(e) in paragraph 2, the following point (g) is added in the first subparagraph:

‘(g) an electronic product fiche as set out in point 2 of Annex IV is made available to dealers for each combination heater model, whereby for heat pump combination heaters models, the electronic product fiche is made available to dealers at least for the heat generator.’;

(f) in paragraph 2, the following subparagraph is added:

‘From **1 January 2020** an electronic label in the format and containing the information set out in point 2.2 of Annex III shall be made available to dealers for each combination heater model conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II.’;

(g) in paragraph 3, the following point (c) is added:

‘(c) an electronic product fiche, as set out in point 3 of Annex IV, is made available to dealers for each temperature control model.’;

(h) in paragraph 4, the following point (c) is added:

‘(c) an electronic product fiche, as set out in point 4 of Annex IV, is made available to dealers for each solar device model.’;

(i) in paragraph 5, the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in point 3 of Annex III is made available to dealers for each model comprising a package of space heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;’;

(j) in paragraph 5, the following point (g) is added:

‘(g) an electronic product fiche as set out in point 5 of Annex IV is made available to dealers for each model comprising a package of space heater, temperature control and solar device.’;

(k) in paragraph 6, the following point (f) is added:

‘(f) an electronic label in the format and containing the information set out in point 4 of Annex III is made available to dealers for each model comprising a package of combination heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;’;

(l) in paragraph 6, the following point (g) is added:

‘(g) an electronic product fiche as set out in point 6 of Annex IV is made available to dealers for each model comprising a package of combination heater, temperature control and solar device.’;

(2) Article 4 is amended as follows:

(a) in paragraph 1, point (b) is replaced by the following:

‘(b) space heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the space heater displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;’;

(b) in paragraph 2, point (b) is replaced by the following:

‘(b) combination heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the combination heater displayed, are marketed with the information provided by the suppliers in accordance with point 2 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;’;

(c) in paragraph 3, point (b) is replaced by the following:

‘(b) packages of space heater, temperature control and solar device offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the package of space heater, temperature control and solar device displayed, are marketed with the information provided in accordance with point 3 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;’;

(d) in paragraph 4, point (b) is replaced by the following:

‘(b) packages of combination heater, temperature control and solar device offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the package of combination heater, temperature control and solar device displayed, are marketed with the information provided in accordance with point 4 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;’;

- (3) Annex VI is amended in accordance with Annex IX to this Regulation;
- (4) a new Annex IX is added in accordance with Annex IX to this Regulation.

### **Article 10**

#### **Amendments to Delegated Regulation (EU) No 812/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

Delegated Regulation (EU) No 812/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**, is amended as follows:

(1) Article 3 is amended as follows:

(a) in paragraph 1, the following point (f) is added in the first subparagraph:

'(f) an electronic label in the format and containing the information set out in point 1.1 of Annex III is made available to dealers for each water heater model conforming to the water heating energy efficiency classes set out in point 1 of Annex II.;;

(b) in paragraph 1, the following point (g) is added in the first subparagraph:

'(g) an electronic product fiche as set out in point 1 of Annex IV is made available to dealers for each water heater model, whereby for heat pump water heaters models, the electronic product fiche is made available to dealers at least for the heat generator.;;

(c) in paragraph 1, the following subparagraph is added:

'From **1 January 2020** an electronic label in the format and containing the information set out in point 1.2 of Annex III shall be made available to dealers for each water heater model conforming to the water heating energy efficiency classes set out in point 1 of Annex II.;;

(d) in paragraph 2, the following point (f) is added in the first subparagraph:

'(f) an electronic label in the format and containing the information set out in point 2.1 of Annex III is made available to dealers for each hot water storage tank model in accordance with the energy efficiency classes set out in point 2 of Annex II.;;

(e) in paragraph 2, the following point (g) is added in the first subparagraph:

'(g) an electronic product fiche as set out in point 2 of Annex IV is made available to dealers for each hot water storage tank model.;;

(f) in paragraph 2, the following subparagraph is added:

'From **1 January 2020** an electronic label in the format and containing the information set out in point 2.2 of Annex III shall be made available to dealers for each hot water storage tank model, in accordance with the energy efficiency classes set out in point 2 of Annex II.;;

(g) in paragraph 3, the following point (c) is added:

'(c) an electronic product fiche, as set out in point 3 of Annex IV, is made available to dealers for each solar device model.;;

(h) in paragraph 4, the following point (f) is added:

'(f) an electronic label in the format and containing the information set out in point 3 of Annex III

is made available to dealers for each model comprising a package of water heater and solar device, in accordance with the water heating energy efficiency classes set out in point 1 of Annex II;';

(i) in paragraph 4, the following point (g) is added:

'(g) an electronic product fiche as set out in point 4 of Annex IV is made available to dealers for each model comprising a package of water heater and solar device.';

(2) Article 4 is amended as follows:

(a) in paragraph 1, point (b) is replaced by the following:

'(b) water heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the water heater displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;';

(b) in paragraph 2, point (b) is replaced by the following:

'(b) hot water storage tanks offered for sale, hire or hire-purchase, where the end user cannot be expected to see the hot water storage tank displayed, are marketed with the information provided by the suppliers in accordance with point 2 of Annex VI; except where the offer is made through the internet in which case the provisions in Annex X shall apply;';

(c) in paragraph 3, point (b) is replaced by the following:

'(b) packages of water heater and solar device offered for sale, hire or hire purchase, where the end-user cannot be expected to see the package of water heater and solar device displayed, are marketed with the information provided in accordance with point 3 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;';

(3) Annex VI is amended in accordance with Annex X to this Regulation;

(4) A new Annex X is added in accordance with Annex X to this Regulation.

## **Article 11**

### **Entry into force and application**

**This Regulation shall enter into force on the date of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.**

**Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.**

## ANNEX I

### Amendments to the Annexes to Delegated Regulation (EU) 1059/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

The following Annex VIII is added:

#### 'ANNEX VIII

#### Information to be provided in the case of sale, hire or hire-purchase through the internet

- (1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
  - (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
  - (c) "tactile screenf" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
  - (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.
- (2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.
- (3) The image used for accessing the label in the case of nested display shall:
- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
  - (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
  - (c) have one of the following two formats:

- (4) In the case of nested display, the sequence of display of the label shall be as follows:
- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
  - (b) the image shall link to the label;
  - (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
- (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
- (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

## ANNEX II

### **Amendments to the Annexes to Delegated Regulation (EU) No 1060/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

The following Annex X is added:

## 'ANNEX X

### **Information to be provided in the case of sale, hire or hire-purchase through the internet**

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 3 of Annex II. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear

on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
- (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
- (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

### ANNEX III

## Amendments to the Annexes to Delegated Regulation (EU) No 1061/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC

The following Annex VIII is added:

### 'ANNEX VIII

#### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

## ANNEX IV

### **Amendments to the Annexes to Delegated Regulation (EU) No 1062/2010, as incorporated and adapted by the Ministerial Council Decision 2011/03/MC-EnC**

The following Annex IX is added:

## 'ANNEX IX

### **Information to be provided in the case of sale, hire or hire-purchase through the internet**

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(3). The size shall be such that the label is clearly visible and legible and shall be proportionate

to the size specified in point 5 of Annex V. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
- (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
- (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(1)(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

**ANNEX V****Amendments to the Annexes to Delegated Regulation (EU) No 392/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

The following Annex IX is added:

**'ANNEX IX****Information to be provided in the case of sale, hire or hire-purchase through the internet**

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(h) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(4) to 3(6). The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;

- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
  - (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
  - (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
  - (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
  - (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.
- (5) The appropriate product fiche made available by suppliers in accordance with Article 3(1)(i) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

## ANNEX VI

### **Amendments to the Annexes to Delegated Regulation (EU) No 392/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

The following Annex VIII is added:

## 'ANNEX VIII

### **Information to be provided in the case of sale, hire or hire-purchase through the internet**

- (1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
  - (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
  - (c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
  - (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.
- (2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 4 of Annex I. The label may be

displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
- (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
- (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

## ANNEX VII

### Amendments to the Annexes to Delegated Regulation (EU) No 874/2012, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC

The following Annex VIII is added:

## 'ANNEX VIII

### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 4 of this Annex the following definitions shall apply:

- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) or Article 3(2)(e) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;

- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
- (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
- (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.'

## **ANNEX VIII**

### **Amendments to the Annexes to Delegated Regulation (EU) No 665/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

The following Annex VII is added:

## **'ANNEX VII**

### **Information to be provided in the case of sale, hire or hire-purchase through the internet**

- (1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
  - (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
  - (c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
  - (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.
- (2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(2). The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 3 of Annex II. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.
- (3) The image used for accessing the label in the case of nested display shall:
- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

- (4) In the case of nested display, the sequence of display of the label shall be as follows:
  - (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
  - (b) the image shall link to the label;
  - (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
  - (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
  - (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
  - (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
  - (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.
- (5) The appropriate product fiche made available by suppliers in accordance with Article 3(1)(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

## ANNEX IX

### **Amendments to the Annexes to Delegated Regulation (EU) No 811/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

- (a) In Annex VI the title is replaced by the following:  
**'Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet'**
- (b) The following Annex IX is added:

**'ANNEX IX****Information to be provided in the case of sale, hire or hire-purchase through the internet**

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;
- (b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification

shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

## ANNEX X

### **Amendments to the Annexes to Delegated Regulation (EU) No 812/2013, as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**

(a) In Annex VI the title is replaced by the following:

**'Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet'**

(b) The following Annex X is added:

## **'ANNEX X**

### **Information to be provided in the case of sale, hire or hire-purchase through the internet**

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but

with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;
- (b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
- (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
- (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

## **DELEGATED REGULATION (EU) 2015/1094 of 5 May 2015 supplementing Directive 2010/30/EU with regard to the energy labelling of professional refrigerated storage cabinets**

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products that have significant potential for energy savings and exhibit wide disparity in performance levels with equivalent functionality.

(2) The energy consumed by professional refrigerated storage cabinets accounts for a significant share of total electricity demand in the Union, and professional refrigerated storage cabinets with equivalent functionality exhibit wide disparity in terms of energy efficiency. The scope for reducing their energy consumption is significant. Professional refrigerated storage cabinets should therefore be covered by energy labelling requirements.

(3) Harmonised provisions should be laid down on labelling and standard product information regarding the energy efficiency of professional refrigerated storage cabinets in order to provide incentives for manufacturers to improve the energy efficiency of those products, encourage end-users to purchase energy-efficient products and contribute to the functioning of the internal market.

(4) The combined effect of this Regulation and Commission Regulation (EU) 2015/1095 is expected to result in estimated annual energy savings of about 1,8 TWh in 2020 and 4,1 TWh in 2030, corresponding to 0,7 and 1,4 million tonnes CO<sub>2</sub> equivalent, as compared with what would happen if no measures were taken.

(5) The information provided on the label should be obtained through reliable, accurate and reproducible measurement procedures based on recognised state-of-the-art methods, including, where available, harmonised standards adopted by the European standardisation organisations, as listed in Annex I to Regulation (EU) No 1025/2012 of the European Parliament and of the Council.

(6) This Regulation should specify a uniform design and content of product labels for professional refrigerated storage cabinets.

(7) In addition, this Regulation should specify requirements for the product fiche and technical documentation for professional refrigerated storage cabinets.

(8) Moreover, this Regulation should specify requirements for the information to be provided in any form of distance-selling of professional refrigerated storage cabinets and in any advertisements and technical promotional material for such products.

(9) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.

## **Article 1**

### **Subject matter and scope**

1. This Regulation establishes requirements for the labelling of, and the provision of supplementary product information on, professional refrigerated storage cabinets.
2. This Regulation shall apply to electric mains-operated professional refrigerated storage cabinets, including those sold for the refrigeration of foodstuffs and animal feed.
3. This Regulation shall not apply to the following products:
  - (a) professional refrigerated storage cabinets that are primarily powered by energy sources other than electricity;
  - (b) professional refrigerated storage cabinets operating with a remote condensing unit;
  - (c) open cabinets, where their openness is a fundamental requirement for their primary functionality;
  - (d) cabinets specifically designed for food processing, where the mere presence of one compartment, with a net volume equivalent to less than 20% of the cabinet's total net volume and specifically designed for food processing, is not sufficient for exemption;
  - (e) cabinets specifically designed only for the purpose of thawing frozen foodstuffs in a controlled manner, where the mere presence of one compartment specifically designed for thawing frozen foodstuffs in a controlled manner is not sufficient for exemption;
  - (f) saladettes;
  - (g) serve-over counters and other similar forms of cabinet primarily intended for display and sale of foodstuffs in addition to refrigeration and storage;
  - (h) cabinets that do not use a vapour compression refrigeration cycle;
  - (i) custom-made professional refrigerated storage cabinets, made on a one-off basis according to individual customer specification and not equivalent to other professional refrigerated storage cabinets as described in definition 9 of Annex I;
  - (j) refrigerator-freezers;
  - (k) static-air cabinets;
  - (l) built-in cabinets;
  - (m) roll-in and pass-through cabinets;
  - (n) chest freezers.

## **Article 2**

### **Definitions**

The following definitions shall apply for the purpose of this Regulation:

- (a) 'professional refrigerated storage cabinet' means an insulated refrigerating appliance integrating one or more compartments accessible via one or more doors or drawers, capable of continuously maintaining the temperature of foodstuffs within prescribed limits at chilled or frozen operating temperature, using

a vapour compression cycle, and intended for the storage of foodstuffs in non-household environments but not for the display to or access by customers;

(b) 'foodstuffs' means food, ingredients, beverages, including wine, and other items primarily intended for consumption which require refrigeration at specified temperatures;

(c) 'built-in cabinet' means a fixed insulated refrigerating appliance intended to be installed in a cabinet, in a prepared recess in a wall or similar location, and requiring furniture finishing;

(d) 'roll-in cabinet' means a professional refrigerated storage cabinet including one unique compartment that allows wheeled racks of product to be wheeled in;

(e) 'pass-through cabinet' means a professional refrigerated storage cabinet accessible from both sides;

(f) 'static-air cabinet' means a professional refrigerated storage cabinet without internal forced-air circulation, specifically designed to store temperature-sensitive foodstuffs or to avoid a drying effect on foodstuffs stored without a sealed enclosure, where a single static air compartment within the cabinet is not sufficient to designate the cabinet as a static air cabinet;

(g) 'open cabinet' means a professional refrigerated storage cabinet whose refrigerated enclosure can be reached from the outside without opening a door or a drawer, where the mere presence of one compartment which can be reached from the outside without opening a door or a drawer, with a net volume equivalent to less than 20% of the professional refrigerated storage cabinet's total volume, is not sufficient to qualify it as such;

(h) 'saladette' means a professional refrigerated storage cabinet with one or more doors or drawer fronts in the vertical plane that has cut-outs in the top surface into which temporary storage bins can be inserted for easy-access storage of foodstuffs such as, but not limited to, pizza toppings or salad items;

(i) 'combined cabinet' means a professional refrigerated storage cabinet including two or more compartments with different temperatures for the refrigeration and storage of foodstuffs;

(j) 'refrigerator-freezer' means a type of combined cabinet including at least one compartment exclusively intended for chilled operating temperature and one compartment exclusively intended for frozen operating temperature;

(k) 'chest freezer' means a food freezer in which the compartment(s) is accessible from the top of the appliance or which has both top-opening type and upright type compartments but where the gross volume of the top-opening type compartment(s) exceeds 75% of the total gross volume of the appliance.

### **Article 3**

#### **Responsibilities of suppliers and timetable**

1. From **1 January 2020**, suppliers placing professional refrigerated storage cabinets on the market or putting them into service shall ensure that the following requirements are met:

(a) a printed label in the format and containing the information set out in Annex III shall be provided for each professional refrigerated storage cabinet;

(b) an electronic label in the format and containing the information set out in Annex III shall be made available to dealers for each professional refrigerated storage cabinet model;

- (c) a product fiche, as set out in Annex IV, shall be made available;
- (d) an electronic product fiche, as set out in Annex IV, shall be made available to dealers for each professional refrigerated storage cabinet model;
- (e) technical documentation, as set out in Annex V, shall be provided on request to the authorities of the **Contracting Parties**;
- (f) any advertisement relating to a specific professional refrigerated storage cabinet model and containing energy-related or price information shall include a reference to the energy efficiency class of that model;
- (g) any technical promotional material concerning a specific professional refrigerated storage cabinet model and describing its specific technical parameters shall include a reference to the energy efficiency class of that model.
2. The labels in Annex III shall accompany professional refrigerated storage cabinets placed on the market according to the following timetable:
- <...><sup>1</sup>
- from **1 January 2020**: label 2.

#### **Article 4**

##### **Responsibilities of dealers**

Dealers of professional refrigerated storage cabinets shall ensure that the following requirements are met:

- (a) at the point of sale, each professional refrigerated storage cabinet shall bear the label provided by suppliers in accordance with Article 3(1) on the outside of the front or top of the appliance, so that it is clearly visible;
- (b) professional refrigerated storage cabinets offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the product displayed, shall be marketed with the information provided by the suppliers in accordance with Annex VI, except where the offer is made on the internet, in which
- (c) any advertisement relating to a specific professional refrigerated storage cabinet model and containing energy-related or price information shall include a reference to the energy efficiency class of that model;
- (d) any technical promotional material concerning a specific professional refrigerated storage cabinet model and describing its specific technical parameters shall include a reference to the energy efficiency class of that model.

#### **Article 5**

##### **Measurement and calculation**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation procedures based on recognised state-of-the-art methods, as set out in Annex IX.

<sup>1</sup> The first indent in Article 3(2) shall not be applicable in accordance with Article 3(4)(a) of Decision 2018/03/MC-EnC

**Article 6**

**Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure set out in Annex X when assessing the conformity of the declared energy efficiency class, annual energy consumption and volumes.

**Article 7**

**Review**

<...><sup>2</sup>

**Article 8**

**Entry into force and application**

**This Regulation shall enter into force on the day of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.**

**Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.**

---

<sup>2</sup> Not applicable in accordance with Article 3(4)(a) of Decision 2018/03/MC-EnC

## **ANNEX I**

### **Definitions applicable for Annexes II to X**

For the purposes of Annexes II to X, the following definitions shall apply:

- (1) 'net volume' means the volume containing foodstuffs within the load limit;
- (2) 'chilled operating temperature' means that the temperature of foodstuffs stored in the cabinet is continuously maintained at a temperature between  $-1\text{ }^{\circ}\text{C}$  and  $5\text{ }^{\circ}\text{C}$ ;
- (3) 'frozen operating temperature' means that the temperature of foodstuffs stored in the cabinet is continuously maintained at a temperature lower than  $-15\text{ }^{\circ}\text{C}$ , which is understood as the highest temperature of the warmest package test;
- (4) 'multi-use cabinet' means that a professional refrigerated storage cabinet or separate compartment of the same cabinet may be set at different temperatures for chilled or frozen foodstuffs;
- (5) 'vertical cabinet' means a professional refrigerated storage cabinet of overall height equal to or higher than 1050 mm with one or more front doors or drawers accessing the same compartment;
- (6) 'counter cabinet' means a professional refrigerated storage cabinet of overall height lower than 1050 mm with one or more front doors or drawers accessing the same compartment;
- (7) 'light-duty cabinet', also known as 'semi-professional cabinet', means a professional refrigerated storage cabinet only capable of continuously maintaining chilled or frozen operating temperature in all its compartment(s) in ambient conditions corresponding to climate class 3, as detailed in Table 3 of Annex IX; if the cabinet is able to maintain temperature in ambient conditions corresponding to climate class 4, it shall not be considered a light-duty cabinet;
- (8) 'heavy-duty cabinet' means a professional refrigerated storage cabinet capable of continuously maintaining chilled or frozen operating temperature in all its compartment(s) in ambient conditions corresponding to climate class 5, as detailed in Table 3 in Annex IX;
- (9) 'equivalent professional refrigerated storage cabinet' means a professional refrigerated storage cabinet model placed on the market with the same net volume, same technical, efficiency and performance characteristics, and same compartment types and volumes as another professional refrigerated storage cabinet model placed on the market under a different commercial code number by the same manufacturer.

## ANNEX II

### Energy efficiency classes

The energy efficiency class of a professional refrigerated storage cabinet shall be determined on the basis of its energy efficiency index (EEI), as set out in Table 1.

*Table 1*

#### Energy efficiency classes of professional refrigerated storage cabinets

Energy efficiency class	EEI
A+++	$EEI < 5$
A++	$5 \leq EEI < 10$
A+	$10 \leq EEI < 15$
A	$15 \leq EEI < 25$
B	$25 \leq EEI < 35$
C	$35 \leq EEI < 50$
D	$50 \leq EEI < 75$
E	$75 \leq EEI < 85$
F	$85 \leq EEI < 95$
G	$95 \leq EEI < 115$

The EEI shall be calculated as detailed in Annex VIII.

## ANNEX III

## Labels

1. Label 1 — Professional refrigerated storage cabinets in energy efficiency classes A to G

The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the energy efficiency class, determined in accordance with Annex II; the head of the arrow containing the energy efficiency class shall be placed at the same height as that for the relevant energy efficiency class;

IV. the annual electricity consumption in kWh in terms of final energy consumption per year, calculated in accordance with Annex IX and rounded to the nearest integer;

V. the sum of the net volumes, expressed in litres, of all chilled compartments functioning at chilled op-

erating temperature; where no compartments functioning at chilled operating temperature are present, the supplier shall declare ' - L' instead of a value;

VI. the sum of the net volumes, expressed in litres, of all compartments functioning at frozen operating temperature; where no compartments functioning at frozen operating temperature are present, the supplier shall declare ' - L' instead of a value;

VII. the climate class (3, 4 or 5), together with the associated dry bulb temperature (in °C) and the relative humidity (in %), as referred to in Table 3, Annex IX.

The design of the label shall be in accordance with point 3. By way of derogation, where a model has been awarded an 'EU ecolabel', a copy of the ecolabel may be added.

## 2. Label 2 — Professional refrigerated storage cabinets in energy efficiency classes A+++ to G

The information listed in point 1 shall be included in this label.

The design of the label shall be in accordance with point 3. By way of derogation, where a model has been awarded an 'EU eco-label', a copy of the eco-label may be added.

3. The design of the label for professional refrigerated storage cabinets shall be as follows:

Where:

- (a) The label shall be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- (b) The background of the label shall be white.
- (c) Colours shall be CMYK — cyan, magenta, yellow and black; for example, 00-70-X-00 indicates 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- (d) The label shall meet the following specifications (numbers refer to the figure above):

1 **EU label border stroke:** 5 pt — colour: Cyan 100 % — round corners: 3,5 mm;

2 **EU logo:** colours: X-80-00-00 and 00-00-X-00;

3 **Energy label:** colour: X-00-00-00;

**Pictogram as depicted (EU logo + energy label):** 92 mm wide × 17 mm high;

4 **Sub-logos border:** 1 pt — colour: Cyan 100 % — 92,5 mm long;

5 **A-G scale**

Arrow: 7 mm high, gap 0,75 mm — colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last classes: 00-X-X-00.

Text: Calibri bold 19 pt, capitals and white; '+' symbols: Calibri bold 13 pt, superscript, white, aligned on a single row;

6 **Energy efficiency class**

Arrow: 26 mm wide × 14 mm high, 100 % black;

Text: Calibri bold 29 pt, capitals and white; '+' symbols: Calibri bold 18 pt, superscript, white and aligned on a single row;

7 **Energy**

Text: Calibri regular 11 pt, capitals, 100 % black;

8 **Annual energy consumption**

Border: 2 pt — colour: Cyan 100 % — round corners: 3,5 mm;

Value: Calibri bold 32 pt, 100 % black;

2nd line: Calibri regular 14 pt, 100 % black;

9 **Sum of the net volumes of all compartments functioning at chilled operating temperature**

Border: 2 pt — colour: Cyan 100 % — round corners: 3,5 mm;

Value: Calibri bold 25 pt, 100 % black; Calibri regular 17 pt, 100 % black;

10 **Climate class together with the associated dry bulb temperature and the relative humidity**

Border: 2 pt — colour: Cyan 100 % — round corners: 3,5 mm;

Value: Calibri bold 25 pt, 100 % black;

2nd line: Calibri regular 14 pt, 100 % black;

11 **Sum of the net volumes of all compartments functioning at frozen operating temperature**

Border: 2 pt — colour: Cyan 100 % — round corners: 3,5 mm;

Value: Calibri bold 25 pt, 100 % black; Calibri regular 17 pt, 100 % black;

- 12 Supplier's name or trademark**
- 13 Supplier's model identifier**
- 14 The supplier's name or trademark and model identifier shall fit in a space of 90 × 15 mm**
- 15 Number of Regulation**

Text: Calibri bold 11 pt.

## ANNEX IV

### Product fiche

1. The information in the product fiche of the professional refrigerated storage cabinet shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
- (b) supplier's model identifier;
- (c) type of model in accordance with the definitions in Annex I;
- (d) the energy efficiency class and energy efficiency index of the model, determined in accordance with Annex II;
- (e) where the model has been awarded an 'EU eco-label' under Regulation (EC) No 66/2010, that information may be included;
- (f) the energy consumption of the cabinet over 24 hours (E24h) and the annual energy consumption in kWh, calculated in accordance with Annex IX and rounded to the nearest integer;
- (g) net volume of each compartment;
- (h) climate class in accordance with Table 3 in Annex IX;
- (i) for light-duty cabinets, the following sentence: 'This appliance is intended for use in ambient temperatures up to 25 °C and therefore is not suitable for use in hot professional kitchens';
- (j) for heavy-duty cabinets, the following sentence: 'This appliance is intended for use in ambient temperatures up to 40 °C'.

2. A single fiche may cover a number of professional refrigerated storage cabinet models supplied by the same supplier.

3. The information in the fiche may be given in the form of a copy of the label, either in colour or in black and white, in which case information listed in point 1 and not displayed on the label shall also be provided.

## **ANNEX V**

### **Technical documentation**

1. The technical documentation referred to in Article 3(1)(c) shall include:

- (a) the name and address of the supplier;
- (b) sufficient description of the professional refrigerated storage cabinet model for it to be unambiguously identified;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) the results of the measurements and calculations for the technical parameters specified in Annex IX.

2. Where the information included in the technical documentation file for a professional refrigerated storage cabinet model has been obtained by a calculation based on an equivalent professional refrigerated storage cabinet model, the technical documentation shall include details of such calculations and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The technical information shall also include a list of all other equivalent professional refrigerated storage cabinet models where the information was obtained on the same basis.

3. The information contained in this technical documentation may be merged with the technical documentation provided in accordance with measures under Directive 2009/125/EC.

## ANNEX VI

### **Information to be provided where end-users cannot be expected to see the product displayed, except on the internet**

1. Where end-users cannot be expected to see the product displayed, except on the internet, the information shall be provided in the following order:
  - (a) the energy efficiency class of the model, in accordance with Annex II;
  - (b) the annual energy consumption in kWh per year, rounded to the nearest integer and calculated in accordance with Annex IX;
  - (c) the net volume of each compartment;
  - (d) the climate class in accordance with Annex IX.
2. Where other information contained in the product fiche is provided, it shall be in the form and order specified in Annex IV.
3. The size and font in which the information referred in this Annex is printed or shown shall be such that it is legible.

## ANNEX VII

### Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) 'display mechanism' means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) 'nested display' means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) 'tactile screen' means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) 'alternative text' means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3(1)(b) shall be shown on the display mechanism near the price of the product in accordance with the timelines indicated in Article 3(2). The size of the label shall be such that it is clearly visible and legible and shall be proportionate to the size specified in point 3 of Annex III. The label may be displayed using a nested display, in which case the image used for accessing it shall comply with the specifications in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate the energy efficiency class of the product in white in the same font size as that used for the price; and
- (c) be in one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex is shown on the display mechanism in proximity to the price of the product;
- (b) the image links to the label;
- (c) the label is displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label is displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification apply;
- (f) display of the label is closed by means of a close option or other standard closing mechanism;
- (g) the alternative text for the graphic, to be displayed on failure to display the label, is the energy efficiency class of the product in the same font size as that used for the price.

5. The appropriate product fiche made available by suppliers in accordance with Article 3(1)(d) shall be shown on the display mechanism near the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing it shall clearly and legibly indicate 'Product fiche'. If nested display is used, the fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## ANNEX VIII

### Method for calculating the energy efficiency index for professional refrigerated storage cabinets

For the calculation of the energy efficiency index (EEI) of a professional refrigerated storage cabinet model, the annual energy consumption of the cabinet shall be compared to its standard annual energy consumption.

The EEI shall be calculated as:

$$EEI = (AEC/SAEC) \times 100$$

where:

$$AEC = E_{24h} \times af \times 365$$

**AEC** = annual energy consumption of the cabinet in kWh/year

**E24h** = energy consumption of the cabinet over 24 hours

**af** = adjustment factor

$$SAEC = M \times V_n + N$$

SAEC = standard annual energy consumption of the cabinet in kWh/year

**V<sub>n</sub>** = net volume of the appliance, which is the sum of net volumes of all compartments of the cabinet, expressed in litres.

M and N are given in the Table 2.

Table 2

#### M and N coefficient values

Category	Value for M	Value for N
Vertical Chilled	1,643	609
Vertical Frozen	4,928	1 472
Counter Chilled	2,555	1 790
Counter Frozen	5,840	2 380

## ANNEX IX

### Measurement and calculation

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published for that purpose **in a dedicated section of the website of the Energy Community**, or using other reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art methods. They shall meet the technical definitions, conditions, equations and parameters set out in this Annex.
2. For establishing the values of annual energy consumption and energy efficiency index for professional refrigerated storage cabinets, measurements shall be carried out under the following conditions:
  - The temperature of test packages shall be between  $-1\text{ °C}$  and  $5\text{ °C}$  for chilled cabinets and lower than  $-15\text{ °C}$  for frozen cabinets.
  - The ambient conditions shall correspond to climate class 4 as detailed in Table 3, except for light-duty cabinets, which shall be tested in ambient conditions corresponding to climate class 3. Adjustment factors of 1,2 for light-duty cabinets at chilled operating temperature and 1,1 for light-duty cabinets at frozen operating temperature shall then be applied to the testing results obtained for light-duty cabinets.
  - Professional refrigerated storage cabinets shall be tested:
    - at chilled operating temperature in the case of a combined cabinet containing at least one compartment exclusively intended for chilled operating temperature,
    - at chilled operating temperature in the case of a professional refrigerated storage cabinet which has solely one compartment exclusively intended for chilled operating temperature,
    - at frozen operating temperature in all other cases.
3. The ambient conditions of climate classes 3, 4 and 5 are shown in Table 3.

*Table 3*

**Ambient conditions of climate classes 3, 4 and 5**

<b>Test room climate class</b>	<b>Dry bulb temperature, °C</b>	<b>Relative humidity, %</b>	<b>Dew point, °C</b>	<b>Water vapour mass in dry air, g/kg</b>
3	25	60	16,7	12,0
4	30	55	20,0	14,8
5	40	40	23,9	18,8

## ANNEX X<sup>3</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 4.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all equivalent professional refrigerated storage cabinets that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 4.
- (6) If the result referred to in point 5 is not achieved, the model and all equivalent professional refrigerated storage cabinets that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

<sup>3</sup> Annex IX is amended in accordance with Article 13 and Annex XIII of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.**

**The Contracting Party authorities shall use the measurement and calculation methods set out in Annexes VIII and IX.**

**The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 4 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.**

**Table 4**  
**Verification tolerances**

<b>Parameters</b>	<b>Verification tolerances</b>
<b>Net volume</b>	<b>The determined value shall not be lower than the declared value by more than 3 %.</b>
<b>Energy consumption (<math>E_{24h}</math>)</b>	<b>The determined value shall not exceed the declared value by more than 10 %.</b>

## **DELEGATED REGULATION (EU) 2015/1186 of 24 April 2015 supplementing Directive 2010/30/EU with regard to the energy labelling of local space heaters**

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 of the European Parliament and of the Council setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products that have a significant potential for energy savings and a wide disparity in the relevant performance levels with equivalent functionality.

(2) Local space heaters with equivalent functionality exhibit a wide disparity in terms of energy efficiency and the energy they use accounts for a significant share of the total energy demand in the Union. The scope for reducing their energy consumption is significant.

(3) Local space heaters using non-woody biomass have specific technical characteristics and should therefore be exempted from this Regulation.

(4) Harmonised provisions on labelling and standard product information should be laid down in order to provide incentives for manufacturers to improve the energy efficiency of local space heaters, to encourage end-users to purchase energy-efficient products and to contribute to the functioning of the internal market.

(5) As the typical use and therefore also energy consumption of local space heaters is different to that of other space heating products being regulated, this Regulation should introduce a labelling scale different to that of other space heating products.

(6) As luminous and tube local space heaters are products directly purchased by professionals and not by final consumers no energy labelling requirements relating to them are set in this Regulation.

(7) The minimum requirements applying to electric local space heaters under Commission Regulation (EU) 2015/1188 provide the maximum technical improvement potential of these products. In consequence, no room for differentiation will be left among them. Electric local space heaters cannot be directly substituted by more efficient local space heaters using other fuels and in consequence, the label would not achieve the objective of providing information to consumers about the relative efficiency of different products.

(8) Promoting the use of renewable energy in heating products is consistent with the objective of promoting renewable energy. It is therefore appropriate that this Regulation introduces a specific approach for local space heaters, a 'biomass label factor' set at such a level that class A++ can be reached by solid fuel local space heaters using pellets only.

(9) The information provided on the label should be obtained through reliable, accurate and reproducible measurement and calculation procedures which take into account recognised state-of-the-art measurement and calculation methods including, where available, harmonised standards adopted by the European standardisation organisations, in accordance with the procedures laid down in Regulation (EU)

No 1025/2012 of the European Parliament and of the Council, for the purpose of establishing ecodesign requirements.

(10) This Regulation should specify a uniform design and content for the product labels of local space heaters.

(11) In addition, this Regulation should specify requirements for the product fiche and technical documentation for local space heaters.

(12) Moreover, this Regulation should specify requirements in respect of the information to be provided in any case of any form of distance selling of local space heaters and in any advertisements and technical promotional material for such local space heaters.

(13) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.

### **Article 1**

#### **Subject matter and scope**

This Regulation establishes requirements for the energy labelling of, and the provision of supplementary product information on local space heaters with a nominal heat output of 50 kW or less.

This Regulation shall not apply to:

- (a) electric local space heaters;
- (b) local space heaters using a vapour compression cycle or sorption cycle for the generation of heat driven by electric compressors or fuel;
- (c) solid fuel local space heaters that are specified for the combustion of non-woody biomass only;
- (d) local space heaters specified for purposes other than indoor space heating to reach and maintain a certain thermal comfort of human beings by means of heat convection or heat radiation;
- (e) local space heaters that are specified for outdoor use only;
- (f) local space heaters of which the direct heat output is less than 6 % of the combined direct and indirect heat output at nominal heat output;
- (g) solid fuel local space heaters that are not factory assembled, or are not provided as prefabricated components or parts by a single manufacturer which are to be assembled on site;
- (h) luminous local space heaters and tube local space heaters;
- (i) air heating products;
- (j) sauna stoves.

### **Article 2**

#### **Definitions**

In addition to the definitions set out in Article 2 of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC**, the following definitions shall apply for the

purposes of this Regulation:

(1) 'local space heater' means a space heating device that emits heat by direct heat transfer or by direct heat transfer in combination with heat transfer to a fluid, in order to reach and maintain a certain level of human thermal comfort within an enclosed space in which the product is situated, possibly combined with a heat output to other spaces and is equipped with one or more heat generators that convert electricity or gaseous, liquid or solid fuels directly into heat, through use of the Joule effect or combustion of fuels respectively;

(2) 'solid fuel local space heater' means an open fronted local space heater, closed fronted local space heater or cooker using solid fuels;

(3) 'gaseous fuel local space heater' means an open fronted local space heater or a closed fronted local space heater using gaseous fuel;

(4) 'liquid fuel local space heater' means an open fronted local space heater or a closed fronted local space heater using liquid fuel;

(5) 'electric local space heater' means a local space heater using the electric Joule effect to generate heat;

(6) 'open fronted local space heater' means a local space heater, using gaseous, liquid or solid fuels, of which the fire bed and combustion gases are not sealed from the space in which the product is fitted and which is sealed to a chimney or fireplace opening or requires a flue duct for the evacuation of products of combustion;

(7) 'closed fronted local space heater' means a local space heater, using gaseous, liquid or solid fuels, of which the fire bed and combustion gases can be sealed from the space in which the product is fitted and which is sealed to a chimney or fireplace opening or requires a flue duct for the evacuation of products of combustion;

(8) 'cooker' means a local space heater, using solid fuels, that integrates in one enclosure the function of a local space heater, and a hob, an oven or both to be used for preparation of food and which is sealed to a chimney or fireplace opening or requires a flue duct for the evacuation of products of combustion;

(9) 'fuel fired local space heater' means either an open fronted local space heater, closed fronted local space heater or cooker;

(10) 'luminous local space heater' means a local space heater, using gaseous or liquid fuel which is equipped with a burner; which is to be installed above head level, directed towards the place of use so that the heat emission of the burner, being predominantly infrared radiation, directly warms the subjects to be heated and which emits the products of combustion in the space where it is situated;

(11) 'tube local space heater' means a local space heater, using gaseous or liquid fuel, which is equipped with a burner; which is to be installed above head level, near the subjects to be heated, which heats the space primarily by infrared radiation from the tube or tubes heated by the internal passage of products of combustion and of which the products of combustion are to be evacuated through a flue duct;

(12) 'flueless heater' means a local space heater, using gaseous, liquid or solid fuel, emitting the products of combustion into the space where the product is situated, other than a luminous local space heater;

(13) 'open to chimney heater' means a local space heater, using gaseous, liquid or solid fuels intended to sit under a chimney or in a fireplace without sealing between the product and the chimney or fireplace opening, and allowing the products of combustion pass unrestricted from the fire bed to the chimney or flue;

- (14) 'air heating product' means a product providing heat to an air-based heating system only that can be ducted and is designed to be used while fastened or secured in a specific location or wall mounted which distributes the air by means of an air moving device in order to reach and maintain a certain level of human thermal comfort within an enclosed space in which the product is situated;
- (15) 'sauna stove' means a local space heater, incorporated in, or declared to be used in, dry or wet saunas or similar environments;
- (16) 'solid fuel' means a fuel which is solid at normal indoor room temperatures, including solid biomass and solid fossil fuel;
- (17) 'biomass' means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;
- (18) 'woody biomass' means biomass originating from trees, bushes and shrubs, including log wood, chipped wood, compressed wood in the form of pellets, compressed wood in the form of briquettes, and sawdust;
- (19) 'non-woody biomass' means biomass other than woody biomass, including, *inter alia*, straw, miscanthus, reeds, kernels, grains, olive stones, olive cakes and nut shells;
- (20) 'preferred fuel' means the single fuel which is to be preferably used for the local space heater according to the supplier's instructions;
- (21) 'fossil solid fuel' means solid fuel other than biomass, including anthracite and dry steam coal, hard coke, low temperature coke, bituminous coal, lignite, a blend of fossil fuels or a blend of biomass and fossil fuel; for the purposes of this Regulation it also includes peat;
- (22) 'other suitable fuel' means a fuel, other than the preferred fuel, which can be used in the local space heater according to the supplier's instructions and includes any fuel that is mentioned in the instruction manual for installers and end-users, on free access websites of manufacturers and suppliers, in technical or promotional material and in advertisements;
- (23) 'direct heat output' means the heat output of the product by radiation and convection of heat, as emitted by or from the product itself to air, excluding the heat output of the product to a heat transfer fluid, expressed in kW;
- (24) 'indirect heat output' means the heat output of the product to a heat transfer fluid by the same heat generation process that provides the direct heat output of the product, expressed in kW;
- (25) 'indirect heating functionality' means the product is capable of transferring part of the total heat output to a heat transfer fluid, for use as space heating or domestic hot water generation.
- (26) 'nominal heat output' ( $P_{nom}$ ) means the heat output of a local space heater comprising both direct heat output and indirect heat output (where applicable), when operating at the setting for the maximum heat output that can be maintained over an extended period, as declared by the supplier, expressed in kW;
- (27) 'minimum heat output' ( $P_{min}$ ) means the heat output of a local space heater comprising both direct heat output and indirect heat output (where applicable), when operating at the setting for the lowest heat output, as declared by the supplier, expressed in kW;
- (28) 'intended for outdoor use' means the product is suitable for safe operation outside enclosed spaces, including possible use in outdoor conditions;

(29) 'equivalent model' means a model placed on the market with the same technical parameters set out in Table 2 or Table 3 of Annex V as another model placed on the market by the same supplier.

For the purposes of Annexes II to IX, additional definitions are set out in Annex I.

### **Article 3**

#### **Responsibilities of suppliers and timetable**

1. From **1 January 2020** suppliers placing on the market or putting into service local space heaters that are not flueless heaters using solid fuels or open to chimney heaters using solid fuels shall ensure that:

- (a) such local space heater is provided with a printed label in the format and containing the information set out in point 1 of Annex III and conforming to the energy efficiency classes set out in Annex II;
- (b) an electronic label in the format and containing the information set out in point 1 of Annex III and conforming to the energy efficiency classes set out Annex II is made available to dealers for such local space heater model;
- (c) a product fiche in accordance with Annex IV, is provided for such local space heater;
- (d) an electronic product fiche, in accordance with Annex IV, is made available to dealers for such local space heater model;
- (e) the technical documentation, as set out in Annex V, is provided on request to the authorities of the Contracting Parties and to the Secretariat;
- (f) any advertisement related to a specific such local space heater model and containing energy-related or price information includes a reference to the energy efficiency class for that model;
- (g) any technical promotional material concerning a specific such local space heater model and describing its specific technical parameters includes a reference to the energy efficiency class for that model.

2. From 1 January 2022 suppliers placing on the market or putting into service flueless heaters using solid fuels or open to chimney heaters using solid fuels shall ensure that:

- (a) such local space heater is provided with a printed label in the format and containing the information set out in point 1 of Annex III and conforming to the energy efficiency classes set out in Annex II;
- (b) an electronic label in the format and containing the information set out in point 1 of Annex III and conforming to the energy efficiency classes set out Annex II is made available to dealers for such local space heater model;
- (c) a product fiche in accordance with Annex IV, is provided for such local space heater;
- (d) an electronic product fiche, in accordance with Annex IV, is made available to dealers for such local space heater model;
- (e) the technical documentation, as set out in Annex V, is provided on request to the authorities of the Contracting Parties and to the Secretariat;
- (f) any advertisement related to a specific such local space heater model and containing energy-related or price information includes a reference to the energy efficiency class for that model;
- (g) any technical promotional material concerning a specific such local space heater model and describing its specific technical parameters includes a reference to the energy efficiency class for that model.

#### **Article 4**

##### **Responsibilities of dealers**

Dealers of local space heaters shall ensure that:

- (a) each local space heater bears, at the point of sale, the label provided by suppliers in accordance with Article 3, on the outside of the front of the local space heater, in such a way as to be clearly visible;
- (b) local space heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the product displayed, are marketed with the information provided by the suppliers in accordance with Annex VI, except where the offer is made through the internet, in which case the provisions of Annex VII shall apply;
- (c) any advertisement for a specific local space heater model which contains energy-related or price information includes a reference to the energy efficiency class of that model;
- (d) any technical promotional material concerning a specific local space heater model which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

#### **Article 5**

##### **Measurement and calculation methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation methods which take into account the recognised state-of-the-art measurement and calculation methods, set out in Annex VIII.

#### **Article 6**

##### **Verification procedure for market surveillance purposes**

Contracting Parties shall apply the procedure laid down in Annex IX when assessing the conformity of the declared energy efficiency class of local space heaters.

#### **Article 7**

##### **Review**

<...><sup>1</sup>

#### **Article 8**

##### **Entry into force and application**

**This Regulation shall enter into force on the day of its adoption by the Ministerial Council.**

---

<sup>1</sup> Not applicable in accordance with Article 3(3)(a) of Decision 2018/03/MC-EnC

**It shall be transposed, implemented and applicable by 1 January 2020.**

**For flueless heaters using solid fuels and open to chimney heaters using solid fuels, it shall apply from 1 January 2022 as set out in Article 3(2). However, Articles 3(2)(f) and (g) and Article 4(b), (c) and (d) shall apply from 1 April 2022.**

**Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.**

## ANNEX I

### Definitions applicable for Annexes II to IX

For the purposes of Annexes II to IX the following definitions shall apply:

- (1) 'conversion coefficient' (CC) means a coefficient reflecting the estimated 40 % average EU generation efficiency referred to in Directive 2012/27/EU, **as incorporated and adapted by the Ministerial Council Decision 2015/08/MC-Enc<sup>2</sup>**; the value of the conversion coefficient is  $CC = 2,5$
- (2) 'net calorific value' (NCV) means the total amount of heat released by a unit quantity of fuel containing the appropriate moisture of the fuel, when it is burned completely with oxygen, and when the products of combustion are not returned to ambient temperature;
- (3) 'useful efficiency, at either nominal or minimum heat output, ( $\eta_{th,nom}$  or  $\eta_{th,min}$  respectively)' means the ratio of the useful heat output and the total energy input expressed in terms of NCV of a local space heater, expressed in %;
- (4) 'electric power requirement at nominal heat output' ( $e_{l,max}$ ) means the electric power consumption of the local space heater while providing the nominal heat output. The electric power consumption shall be established without consideration of the power consumption of a circulator in case the product offers indirect heating functionality and a circulator is incorporated, expressed in kW;
- (5) 'electric power requirement at minimum heat output' ( $e_{l,min}$ ) means the electric power consumption of the local space heater while providing the minimum heat output. The electric power consumption shall be established without consideration of the power consumption of a circulator in case the product offers indirect heating functionality and a circulator is incorporated, expressed in kW;
- (6) 'electric power requirement in standby mode' ( $e_{l,sv}$ ) means the electric power consumption of the product while in standby mode, expressed in kW;
- (7) 'permanent pilot flame power requirement' ( $P_{pilot}$ ) means the fuel consumption of gaseous, liquid or solid fuel of the product for the provision of a flame to serve as an ignition source for the more powerful combustion process needed for nominal or part load heat output, when lit for more than 5 minutes before the main burner is on, expressed in kW;
- (8) 'single stage heat output, no room temperature control' means the product is not capable of varying its heat output automatically and that no feedback of room temperature is present to adapt the heat output automatically;
- (9) 'two or more manual stages, no room temperature control' means the product is capable of varying its heat output manually by two or more levels of heat output and is not equipped with a device that automatically regulates the heat output in relation to a desired indoor temperature;
- (10) 'with mechanic thermostat room temperature control' means the product is equipped with a non-electronic device that allows the product to automatically vary its heat output over a certain time period, in relation to a certain required level of indoor heating comfort;
- (11) 'with electronic room temperature control' means the product is equipped with an electronic device, either integrated or external, that allows the product to automatically vary its heat output over a certain

<sup>2</sup> Directive 2012/27/EU, of 25 October 2012 on energy efficiency, **as incorporated and adapted by the Ministerial Council Decision 2015/08/MC-Enc**

time period, in relation to a certain required level of indoor heating comfort;

(12) 'with electronic room temperature control plus day timer' means the product is equipped with an electronic device, either integrated or external, that allows the product to automatically vary its heat output over a certain time period, in relation to a certain required level of indoor heating comfort, and allows the setting of timing and temperature level for a 24-hours timer interval;

(13) 'with electronic room temperature control plus week timer' means the product is equipped with an electronic device, either integrated or external, that allows the product to automatically vary its heat output over a certain time period, in relation to a certain required level of indoor heating comfort, and allows the setting of timing and temperature levels for a full week. During the 7-day period the settings must allow a variation on a day-to-day basis;

(14) 'room temperature control, with presence detection' means the product is equipped with an electronic device, either integrated or external, that automatically reduces the set-point for the room temperature when no person is detected in the room;

(15) 'room temperature control, with open window detection' means the product is equipped with an electronic device, either integrated or external, that reduces the heat output when a window or door has been opened. Whenever a sensor is used to detect the opening of a window or door, it can be installed with the product, externally to the product, built in the building structure or as a combination of those options;

(16) 'with distance control option' means the function that allows remote interaction from outside the building in which the product is installed with the control of the product;

(17) 'standby mode' means a condition where the product is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only the following functions, which may persist for an indefinite time: reactivation function, or reactivation function and only an indication of enabled reactivation function, and/or information or status display;

(18) 'model identifier' means the code, usually alphanumeric, which distinguishes a specific local space heater model from other models with the same trade mark, supplier's name or dealer's name;

(19) 'other fossil fuel' means fossil fuel other than anthracite and dry steam coal, hard coke, low temperature coke, bituminous coal, lignite, peat or blended fossil fuel briquettes;

(20) 'other woody biomass' means woody biomass other than log wood with a moisture content of 25 % or less, briquetted fuel with a moisture content below 14 % or compressed wood with a moisture content below 12 %;

(21) 'moisture content' means the mass of water in the fuel in relation to the total mass of the fuel as used in the local space heater.

## ANNEX II

### Energy efficiency classes

The energy efficiency class of a local space heater shall be determined on the basis of its energy efficiency index as set out in Table 1.

*Table 1*

#### Energy efficiency classes of local space heaters

Energy efficiency class	Energy efficiency index (EEI)
A++	$EEI \geq 130$
A+	$107 \leq EEI < 130$
A	$88 \leq EEI < 107$
B	$82 \leq EEI < 88$
C	$77 \leq EEI < 82$
D	$72 \leq EEI < 77$
E	$62 \leq EEI < 72$
F	$42 \leq EEI < 62$
G	$EEI < 42$

The energy efficiency index of a local space heater shall be calculated in accordance with Annex VIII.

## ANNEX III

## The label

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the energy efficiency class, determined in accordance with point 1 of Annex II; the head of the arrow containing the energy efficiency class of the local space heater shall be placed at the same height as the head of the relevant energy efficiency class;

IV. the symbol for direct heat output;

V. the direct heat output in kW, rounded to the nearest one decimal place;

VI. for local space heaters with heat transfer to a fluid, the symbol for indirect heat output;

VII. for local space heaters with heat transfer to a fluid, the indirect heat output in kW, rounded to the nearest one decimal place.

(b) The design aspects of the label for local space heaters shall be in accordance with point 2 of this Annex.

2. The design of the label for local space heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

① **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.

- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Scale of energy classes**
- Arrow: height: 6 mm, gap: 1,3 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Seventh class: 00-X-X-00,
    - Eighth class: 00-X-X-00,
    - Last class: 00-X-X-00,
  - Text: Calibri bold 14 pt, capitals, white, '+' symbols: superscript, aligned on a single row;
- 6 **Energy efficiency class:**
- Arrow: width: 22 mm, height: 12 mm, 100 % black,
  - Text: Calibri bold 24 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 7 **Direct heating functionality:**
- Pictogram as depicted,
  - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 8 **If applicable, indirect heating functionality:**
- Pictogram as depicted,
  - Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 9 **Nominal direct heat output:**
- Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
  - Value 'XY,Z': Calibri bold 34 pt, 100 % black,
  - Text 'kW': Calibri regular 18 pt, 100 % black.
- 10 **If applicable, nominal indirect heat output:**
- Border: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
  - Value 'XY,Z': Calibri bold 34 pt, 100 % black,
  - Text 'kW': Calibri regular 18 pt, 100 % black.

**12 Year of label introduction and number of Regulation:**

— Text: Calibri bold 10 pt.

**13 Supplier's name or trademark.**

**14 Supplier's model identifier:**

— The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

## ANNEX IV

### Product fiche

1. The information in the product fiche of the local space heater shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trademark;
- (b) supplier's model identifier;
- (c) the energy efficiency class of the model, determined in accordance with point 1 of Annex II;
- (d) the direct heat output in kW, rounded to the nearest one decimal place;
- (e) the indirect heat output in kW, rounded to the nearest one decimal place;
- (f) the energy efficiency index, rounded to the nearest integer and calculated in accordance with Annex VIII;
- (g) the useful energy efficiency at nominal heat output, and at minimum load if applicable, rounded to the nearest one decimal place and calculated in accordance with Annex VIII;
- (h) any specific precautions that shall be taken when the local space heater is assembled, installed or maintained.

2. One fiche may cover a number of local space heater models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.

## ANNEX V

### Technical documentation

For local space heaters, the technical documentation referred to in Article 3(1)(e) and Article 3(2)(e) shall include:

- (a) the name and address of the supplier;
- (b) the model identifier;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where the preferred fuel is other woody biomass, non-woody biomass, other fossil fuel or other blend of biomass and fossil fuel as referred to in Table 2, a description of the fuel sufficient for its unambiguous identification and the technical standard or specification of the fuel, including the measured moisture content and the measured ash content, and for other fossil fuel also the measured volatile content of the fuel;
- (e) where appropriate, the other technical standards and specifications used;
- (f) the identification and signature of the person empowered to bind the supplier;
- (g) the information included in Table 2 (for solid fuel local space heaters) and Table 3 (for gaseous/liquid fuel local space heaters), measured and calculated in accordance with Annex VIII;
- (h) reports of tests undertaken by suppliers or on their behalf, including the name and address of the body that conducted the tests;
- (i) any specific precautions that shall be taken when the local space heater is assembled, installed or maintained;
- (j) a list of equivalent models, if applicable. This information may be merged with the technical documentation provided in accordance with measures under Directive 2009/125/EC of the European Parliament and of the Council.

## **ANNEX VI**

### **Information to be provided in cases where end-users cannot be expected to see the product displayed, except on the internet**

1. The information referred to in Article 4(1)(b) shall be provided in the following order:
  - (a) the energy efficiency class of the model, determined in accordance with point 1 of Annex II;
  - (b) the direct heat output in kW, rounded to the nearest one decimal place;
  - (c) the indirect heat output in kW, rounded to the nearest one decimal place.
2. The size and font in which the information referred in point 1 is printed or shown shall be legible.

## ANNEX VII

### Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex, the following definitions shall apply:

- (a) 'display mechanism' means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) 'nested display' means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) 'tactile screen' means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) 'alternative text' means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3(1)(b) or Article 3(2)(b) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
- (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;
- (g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy

efficiency class of the product in a font size equivalent to that of the price.

5. The appropriate product fiche made available by suppliers in accordance with Article 3(1)(d) or Article 3(2)(d) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate 'Product fiche'. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## ANNEX VIII

### Measurements and calculations

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published for this purpose in **a dedicated section of the website of the Energy Community**, or using other reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art methods. They shall meet the conditions set out in points 2 to 4.

2. General conditions for measurements and calculations

(a) Local space heaters shall be tested for the preferred fuel in order to determine the energy efficiency index, direct and indirect heat output.

(b) Declared values for direct and indirect heat output, and energy efficiency index, shall be rounded to the nearest one decimal place.

3. General conditions for energy efficiency index and consumption of local space heaters:

(a) The useful efficiency values  $\eta_{th,nom}$ ,  $\eta_{th,min}$  and the direct and indirect heat output values for  $P_{nom}$ ,  $P_{min}$  are measured, where applicable.

(b) The energy efficiency index (*EEI*) shall be calculated as the seasonal space heating energy efficiency in active mode ( $\eta_{s,on}$ ) corrected for local space heaters using biomass as preferred fuel by a factor taking into account the renewable character of the preferred fuel, and corrected by contributions accounting for temperature controls, auxiliary electricity consumption and permanent pilot flame energy consumption. The energy efficiency index (*EEI*) is expressed as a figure equivalent to its figure expressed in percentage.

4. Specific conditions for seasonal space heating energy efficiency

(a) The energy efficiency index (*EEI*) of all local space heaters is defined as:

$$EEI = \left( \eta_{s,on} \cdot BLF \right) - 10\% + F(2) + F(3) - F(4) - F(5)$$

Where

- $\eta_{s,on}$  is the seasonal space heating energy efficiency in active mode, expressed in %, calculated as set out in point 4(b),
- *BLF* is the biomass label factor, which is 1,45 for biomass local space heaters and 1 for fossil fuel local space heaters,
- *F*(2) is a correction factor accounting for a positive contribution to the energy efficiency index due to adjusted contributions of controls of indoor heating comfort, the values of which are mutually exclusive, cannot be added on top of each other, expressed in %,
- *F*(3) is a correction factor accounting for a positive contribution to the energy efficiency index due to adjusted contributions of controls for indoor heating comfort the values of which can be added on top of each other, expressed in %;
- *F*(4) is a correction factor accounting for a negative contribution to the energy efficiency index by auxiliary electricity consumption, expressed in %;
- *F*(5) is a correction factor accounting for a negative contribution to the energy efficiency index by energy consumption of a permanent pilot flame, expressed in %.

(b) The seasonal space heating energy efficiency in active mode is calculated as:

$$\eta_{s, on} = \eta_{th, nom}$$

where

—  $\eta_{th, nom}$  is the useful efficiency at nominal heat output, based on NCV.

(c) The correction factor  $F(2)$  accounting for a positive contribution to the energy efficiency index due to adjusted contributions of controls for indoor heating comfort, the values of which are mutually exclusive or cannot be added to each other, is calculated as follows:

For all local space heaters the correction factor  $F(2)$  is equal to one of the factors according to Table 4, depending on which control characteristic applies. Only one value can be selected.

Table 4  
Correction factor  $F(2)$

If the product is equipped with (only one option may apply):	$F(2)$
	<b>Fuel fired local space heaters</b>
single stage heat output, no room temperature control	0,0 %
two or more manual stages, no temperature control	1,0 %
with mechanic thermostat room temperature control	2,0 %
with electronic room temperature control	4,0 %
with electronic room temperature control plus day timer	6,0 %
with electronic room temperature control plus week timer	7,0 %

From 1 January 2022,  $F(2)$  shall be zero for solid fuel local space heaters with emissions, where the temperature control is set at the minimum heat output, higher than those set out in Annex II, point 2 of Commission Regulation (EU) 2015/1185. The heat output in this setting must not be higher than 50 % of the nominal heat output. From 1 January 2022, if  $F(2)$  is not zero the technical documentation shall include the relevant information on emissions at minimum heat output.

(d) The correction factor  $F(3)$  accounting for a positive contribution to the energy efficiency index due to adjusted contributions of controls for indoor heating comfort, the values of which can be added to each other, is calculated as follows:

For all local space heaters the correction factor  $F(3)$  is the summation of the values according to Table 5, depending on which control characteristic(s) applies.

Table 5

**Correction factor F(3)**

<b>If the product is equipped with (multiple options may apply):</b>	<b>F(3)</b>
	<b>Fuel fired local space heaters</b>
room temperature control with presence detection	1,0 %
room temperature control with open window detection	1,0 %
with distance control option	1,0 %

From 1 January 2022,  $F(3)$  shall be zero for solid fuel local space heaters with emissions, where the temperature control is set at the minimum heat output, higher than those set out in Annex II, point 2 of Regulation (EU) 2015/1185. The heat output in this setting must not be higher than 50 % of the nominal heat output. From 1 January 2022, if  $F(3)$  is not zero the technical documentation shall include the relevant information on emissions at minimum heat output.

(e) The auxiliary electricity use correction factor  $F(4)$  is calculated as:

$$F(4) = CC \cdot \frac{0,2 \cdot el_{max} + 0,8 \cdot el_{min} + 1,3 \cdot el_{sb}}{P_{nom}} \cdot 100 [\%]$$

This correction factor takes into account the auxiliary electricity consumption during on-mode and stand-by-mode operation.

For all local space heaters the auxiliary electricity consumption correction is calculated as follows:

Where

- $el_{max}$  is the electric power consumption at nominal heat output, expressed in kW;
- $el_{min}$  is the electric power consumption at minimum heat output, expressed in kW. In case the product does not offer a minimum heat output the value for the electric power consumption at nominal heat output shall be used;
- $el_{sb}$  is the electric power consumption of the product while in standby mode, expressed in kW,
- $P_{nom}$  is the nominal heat output of the product, expressed in kW.

(f) The correction factor  $F(5)$  related to the energy consumption of a permanent pilot flame is calculated as follows:

This correction factor takes into account the permanent pilot flame power requirement.

For all local space heaters the correction factor is calculated as:

$$F(5) = 0,5 \cdot \frac{P_{pilot}}{P_{nom}} \cdot 100 [\%]$$

Where

- $P_{pilot}$  is the pilot flame consumption, expressed in kW,
- $P_{nom}$  is the nominal heat output of the product, expressed in kW.

## ANNEX IX<sup>3</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 6. The unit shall be tested with a fuel with characteristics in the same range as the fuel that was used by the supplier to perform the measurements described in Annex VIII.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 6.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

<sup>3</sup> Annex IX is amended in accordance with Article 14 and Annex XIV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.**

**The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VIII.**

**The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 6 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.**

**Table 6**  
**Verification tolerances**

<b>Parameter</b>	<b>Verification tolerance</b>
<b>Energy efficiency index</b>	<b>The determined value shall not be lower than the declared value by more than 8 %.</b>

## **DELEGATED REGULATION (EU) 2015/1187 of 27 April 2015 supplementing Directive 2010/30/EU with regard to energy labelling of solid fuel boilers and packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices**

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts on the labelling of energy-related products that have a significant potential for energy savings and a wide disparity in the relevant performance levels with equivalent functionality.

(2) Space heaters with equivalent functionality including solid fuel boilers exhibit a wide disparity in terms of energy efficiency. The energy solid fuel boilers use to provide indoor space heating accounts for a significant share of the total energy demand in the Union. The scope for reducing the energy consumption of solid fuel boilers is significant and includes combining them with appropriate temperature controls and solar devices, and therefore packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices should also be covered by energy labelling requirements.

(3) Boilers generating heat exclusively for providing hot drinking or sanitary water, boilers for heating gaseous heat transfer media, cogeneration boilers with an electrical capacity of 50 kW or more and non-woody biomass boilers have specific technical characteristics and should therefore be exempted from this Regulation.

(4) Harmonised provisions on labelling and standard product information regarding the energy efficiency of solid fuel boilers should be laid down in order to provide incentives for manufacturers to improve the energy efficiency of solid fuel boilers, to encourage end-users to purchase energy-efficient products and to contribute to the functioning of the internal market.

(5) In order to provide consumers with comparable information on solid fuel boilers, a labelling scale should be introduced coherent with Commission Delegated Regulation (EU) No 811/2013. Taking the approach applied in that regulation to renewable energy would not promote energy efficiency in biomass boilers. Taking the approach applied to fossil fuels would for biomass not be consistent with the objective of promoting renewable energy under Directive 2009/28/EC of the European Parliament and of the Council. It is therefore appropriate that this Regulation introduces a specific approach for biomass boilers, a 'biomass label factor' set at such a level that class A++ can be reached by condensing biomass boilers.

(6) The information provided on the label should be obtained through reliable, accurate and reproducible measurement and calculation procedures which take into account recognised state-of-the-art measurement and calculation methods including, where available, harmonised standards adopted by the European standardisation organisations in accordance with the procedures laid down in Regulation

(EU) No 1025/2012 of the European Parliament and of the Council , for the purpose of establishing ecodesign requirements.

(7) This Regulation should specify a uniform design and content for the labels for solid fuel boilers.

(8) In addition, this Regulation should specify requirements for the product and technical documentation for solid fuel boilers.

(9) Moreover, this Regulation should specify requirements in respect of the information to be provided in case of any form of distance selling of solid fuel boilers and in any advertisements and technical promotional material for solid fuel boilers.

(10) Where labels and product information are based on product fiches from suppliers it should be ensured that the end-user has easy access to information on the energy performance of packages of a solid fuel boiler combined with supplementary heaters, solar devices and temperature controls.

(11) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.

### **Article 1**

#### **Subject matter and scope**

1. This Regulation establishes requirements for the energy labelling of and the provision of supplementary product information on solid fuel boilers with a rated heat output of 70 kW or less and packages of a solid fuel boiler with a rated heat output of 70 kW or less, supplementary heaters, temperature controls and solar devices.

2. This Regulation shall not apply to:

- (a) boilers generating heat only for the purpose of providing hot drinking or sanitary water;
- (b) boilers for heating and distributing gaseous heat transfer media such as vapour or air;
- (c) solid fuel cogeneration boilers with a maximum electrical capacity of 50 kW or more;
- (d) non-woody biomass boilers.

### **Article 2**

#### **Definitions**

In addition to the definitions set out in Article 2 of Directive 2010/30/EU, **as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-Enc**, the following definitions shall apply for the purposes of this Regulation:

(1) ‘solid fuel boiler’ means a device equipped with one or more solid fuel heat generators that provides heat to a water-based central heating system in order to reach and maintain at a desired level the indoor temperature of one or more enclosed spaces, with a heat loss to its surrounding environment of not more than 6% of rated heat output;

(2) ‘water-based central heating system’ means a system using water as a heat transfer medium to distribute centrally generated heat to heat emitting devices for the heating of enclosed spaces within buildings or parts thereof, including block heating or district heating networks;

- (3) 'solid fuel heat generator' means the part of a solid fuel boiler that generates the heat through the combustion of solid fuels;
- (4) 'rated heat output' or 'Pr' means the declared heat output of a solid fuel boiler when providing heating of enclosed spaces with the preferred fuel, expressed in kW;
- (5) 'solid fuel' means a fuel that is solid at normal indoor room temperatures, including solid biomass and solid fossil fuel;
- (6) 'biomass' means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;
- (7) 'woody biomass' means biomass originating from trees, bushes and shrubs, including log wood, chipped wood, compressed wood in the form of pellets, compressed wood in the form of briquettes, and sawdust;
- (8) 'non-woody biomass' means biomass other than woody biomass, including straw, miscanthus, reeds, kernels, grains, olive stones, olive cakes and nut shells;
- (9) 'fossil fuel' means fuel other than biomass, including anthracite, brown coal, coke, bituminous coal; for the purposes of this Regulation it also includes peat;
- (10) 'biomass boiler' means a solid fuel boiler that uses biomass as the preferred fuel;
- (11) 'non-woody biomass boiler' means a biomass boiler that uses non-woody biomass as the preferred fuel and for which woody biomass, fossil fuel or a blend of biomass and fossil fuel are not listed among its other suitable fuels;
- (12) 'preferred fuel' means the single solid fuel which is to be preferably used for the boiler according to the supplier's instructions;
- (13) 'other suitable fuel' means a solid fuel, other than the preferred fuel, which can be used in the solid fuel boiler according to the supplier's instructions and includes any fuel that is mentioned in the instruction manual for installers and end-users, on free access websites of suppliers, in technical promotional material and in advertisements;
- (14) 'solid fuel cogeneration boiler' means a solid fuel boiler capable of simultaneously generating heat and electricity;
- (15) 'supplementary heater' means a secondary boiler or heat pump falling within the scope of Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**, or a secondary solid fuel boiler, which generates extra heat where the heat demand is greater than the rated heat output of the primary solid fuel boiler;
- (16) 'temperature control' means the equipment that interfaces with the end-user regarding the values and timing of the desired indoor temperature, and communicates relevant data to an interface of the solid fuel boiler such as a central processing unit, thus helping to regulate the indoor temperature(s);
- (17) 'solar device' means a solar-only system, a solar collector, a solar hot water storage tank or a pump in the collector loop, which are placed on the market separately;
- (18) 'solar-only system' means a device that is equipped with one or more solar collectors and solar hot water storage tanks and possibly pumps in the collector loop and other parts, which is placed on the market as one unit and is not equipped with any heat generator except possibly one or more back-up

immersion heaters;

(19) 'solar collector' means a device designed to absorb global solar irradiance and to transfer the heat energy so produced to a fluid passing through it;

(20) 'solar hot water storage tank' means a hot water storage tank storing heat energy produced by one or more solar collectors;

(21) 'hot water storage tank' means a vessel for storing hot water for water or space heating purposes, including any additives, which is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(22) 'back-up immersion heater' means a Joule effect electric resistance heater that is part of a hot water storage tank and generates heat only when the external heat source supply is disrupted (including during maintenance periods) or out of order, or that is part of a solar hot water storage tank and provides heat when the solar heat source is not sufficient to satisfy required comfort levels;

(23) 'package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices' means a package offered to the end-user containing a solid fuel boiler combined with one or more supplementary heaters, one or more temperature controls or one or more solar devices;

(24) 'combination boiler' means a solid fuel boiler that is designed to also provide heat to deliver hot drinking or sanitary water at given temperature levels, quantities and flow rates during given intervals, and is connected to an external supply of drinking or sanitary water.

For the purposes of Annexes II to X, additional definitions are set out in Annex I.

### **Article 3**

#### **Responsibilities of suppliers and timetable**

1. From **1 January 2020** suppliers placing solid fuel boilers on the market or putting them into service, including those integrated in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, shall ensure that:

(a) each solid fuel boiler is provided with a printed label in the format and containing the information set out in point 1.1 of Annex III and conforming to the energy efficiency classes set out in Annex II, and each solid fuel boiler intended for use in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices is provided with a second label in the format and containing the information set out in point 2 of Annex III;

(b) an electronic label in the format and containing the information set out in point 1.1 of Annex III and conforming to the energy efficiency classes set out in Annex II is made available to dealers for each solid fuel boiler model;

(c) a product fiche, in accordance with point 1 of Annex IV, is provided for each solid fuel boiler, and a second fiche, in accordance with point 2 of Annex IV, is provided for each solid fuel boiler intended for use in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(d) an electronic product fiche, in accordance with point 1 of Annex IV, shall be made available to dealers for each solid fuel boiler model;

(e) the technical documentation, as set out in point 1 of Annex V, is provided on request to the authorities

of the **Contracting Parties** and the **Secretariat**;

(f) any advertisement related to a specific solid fuel boiler model and containing energy-related information or price includes a reference to the energy efficiency class of that model;

(g) any technical promotional material concerning a specific solid fuel boiler model and describing its specific technical parameters includes a reference to the energy efficiency class of that model.

2. From **1 January 2020** suppliers placing solid fuel boilers on the market or putting them into service, including those integrated in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, shall ensure that:

(a) each solid fuel boiler is provided with a printed label in the format and containing the information set out in point 1.2 of Annex III and conforming to the energy efficiency classes set out in Annex II;

(b) an electronic label in the format and containing the information set out in point 1.2 of Annex III and conforming to the energy efficiency classes set out in Annex II is made available to dealers for each solid fuel boiler model.

3. From **1 January 2020** suppliers placing packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices on the market or putting them into service shall ensure that:

(a) a printed label in the format and containing the information set out in point 2 of Annex III and conforming to the energy efficiency classes set out in Annex II is provided for each package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(b) an electronic label in the format and containing the information set out in point 2 of Annex III and conforming to the energy efficiency classes set out in Annex II is made available to dealers for each model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(c) a product fiche, in accordance with point 2 of Annex IV, is provided for each package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(d) an electronic product fiche, in accordance with point 2 of Annex IV, is made available to dealers for each model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

(e) the technical documentation, in accordance with point 2 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the **Secretariat**;

(f) any advertisement relating to a specific model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices and which contains energy-related information or price includes a reference to the energy efficiency class for that model;

(g) any technical promotional material concerning a specific model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices which describes its specific technical parameters includes a reference to the energy efficiency class for that model.

#### **Article 4**

##### **Responsibilities of dealers**

1. Dealers in solid fuel boilers shall ensure that:

(a) each solid fuel boiler bears, at the point of sale, the label provided by suppliers in accordance with Article 3(1) or 3(2) on the outside of the front of the solid fuel boiler, in such a way as to be clearly visible;

(b) solid fuel boilers offered for sale, hire or hire purchase, where the end-user cannot be expected to see the product displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex VII shall apply;

(c) any advertisement for a specific solid fuel boiler model which contains containing energy-related or price information includes a reference to the energy efficiency class of that model;

(d) any technical promotional material concerning a specific solid fuel boiler model which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

2. Dealers in packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall ensure that:

(a) any offer for a specific package includes the energy efficiency class for that package, by displaying on the package the label provided by the supplier in accordance with Article 3(3)(a) and the product fiche provided by the supplier in accordance with Article 3(3)(c), duly filled with the characteristics of that package;

(b) packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices offered for sale, hire or hire purchase, where the end-user cannot be expected to see the package displayed, are marketed with the information provided in accordance with point 2 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex VII shall apply;

(c) any advertisement relating to a specific model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar device models and which contains energy-related information or price includes a reference to the energy efficiency class for that model;

(d) any technical promotional material concerning a specific model comprising a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices which describes its specific technical parameters includes a reference to the energy efficiency class for that model.

#### **Article 5**

##### **Measurement and calculation methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation methods which take into account the recognised state-of-the-art measurement and calculation methods, set out in Annex VIII. The energy efficiency index shall be calculated as set out in Annex IX.

### **Article 6**

#### **Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure laid down in Annex X when assessing the conformity with this Regulation of the declared energy efficiency class of solid fuel boilers and packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices.

### **Article 7**

#### **Review**

<...><sup>1</sup>

### **Article 8**

#### **Entry into force and application**

**This Regulation shall enter into force on the day of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.**

**Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.**

---

<sup>1</sup> Not applicable in accordance with Article 3(2)(a) of Decision 2018/03/MC-EnC

## ANNEX I

### Definitions applicable to Annexes II to X

For the purposes of Annexes II to X the following definitions shall apply:

- (1) 'model identifier' means the code, usually alphanumeric, which distinguishes a specific model comprising a solid fuel boiler or a package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices from other models with the same trade mark, supplier's name or dealer's name;
- (2) 'seasonal space heating energy efficiency' or ' $\eta_s$ ' means the ratio between the space heating demand for a designated heating season, supplied by a solid fuel boiler and the annual energy consumption required to meet this demand, expressed in %;
- (3) 'electrical efficiency' or ' $\eta_{el}$ ' means the ratio of the electricity output and the total energy input of a solid fuel cogeneration boiler, whereby the total energy input is expressed in terms of GCV or in terms of final energy multiplied by CC;
- (4) 'gross calorific value' or 'GCV' means the total amount of heat released by a unit quantity of fuel containing the appropriate moisture content, when it is burned completely with oxygen, and when the products of combustion are returned to ambient temperature; this quantity includes the condensation heat of the water vapour formed by the combustion of any hydrogen contained in the fuel;
- (5) 'conversion coefficient' or 'CC' means a coefficient reflecting the estimated 40 % average EU generation efficiency referred to in Directive 2012/27/EU of the European Parliament and of the Council, **as incorporated and adapted by the Ministerial Council Decision 2015/08/MC-EnC**<sup>2</sup>; the value of the conversion coefficient is  $CC= 2,5$ ;
- (6) 'temperature control fiche' means the product fiche required to be provided for temperature controls by Article 3(3)(a) of Commission Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**;
- (7) 'boiler fiche' means for solid fuel boilers the product fiche required to be provided by Article 3(1)(c) of this Regulation and for boilers other than solid fuel boilers the product fiche required to be provided for such boilers by Article 3(1)(b) of Commission Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**;
- (8) 'solar device fiche' means the product fiche required to be provided for solar devices by Article 3(4) (a) of Commission Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**;
- (9) 'heat pump fiche' means the product fiche required to be provided for heat pumps by Article 3(1) (b) of Commission Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**;
- (10) 'condensing boiler' means a solid fuel boiler in which, under normal operating conditions and at given operating water temperatures, the water vapour in the combustion products is partially condensed, in order to make use of the latent heat of this water vapour for heating purposes;
- (11) 'other woody biomass' means woody biomass other than: log wood with a moisture content of 25

<sup>2</sup> Directive 2012/27/EU on Energy Efficiency, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**.

% or less, chipped wood with a moisture content of 15 % or higher, compressed wood in the form of pellets or briquettes, or sawdust with a moisture content equal or less than 50 %;

(12) 'moisture content' means the mass of water in the fuel in relation to the total mass of the fuel as used in solid fuel boilers;

(13) 'other fossil fuel' means fossil fuel other than bituminous coal, brown coal (including briquettes), coke, anthracite or blended fossil fuel briquettes;

(14) 'electric power requirement at maximum heat output' or ' $e'_{max}$ ' means the electric power consumption of the solid fuel boiler at rated heat output, expressed in kW, excluding electricity consumption from a back-up heater and from incorporated secondary emission abatement equipment;

(15) 'electric power requirement at minimum heat output' or ' $e'_{min}$ ' means the electric power consumption of the solid fuel boiler at applicable part load, expressed in kW, excluding electricity consumption from a back-up heater and from incorporated secondary emission abatement equipment;

(16) 'back-up heater' means a Joule-effect electric resistance element that generates heat only to prevent the solid fuel boiler or the water based central heating system from freezing or when the external heat source supply is disrupted (including during maintenance periods) or out of order;

(17) 'applicable part load' means for automatically stoked solid fuel boilers, operation at 30 % of rated heat output, and for manually stoked solid fuel boilers that can be operated at 50 % of rated heat output, operation at 50 % of rated heat output;

(18) 'standby mode power consumption' or ' $P_{sb}$ ' means the power consumption of a solid fuel boiler in standby mode, excluding from incorporated secondary emission abatement equipment, expressed in kW;

(19) 'standby mode' means a condition where the solid fuel boiler is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only the following functions, which may persist for an indefinite time: reactivation function, or reactivation function and only an indication of enabled reactivation function, or information or status display;

(20) 'seasonal space heating energy efficiency in active mode' or ' $\eta_{son}$ ' means

(a) for automatically stoked solid fuel boilers, a weighted average of the useful efficiency at rated heat output and the useful efficiency at 30 % of the rated heat output;

(b) for manually stoked solid fuel boilers that can be operated at 50 % of the rated heat output in continuous mode, a weighted average of the useful efficiency at rated heat output and the useful efficiency at 50 % of the rated heat output;

(c) for manually stoked solid fuel boilers that cannot be operated at 50 % or less of the rated heat output in continuous mode, the useful efficiency at rated heat output;

(d) for solid fuel cogeneration boilers, the useful efficiency at rated heat output;

(21) 'useful efficiency' or ' $\eta$ ' means the ratio of the useful heat output and the total energy input of a solid fuel boiler, whereby the total energy input is expressed in terms of GCV or in terms of final energy multiplied by CC;

(22) 'useful heat output' or ' $P$ ' means the heat output of a solid fuel boiler transmitted to the heat carrier, expressed in kW;

(23) 'fossil fuel boiler' means a solid fuel boiler that has fossil fuel or a blend of biomass and fossil fuel as the preferred fuel;

(24) 'gross calorific value moisture free' or ' $GCV_{mf}$ ' means the total amount of heat released by a unit quantity of fuel dried of inherent moisture, when it is burned completely with oxygen, and when the products of combustion are returned to ambient temperature; this quantity includes the condensation heat of the water vapour formed by the combustion of any hydrogen contained in the fuel;

(25) 'equivalent model' means a model placed on the market with the same technical parameters set out in Table 4 of point 1 of Annex V, as another model placed on the market by the same supplier.

## ANNEX II

### Energy efficiency classes

The energy efficiency class of a solid fuel boiler shall be determined on the basis of its energy efficiency index as set out in Table 1.

The energy efficiency index of a solid fuel boiler shall be calculated in accordance with Annex IX.

*Table 1*

**Energy efficiency classes of solid fuel boilers**

<b>Energy efficiency class</b>	<b>Energy efficiency index (EEI)</b>
A <sup>+++</sup>	$EEI \geq 150$
A <sup>++</sup>	$125 \leq EEI < 150$
A <sup>+</sup>	$98 \leq EEI < 125$
A	$90 \leq EEI < 98$
B	$82 \leq EEI < 90$
C	$75 \leq EEI < 82$
D	$36 \leq EEI < 75$
E	$34 \leq EEI < 36$
F	$30 \leq EEI < 34$
G	$EEI < 30$

## ANNEX III

### The labels

#### 1. SOLID FUEL BOILERS

##### 1.1. Label 1

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the space heating function;

IV. the energy efficiency class, determined in accordance with Annex II; the head of the arrow containing the energy efficiency class of the solid fuel boiler shall be placed at the same height as the head of the relevant energy efficiency class;

V. the rated heat output in kW, rounded to the nearest integer;

VI. for combination boilers, also the additional water heating function;

VII. for solid fuel cogeneration boilers, also the additional electricity generation function.

(b) The design aspects of the label for solid fuel boilers shall be in accordance with point 3 of this Annex. By way of exception, where a model has been granted an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

## 1.2. Label 2

(a) The information listed in point 1.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for solid fuel boilers shall be in accordance with point 3 of this Annex. By way of exception, where a model has been granted an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

## 2. PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES

**Label for packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices in energy efficiency classes A+++ to G**

(a) The following information shall be included in the label:

I. dealer's or supplier's name or trade mark;

II. dealer's or supplier's model(s) identifier;

III. the space heating function;

IV. the energy efficiency class of the solid fuel boiler, determined in accordance with Annex II;

V. indication of whether a solar collector, hot water storage tank, temperature control or supplementary heater may be included in the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices;

VI. the energy efficiency class of the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, determined in accordance with point 2 of Annex IV; the head of the arrow containing the energy efficiency class of the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall be placed at the same height as the head of the relevant energy efficiency class.

(b) The design aspects of the label for packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall be in accordance with point 4 of this Annex. For packages of a solid fuel

boiler, supplementary heaters, temperature controls and solar devices in energy efficiency classes A+++ to D, the classes E to G in the A+++ to G scale may be omitted.

### 3. THE DESIGN OF THE LABEL FOR SOLID FUEL BOILERS SHALL BE THE FOLLOWING:

whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfill all of the following requirements (numbers refer to the figure above):

- ① **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
- ② **EU logo:** Colours: X-80-00-00 and 00-00-X-00.

- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Space heating function:**  
— **Pictogram** as depicted.
- 6 **A++-G and A+++-D scales, respectively:**  
— **Arrow:** height: 5 mm, gap: 1,3 mm, colours:  
— Highest class: X-00-X-00,  
— Second class: 70-00-X-00,  
— Third class: 30-00-X-00,  
— Fourth class: 00-00-X-00,  
— Fifth class: 00-30-X-00,  
— Sixth class: 00-70-X-00,  
— Seventh class: 00-X-X-00,  
— Eighth class: 00-X-X-00,  
— Last class: 00-X-X-00,  
— **Text:** Calibri bold 14 pt, capitals, white, '+' symbols: superscript, aligned on a single row;  
— **Arrow:** height: 7 mm, gap: 1 mm, colours:  
— Highest class: X-00-X-00,  
— Second class: 70-00-X-00,  
— Third class: 30-00-X-00,  
— Fourth class: 00-00-X-00,  
— Fifth class: 00-30-X-00,  
— Sixth class: 00-70-X-00,  
— Last class: 00-X-X-00,  
— **Text:** Calibri bold 16 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 7 **Energy efficiency class:**  
— **Arrow:** width: 22 mm, height: 12 mm, 100 % black,  
— **Text:** Calibri bold 24 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 8 **Rated heat output:**  
— **Border:** 2 pt — colour: cyan 100 % — round corners: 3,5 mm,  
— **Value 'YZ':** Calibri bold 45 pt, 100 % black,  
— **Text 'kW':** Calibri regular 30 pt, 100 % black.
- 9 **Water heating function**  
— **Pictogram** as depicted,  
— **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

**10 Electricity function:**

- **Pictogram** as depicted,
- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

**11 Year of label introduction and number of Regulation:**

- **Text:** Calibri bold 10 pt.

**12 Supplier's name or trademark.****13 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

#### 4. THE DESIGN OF THE LABEL FOR PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES SHALL BE THE FOLLOWING:

whereby:

- (a) The label shall be at least 210 mm wide and 297 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **EU label border stroke:** 6 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 191 mm, height: 37 mm.
- 4 **Sub-logos border:** 2 pt, colour: cyan 100 %, length: 191 mm.
- 5 **Space heating function:**
  - **Pictogram** as depicted.
- 6 **Solid fuel boiler:**
  - **Pictogram** as depicted,
  - Energy efficiency class of solid fuel boiler:
  - **Arrow:** width: 24 mm, height: 14 mm, 100 % black;
  - **Text:** Calibri bold 28 pt, capitals, white, '+' symbols: superscript, aligned on a single row,
  - **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 7 **Package with solar collectors, hot water storage tanks, temperature controls and supplementary heaters:**
  - **Pictograms** as depicted,
  - **'+' symbol:** Calibri bold 50 pt, cyan 100 %,
  - **Boxes:** width: 12 mm, height: 12 mm, border: 4 pt, cyan 100 %,
  - **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 8 **A+++ - G scale with border:**
  - **Arrow:** height: 15 mm, gap: 3 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Seventh class: 00-X-X-00,
    - If applicable, last classes: 00-X-X-00,
  - **Text:** Calibri bold 30 pt, capitals, white, '+' symbols: superscript, aligned on a single row,
  - **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

**9 Energy efficiency class for the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices:**

— **Arrow:** width: 33 mm, height: 19 mm, 100 % black,

— **Text:** Calibri bold 40 pt, capitals, white, '+' symbols: superscript, aligned on a single row.

**10 Year of label introduction and number of Regulation:**

— **Text:** Calibri bold 12 pt.

**11 Dealer's or supplier's name or trademark.**

**12 Dealer's or supplier's model identifier:**

The dealer's or supplier's name or trade mark and model identifier shall fit in a space of 191 × 19 mm.

## ANNEX IV

### Product fiche

#### 1. SOLID FUEL BOILERS

1.1. The information in the product fiche of the solid fuel boiler shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trademark;
- (b) supplier's model identifier;
- (c) the energy efficiency class of the model, determined in accordance with Annex II;
- (d) the rated heat output in kW, rounded to the nearest integer;
- (e) the energy efficiency index, rounded to the nearest integer and calculated in accordance with Annex IX;
- (f) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with Annex VIII;
- (g) any specific precautions that shall be taken when the solid fuel boiler is assembled, installed or maintained;
- (h) in the case of solid fuel cogeneration boilers the electrical efficiency in %, rounded to the nearest integer;

1.2. One product fiche may cover a number of solid fuel boiler models supplied by the same supplier.

1.3. The information contained in the product fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1.1 not already displayed on the label shall also be provided.

#### 2. PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES

The fiche for packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall contain the information set out in Figure 1 or Figure 2, as appropriate, for evaluating the energy efficiency index of the package offered, including the following information:

- (a) **I**: the value of the energy efficiency index of the primary solid fuel boiler;
- (b) **II**: the factor for weighting the heat output of primary solid fuel boiler and supplementary heaters of a package as set out in Tables 2 and 3 of this Annex, as appropriate;
- (c) **III**: the value of the mathematical expression:  $294/(11 \eta Pr)$ , whereby  $Pr$  refers to the primary solid fuel boiler;
- (d) **IV**: the value of the mathematical expression  $115/(11 \eta Pr)$ , whereby  $Pr$  refers to the primary solid fuel boiler.

Table 2

**Weighting of primary solid fuel boiler and supplementary heater, for the purposes of Figure 1 of this Annex <sup>(1)</sup>**

$P_{sup}/(P_r + P_{sup})$ <sup>(2)</sup>	II, package without hot water storage tank	II, package with hot water storage tank
0	0	0
0,1	0,30	0,37
0,2	0,55	0,70
0,3	0,75	0,85
0,4	0,85	0,94
0,5	0,95	0,98
0,6	0,98	1,00
$\geq 0,7$	1,00	1,00

Table 3

**Weighting of primary cogeneration solid fuel boiler and supplementary heater, for the purposes of Figure 2 of this Annex <sup>(1)</sup>**

$P_r/(P_r + P_{sup})$ <sup>(3)</sup>	II, package without hot water storage tank	II, package with hot water storage tank
0	1,00	1,00
0,1	0,70	0,63
0,2	0,45	0,30
0,3	0,25	0,15
0,4	0,15	0,06
0,5	0,05	0,02
0,6	0,02	0
$\geq 0,7$	0	0

<sup>(1)</sup> The intermediate values are calculated by linear interpolation between the two adjacent values.

<sup>(2)</sup>  $P_r$  refers to the primary solid fuel boiler.

<sup>(3)</sup>  $P_r$  refers to the primary solid fuel boiler.

## ANNEX V

### Technical documentation

#### 1. SOLID FUEL BOILERS

For solid fuel boilers, the technical documentation referred to in Article 3(1)(e) shall include:

- (a) the name and address of the supplier;
- (b) the model identifier;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where the preferred fuel is other woody biomass, non-woody biomass, other fossil fuel or other blend of biomass and fossil fuel as referred to in Table 4, a description of the fuel sufficient for its unambiguous identification and the technical standard or specification of the fuel, including the measured moisture content and the measured ash content, and for other fossil fuel also the measured volatile content of the fuel;
- (e) where appropriate, the other technical standards and specifications used;
- (f) the name and signature of the person empowered to bind the supplier;
- (g) the information included in Table 4, with its technical parameters measured and calculated in accordance with Annex VIII and IX;
- (h) reports of tests undertaken by suppliers or on their behalf, including the name and address of the body that conducted the test;
- (i) any specific precautions that must be taken when the solid fuel boiler is assembled, installed or maintained;
- (j) a list of equivalent models, if applicable.

This information may be merged with the technical documentation provided in accordance with measures under Directive 2009/125/EC of the European Parliament and of the Council.

*Table 4*

#### Technical parameters for solid fuel boilers and solid fuel cogeneration boilers

Model identifier		
Stoking mode: [Manual: the boiler should be operated with a hot water storage tank of a volume of at least x (*) litre/Automatic: it is recommended that the boiler be operated with a hot water storage tank of a volume of at least x (?) litre]		
Condensing boiler: [yes/no]		
Solid fuel cogeneration boiler: [yes/no]		Combination boiler: [yes/no]
<b>Fuel</b>	<b>Preferred fuel (only one):</b>	<b>Other suitable fuel(s):</b>
Log wood, moisture content ≤ 25 %	[yes/no]	[yes/no]
Chipped wood, moisture content 15-35 %	[yes/no]	[yes/no]
Chipped wood, moisture content > 35 %	[yes/no]	[yes/no]

Compressed wood in the form of pellets or briquettes	[yes/no]	[yes/no]
Sawdust, moisture content $\leq 50\%$	[yes/no]	[yes/no]
Other woody biomass	[yes/no]	[yes/no]
Non-woody biomass	[yes/no]	[yes/no]
Bituminous coal	[yes/no]	[yes/no]
Brown coal (including briquettes)	[yes/no]	[yes/no]
Coke	[yes/no]	[yes/no]
Anthracite	[yes/no]	[yes/no]
Blended fossil fuel briquettes	[yes/no]	[yes/no]
Other fossil fuel	[yes/no]	[yes/no]
Blended biomass (30-70 %) and fossil fuel briquettes	[yes/no]	[yes/no]
Other blend of biomass and fossil fuel	[yes/no]	[yes/no]

**Characteristics when operating with the preferred fuel:**Seasonal space heating energy efficiency  $\eta_s$  [%]:Energy efficiency index  $EEI$ :

Item	Symbol	Value	Unit	Item	Symbol	Value	Unit

Contact details	Name and address of the supplier						

<sup>(1)</sup> Tank volume =  $45 \times P_r \times (1 - 2,7/P_r)$  or 300 litres whichever is higher, with  $P_r$  indicated in kW

<sup>(2)</sup> Tank volume =  $20 \times P_r$  with  $P_r$  indicated in kW

<sup>(3)</sup> For the preferred fuel  $P_n$  equals  $P_r$

## 2. PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES

For packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices, the technical documentation referred to in Article 3(3)(e) shall include:

- (a) the name and address of the supplier;
- (b) a description of the model comprising the package of a solid fuel boiler, supplementary heaters, temperatures control and solar devices sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the name and signature of the person empowered to bind the supplier;
- (f) technical parameters:
  - (1) the energy efficiency index, rounded to the nearest integer;
  - (2) the technical parameters set out in point 1 of this Annex and, where appropriate, the technical parameters set out in point 1 of Annex V of Commission Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC**;
  - (3) the technical parameters set out in points 3 and 4 of Annex V of Commission Delegated Regulation (EU) No 811/2013, **as incorporated and adapted by the Ministerial Council Decision 2014/02/ MC-EnC**;
- (g) any specific precautions that must be taken when the package of a solid fuel boiler, supplementary heaters, temperature controls and solar devices is assembled, installed or maintained.

## ANNEX VI

### Information to be provided in cases where end-users cannot be expected to see the product displayed, except on the internet

#### 1. SOLID FUEL BOILERS

1.1. The information referred to in Article 4(1)(b) shall be provided in the following order:

- (a) the energy efficiency class of the model, determined in accordance with Annex II;
- (b) the rated heat output in kW, rounded to the nearest integer;
- (c) the energy efficiency index, rounded to the nearest integer and calculated in accordance with Annex IX;
- (d) in the case of solid fuel cogeneration boilers the electrical efficiency in %, rounded to the nearest integer.

1.2. The size and font in which the information referred in point 1.1 is printed or shown shall be legible.

#### 2. PACKAGES OF A SOLID FUEL BOILER, SUPPLEMENTARY HEATERS, TEMPERATURE CONTROLS AND SOLAR DEVICES

2.1. The information referred to in Article 4(2)(b) shall be provided in the following order:

- (a) the energy efficiency class of the model, determined in accordance with Annex II;
- (b) the energy efficiency index, rounded to the nearest integer;
- (c) the information set out in Figure 1 and Figure 2 of Annex IV, as appropriate.

The size and font in which the information referred in point 2.1 is printed or shown shall be legible.

## ANNEX VII

### Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) 'display mechanism' means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) 'nested display' means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) 'tactile screen' means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) 'alternative text' means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;
- (b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop-up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.

5. The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate 'Product fiche'. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## ANNEX VIII

### Measurements and calculations

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published for this purpose in **a dedicated section of the website of the Energy Community**, or using other reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art methods. They shall meet the conditions and technical parameters set out in points 2 to 5.

#### 2. General conditions for measurements and calculations

- (a) Solid fuel boilers shall be tested with the preferred fuel.
- (b) The declared value for the seasonal space heating energy efficiency shall be rounded to the nearest integer.

#### 3. General conditions for the seasonal space heating energy efficiency of solid fuel boilers

- (a) The useful efficiency values  $\eta_{n'}$ ,  $\eta_p$  and the useful heat output values  $P_{n'}$ ,  $P_p$  shall be measured, as appropriate. For solid fuel cogeneration boilers the electrical efficiency value  $\eta_{el,n}$  is also measured.
- (b) The seasonal space heating energy efficiency  $\eta_s$  shall be calculated as the seasonal space heating energy efficiency in active mode  $\eta_{son}$ , corrected by contributions accounting for temperature controls, auxiliary electricity consumption, and, for solid fuel cogeneration boilers, by adding the electrical efficiency multiplied by a conversion coefficient  $CC$  of 2,5;
- (c) The consumption of electricity shall be multiplied by a conversion coefficient  $CC$  of 2,5.

#### 4. Specific conditions for the seasonal space heating energy efficiency of solid fuel boilers

- (a) Seasonal space heating energy efficiency  $\eta_s$  is defined as:

$$\eta_s = \eta_{son} - F(1) - F(2) + F(3)$$

where:

$\eta_{son}$  is the seasonal space heating energy efficiency in active mode, expressed as a percentage, calculated as set out in point 4(b);

**F(1)** accounts for a loss of seasonal space heating energy efficiency due to adjusted contributions of temperature controls;  $F(1) = 3\%$ ;

**F(2)** accounts for a negative contribution to the seasonal space heating energy efficiency by auxiliary electricity consumption, expressed as a percentage, and is calculated as set out in point 4(c);

**F(3)** accounts for a positive contribution to the seasonal space heating energy efficiency by the electrical efficiency of solid fuel cogeneration boilers, expressed as a percentage, and is calculated as follows:

$$F(3) = 2,5 \times \eta_{el,n}$$

- (b) the seasonal space heating energy efficiency in active mode,  $\eta_{son}$ , is calculated as follows:

(1) for manually stoked solid fuel boilers that can be operated at 50% of the rated heat output in continuous mode, and for automatically stoked solid fuel boilers:

$$\eta_{son} = 0,85 \times \eta_p + 0,15 \times \eta_n$$

(2) for manually stoked solid fuel boilers that cannot be operated at 50% or less of the rated heat output in continuous mode, and for solid fuel cogeneration boilers:

$$\eta_{son} = \eta_n$$

(c)  $F(2)$  is calculated as follows:

(1) for manually stoked solid fuel boilers that can be operated at 50% of the rated heat output in continuous mode, and for automatically stoked solid fuel boilers:

$$F(2) = 2,5 \times (0,15 \times el_{max} + 0,85 \times el_{min} + 1,3 \times P_{SB}) / (0,15 \times P_n + 0,85 \times P_p)$$

(2) for manually stoked solid fuel boilers that cannot be operated at 50% or less of the rated heat output in continuous mode, and for solid fuel cogeneration boilers:

$$F(2) = 2,5 \times (el_{max} + 1,3 \times P_{SB}) / P_n$$

## 5. CALCULATION OF GROSS CALORIFIC VALUE

The gross calorific value (GCV) shall be obtained from the gross calorific value moisture free ( $GCV_{mf}$ ) by applying the following conversion:

$$GCV = GCV_{mf} \times (1 - M)$$

where:

(a) GCV and  $GCV_{mf}$  are expressed in megajoules per kilogram;

(b)  $M$  is the moisture content of the fuel, expressed as a proportion.

## ANNEX IX

## Method for calculating the Energy Efficiency Index

1. The Energy Efficiency Index (*EEl*) of solid fuel boilers shall be calculated for the preferred fuel and rounded to the nearest integer as:

$$EEI = \eta_{son} \times 100 \times BLF - F(1) - F(2) \times 100 + F(3) \times 100$$

where:

$\eta_{son}$  is the seasonal space heating energy efficiency in active mode, calculated as set out in point 4(b) of Annex VIII;

*BLF* is the biomass label factor, which is 1,45 for biomass boilers and 1 for fossil fuel boilers;

**F(1)** accounts for a negative contribution to the energy efficiency index due to adjusted contributions of temperature controls;  $F(1) = 3$ ;

**F(2)** accounts for a negative contribution to the energy efficiency index by auxiliary electricity consumption, and is calculated as set out in point 4(c) of Annex VIII;

**F(3)** accounts for a positive contribution to the energy efficiency index by the electrical efficiency of solid fuel cogeneration boilers, and is calculated as follows:

$$F(3) = 2,5 \times \eta_{el,n}$$

2. The Energy Efficiency Index (*EEl*) of packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices shall determined in accordance with point 2 of Annex IV.

## ANNEX X<sup>3</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 5. The unit shall be tested with a fuel with characteristics in the same range as the fuel that was used by the supplier to perform measurements according to Annex VIII.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective verification tolerances given in Table 5.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.

<sup>3</sup> Annex X is amended in accordance with Article 15 and Annex XV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.**

**The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VIII and IX.**

**The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 5 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.**

***Table 5***  
**Verification tolerances**

<b>Parameter</b>	<b>Verification tolerance</b>
<b>Energy efficiency index</b>	<b>The determined value shall not be lower than the declared value by more than 6 %.</b>

## **DELEGATED REGULATION (EU) 1254/2014 of 11 July 2014 supplementing Directive 2010/30/EU with regard to energy labelling of residential ventilation units**

Incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decision 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts for the labelling of energy-related products. The delegated acts are to be adopted where products represent a significant potential for energy savings and present a wide disparity in performance levels although having an equivalent functionality and no other Union legislation or self-regulation is expected to achieve the policy objectives more quickly or at lesser expense than mandatory requirements.

(2) The Commission has assessed the technical, environmental and economic aspects of residential ventilation units. The assessment showed that the energy used by residential ventilation units accounts for a significant part of total household energy demand in the Union. Improvements have already been achieved in the energy efficiency of those products, but there is substantial scope for further reducing the energy consumption of such units. The assessment also confirmed a wide disparity in performance levels, and found no self-regulation or voluntary agreements which could achieve the policy objectives.

(3) Small ventilation units with an electric power input of less than 30 W per air stream should be exempted from the scope of this Regulation. Those units are designed for many different applications, predominantly working intermittently and with supplementary functions only, for example in bathrooms. Including those ventilation units would represent a considerable administrative burden in terms of market surveillance due to large sales numbers, while contributing only to a small share of the energy saving potential. However, considering that they offer similar functionalities to other ventilation units, their possible inclusion should be similarly addressed in the review of this Regulation. Non-residential ventilation units (NRVUs) should be excluded from labelling as these products are chosen by planners and architects and largely independent from consumer and market behaviour. Ventilation units specifically designed to operate exclusively for emergency purposes or in exceptional or hazardous environments should also be exempted, as they are used rarely and for a short time. The exemptions also clarify that multifunctional units which predominantly heat or cool and kitchen range hoods are excluded. Harmonised provisions on labelling and standard product information regarding the specific energy consumption of residential ventilation units should be laid down in order to provide incentives for manufacturers to improve the energy efficiency of these units, encourage end-users to purchase energy-efficient products and contribute to the functioning of the internal market.

(4) As the sound power level of a residential ventilation unit can be an important consideration for consumers, information on this should be included on the label.

(5) The combined effect of this Regulation and Commission Regulation (EU) No 1253/2014 is expected to raise the aggregated saving by 1300 PJ (45 %) to 4130 PJ in 2025.

(6) The information provided on the label should be obtained through reliable, accurate and reproducible methods which take into account recognised 'state of the art' measurement and calculation methods, including, where available, harmonised standards adopted by the European standardisation bodies in accordance with the procedures laid down in Regulation (EU) No 1025/2012 of the European Parliament and of the Council.

(7) This Regulation should specify requirements as to the uniform design and content for the label, the technical documentation and the fiche. Requirements should also be laid down as regards the information to be provided in the case of any form of distance selling, advertisements and technical promotional materials for ventilation units, as the importance of information displayed to end-users via the internet is increasing.

### **Article 1**

#### **Subject matter and scope**

1. This Regulation establishes energy labelling requirements for residential ventilation units.

2. This Regulation shall not apply to residential ventilation units which:

(a) are unidirectional (exhaust or supply) with an electric power input of less than 30 W;

(b) are exclusively specified as operating in a potentially explosive atmosphere as defined in Directive 94/9/EC of the European Parliament and of the Council;

(c) are exclusively specified as operating for emergency use, for short periods of time, and which comply with the basic requirements for construction works with regard to safety in case of fire as set out in Regulation (EU) No 305/2011 of the European Parliament and of the Council;

(d) are exclusively specified as operating:

(i) where operating temperatures of the air being moved exceed 100 °C;

(ii) where the operating ambient temperature for the motor, if located outside the air stream, driving the fan exceeds 65 °C;

(iii) where the temperature of the air being moved or the operating ambient temperature for the motor, if located outside the air stream, are lower than – 40 °C;

(iv) where the supply voltage exceeds 1000 V AC or 1500 V DC;

(v) in toxic, highly corrosive or flammable environments or in environments with abrasive substances;

(e) include a heat exchanger and a heat pump for heat recovery, or allowing heat transfer or extraction being additional to that of the heat recovery system, except heat transfer for frost protection or defrosting;

(f) are classified as range hoods covered by Commission Delegated Regulation (EU) No 65/2014, **as incorporated and adapted by the Ministerial Council Decision 2014/02/MC-EnC.**

## **Article 2**

### **Definitions**

For the purposes of this Regulation the following definitions shall apply:

- (1) 'ventilation unit' (VU) means an electricity driven appliance equipped with at least one impeller, one motor and a casing and intended to replace utilised air by outdoor air in a building or a part of a building;
- (2) 'residential ventilation unit' (RVU) means a ventilation unit where:
  - (a) the maximum flow rate does not exceed 250 m<sup>3</sup>/h;
  - (b) the maximum flow rate is between 250 and 1 000 m<sup>3</sup>/h, and the manufacturer declares its intended use as being exclusively for a residential ventilation application;
- (3) 'maximum flow rate' is the declared maximum air volume flow rate of a ventilation unit that can be achieved with integrated or separately co-supplied controls at standard air conditions (20 °C) and 101325 Pa, where the unit is installed complete (e.g. including clean filters) and according to the manufacturer's instructions, for ducted RVUs the maximum flow is related to the air flow at 100 Pa of external static pressure difference, and for non-ducted RVUs to the air flow at the lowest achievable total pressure difference to be chosen from a set of values of 10 (minimum)-20-50-100-150-200-250 Pa, whichever is equal or just below the measured pressure difference value;
- (4) 'unidirectional ventilation unit' (UVU) means a ventilation unit producing an air flow in one direction only, either from indoors to outdoors (exhaust) or from outdoors to indoors (supply), where the mechanically produced air flow is balanced by natural air supply or exhaust;
- (5) 'bidirectional ventilation unit' (BVU) means a ventilation unit producing an air flow between indoors and outdoors and which is equipped with both exhaust and supply fans;
- (6) 'equivalent ventilation unit model' means a ventilation unit with the same technical characteristics according to the applicable product information requirements, but placed on the market as a different ventilation unit model by the same manufacturer, authorised representative or importer.

For the purposes of Annexes II to IX, additional definitions are set out in Annex I.

## **Article 3**

### **Responsibilities of suppliers**

1. Suppliers placing residential ventilation units on the market shall ensure that from **1 January 2020** the following requirements are fulfilled:

- (a) each residential ventilation unit is accompanied by a printed label in the format and containing the information set out in Annex III, the label must be provided at least in the packaging of the unit. For each model of residential ventilation units an electronic label in the format and containing the information set out in Annex III shall be made available to dealers;
- (b) a product fiche, as set out in Annex IV, is made available. The fiche must be provided at least in the packaging of the unit. For each model of residential ventilation units an electronic product fiche, as set out in Annex IV, shall be made available to dealers, and on free access websites;

(c) technical documentation, as set out in Annex V, is made available on request to the **Contracting Party** authorities and the **Secretariat**;

(d) instructions for use are made available;

(e) any advertisement for a specific model of residential ventilation units that discloses energy-related or price information contains the specific energy consumption class of that model;

(f) any technical promotional material concerning a specific model of residential ventilation unit which describes its specific technical parameters states the specific energy consumption class of that model.

2. From **1 January 2020** residential ventilation units placed on the market shall be provided with a label in the format set out in Annex III, point 1, if they are unidirectional residential ventilation units, and with a label in the format set out in Annex III, point 2, if they are bidirectional ventilation units.

#### **Article 4**

##### **Responsibilities of dealers**

Dealers shall ensure that:

(a) each residential ventilation unit, at the point of sale, bears the label provided by suppliers in accordance with Article 3(1)(a) on the outside of the front or top of the appliance in such a way as to be clearly visible;

(b) residential ventilation units offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the product displayed, are marketed with the information provided by suppliers in accordance with Annex VI, except where the offer is made on the internet, in which case the provisions of Annex VII shall apply;

(c) any advertisement for a specific model of residential ventilation unit that discloses energy-related or price information contains a reference to the specific energy consumption class of the unit;

(d) any technical promotional material concerning a specific model which describes the technical parameters of a residential ventilation unit includes the specific energy consumption class of the model and the instructions for use provided by the supplier.

#### **Article 5**

##### **Measurement methods**

For the purposes of information to be provided under Articles 3 and 4, the specific energy consumption class shall be determined in accordance with the table set out in Annex II. The specific energy consumption, the annual electricity consumption, the annual heating saved, the maximum flow rate and the sound power level shall be determined in accordance with measurement and calculation methods as set out in Annex VIII, and take into account recognised state-of-the-art measurement and calculation methods.

**Article 6**

**Verification procedure for market surveillance purposes**

When assessing the conformity of the ventilation unit, **Contracting Parties** shall apply the procedure laid down in Annex IX.

**Article 7**

**Review**

<...><sup>1</sup>

**Article 8**

**Entry into force and application**

**This Regulation shall enter into force on the day of its adoption by the Ministerial Council. It shall be transposed, implemented and applicable by 1 January 2020.**

**Each Contracting Party shall notify the Secretariat of completed transposition within two weeks following the adoption of transposition measures.**

---

<sup>1</sup> Not applicable in accordance with Article 3(5)(a) of Decision 2018/03/MC-EnC

## ANNEX I

### Definitions applicable for Annexes II to IX

- (1) 'specific energy consumption (SEC)' (expressed in kWh/(m<sup>2</sup>.a)) means a coefficient to express the energy consumed for ventilation per m<sup>2</sup>heated floor area of a dwelling or building, calculated for RVUs in accordance with Annex VIII;
- (2) 'sound power level ( $L_{WA}$ )' means the casing-radiated A-weighted sound power level expressed in decibels (dB) with reference to the sound power of one picowatt (1 pW), transmitted by the air at reference airflow;
- (3) 'multi-speed drive' means a fan motor that can be operated at three or more fixed speeds plus zero ('off');
- (4) 'variable speed drive (VSD)' means an electronic controller, integrated or functioning as one system or as a separate delivery with the motor and the fan, which continuously adapts the electrical power supplied to the motor in order to control the flow rate;
- (5) 'heat recovery system (HRS)' means the part of a bidirectional ventilation unit equipped with a heat exchanger designed to transfer the heat contained in the (contaminated) exhaust air to the (fresh) supply air;
- (6) 'thermal efficiency of a residential HRS ( $\eta_t$ )' means the ratio between supply air temperature gain and exhaust air temperature loss, both relative to the outdoor temperature, measured under dry conditions of the HRS, and standard air conditions, with balanced mass flow at reference flow rate, an indoor-outdoor temperature difference of 13 K, no correction for thermal heat gain from fan motors;
- (7) 'internal leakage rate' means the fraction of extract air present in the supply air of ventilation units with HRS as a result of leakage between extract and supply airflows inside the casing when the unit is operated at reference air volume flow, measured at the ducts, the test shall be performed at 100 Pa;
- (8) 'carry over' means the percentage of the exhaust air which is returned to the supply air for a regenerative heat exchanger according to the reference flow;
- (9) 'external leakage rate' means the fraction of reference air volume flow escaping from the casing of a unit when it is subjected to a pressure test, the test shall be performed at 250 Pa for both under and over pressure;
- (10) 'mixing' means the immediate recirculation or short-circuiting of airflows between discharge and intake ports at both the indoor and outdoor terminals so that they do not contribute to the effective ventilation of a building space, when the unit is operated at reference air volume rate;
- (11) 'mixing rate' means the fraction of extract airflow, as part of the total reference air volume, that recirculates between discharge and intake ports at both the indoor and outdoor terminals and thus does not contribute to the effective ventilation of a building space, when the unit is operated at reference air volume (measured at 1 m distance from the indoor supply duct), less the internal leakage rate;
- (12) 'effective power input' (expressed in W) means the electric power input at reference flow rate and corresponding external total pressure difference and includes the electrical demand for fans, controls (including remote controls) and the heat pump (if integrated);
- (13) 'specific power input (SPI)' (expressed in W/(m<sup>3</sup>/h)) means the ratio between the effective power input (in W) and the reference flow rate (in m<sup>3</sup>/h);

(14) 'flow rate/pressure diagram' means a set of curves for flow rate (horizontal axis) and pressure difference of a unidirectional RVU or the supply side of a bidirectional RVU, where each curve represents one fan speed with at least eight equidistant test-points and the number of curves is given by the number of discrete fan speed options (one, two or three) or, in the case of a variable fan speed drive, includes at least a minimum, maximum and appropriate intermediate curve close to the reference air volume and pressure difference for SPI testing;

(15) 'reference flow rate' (expressed in  $\text{m}^3/\text{s}$ ) is the abscissa value to a point on a curve in the flow rate/pressure diagram which is on or closest to a reference point at 70 % at least of the maximum flow rate and 50 Pa for ducted units and at a minimum pressure for non-ducted units. For bidirectional ventilation units, the reference air volume flow rate applies to the air supply outlet;

(16) 'control factor (CTRL)' means a correction factor for the SEC calculation depending on the type of control that is part of the ventilation unit, according to the description in Annex VIII Table 1;

(17) 'control parameter' means a measurable parameter or set of measurable parameters that are assumed to be representative of the ventilation demand, e.g. the level of relative humidity (RH), carbon dioxide ( $\text{CO}_2$ ), volatile organic compounds (VOC) or other gases, presence, motion or occupancy detection from infrared body heat or from reflection of ultrasonic waves, electrical signals from human operation of lights or equipment;

(18) 'manual control' means any control type that does not use demand control;

(19) 'demand control' means a device or set of devices, integrated or as a separate delivery, that measures a control parameter and uses the result to regulate automatically the flow rate of the unit and/or the flow rates of the ducts;

(20) 'clock control' means a clocked (daytime-controlled) human interface to control the fan speed/flow rate of the ventilation unit, with at least seven weekday manual settings of the adjustable flow rate for at least two setback periods, i.e. periods in which a reduced or no flow rate applies;

(21) 'demand controlled ventilation (DCV)' means a ventilation unit that uses demand control;

(22) 'ducted unit' means a ventilation unit intended to ventilate one or more rooms or enclosed space in a building through the use of air ducts, intended to be equipped with duct connections;

(23) 'non-ducted unit' means a single room ventilation unit intended to ventilate a single room or enclosed space in a building, and not intended to be equipped with duct connections;

(24) 'central demand control' means a demand control of a ducted ventilation unit that continuously regulates the fan speed(s) and flow rate based on one sensor for the whole ventilated building or part of the building at central level;

(25) 'local demand control' means a demand control for a ventilation unit that continuously regulates the fan speed(s) and flow rates based on more than one sensor for a ducted ventilation unit or one sensor for a non-ducted unit;

(26) 'static pressure ( $p_{st}$ )' means the total pressure minus the fan dynamic pressure;

(27) 'total pressure ( $p_t$ )' means the difference between the stagnation pressure at the fan outlet and that at the fan inlet;

(28) 'stagnation pressure' means the pressure measured at a point in a flowing gas if it were to be brought to rest by means of an isentropic process;

(29) 'dynamic pressure' means the pressure calculated from the mass flow rate and the average gas density at the outlet and the unit outlet area;

(30) 'recuperative heat exchanger' means a heat exchanger intended to transfer thermal energy from one air stream to another without moving parts, such as a plate or tubular heat exchanger with parallel flow, cross flow or counter flow, or a combination of these, or a plate or tubular heat exchanger with vapour diffusion;

(31) 'regenerative heat exchanger' means a rotary heat exchanger incorporating a rotating wheel for the purpose of transferring thermal energy from one air stream to the other, including material allowing latent heat transfer, a drive mechanism, a casing or frame, and seals to reduce bypassing and leakage of air from one stream or another; such heat exchangers have varying degrees of moisture recovery depending on the material used;

(32) 'airflow sensitivity to pressure variations' of a non-ducted RVU is the ratio between the maximum deviation from the maximum RVU flow rate at + 20 Pa and that at – 20 Pa external total pressure difference;

(33) 'indoor/outdoor air tightness' of a non-ducted RVU is the flow rate (expressed in m<sup>3</sup>/h) between indoors and outdoors when the fan(s) is(are) switched off.

## ANNEX II

### Specific energy consumption classes

Specific energy consumption (SEC) classes of residential ventilation units calculated for average climate:

*Table 1*

#### Classification from 1 January 2020

<b>SEC class</b>	<b>SEC in kWh/a.m<sup>2</sup></b>
A+ (most efficient)	$SEC < -42$
A	$-42 \leq SEC < -34$
B	$-34 \leq SEC < -26$
C	$-26 \leq SEC < -23$
D	$-23 \leq SEC < -20$
E	$-20 \leq SEC < -10$
F	$-10 \leq SEC < 0$
G (least efficient)	$0 \leq SEC$

## ANNEX III

### The label

1. Label for UVUs marketed after **1 January 2020**:

The label shall provide the following information:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency is indicated for an 'average' climate;

IV. sound power level ( $L_{WA}$ ) in dB rounded to the nearest integer;

V. maximum flow rate in  $m^3/h$  rounded to the nearest integer, accompanied by one arrow representing UVUs.

2. Label for BVUs marketed after **1 January 2020**:

The label shall provide the following information:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy

efficiency is indicated for an 'average' climate;

IV. sound power level ( $L_{WA}$ ) in dB rounded to the nearest integer;

V. maximum flow rate in  $m^3/h$  rounded to the nearest integer, accompanied by two arrows in opposite directions representing BVUs.

3. The design of the labels for residential ventilation units set out in points 1 to 2 shall be the following:

Whereby:

The label shall be at least 75 mm wide and 150 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

The background shall be white.

Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border stroke:** 3,5 pt — colour: Cyan 100 % — round corners: 2,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy logo:** Colour: X-00-00-00.

Pictogram as depicted: EU logo + energy logo: width: 62 mm, height: 12 mm.

**4 Sub-logos border:** 1 pt — colour: cyan 100 % — length: 62 mm.

**5 A+–G scales:**

— Arrow: height: 6 mm, gap: 1 mm — colours:

— Highest class: X-00-X-00,

— Second class: 70-00-X-00,

— Third class: 30-00-X-00,

— Fourth class: 00-00-X-00,

— Fifth class: 00-30-X-00,

— Sixth class: 00-70-X-00,

— Seventh class 00-X-X-00,

— Last class: 00-X-X-00,

— Text: Calibri bold 13 pt, capitals, white.

**6 Specific energy consumption class**

— Arrow: width: 17 mm, height: 9 mm, 100 % black;

— Text: Calibri bold 18,5 pt, capitals, white; '+' symbols: Calibri bold 11 pt, white aligned on a single row.

**7 Sound power level in dB:**

— Border: 1,5 pt — colour: cyan 100 % — round corners: 2,5 mm;

— Value: Calibri bold 16 pt, 100 % black;

— 'dB': Calibri regular 10 pt, 100 % black.

**8 Maximum flow rate in m<sup>3</sup>/h:**

— Border: 1,5 pt — colour: cyan 100 % — round corners: 2,5 mm;

— Value: Calibri bold 16 pt, 100 % black;

— 'm<sup>3</sup>/h': Calibri bold 16 pt, 100 % black;

- One or two arrows
  - each width: 10 mm, each height: 10 mm.
  - Colour: cyan 100 %.

**9. Energy:**

- Text: Calibri regular 6 pt, capitals, black.

**10. Reference period:**

- Text: Calibri bold 8 pt.

**11. Supplier's name or trademark**

**12. Supplier's model identifier**

- 13** The suppliers' name or trade mark and model identifier shall fit in a space of 62 × 10 mm.

## ANNEX IV

### Product fiche

The information in the product fiche of the residential ventilation unit referred to in Article 3(1)(b) shall be given in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
- (b) supplier's model identifier i.e. the code, usually alphanumeric, used to distinguish a specific residential ventilation unit model from other models with the same trade mark or supplier's name;
- (c) specific energy consumption (SEC) in kWh/(m<sup>2</sup>.a) for each applicable climate zone and SEC class;
- (d) declared typology in accordance with Article 2 of this Regulation (, unidirectional or bidirectional);
- (e) type of drive installed or intended to be installed (multi-speed drive or variable speed drive);
- (f) type of heat recovery system (recuperative, regenerative, none);
- (g) thermal efficiency of heat recovery (in % or 'not applicable' if the product has no heat recovery system);
- (h) maximum flow rate in m<sup>3</sup>/h;
- (i) electric power input of the fan drive, including any motor control equipment, at maximum flow rate (W);
- (j) sound power level ( $L_{WA}$ ), rounded to the nearest integer;
- (k) reference flow rate in m<sup>3</sup>/s;
- (l) reference pressure difference in Pa;
- (m) SPI in W/(m<sup>3</sup>/h);
- (n) control factor and control typology in accordance with the relevant definitions and classification in Annex VIII Table 1;
- (o) declared maximum internal and external leakage rates (%) for bidirectional ventilation units or carry over (for regenerative heat exchangers only), and external leakage rates (%) for ducted unidirectional ventilation units;
- (p) mixing rate of non-ducted bidirectional ventilation units not intended to be equipped with one duct connection on either supply or extract air side;
- (q) position and description of visual filter warning for RVUs intended for use with filters, including text pointing out the importance of regular filter changes for performance and energy efficiency of the unit;
- (r) for unidirectional ventilation systems, instructions to install regulated supply/exhaust grilles in the façade for natural air supply/extraction;
- (s) internet address for pre-/dis-assembly instructions;
- (t) for non-ducted units only: the airflow sensitivity to pressure variations at + 20 Pa and – 20 Pa;
- (u) for non-ducted units only: the indoor/outdoor air tightness in m<sup>3</sup>/h;
- (v) the annual electricity consumption (AEC) (in kWh electricity/a);
- (w) the annual heating saved (AHS) (in kWh primary energy/a) for each type of climate ('average', 'warm', 'cold').

## **ANNEX V**

### **Technical documentation**

The technical documentation referred to in Article 3(1)(c) shall include at least the following:

- (a) the name and address of the supplier;
- (b) supplier's model identifier i.e. the code, usually alphanumeric, used to distinguish a specific residential ventilation unit model from other models with the same trade mark or supplier's name;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other calculation methods, measurement standards and specifications used;
- (e) identification and signature of the person empowered to bind the supplier;
- (f) where appropriate, the technical parameters for measurements, established in accordance with Annex VIII;
- (g) overall dimensions;
- (h) specification of the type of RVU;
- (i) the specific energy consumption class of the model as defined in Annex II;
- (j) the specific energy consumption (SEC) for each applicable climate zone;
- (k) sound power level ( $L_{WA}$ );
- (l) the results of calculations carried out in accordance with Annex VIII.

Suppliers may include additional information at the end of the above list.

## ANNEX VI

### **Information to be provided where end-users cannot be expected to see the product displayed, except on the internet**

1. Where end-users cannot be expected to see the product displayed, except on the internet, the information shall be provided in the following order:
  - (a) the specific energy consumption class of the model as defined in Annex II;
  - (b) the specific energy consumption (SEC) in kWh/(m<sup>2</sup>.a) for each applicable climate zone;
  - (c) the maximum flow rate (in m<sup>3</sup>/h);
  - (d) sound power level ( $L_{WA}$ ) in dB(A) rounded to the nearest integer.
2. Where other information contained in the product information fiche is provided, it shall be in the form and order specified in Annex IV.
3. The size and font in which the information referred in this Annex is printed or shown shall be such that it is legible.

## ANNEX VII

### Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex, the following definitions shall apply:

- (a) 'display mechanism' means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) 'nested display' means a visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) 'tactile screen' means a screen responding to touch, such as that of a tablet computer, slate computer or smartphone;
- (d) 'alternative text' means text provided as an alternative to a graphic, allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

2. The appropriate label made available by suppliers in accordance with Article 3(1)(a) shall be shown on the display mechanism near the price of the product in accordance with the timelines indicated in Article 3(2) and (3). The size of the label shall be such that it is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing it shall comply with the specifications in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

3. The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate the energy efficiency class of the product in white in the same font size as that used for the price; and
- (c) be in one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:

- a) the image referred to in point 3 of this Annex is shown on the display mechanism in proximity to the price of the product;
- b) the image links to the label;
- c) the label is displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- d) the label is displayed by pop-up, new tab, new page or inset screen display;
- e) for magnification of the label on tactile screens, the device conventions for tactile magnification apply;
- f) display of the label is closed by means of a close option or other standard closing mechanism;
- g) the alternative text for the graphic, to be displayed on failure to display the label, is the energy efficiency class of the product in the same font size as that used for the price.

5. The appropriate product fiche made available by suppliers in accordance with Article 3(1)(b) shall be shown on the display mechanism near the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing it shall clearly and legibly indicate 'Product fiche'. If nested display is used, the fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## ANNEX VIII

### Measurements and calculations

1. The specific energy consumption (SEC) is calculated using the following equation:

$$SEC = t_a \cdot p_{ef} \cdot q_{net} \cdot MISC \cdot CTRL^X \cdot SPI - t_h \cdot \Delta T_h \cdot \eta_h^{AS1} \cdot c_{air} \cdot (q_{ref} - q_{net} \cdot CTRL \cdot MISC \cdot (1 - \eta_t)) + Q_{defr}$$

where:

- $SEC$  is the specific energy consumption for ventilation per m<sup>2</sup> heated floor area of a dwelling or building [kWh/m<sup>2</sup>.a];
- $t_a$  is annual operating hours [h/a];
- $p_{ef}$  is the primary energy factor for electric power generation and distribution [-];
- $q_{net}$  is net ventilation rate demand per m<sup>2</sup> heated floor area [m<sup>3</sup>/h.m<sup>2</sup>];
- $MISC$  is an aggregated general typology factor, incorporating factors for ventilation effectiveness, duct leakage and extra infiltration [-];
- $CTRL$  is the ventilation control factor [-];
- $X$  is an exponent that takes into account non-linearity between thermal energy and electricity saving, depending on motor and drive characteristics [-];
- $SPI$  is specific power input [kW/(m<sup>3</sup>/h)];
- $t_h$  is total hours heating season [h];
- $\Delta T_h$  is the average difference in indoor (19 °C) and outdoor temperature over a heating season, minus 3 K correction for solar and internal gains [K];
- $\eta_h$  is the average space heating efficiency [-];
- $c_{air}$  is the specific heat capacity of air at constant pressure and density [kWh/(m<sup>3</sup> K)];
- $q_{ref}$  is the reference natural ventilation rate per m<sup>2</sup> heated floor area [m<sup>3</sup>/h.m<sup>2</sup>];
- $\eta_t$  is the thermal efficiency of heat recovery [-];
- $Q_{defr}$  is the annual heating energy per m<sup>2</sup> heated floor area [kWh/m<sup>2</sup>.a] for defrosting, based on a variable electric resistance heating.

$$Q_{defr} = t_{defr} \cdot \Delta T_{defr} \cdot c_{air} \cdot q_{net} \cdot p_{ef}$$

where:

- $t_{defr}$  is the duration of the defrosting period, i.e. when the outdoor temperature is below -4 °C [h/a]; and
- $\Delta T_{defr}$  is the average difference in K between the outdoor temperature and -4 °C during the defrosting period.

$Q_{defr}$  applies only to bidirectional units with recuperative heat exchanger; for unidirectional units or units with regenerative heat exchangers,  $Q_{defr} = 0$ .

$SPI$  and  $\eta_t$  are values derived from tests and calculation methods.

Other parameters and their defaults are given in Table 1. The SEC for label classification is based on the 'average' climate.

2. The annual electricity consumption per 100 m<sup>2</sup> floor area (AEC) (in kWh/a electric per year); and the annual heating saved ((AHS), which means the annual saving in consumption of energy for heating (in kWh fuel gross calorific value per year) are calculated as follows, using the definitions in point 1, and the default values given in Table 1, for each type of climate (average, warm and cold):

$$AEC = t_a \cdot q_{net} \cdot MISC \cdot CTRL^x \cdot SPI + Q_{defr} ;$$

$$AHS = t_h \cdot \Delta T_h \cdot \eta_h^{AHS} \cdot c_{air} \cdot (q_{ref} - q_{net} \cdot CTRL \cdot MISC \cdot (1 - \eta_t)) .$$

Table 1

## SEC calculation parameters

General typology					MISC
Ducted ventilation units					1,1
Non-ducted ventilation units					1,21
Ventilation control					CTRL
Manual control (no DCV)					1
Clock control (no DCV)					0,95
Central demand control					0,85
Local demand control					0,65
Motor & drive					x-value
on/off & single speed					1
2-speed					1,2
3-speed					1,5
variable speed					2
Climate	$t_h$ in h	$\Delta T_h$ in K	$t_{defr}$ in h	$\Delta T_{defr}$ in K	$Q_{defr}^*$ in kWh/a.m <sup>2</sup>
Cold	6 552	14,5	1 003	5,2	5,82
Average	5 112	9,5	168	2,4	0,45
Warm	4 392	5	—	—	—
Defaults					value
specific heat capacity of air, $c_{air}$ in kWh/(m <sup>3</sup> K)					0,000344
net ventilation requirement per m <sup>2</sup> heated floor area, $q_{net}$ in m <sup>3</sup> /h.m <sup>2</sup>					1,3
reference natural ventilation rate per m <sup>2</sup> heated floor area, $q_{ref}$ in m <sup>3</sup> /h.m <sup>2</sup>					2,2
annual operating hours, $t_a$ in h					8 760
primary energy factor electric power generation & distribution, $pef$					2,5
space heating efficiency, $\eta_h$					75 %

\* Defrosting applies only to bidirectional units with recuperative heat exchanger and is calculated as  $Q_{defr} = t_{defr} \cdot \Delta T_{defr} \cdot c_{air} \cdot q_{net} \cdot pef$ .  
For unidirectional units or units with regenerative heat exchangers,  $Q_{defr} = 0$

## ANNEX IX<sup>2</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances defined in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish values in the technical documentation. The values and classes on the label or in the (electronic) product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all other equivalent models shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different equivalent models.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.

<sup>2</sup> Annex IX is amended in accordance with Article 12 and Annex XII of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

(6) If the result referred to in point 5 is not achieved, the model and all other equivalent models shall be considered not to comply with this Delegated Regulation.

(7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VIII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

*Table 1*  
Verification tolerances

Parameters	Verification tolerances
SPI	The determined value shall be no more than 1,07 times the declared value.
Thermal efficiency RVU	The determined value shall be no less than 0,93 times the declared value.
Sound power level	The determined value shall be no more than the declared value plus 2 dB.

## **Delegated Regulation (EU) 65/2014 of 1 October 2013 supplementing Directive 2010/30/EU of the European Parliament and of the Council with regard to the energy labelling of domestic ovens and range hoods**

Incorporated and adapted by Ministerial Council Decision 2014/02/MC-EnC of 23 September 2014 adapting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2014/02/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products that offer significant potential for energy savings and present a wide disparity in performance levels with equivalent functionality.

(2) The energy used by electric ovens accounts for a significant part of total energy demand in the Union. In addition to the energy efficiency improvements already achieved, the scope for further reducing the energy consumption of these appliances is substantial.

(3) Provisions for the energy labelling of household electric ovens were established by Commission Directive 2002/40/EC of 8 May 2002 implementing Council Directive 92/75/EEC with regard to energy labelling of household electric ovens.

(4) Technological development in the field of domestic cooking appliances has been rapid in recent years. The ecodesign preparatory studies showed that domestic gas ovens and range hoods show significant potential for energy savings. In order to ensure that the energy labels provide dynamic incentives for suppliers to further improve the energy efficiency of these appliances and to accelerate market transformation towards energy-efficient technologies, Directive 2002/40/EC should be repealed and new provisions should be laid down.

(5) The provisions of this Regulation should apply to domestic electric and gas ovens, including when incorporated into cookers, and to domestic electric range hoods.

(6) This Regulation should introduce a revised energy efficiency scale from A+++ to D for all ovens concerned and a new energy efficiency scale from A to G with a ‘+’ added on at the top of the scale every two years until the A+++ class has been reached for domestic range hoods, these further classes should be added to accelerate the market penetration of high-efficiency appliances.

(7) The combined effect of the provisions set out in this Regulation, and in Commission Regulation (EU) No 66/2014 on the ecodesign requirements for domestic ovens, hobs and range hoods is expected to result in annual primary energy savings of 27 PJ/a in 2020, increasing up to 60 PJ/a by 2030.

(8) The sound power level of a domestic range hood can be an important consideration for end-users. Information on sound power levels should be included on the labels of domestic range hoods, to enable end-users to make an informed decision.

(9) The information provided on the respective labels should be obtained through reliable, accurate and reproducible calculation and measurement methods that take into account the recognised state-of-the-art calculation and measurement methods including, where available, harmonised standards adopted by the European standardisation organisations, as listed in Annex I to Regulation (EU) No 1025/2012 of the European Parliament and of the Council of 25 October 2012 on European standardisation. (10) This Regulation should specify a uniform design and content for the labelling of domestic ovens, including when incorporated into cookers, and domestic electric range hoods.

(11) This Regulation should specify requirements as to the technical documentation and the fiche for domestic ovens, including when incorporated into cookers, and domestic electric range hoods, also when used for non-domestic purposes.

(12) This Regulation should specify requirements as to the information to be provided for any form of distance selling, advertising and technical promotional material of domestic ovens (including when incorporated into cookers) and domestic electric range hoods, also when used for non-domestic purposes.

(13) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress, and in particular the effectiveness and the appropriateness of the approach followed for the determination of the domestic ovens energy efficiency classes.

## **Article 1**

### **Subject matter and scope**

1. This Regulation establishes requirements for the labelling and the provision of supplementary product information for domestic electric and gas ovens (including when incorporated into cookers) and for domestic electric range hoods, including when sold for non-domestic purposes.

2. This Regulation shall not apply to:

- (a) ovens that use energy sources other than electricity or gas;
- (b) ovens which offer a 'microwave heating' function;
- (c) small ovens;
- (d) portable ovens;
- (e) heat storage ovens;
- (f) ovens which are heated with steam as a primary heating function;
- (g) ovens designed for use only with gases of the 'third family' (propane and butane).

## **Article 2**

### **Definitions**

In addition to the definitions set out in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

(1) 'oven' means an appliance or part of an appliance which incorporates one or more cavities using electricity and/or gas in which food is prepared by use of a conventional or fan-forced mode;

- (2) 'cavity' means the enclosed compartment in which the temperature can be controlled for preparation of food;
- (3) 'multi-cavity oven' means an oven with two or more cavities, each of which is heated separately;
- (4) 'small oven' means an oven where all cavities have a width and depth of less than 250 mm or a height less than 120 mm;
- (5) 'portable oven' means an oven with a product mass of less than 18 kilograms, provided it is not designed for built-in installations;
- (6) 'microwave heating' means heating of food using electromagnetic energy;
- (7) 'conventional mode' means the operation mode of an oven only using natural convection for circulation of heated air inside the cavity of the oven;
- (8) 'fan-forced mode' means a mode of an oven when a built-in fan circulates heated air inside the cavity of the oven;
- (9) 'cycle' means the period of heating a standardised load in a cavity of an oven under defined conditions;
- (10) 'cooker' means an appliance consisting of an oven and a hob using gas or electricity;
- (11) 'operation mode' means the status of an oven during use;
- (12) 'heat source' means the main energy form for heating an oven;
- (13) 'range hood' means an appliance, operated by a motor which it controls, intended to collect contaminated air from above a hob, or which includes a downdraft system intended for installation adjacent to cooking ranges, hobs and similar cooking products, that draws vapour down into an internal exhaust duct;
- (14) 'automatic functioning mode during the cooking period' means a condition in which the air flow of the range hood during the cooking period is automatically controlled through sensor(s), including as regards humidity, temperature, etc.;
- (15) 'fully automatic range hood' means a range hood in which the air flow and/or other functions are automatically controlled through sensor(s) during 24 hours including the cooking period;
- (16) 'best efficiency point' (BEP) means the range hood operating point with maximum fluid dynamic efficiency ( $FDE_{hood}$ );
- (17) 'lighting efficiency' ( $LE_{hood}$ ) means the ratio between the average illumination of the lighting system of the domestic range hood and the power of the lighting system in lux/W;
- (18) 'grease filtering efficiency' ( $GFE_{hood}$ ) means the relative share of grease retained within the range hood grease filters;
- (19) 'off mode' means a condition in which the appliance is connected to the mains power source but is not providing any function or only provides an indication of off mode condition, or only provides functionalities intended to ensure electromagnetic compatibility pursuant to Directive 2004/108/EC of the European Parliament and of the Council;
- (20) 'standby mode' means a condition where the appliance is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only re-activation function, or reactivation function and only an indication of enabled reactivation function, and/or information or status display which may persist for an indefinite time;

(21) 'reactivation function' means a function facilitating the activation of other modes, including the active mode, by remote switch including remote control, internal sensor, or timer to a condition providing additional functions, including the main function;

(22) 'information or status display' means a continuous function providing information or indicating the status of the equipment on a display, including clocks;

(23) 'end-user' means a consumer buying or expected to buy a product;

(24) 'point of sale' means a location where appliances are displayed and/or offered for sale or hire;

(25) 'equivalent model' means a model placed on the market with the same technical parameters as another model placed on the market under a different commercial code number by the same manufacturer or importer.

### Article 3

#### Responsibilities of suppliers and timetable

Suppliers shall ensure that:

(1) as regards labels, fiches and technical documentation:

(a) for domestic ovens:

(i) each domestic oven is supplied with (a) printed label(s) containing information in the format set out in point 1 of Annex III for each cavity of the oven;

(ii) a product fiche, as set out in point A of Annex IV, is made available for domestic ovens placed on the market;

(iii) the technical documentation, as set out in point A of Annex V, is made available on request to the authorities of the **Contracting Parties**;

(iv) any advertisement for a specific model of domestic oven contains the energy efficiency class, if the advertisement discloses energy-related or price information;

(v) any technical promotional material concerning a specific model of domestic oven which describes its specific technical parameters includes the energy efficiency class of that model;

(vi) an electronic label in the format and containing the information set out in point 1 of Annex III is made available to dealers for each cavity of each domestic oven model;

(vii) an electronic product fiche as set out in point A of Annex IV is made available to dealers for each domestic oven model;

(b) for domestic range hoods:

(i) each domestic range hood is supplied with a printed label containing information in the format set out in point 2 of Annex III;

(ii) a product fiche, as set out in point B of Annex IV, is made available for domestic range hoods placed on the market;

(iii) the technical documentation as set out in point B of Annex V, is made available on request to the authorities of the **Contracting Parties**;

(iv) any advertisement for a specific model of domestic range hood contains the energy effi-

- ciency class, if the advertisement discloses energy-related or price information;
- (v) any technical promotional material concerning a specific model of domestic range hood which describes its specific technical parameters includes the energy efficiency class of that model;
- (vi) an electronic label in the format and containing the information set out in point 2 of Annex III is made available to dealers for each domestic range hood model;
- (vii) an electronic product fiche as set out in point B of Annex IV is made available to dealers for each domestic range hood model;

(2) as regards efficiency classes:

- (a) for domestic ovens, the energy efficiency class of the cavity of the oven shall be determined in accordance with point 1 of Annex I, and point 1 of Annex II;
- (b) for domestic range hoods:
  - (i) the energy efficiency classes shall be determined in accordance with point 2(a) of Annex I and point 2.1 of Annex II;
  - (ii) the fluid dynamic efficiency classes shall be determined in accordance with point 2(b) of Annex I and point 2.2 of Annex II;
  - (iii) the lighting efficiency classes shall be determined in accordance with point 2(c) of Annex I and point 2.3 of Annex II;
  - (iv) the grease filtering efficiency classes shall be determined in accordance with point 2(d) of Annex I and point 2.4 of Annex II;

(3) as regards formats of the labels:

- (a) for domestic ovens, the format of the label for the cavity of the oven shall be as set out in point 1 of Annex III, for appliances placed on the market from **1 January 2016**;
- (b) for domestic range hoods, the format of the label shall be as set out in point 2 of Annex III, according to the following timetable:
  - (i) <...><sup>1</sup>
  - (ii) for domestic range hoods placed on the market from 1 January 2016 with energy efficiency classes A+, A, B, C, D, E and F, labels shall be in accordance with point 2.1.2 of Annex III (Label 2) or, where suppliers deem appropriate, with point 2.1.3 of that Annex (Label 3);
  - (iii) for domestic range hoods placed on the market from 1 January 2018 with energy efficiency classes A++, A+, A, B, C, D and E, labels shall be in accordance with point 2.1.3 of Annex III (Label 3) or, where suppliers deem appropriate, with point 2.1.4 of that Annex (Label 4);
  - (iv) for domestic range hoods placed on the market from 1 January 2020 with energy efficiency classes A+++, A++, A+, A, B, C and D, labels shall be in accordance with point 2.1.4 of Annex III (Label 4).

<sup>1</sup> Not applicable

## **Article 4**

### **Responsibilities of dealers**

Dealers shall ensure that:

(1) for domestic ovens:

(a) each oven presented at the point of sale carries the label for each cavity provided by suppliers in accordance with Article 3(1)(a)(i) displayed on the front or top of the appliance, or in the immediacy of the appliance, so as to be clearly visible and identifiable as the label belonging to the model without having to read the brand name and model number on the label;

(b) ovens offered for sale or hire where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, are marketed with the information provided by suppliers in accordance with Part A of Annex VI to this Regulation, except where the offer is made through the internet in which case the provisions of Annex VII shall apply;

(c) any advertisement for any form or medium of distance selling and marketing concerning a specific model of oven contains a reference to the energy efficiency class, if the advertisement discloses energy-related or price information;

(d) any technical promotional material concerning a specific model which describes the technical parameters of an oven includes the energy efficiency class of the model;

(2) for domestic range hoods:

(a) each domestic range hood presented at the point of sale is accompanied by the label provided by suppliers in accordance with Article 3(1)(b)(i) displayed on the front or top of the appliance, or in the immediacy of the appliance, so as to be clearly visible and identifiable as the label belonging to the model without having to read the brand name and model number on the label;

(b) domestic range hoods offered for sale or hire where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, are marketed with the information provided by suppliers in accordance with Part B of Annex VI to this Regulation, except where the offer is made through the internet in which case the provisions of Annex VII shall apply;

(c) any advertisement for any form or medium of distance selling and marketing concerning a specific model of domestic range hood contains a reference to the energy efficiency class, if the advertisement discloses energy-related or price information;

(d) any technical promotional material concerning a specific model which describes the technical parameters of a domestic range hood includes the energy efficiency class of the model.

## **Article 5**

### **Measurement and calculation methods**

The information to be provided under Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art calculation and measurement methods.

**Article 6****Verification procedure for market surveillance purposes**

When performing the market surveillance checks for compliance with requirements set out in this Regulation, the **Contracting Parties'** authorities shall apply the verification procedure described in Annex VIII.

**Article 7****Review**

&lt;...&gt;

**Article 8****Repeal**

&lt;...&gt;

**Article 9****Transitional provisions**

1. Domestic ovens which comply with the provisions of this Regulation and which are placed on the market or offered for sale, hire or hire-purchase before **1 January 2016** shall be regarded as complying with the requirements of Directive 2002/40/EC.
2. From **1 January 2016 to 1 April 2016**, dealers may apply Article 4(1)(b) to specific ovens that fall under that provision.
3. From **1 January 2016 to 1 April 2016**, dealers may apply Article 4(2)(b) to specific range hoods that fall under that provision.

**Article 10****Entry into force and application**

1. **This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties<sup>2</sup>.**
2. It shall apply from **1 January 2016**. However, Article 3(1)(a)(iv) and (v), Article 3(1)(b)(iv) and (v), Article 4(1)(b), (c) and (d), and Article 4(2)(b), (c) and (d) shall apply from **1 April 2016**.

This Regulation shall be binding in its entirety and directly applicable in all **Contracting Parties**.

**The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which**

<sup>2</sup> The text displayed here corresponds to Article 3(1) of Decision 2014/02/MC-EnC

**they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation<sup>3</sup>.**

---

<sup>3</sup> The text displayed here corresponds to Article 2(3) of Decision 2014/02/MC-EnC

## ANNEX I

### Efficiency classes

#### 1. DOMESTIC OVENS

The energy efficiency classes of domestic ovens shall be determined separately for each cavity in accordance with values as set out in Table 1 of this Annex. The energy efficiency of ovens shall be determined in accordance with point 1 of Annex II.

Table 1

#### Energy efficiency classes of domestic ovens

Energy Efficiency Class	Energy Efficiency Index ( $EEI_{\text{cavity}}$ )
A+++ (most efficient)	$EEI_{\text{cavity}} < 45$
A++	$45 \leq EEI_{\text{cavity}} < 62$
A+	$62 \leq EEI_{\text{cavity}} < 82$
A	$82 \leq EEI_{\text{cavity}} < 107$
B	$107 \leq EEI_{\text{cavity}} < 132$
C	$132 \leq EEI_{\text{cavity}} < 159$
D (least efficient)	$EEI_{\text{cavity}} \geq 159$

#### 2. DOMESTIC RANGE HOODS

(a) The energy efficiency classes of domestic range hoods shall be determined in accordance with values as set out in Table 2 of this Annex. The Energy Efficiency Index ( $EEI_{\text{hood}}$ ) of domestic range hoods shall be calculated in accordance with point 2.1 of Annex II.

Table 2

#### Energy efficiency classes of domestic range hoods

Energy Efficiency Class	Energy Efficiency Index ( $EEI_{\text{hood}}$ )			
	Label 1	Label 2	Label 3	Label 4
A+++ (most efficient)				$EEI_{\text{hood}} < 30$
A++			$EEI_{\text{hood}} < 37$	$30 \leq EEI_{\text{hood}} < 37$
A+		$EEI_{\text{hood}} < 45$	$37 \leq EEI_{\text{hood}} < 45$	$37 \leq EEI_{\text{hood}} < 45$
A	$EEI_{\text{hood}} < 55$	$45 \leq EEI_{\text{hood}} < 55$	$45 \leq EEI_{\text{hood}} < 55$	$45 \leq EEI_{\text{hood}} < 55$
B	$55 \leq EEI_{\text{hood}} < 70$	$55 \leq EEI_{\text{hood}} < 70$	$55 \leq EEI_{\text{hood}} < 70$	$55 \leq EEI_{\text{hood}} < 70$
C	$70 \leq EEI_{\text{hood}} < 85$	$70 \leq EEI_{\text{hood}} < 85$	$70 \leq EEI_{\text{hood}} < 85$	$70 \leq EEI_{\text{hood}} < 85$
D	$85 \leq EEI_{\text{hood}} < 100$	$85 \leq EEI_{\text{hood}} < 100$	$85 \leq EEI_{\text{hood}} < 100$	$EEI_{\text{hood}} \geq 85$
E	$100 \leq EEI_{\text{hood}} < 110$	$100 \leq EEI_{\text{hood}} < 110$	$EEI_{\text{hood}} \geq 100$	
F	$110 \leq EEI_{\text{hood}} < 120$	$EEI_{\text{hood}} \geq 110$		
G (least efficient)	$EEI_{\text{hood}} \geq 120$			

(b) The fluid dynamic efficiency classes of a domestic range hood shall be determined in accordance with its Fluid Dynamic Efficiency ( $FDE_{hood}$ ) as in the following Table 3. The Fluid Dynamic Efficiency of domestic range hoods shall be determined in accordance with point 2.2 of Annex II.

Table 3

**Fluid Dynamic Efficiency classes for domestic range hoods**

Fluid Dynamic Efficiency Class	Fluid Dynamic Efficiency ( $FDE_{hood}$ )
A (most efficient)	$FDE_{hood} > 28$
B	$23 < FDE_{hood} \leq 28$
C	$18 < FDE_{hood} \leq 23$
D	$13 < FDE_{hood} \leq 18$
E	$8 < FDE_{hood} \leq 13$
F	$4 < FDE_{hood} \leq 8$
G (least efficient)	$FDE_{hood} \leq 4$

(c) The lighting efficiency classes of a domestic range hood shall be determined in accordance with its Lighting Efficiency ( $LE_{hood}$ ) as in the following Table 4. The Lighting Efficiency of domestic range hoods shall be determined in accordance with point 2.3 of Annex II.

Table 4

**The Lighting Efficiency classes for domestic range hoods**

Lighting Efficiency Class	Lighting Efficiency ( $LE_{hood}$ )
A (most efficient)	$LE_{hood} > 28$
B	$20 < LE_{hood} \leq 28$
C	$16 < LE_{hood} \leq 20$
D	$12 < LE_{hood} \leq 16$
E	$8 < LE_{hood} \leq 12$
F	$4 < LE_{hood} \leq 8$
G (least efficient)	$LE_{hood} \leq 4$

(d) The grease filtering efficiency classes of a domestic range hood shall be determined in accordance with its Grease Filtering Efficiency ( $GFE_{hood}$ ) as in the following Table 5. The Grease Filtering Efficiency of domestic range hoods shall be determined in accordance with point 2.4 of Annex II.

Table 5

**Grease Filtering Efficiency (GFEhood) classes for domestic range hoods**

<b>Grease Filtering Efficiency Class</b>	<b>Grease Filtering Efficiency (%)</b>
A (most efficient)	$GFE_{hood} > 95$
B	$85 < GFE_{hood} \leq 95$
C	$75 < GFE_{hood} \leq 85$
D	$65 < GFE_{hood} \leq 75$
E	$55 < GFE_{hood} \leq 65$
F	$45 < GFE_{hood} \leq 55$
G (least efficient)	$GFE_{hood} \leq 45$

## ANNEX II

### Measurements and calculations

For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using a reliable, accurate and reproducible method that take into account the generally recognised state-of-the-art measurement and calculation methods, including harmonised standards the reference numbers of which have been published for the purpose in the *Official Journal of the European Union*. They shall meet the technical definitions, conditions, equations and parameters set out in this Annex.

#### 1. DOMESTIC OVENS

The energy consumption of a cavity of a domestic oven shall be measured for one standardised cycle, in a conventional mode and in a fan-forced mode, if available, by heating a standardised load soaked with water. It shall be verified that the temperature inside the oven cavity reaches the temperature setting of the thermostat and/or the oven control display within the duration of the test cycle. The energy consumption per cycle corresponding to the best performing mode (conventional mode or fan-forced mode) shall be used in the following calculations.

For each cavity of a domestic oven, the Energy Efficiency Index ( $EEI_{\text{cavity}}$ ) shall be calculated according to the following formulas:

for domestic electric ovens:

$$EEI_{\text{cavity}} = \frac{EC_{\text{electric cavity}}}{SEC_{\text{electric cavity}}} \times 100$$

$$SEC_{\text{electric cavity}} = 0,0042 \times V + 0,55 \quad (\text{in kWh})$$

for domestic gas ovens:

$$EEI_{\text{cavity}} = \frac{EC_{\text{gas cavity}}}{SEC_{\text{gas cavity}}} \times 100$$

$$SEC_{\text{gas cavity}} = 0,044 \times V + 3,53 \quad (\text{in MJ})$$

Where:

- $EEI_{\text{cavity}}$  = Energy Efficiency Index for each cavity of a domestic oven, in %, rounded to the first decimal place,
- $SEC_{\text{electric cavity}}$  = Standard Energy Consumption (electricity) required to heat a standardised load in a cavity of an electric heated domestic oven during a cycle, expressed in kWh, rounded to the second decimal place,
- $SEC_{\text{gas cavity}}$  = Standard Energy Consumption required to heat a standardised load in a cavity of a domestic gas-fired oven during a cycle, expressed in MJ, rounded to the second decimal place,
- $V$  = Volume of the cavity of the domestic oven in litres (L), rounded to the nearest integer,
- $EC_{\text{electric cavity}}$  = Energy consumption required to heat a standardised load in a cavity of an electric

heated domestic oven during a cycle, expressed in kWh, rounded to the second decimal place,

-  $EC_{\text{gas cavity}}$  = Energy consumption required to heat a standardised load in a gas-fired cavity of a domestic oven during a cycle, expressed in MJ, rounded to the second decimal place.

## 2. DOMESTIC RANGE HOODS

### 2.1. Calculation of the Energy Efficiency Index ( $EEI_{\text{hood}}$ )

The Energy Efficiency Index ( $EEI_{\text{hood}}$ ) is calculated as:

$$EEI_{\text{hood}} = \frac{AEC_{\text{hood}}}{SAEC_{\text{hood}}} \times 100$$

and is rounded to the first decimal place.

Where:

-  $SAEC_{\text{hood}}$  is the Standard Annual Energy consumption of the domestic range hood in kWh/a, rounded to the first decimal place,

-  $AEC_{\text{hood}}$  is the Annual Energy Consumption of the domestic range hood in kWh/a, rounded to the first decimal place.

The Standard Annual Energy Consumption ( $SAEC_{\text{hood}}$ ) of a domestic range hood shall be calculated as:

$$SAEC_{\text{hood}} = 0,55 \times (W_{\text{BEP}} + W_L) + 15,3$$

Where:

-  $W_{\text{BEP}}$  is the electric power input of the domestic range hood at the best efficiency point, in Watt and rounded to the first decimal place,

-  $W_L$  is the nominal electric power input of the lighting system of the domestic range hood on the cooking surface, in Watt and rounded to the first decimal place.

The Annual Energy Consumption ( $AEC_{\text{hood}}$ ) of a domestic range hood is calculated as:

(i) for the fully automatic domestic range hoods:

$$AEC_{\text{hood}} = \left[ \frac{(W_{\text{BEP}} \times t_H \times f) + (W_L \times t_L)}{60 + 1000} + \frac{P_G \times (1440 - t_H \times f)}{2 \times 60 \times 1000} + \frac{P_B \times (1440 - t_H \times f)}{2 \times 60 \times 1000} \right] \times 365$$

(b) for all other domestic range hoods:

$$AEC_{\text{hood}} = \frac{W_{\text{BEP}} \times (t_H \times f) + W_L \times t_L}{60 \times 1000} \times 365$$

Where:

-  $t_L$  is the average lighting time per day, in minutes ( $t_L = 120$ ),

-  $t_H$  is the average running time per day for domestic range hoods, in minutes ( $t_H = 60$ ),

- $P_o$  is the electric power input in off-mode of the domestic range hood, in Watt and rounded to the second decimal place,
- $P_s$  is the electric power input in standby mode of the domestic range hood, in Watt and rounded to the second decimal place,
- $f$  is the time increase factor, calculated and rounded to the first decimal place, as:

$$f = 2 - (FDE_{hood} \times 3,6) / 100$$

## 2.2. Calculation of the Fluid Dynamic Efficiency ( $FDE_{hood}$ )

The Fluid Dynamic Efficiency ( $FDE_{hood}$ ) at the best efficiency point is calculated by the following formula, and is rounded to the first decimal place:

$$FDE_{hood} = \frac{Q_{BEP} \times P_{BEP}}{3600 \times W_{BEP}} \times 100$$

Where:

- $Q_{BEP}$  is the flow rate of the domestic range hood at best efficiency point, expressed in m<sup>3</sup>/h and rounded to the first decimal place,
- $P_{BEP}$  is the static pressure difference of the domestic range hood at best efficiency point, expressed in Pa and rounded to the nearest integer,
- $W_{BEP}$  is the electric power input of the domestic range hood at the best efficiency point, expressed in Watt and rounded to the first decimal place.

## 2.3. Calculation of the Lighting Efficiency ( $LE_{hood}$ )

The Lighting Efficiency ( $LE_{hood}$ ) of a domestic range hood means the ratio between the average illumination and the nominal electric power input of the lighting system. It shall be calculated in lux per Watt and rounded at the nearest integer, as:

$$LE_{hood} = \frac{E_{middle}}{W_L}$$

Where:

- $E_{middle}$  is the average illumination of the lighting system on the cooking surface measured under standard conditions, in lux and rounded to the nearest integer,
- $W_L$  is the nominal electric power input of the lighting system of the domestic range hood on the cooking surface, in Watt and rounded to the first decimal place.

#### 2.4. Calculation of the Grease Filtering Efficiency ( $GFE_{hood}$ )

The Grease Filtering Efficiency ( $GFE_{hood}$ ) of a domestic range hood means the relative amount of grease retained within the range hood grease filters. It shall be calculated and rounded to the first decimal place as:

$$GFE_{hood} = [w_g / (w_r + w_t + w_g)] \times 100 [\%]$$

Where:

- $w_g$  = the mass of oil in the grease filter, including all detachable coverings, in g and rounded to the first decimal place,
- $w_r$  = the mass of oil retained in the airways of the range hood, in g and rounded to the first decimal place,
- $w_t$  = the mass of oil retained in the absolute filter, in g and rounded to the first decimal place.

#### 2.5. Noise

The Noise Value (in dB) is measured as the airborne acoustical A-weighted sound power emissions (weighted average value –  $L_{WA}$ ) of a domestic range hood at the highest setting for normal use, rounded to the nearest integer.

## ANNEX III The label

### 1. LABEL FOR DOMESTIC OVENS

#### 1.1. Domestic electric ovens

##### 1.1.1. Label presentation — for each cavity of a domestic electric oven

### 1.1.2. Label information — domestic electric ovens

The following information shall be included in the label:

- I. Supplier's name or trade mark;
- II. Supplier's model identifier, where 'model identifier' means the code, usually alphanumeric, which distinguishes a specific domestic oven model from other models with the same trade mark or supplier's name;
- III. Energy source of the domestic oven;
- IV. The energy efficiency class of the cavity determined in accordance with Annex I. The head of the arrow containing the indicator letter shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
- V. Usable volume of the cavity in litres, rounded to the nearest integer;
- VI. Energy consumption per cycle expressed in kWh/cycle (electricity consumption) for the heating function(s) (conventional and if available the forced air convection) of the cavity based on standard load determined in accordance with the test procedures, rounded to the second decimal place ( $EC_{\text{electric cavity}}$ ).

## 1.1.3. Label design — domestic electric ovens

The design of the label for each cavity of a domestic electric oven shall be as in the following figure:

Whereby:

- (i) The label shall be at least 85 mm wide and 170 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- (ii) The background shall be white.
- (iii) Colours shall be CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- (iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- ❶ **Border stroke:** 4 pt — colour: cyan 100 % — round corners: 3 mm.
- ❷ **EU logo:** colours: X-80-00-00 and 00-00-X-00.
- ❸ **Energy logo:** colour: X-00-00-00; pictogram as depicted: EU logo + energy label: width: 70 mm, height: 14 mm.
- ❹ **Sub-logos border:** 1,5 pt — colour: cyan 100 % — length: 70 mm.
- ❺ **Scale of energy classes**
  - **Arrow:** height: 5,5 mm, gap: 1 mm — colours:
    - Highest class: X-00-X-00
    - Second class: 70-00-X-00
    - Third class: 30-00-X-00
    - Fourth class: 00-00-X-00
    - Fifth class: 00-30-X-00
    - Sixth class: 00-70-X-00
    - Last class: 00-X-X-00
  - **Text:** Calibri bold 18 pt, capitals and white; ‘+’ symbol: Calibri bold 12 pt, white, aligned on a single row.
- ❻ **Energy efficiency class**
  - **Arrow:** width: 20 mm, height: 10 mm, 100 % black;
  - **Text:** Calibri bold 24 pt, capitals and white; ‘+’ symbol: Calibri bold 18 pt, white, aligned on a single row.
- ❼ **Energy consumption per cycle**
  - **Border:** 1,5 pt — colour: cyan 100 % — round corners: 3 mm.
  - **Value:** Calibri bold 19 pt, 100 % black; and Calibri regular 10 pt, 100 % black.
- ❽ **Volume**
  - **Border:** 1,5 pt — colour: cyan 100 % — round corners: 3 mm.
  - **Value:** Calibri bold 20 pt, 100 % black; and Calibri regular 10 pt, 100 % black.
- ❾ **Asterisk:** Calibri regular 6 pt, 100 % black.
- ❿ **Numbering of the Regulation:** Calibri bold 10 pt, 100 % black
- ⓫ **Supplier’s name or trademark**
- ⓬ **Supplier’s model identifier**
- ⓭ The suppliers’ name or trade mark and model identifier should fit in a space of 70 × 13 mm.

### 1.2. Domestic gas ovens

#### 1.2.1. Label presentation — for each cavity of a domestic gas oven

### 1.2.2. Label information

The following information shall be included in the label:

- I. Supplier's name or trade mark;
- II. Supplier's model identifier, where 'model identifier' means the code, usually alphanumeric, which distinguishes a specific domestic oven model from other models with the same trade mark or supplier's name;
- III. Energy source of the domestic oven;
- IV. The energy efficiency class of the cavity determined in accordance with Annex I. The head of the arrow containing the indicator letter shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
- V. Usable volume of the cavity in litres, rounded to the nearest integer;
- VI. Energy consumption per cycle expressed in MJ/cycle and in kWh/cycle<sup>4</sup> (gas consumption) for the heating function(s) (conventional and if available the forced air convection) of the cavity based on standard load determined in accordance with the test procedures, rounded to the second decimal place ( $EC_{\text{gas cavity}}$ ).

---

4 1 kWh/cycle = 3,6 MJ/cycle.

1.2.3. Label design — domestic gas ovens

The design of the label for each cavity of a domestic gas oven shall be as in the following figure:

Whereby:

- (i) The label shall be at least 85 mm wide and 170 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- (ii) The background shall be white.
- (iii) Colours shall be CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- (iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- ❶ **Border stroke:** 4 pt — colour: cyan 100 % — round corners: 3 mm.
- ❷ **EU logo:** colours: X-80-00-00 and 00-00-X-00.
- ❸ **Energy logo:** colour: X-00-00-00; pictogram as depicted: EU logo + energy label: width: 70 mm, height: 14 mm.
- ❹ **Sub-logos border:** 1,5 pt — colour: cyan 100 % — length: 70 mm.
- ❺ **Scale of energy classes**
  - **Arrow:** height: 5,5 mm, gap: 1 mm — colours:
    - Highest class: X-00-X-00
    - Second class: 70-00-X-00
    - Third class: 30-00-X-00
    - Fourth class: 00-00-X-00
    - Fifth class: 00-30-X-00
    - Sixth class: 00-70-X-00
    - Last class: 00-X-X-00
  - **Text:** Calibri bold 18 pt, capitals and white; ‘+’ symbol: Calibri bold 12 pt, white, aligned on a single row.
- ❻ **Energy efficiency class**
  - **Arrow:** width: 20 mm, height: 10 mm, 100 % black;
  - **Text:** Calibri bold 24 pt, capitals and white; ‘+’ symbol: Calibri bold 18 pt, white, aligned on a single row.
- ❼ **Energy consumption per cycle**
  - **Border:** 1,5 pt — colour: cyan 100 % — round corners: 3 mm.
  - **Value:** Calibri bold 19 pt, 100 % black; and Calibri regular 10 pt, 100 % black.
- ❽ **Volume**
  - **Border:** 1,5 pt — colour: cyan 100 % — round corners: 3 mm.
  - **Value:** Calibri bold 20 pt, 100 % black; and Calibri regular 10 pt, 100 % black.
- ❾ **Asterisk:** Calibri regular 6 pt, 100 % black.
- ❿ **Numbering of the Regulation: Calibri bold 10 pt, 100 % black**
- ⓫ **Supplier’s name or trademark**
- ⓬ **Supplier’s model identifier**
- ⓭ The suppliers’ name or trade mark and model identifier should fit in a space of 70 × 13 mm.

## 2. LABEL FOR DOMESTIC RANGE HOODS

### 2.1. Label formats

#### 2.1.1. Domestic range hoods in energy efficiency classes A to G (label 1)

2.1.2. Domestic range hoods in energy efficiency classes A+ to F (label 2)

2.1.3. Domestic range hoods in energy efficiency classes A++ to E (label 3)

## 2.1.4. Domestic range hoods in energy efficiency classes A+++ to D (label 4)

## 2.2. Label information — domestic range hoods

The following information shall be included in the label:

- I. Supplier's name or trade mark;
- II. Supplier's model identifier, where 'model identifier' means the code, usually alphanumeric, which distinguishes a specific domestic range hood model from other models with the same trade mark or supplier's name;
- III. The energy efficiency class of the domestic range hood, determined in accordance with Annex I. The head of the arrow containing the energy efficiency class of the domestic range hood shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
- IV. Annual energy consumption ( $AEC_{hood}$ ) calculated in accordance with Annex II, in kWh rounded to the nearest integer;
- V. The Fluid Dynamic Efficiency class determined in accordance with Annex I;
- VI. The Lighting Efficiency class determined in accordance with Annex I;
- VII. The Grease Filtering Efficiency class determined in accordance with Annex I;
- VIII. The Noise Value, determined in accordance with point 2.5 of Annex II, rounded to the nearest integer.

## 2.3. Label design — domestic range hoods

The design of the label shall be as in the following figure:

Whereby:

- (i) The label shall be at least 60 mm wide and 120 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- (ii) The background shall be white.
- (iii) Colours shall be CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- (iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- ① **Border stroke:** 3 pt — colour: Cyan 100 % — round corners: 2 mm.
- ② **EU logo:** colours: X-80-00-00 and 00-00-X-00.
- ③ **Energy logo:** colour: X-00-00-00; pictogram as depicted: EU logo + energy label: width: 51 mm, height: 10 mm.
- ④ **Sub-logos border:** 1 pt — colour: Cyan 100 % — length: 51 mm.
- ⑤ **Scale of energy classes**
  - **Arrow:** height: 4 mm, gap: 0,75 mm — colours:
    - Highest class: X-00-X-00
    - Second class: 70-00-X-00
    - Third class: 30-00-X-00
    - Fourth class: 00-00-X-00
    - Fifth class: 00-30-X-00
    - Sixth class: 00-70-X-00
    - Last class: 00-X-X-00
  - **Text:** Calibri bold 10 pt, capitals and white; '+' symbol: Calibri bold 7 pt, white, aligned on a single row.
- ⑥ **Energy efficiency class**
  - **Arrow:** width: 15 mm, height: 8 mm, 100 % black;
  - **Text:** Calibri bold 17 pt, capitals and white; '+' symbol: Calibri bold 12 pt, white, aligned on a single row.
- ⑦ **Annual energy consumption**
  - **Border:** 1 pt — colour: cyan 100 % — round corners: 2,5 mm.
  - **Value:** Calibri bold 21 pt, 100 % black; and Calibri regular 8 pt, 100 % black.
- ⑧ **Fluid Dynamic Efficiency**
  - **Pictogram** as depicted
  - **Border:** 1 pt — colour: cyan 100 % — round corners: 2,5 mm.
  - **Value:** Calibri regular 6 pt, 100 % black; and Calibri bold 11,5 pt, 100 % black.
- ⑨ **Lighting Efficiency**
  - **Pictogram** as depicted
  - **Border:** 1 pt — colour: cyan 100 % — round corners: 2,5 mm.
  - **Value:** Calibri regular 6 pt, 100 % black; and Calibri bold 11,5 pt, 100 % black.
- ⑩ **Grease Filtering Efficiency**
  - **Pictogram** as depicted
  - **Border:** 1 pt — colour: cyan 100 % — round corners: 2,5 mm.
  - **Value:** Calibri regular 10 pt, 100 % black; and Calibri bold 14 pt, 100 % black.

**11 Noise level**

- **Pictogram** as depicted
- **Border**: 1 pt — colour: cyan 100 % — round corners: 2,5 mm.
- **Value**: Calibri regular 6 pt, 100 % black; and Calibri bold 11,5 pt, 100 % black.

**12 Numbering of the Regulation: Calibri bold 8 pt, 100 % black**

**13 Supplier's name or trademark**

**14 Supplier's model identifier**

- 15** The suppliers' name or trade mark and model identifier should fit in a space of 51 × 9 mm.

## ANNEX IV

### Fiche

#### A. FICHE FOR DOMESTIC OVENS

1. The information in the product fiche of the domestic ovens referred to in Article 3(1)(a)(ii) shall be given as defined below and in the order specified below, and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
- (b) supplier's model identifier which means the code, usually alphanumeric, which distinguishes a specific domestic oven model from other models with the same trade mark or supplier's name and with different declared values for any of the parameters included in the label for the domestic oven (point 1 of Annex III);
- (c) the energy efficiency index ( $EEl_{cavity}$ ) for each cavity of the model calculated in accordance with point 1 of Annex II and rounded to the first decimal place; the declared energy efficiency index shall not exceed the index reported in the technical documentation in Annex V;
- (d) the energy efficiency class of the model for each cavity as defined in Table 1 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
- (e) the energy consumption per cycle for each cavity if available in conventional mode and in fan-forced convection mode (the measured energy consumption shall be expressed in kWh (electric and gas ovens) and in MJ (gas ovens), rounded to two decimal place); the declared value shall not be lower than the value reported in the technical documentation in Annex V;
- (f) the number of cavities; the heat source(s) per cavity; and the volume of each cavity.

2. Without prejudice to any requirements under the Community eco-label scheme, where a model has been granted a European Union eco-label under Regulation (EC) No 66/2010 of the European Parliament and of the Council of 25 November 2009, a copy of the eco-label may be added.

3. One fiche may cover a number of domestic oven models supplied by the same supplier.

4. The information contained in the fiche may be given in the form of a copy of the label of each cavity (either in colour or in black and white). Where this is the case, the information listed in point 1, not already displayed on the label, shall also be provided.

#### B. FICHE FOR DOMESTIC RANGE HOODS

1. The information in the product fiche of the domestic range hoods referred to in Article 3(1)(b)(ii) shall be given as defined below and in the order specified below, and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
- (b) supplier's model identifier which means the code, usually alphanumeric, which distinguishes a specific domestic range hood model from other models with the same trade mark or supplier's name and with different declared values for any of the parameters included in the label for the domestic range hood (point 2 of Annex III);

- (c) the Annual Energy Consumption ( $AEC_{hood}$ ) calculated according to point 2 of Annex II, in kWh/a and rounded to the first decimal place; the declared value shall not be lower than the value reported in the technical documentation in Annex V;
- (d) the Energy Efficiency class, as defined in Table 2 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
- (e) the Fluid Dynamic Efficiency ( $FDE_{hood}$ ) calculated according to point 2 of Annex II, rounded to the first decimal place; the declared value shall not be higher than the value reported in the technical documentation in Annex V;
- (f) the Fluid Dynamic Efficiency class, as defined in Table 3 of Annex I; the declared class shall not be better than the class reported in the technical documentation in Annex V;
- (g) the Lighting Efficiency ( $LE_{hood}$ ) calculated according to point 2 of Annex II, in lux/Watt and rounded to the first decimal place; the declared value shall not be higher than the value reported in the technical documentation in Annex V;
- (h) the Lighting Efficiency class, as defined in Table 4 of Annex I, the declared class shall not be better than the class reported in the technical documentation in Annex V;
- (i) the Grease Filtering Efficiency calculated according to point 2 of Annex II, in percentage and rounded to the first decimal place; the declared value shall not be higher than the value reported in the technical documentation in Annex V;
- (j) the Grease Filtering Efficiency class, as defined in Table 5 of Annex I; the declared class shall not be better than the class reported in the technical documentation in Annex V;
- (k) the air flow (in  $m^3/h$ , and rounded to the nearest integer), at minimum and maximum speed in normal use, intensive or boost excluded; the declared values shall not be higher than the values reported in the technical documentation in Annex V;
- (l) if available, the air flow (in  $m^3/h$  and rounded to the nearest integer), at intensive or boost setting; the declared value shall not be higher than the values reported in the technical documentation in Annex V;
- (m) the airborne acoustical A-weighted sound power emissions (in dB rounded to the nearest integer), at minimum and maximum speed available in normal use; the declared value shall not be lower than the value reported in the technical documentation in Annex V;
- (n) if available, the airborne acoustical A-weighted sound power emissions (in dB rounded to the nearest integer), at intensive or boost setting; the declared value shall not be lower than the value reported in the technical documentation in Annex V;
- (o) if applicable, the power consumption in off mode ( $P_o$ ), in Watt and rounded to the second decimal place; the declared values shall not be lower than the values reported in the technical documentation in Annex V;
- (p) if applicable, the power consumption in standby mode ( $P_s$ ), in Watt and rounded to the second decimal place; the declared values shall not be lower than the values reported in the technical documentation in Annex V.
2. One fiche may cover a number of domestic range hood models supplied by the same supplier.
3. The information contained in the fiche may be given in the form of a copy of the label (either in colour or in black and white). Where this is the case, the information listed in point 1, not already displayed on the label, shall also be provided.

## ANNEX V

### Technical documentation

#### A. TECHNICAL DOCUMENTATION FOR DOMESTIC OVENS

1. The technical documentation referred to in Article 3(1)(a)(iii) shall include at minimum:
  - (a) the name and address of the supplier;
  - (b) a general description of the appliance model, sufficient for it to be unequivocally and easily identified, including the supplier's model identifier (i.e. the code, usually alphanumeric) which distinguishes a specific domestic oven model from other models with the same trade mark or supplier's name and with different declared values for any of the parameters included in the label for the domestic oven (point 1 of Annex III);
  - (c) technical parameters for measurements as follows:
    - (i) the number of cavities; the volume of each cavity; the heat source(s) per cavity; the heating function(s) (conventional and/or the forced air convection) per cavity;
    - (ii) the energy consumption per cycle for each cavity if available in conventional mode and in fan-forced convection mode; the measured energy consumption shall be expressed in kWh (electric and gas ovens) and in MJ (gas ovens), rounded to the second decimal place;
    - (iii) the energy efficiency index ( $EEI_{cavity}$ ) for each cavity of the domestic oven calculated in accordance with point 1 of Annex II and rounded to the first decimal place;
    - (iv) the energy efficiency class for each cavity of the domestic oven as defined in Table 1 of Annex I;
  - (d) a copy of the calculation and the results of the calculations performed in accordance with Annex II;
  - (e) where appropriate, the references of the harmonised standards applied;
  - (f) where appropriate, the other technical standards and specifications used;
  - (g) identification and signature of the person empowered to bind the supplier.
2. Suppliers may include additional information at the end of the above list.

## ANNEX VI

### Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet

#### A. DOMESTIC OVENS

1. The information referred to in Article 4(1)(b) shall be provided in the following order:
  - (a) supplier's name or trade mark;
  - (b) supplier's model identifier, i.e. the model identifier of the specific domestic oven to which the figures quoted below apply;
  - (c) the energy efficiency class of the model for each cavity as defined in Annex I, Table 1; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
  - (d) the energy consumption per cycle for each cavity if available in conventional mode and in fan-forced convection mode; the measured energy consumption shall be expressed in kWh (electric and gas ovens) and in MJ (gas ovens), rounded to two decimal places; the declared value shall not be lower than the value reported in the technical documentation in Annex V;
  - (e) the number of cavities; the heat source(s) per cavity; the volume of each cavity.
2. Where other information contained in the product information fiche is also provided, it shall be in the form and order specified in Annex IV.
3. The size and font in which all the information referred to in this Annex is printed or shown, shall be legible.

#### B. DOMESTIC RANGE HOODS

1. The information referred to in Article 4(2)(b) shall be provided in the following order:
  - (a) supplier's name or trade mark;
  - (b) supplier's model identifier, i.e. the model identifier of the specific range hood to which the figures quoted below apply;
  - (c) the energy efficiency class of the model as defined in Table 2 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
  - (d) the annual energy consumption of the model in kWh, as defined in point 2.1 of Annex II; the declared value shall not be lower than the value reported in the technical documentation in Annex V;
  - (e) the fluid dynamic efficiency class of the model as defined in Table 3 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
  - (f) the lighting efficiency class of the model as defined in Table 4 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;
  - (g) the grease filtering efficiency class of the model as defined in Table 5 of Annex I; the declared class shall not be more favourable than the class reported in the technical documentation in Annex V;

(h) the airborne acoustical A-weighted sound power emissions (weighted average value –  $L_{WA}$ ) of a domestic range hood at minimum and maximum speed available in normal use, in dB rounded to the nearest integer; the declared value shall not be lower than the value reported in the technical documentation in Annex V.

2. Where other information contained in the product information fiche is also provided, it shall be in the form and order specified in Annex IV.
3. The size and font in which all the information referred to in this Annex is printed or shown, shall be legible.

## ANNEX VII

### Information to be provided in the case of sale, hire or hire-purchase through the internet

1. For the purpose of points 2 to 5 of this Annex the following definitions shall apply:
  - (a) 'display mechanism' means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
  - (b) 'nested display' means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
  - (c) 'tactile screen' means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
  - (d) 'alternative text' means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.
2. The appropriate label made available by suppliers in accordance with Article 3(1)(a)(vi) or 3(1)(b)(vi) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(3). For ovens, the appropriate label shall be shown for each cavity of the oven. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.
3. The image used for accessing the label in the case of nested display shall:
  - (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
  - (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
  - (c) have one of the following two formats:

4. In the case of nested display, the sequence of display of the label shall be as follows:
  - (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
  - (b) the image shall link to the label;
  - (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
  - (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
  - (e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
  - (f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

5. The appropriate product fiche made available by suppliers in accordance with Article 3(1)(a)(vii) or 3(1)(b)(vii) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate 'Product fiche'. If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## ANNEX VIII<sup>5</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 6.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 6.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6. The Contracting

<sup>5</sup> Annex VIII is replaced in accordance with Article 11 and Annex XI of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

Party authorities shall use the measurement and calculation methods set out in Annex II. The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 6 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 6**  
**Verification tolerances**

Parameters	Verification tolerances
Mass of the oven, M	The determined value shall not exceed the declared value of M by more than 5 %.
Volume of the cavity of the oven, V	The determined value shall not be lower than the declared value of V by more than 5 %.
$EC_{\text{electric cavity}}$ , $EC_{\text{gas cavity}}$	The determined values shall not exceed the declared values of $EC_{\text{electric cavity}}$ and $EC_{\text{gas cavity}}$ by more than 5 %.
$W_{\text{BEP}}$ , $W_L$	The determined values shall not exceed the declared values of $W_{\text{BEP}}$ and $W_L$ by more than 5 %.
$Q_{\text{BEP}}$ , $P_{\text{BEP}}$	The determined values shall not be lower than the declared values of $Q_{\text{BEP}}$ and $P_{\text{BEP}}$ by more than 5 %.
$Q_{\text{max}}$	The determined value shall not exceed the declared value of $Q_{\text{max}}$ by more than 8 %.
$E_{\text{middle}}$	The determined value shall not be lower than the declared value of $E_{\text{middle}}$ by more than 5 %.
$GFE_{\text{hood}}$	The determined value shall not be lower than the declared value of $GFE_{\text{hood}}$ by more than 5 %.
$P_o$ , $P_s$	The determined values of power consumption $P_o$ and $P_s$ shall not exceed the declared values of $P_o$ and $P_s$ by more than 10 %. The determined values of power consumption $P_o$ and $P_s$ of less than or equal to 1,00 W shall not exceed the declared values of $P_o$ and $P_s$ by more than 0,10 W.
Sound power level, $L_{\text{WA}}$	The determined value shall not exceed the declared value of $L_{\text{WA}}$ .

## **DELEGATED REGULATION (EU) 812/2013 of 18 February 2013 supplementing Directive 2010/30/EU with regard to the energy labelling of water heaters, hot water storage tanks and packages of water heater and solar device**

Incorporated and adapted by Ministerial Council Decision 2014/02/MC-EnC of 23 September 2014 adapting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 of the European Parliament and of the Council setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2014/02/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

- (1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products that have a significant potential for energy savings but exhibit a wide disparity in performance levels with equivalent functionality.
- (2) The energy consumed by water heaters and hot water storage tanks accounts for a significant share of the total energy demand in the Union, and water heaters and hot water storage tanks with equivalent functionality exhibit a wide disparity in terms of water heating energy efficiency and standing loss. The scope for reducing their energy consumption is significant and includes combining water heaters with appropriate solar devices. Water heaters, hot water storage tanks and packages of water heaters and solar devices should therefore be covered by energy labelling requirements.
- (3) Water heaters that are designed for using gaseous or liquid fuels predominantly (more than 50 %) produced from biomass have specific technical characteristics which require further technical, economic and environmental analyses. Depending on the outcome of the analyses, energy labelling requirements for those water heaters should be set at a later stage, if appropriate.
- (4) Harmonised provisions should be laid down on labelling and standard product information regarding the energy efficiency of water heaters and hot water storage tanks in order to provide incentives for manufacturers to improve the energy efficiency of these products, to encourage end-users to purchase energy-efficient products and to contribute to the functioning of the internal market.
- (5) As regards significant energy and cost savings for each type of water heater and for hot water storage tanks, this Regulation should introduce a new single labelling scale from A to G for conventional water heaters, solar water heaters and heat pump water heaters and for hot water storage tanks. A dynamic class A<sup>+</sup> should be added to the classification after two years to accelerate the market penetration of the most efficient water heaters and hot water storage tanks.
- (6) This Regulation should ensure that consumers get more accurate comparative information about the performance of solar water heaters and heat pump water heaters in three European climate zones.
- (7) The sound power level of a water heater could be an important consideration for end-users. Information on sound power levels should be included on the labels of water heaters.
- (8) The combined effect of this Regulation and Commission Regulation (EU) No 814/2013 of 2 August 2013 implementing Directive 2009/125/EC of the European Parliament and of the Council with regard

to ecodesign requirements for water heaters and hot water storage tanks is expected to result in estimated annual energy savings of around 450 PJ (11 Mtoe) by 2020, corresponding to about 26 Mt CO<sub>2</sub> emissions, compared to what would happen if no measures were taken.

(9) The information provided on the labels should be obtained through reliable, accurate and reproducible measurement and calculation procedures that take into account recognised state-of-the-art measurement and calculation methods including, where available, harmonised standards adopted by the European standardisation bodies under a request from the Commission, in accordance with the procedures laid down in the Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations and of rules on Information Society services, for the purpose of establishing ecodesign requirements.

(10) This Regulation should specify a uniform design and content of product labels for water heaters and hot water storage tanks.

(11) In addition, this Regulation should specify requirements for the product fiche and technical documentation for water heaters and hot water storage tanks.

(12) Moreover, this Regulation should specify requirements for the information to be provided for any form of distance selling of water heaters and hot water storage tanks and in any advertisements and technical promotional material for such products.

(13) In addition to the product labels and fiches for water heaters and hot water storage tanks laid down in this Regulation, a package label and fiche based on product fiches from suppliers should ensure that the end-user has easy access to information on the energy performance of water heaters in combination with solar devices. The most efficient class A<sup>+++</sup> may be reached by such a package.

(14) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.

## **Article 1**

### **Subject matter and scope**

1. This Regulation establishes requirements for the energy labelling of, and the provision of supplementary product information on, water heaters with a rated heat output  $\leq 70$  kW, hot water storage tanks with a storage volume  $\leq 500$  litres and packages of water heater  $\leq 70$  kW and solar device.

2. This Regulation shall not apply to:

- (a) water heaters specifically designed for using gaseous or liquid fuels predominantly produced from biomass;
- (b) water heaters using solid fuels;
- (c) water heaters within the scope of Directive 2010/75/EU of the European Parliament and of the Council;
- (d) combination heaters as defined in Article 2 of Delegated Regulation (EU) No 811/2013<sup>1</sup>;
- (e) water heaters which do not meet at least the load profile with the smallest reference energy, as specified in Annex VII, Table 3;
- (f) water heaters designed for making hot drinks and/or food only.

---

<sup>1</sup> Incorporated and adapted by Ministerial Council Decision 2014/02/MC-EnC of 23 September 2014

## **Article 2**

### **Definitions**

In addition to the definitions set out in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

- (1) 'water heater' means a device that:
- (a) is connected to an external supply of drinking or sanitary water;
  - (b) generates and transfers heat to deliver drinking or sanitary hot water at given temperature levels, quantities and flow rates during given intervals; and
  - (c) is equipped with one or more heat generators;
- (2) 'heat generator' means the part of a water heater that generates the heat using one or more of the following processes:
- (a) combustion of fossil fuels and/or biomass fuels;
  - (b) use of the Joule effect in electric resistance heating elements;
  - (c) capture of ambient heat from an air source, water source or ground source, and/or waste heat;
- (3) 'rated heat output' means the declared heat output of the water heater when providing water heating at standard rating conditions, expressed in kW;
- (4) 'storage volume' (V) means the rated volume of a hot water storage tank, expressed in litres;
- (5) 'standard rating conditions' means the operating conditions of water heaters for establishing the rated heat output, water heating energy efficiency and sound power level, and of hot water storage tanks for establishing the standing loss;
- (6) 'biomass' means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;
- (7) 'biomass fuel' means a gaseous or liquid fuel produced from biomass;
- (8) 'fossil fuel' means a gaseous or liquid fuel of fossil origin;
- (9) 'hot water storage tank' means a vessel for storing hot water for water and/or space heating purposes, including any additives, which is not equipped with any heat generator except possibly one or more back-up immersion heaters;
- (10) 'back-up immersion heater' means a Joule effect electric resistance heater that is part of a hot water storage tank and generates heat only when the external heat source is disrupted (including during maintenance periods) or out of order, or that is part of a solar hot water storage tank and provides heat when the solar heat source is not sufficient to satisfy required comfort levels;
- (11) 'solar device' means a solar-only system, a solar collector, a solar hot water storage tank or a pump in the collector loop, which are placed on the market separately;
- (12) 'solar-only system' means a device that is equipped with one or more solar collectors and solar hot water storage tanks and possibly pumps in the collector loop and other parts, which is placed on the market as one unit and is not equipped with any heat generator except possibly one or more back-up immersion heaters;
- (13) 'package of water heater and solar device' means a package offered to the end-user containing one or more water heaters and one or more solar devices;
- (14) 'water heating energy efficiency' ( $\eta_{wh}$ ) means the ratio between the useful energy provided by a water heater or a package of water heater and solar device and the energy required for its generation,

expressed in %;

(15) 'sound power level' ( $L_{WA}$ ) means the A-weighted sound power level, indoors and/or outdoors, expressed in dB;

(16) 'standing loss' ( $S$ ) means the heating power dissipated from a hot water storage tank at given water and ambient temperatures, expressed in W;

(17) 'heat pump water heater' means a water heater that uses ambient heat from an air source, water source or ground source, and/or waste heat for heat generation.

For the purposes of Annexes II to IX, additional definitions are set out in Annex I.

### Article 3

#### Responsibilities of suppliers and timetable

1. From **1 January 2018** suppliers placing water heaters on the market and/or putting them into service, including those integrated in packages of water heater and solar device, shall ensure that:

(a) <...> for water heaters intended for use in packages of water heater and solar device, a second label complying with the format and content of information set out in point 3 of Annex III is provided for each water heater;

(b) a product fiche, as set out in point 1 of Annex IV, is provided for each water heater, whereby: for heat pump water heaters, the product fiche is provided at least for the heat generator; for water heaters intended for use in packages of water heater and solar device, a second fiche, as set out in point 4 of Annex IV, is provided;

(c) the technical documentation, as set out in point 1 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific water heater model and containing energy-related or price information includes a reference to the water heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific water heater model and describing its specific technical parameters includes a reference to the water heating energy efficiency class under average climate conditions for that model;

**(f) an electronic label in the format and containing the information set out in point 1.1 of Annex III is made available to dealers for each water heater model conforming to the water heating energy efficiency classes set out in point 1 of Annex II;**

**(g) an electronic product fiche as set out in point 1 of Annex IV is made available to dealers for each water heater model, whereby for heat pump water heaters models, the electronic product fiche is made available to dealers at least for the heat generator.<sup>2</sup>**

From **1 January 2018** a printed label complying with the format and content of information set out in point 1.2 of Annex III shall be provided for each water heater conforming to the water heating energy efficiency classes set out in point 1 of Annex II, whereby: for heat pump water heaters, the printed label shall be provided at least in the packaging of the heat generator.

**From 1 January 2020 an electronic label in the format and containing the information set**

<sup>2</sup> Article 3, paragraph 1, points (f) and (g) are added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**out in point 1.2 of Annex III shall be made available to dealers for each water heater model conforming to the water heating energy efficiency classes set out in point 1 of Annex II.<sup>3</sup>**

2. From **1 January 2018** suppliers placing hot water storage tanks on the market and/or putting them into service shall ensure that:

(a) <...>

(b) a product fiche, as set out in point 2 of Annex IV, is provided;

(c) the technical documentation, as set out in point 2 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific hot water storage tank model and containing energy-related or price information includes a reference to the energy efficiency class for that model;

(e) any technical promotional material concerning a specific hot water storage tank model and describing its specific technical parameters includes a reference to the energy efficiency class for that model;

**(f) an electronic label in the format and containing the information set out in point 2.1 of Annex III is made available to dealers for each hot water storage tank model in accordance with the energy efficiency classes set out in point 2 of Annex II;**

**(g) an electronic product fiche as set out in point 2 of Annex IV is made available to dealers for each hot water storage tank model.<sup>4</sup>**

**From 1 January 2018 a printed label complying with the format and content of information as set out in point 2.2 of Annex III shall be provided for each hot water storage tank conforming to the energy efficiency classes set out in point 2 of Annex II.**

**From 1 January 2020 an electronic label in the format and containing the information set out in point 2.2 of Annex III shall be made available to dealers for each hot water storage tank model, in accordance with the energy efficiency classes set out in point 2 of Annex II.<sup>5</sup>**

3. From **1 January 2018** suppliers placing solar devices on the market and/or putting them into service shall ensure that:

(a) a product fiche, as set out in point 3 of Annex IV, is provided;

(b) the technical documentation, as set out in point 3 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

**(c) an electronic product fiche, as set out in point 3 of Annex IV, is made available to dealers for each solar device model.<sup>6</sup>**

4. From **1 January 2018** suppliers placing packages of water heater and solar device on the market and/or putting them into service shall ensure that:

(a) a printed label complying with the format and content of information set out in point 3 of Annex III is provided for each package of water heater and solar device conforming to the water heating energy efficiency classes set out in point 1 of Annex II;

(b) a product fiche, as set out in point 4 of Annex IV, is provided for each package of water heater and

<sup>3</sup> Added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>4</sup> Article 3, paragraph 2, points (f) and (g) are added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>5</sup> Added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>6</sup> Article 3, paragraph 3, point (c) is added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

solar device;

(c) the technical documentation, as set out in point 4 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific package of water heater and solar device model and containing energy-related or price information includes a reference to the water heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific package of water heater and solar device model and describing its specific technical parameters includes a reference to the water heating energy efficiency class under average climate conditions for that model;

**(f) an electronic label in the format and containing the information set out in point 3 of Annex III is made available to dealers for each model comprising a package of water heater and solar device, in accordance with the water heating energy efficiency classes set out in point 1 of Annex II;**

**(g) an electronic product fiche as set out in point 4 of Annex IV is made available to dealers for each model comprising a package of water heater and solar device.<sup>7</sup>**

#### *Article 4*

#### **Responsibilities of dealers**

1. Dealers of water heaters shall ensure that:

(a) each water heater, at the point of sale, bears the label provided by suppliers in accordance with Article 3(1), as set out in point 1 of Annex III, on the outside of the front of the appliance, in such a way as to be clearly visible;

**(b) water heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the water heater displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;<sup>8</sup>**

(c) any advertisement relating to a specific water heater model and containing energy-related or price information includes a reference to the water heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific water heater model and describing its specific technical parameters includes a reference to the water heating energy efficiency class under average climate conditions for that model.

2. Dealers of hot water storage tanks shall ensure that:

(a) each hot water storage tank, at the point of sale, bears the label provided by suppliers in accordance with Article 3(2), as set out in point 2 of Annex III, on the outside of the front of the appliance, in such a way as to be clearly visible;

**(b) hot water storage tanks offered for sale, hire or hire-purchase, where the end user cannot be expected to see the hot water storage tank displayed, are marketed with the in-**

<sup>7</sup> Article 3, paragraph 4, points (f) and (g) are added in accordance with Article 10(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>8</sup> Article 4, paragraph 1, point (b) is replaced in accordance with Article 10(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**formation provided by the suppliers in accordance with point 2 of Annex VI; except where the offer is made through the internet in which case the provisions in Annex X shall apply;**<sup>9</sup>

(c) any advertisement relating to a specific hot water storage tank model and containing energy-related or price information includes a reference to the energy efficiency class for that model;

(d) any technical promotional material concerning a specific hot water storage tank model and describing its specific technical parameters includes a reference to the energy efficiency class for that model.

3. Dealers of packages of water heater and solar device shall ensure, based on the label and fiches provided by suppliers in accordance with Article 3(1), (3) and (4), that:

(a) any offer for a specific package includes the water heating energy efficiency and the water heating energy efficiency class for that package under average, colder or warmer climate conditions, as applicable, by displaying with the package the label set out in point 3 of Annex III and providing the fiche set out in point 4 of Annex IV, duly filled in according to the characteristics of that package;

**(b) packages of water heater and solar device offered for sale, hire or hire purchase, where the end-user cannot be expected to see the package of water heater and solar device displayed, are marketed with the information provided in accordance with point 3 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex X shall apply;**<sup>10</sup>

(c) any advertisement relating to a specific package of water heater and solar device model and containing energy-related or price information includes a reference to the water heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific package of water heater and solar device model and describing its specific technical parameters includes a reference to the water heating energy efficiency class under average climate conditions for that model.

### **Article 5**

#### **Measurement and calculation methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation methods which take into account the recognised state-of-the-art measurement and calculation methods, as set out in Annex VII and Annex VIII.

### **Article 6**

#### **Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure set out in Annex IX when assessing the conformity of the declared water heating energy efficiency class, water heating energy efficiency, annual energy consumption and sound power level of water heaters and the declared energy efficiency class and standing loss of hot water storage tanks.

<sup>9</sup> Article 4, paragraph 2, point (b) is replaced in accordance with Article 10(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>10</sup> Article 4, paragraph 3, point (b) is replaced in accordance with Article 10(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**Article 7**

**Review**

<...><sup>11</sup>

**Article 8**

**Entry into force and application**

**This Regulation shall apply from 1 January 2016<sup>12</sup>.**

**The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation<sup>13</sup>.**

**This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties<sup>14</sup>.**

## ANNEX I

### Definitions applicable for Annexes II to IX

For the purposes of Annexes II to IX, the following definitions shall apply:

- (1) 'conventional water heater' means a water heater that generates heat using the combustion of fossil and/or biomass fuels and/or the Joule effect in electric resistance heating elements;
- (2) 'solar water heater' means a water heater equipped with one or more solar collectors, solar hot water storage tanks, heat generators and possibly pumps in the collector loop and other parts, a solar water heater is placed on the market as one unit;
- (3) 'load profile' means a given sequence of water draw-offs, as specified in Annex VII, Table 3; each water heater meets at least one load profile;
- (4) 'water draw-off' means a given combination of useful water flow rate, useful water temperature, useful energy content and peak temperature, as specified in Annex VII, Table 3;
- (5) 'useful water flow rate' ( $f$ ) means the minimum flow rate, expressed in litres per minute, for which hot water is contributing to the reference energy, as specified in Annex VII, Table 3;
- (6) 'useful water temperature' ( $T_m$ ) means the water temperature, expressed in degrees Celsius, at which hot water starts contributing to the reference energy, as specified in Annex VII, Table 3;
- (7) 'useful energy content' ( $Q_{tap}$ ) means the energy content of hot water, expressed in kWh, provided at a temperature equal to, or above, the useful water temperature, and at water flow rates equal to, or above, the useful water flow rate, as specified in Annex VII, Table 3;
- (8) 'energy content of hot water' means the product of the specific heat capacity of water, the average temperature difference between the hot water output and cold water input, and the total mass of the hot water delivered;
- (9) 'peak temperature' ( $T_p$ ) means the minimum water temperature, expressed in degrees Celsius, to be achieved during water draw-off, as specified in Annex VII, Table 3;
- (10) 'reference energy' ( $Q_{ref}$ ) means the sum of the useful energy content of water draw-offs, expressed in kWh, in a particular load profile, as specified in Annex VII, Table 3;
- (11) 'maximum load profile' means the load profile with the greatest reference energy that a water heater is able to provide while fulfilling the temperature and flow rate conditions of that load profile;
- (12) 'declared load profile' means the load profile applied when determining water heating energy efficiency;
- (13) 'conversion coefficient' (CC) means a coefficient reflecting the estimated 40 % average EU generation efficiency referred to in Directive 2012/27/EU of the European Parliament and of the Council; the value of the conversion coefficient is  $CC = 2,5$ ;
- (14) 'daily electricity consumption' ( $Q_{elec}$ ) means the consumption of electricity over 24 consecutive hours under the declared load profile and under given climate conditions, expressed in kWh in terms of final energy;
- (15) 'daily fuel consumption' ( $Q_{fuel}$ ) means the consumption of fuels over 24 consecutive hours under the declared load profile and under given climate conditions, expressed in kWh in terms of GCV, and for

the purposes of point 4 in Annex VIII expressed in GJ in terms of GCV;

(16) 'gross calorific value' (GCV) means the total amount of heat released by a unit quantity of fuel when it is burned completely with oxygen and when the products of combustion are returned to ambient temperature; this quantity includes the condensation heat of any water

vapour contained in the fuel and of the water vapour formed by the combustion of any hydrogen contained in the fuel;

(17) 'smart control' means a device that automatically adapts the water heating process to individual usage conditions with the aim of reducing energy consumption;

(18) 'smart control compliance' (smart) means the measure of whether a water heater equipped with smart controls fulfils the criterion set out in point 5 of Annex VIII;

(19) 'smart control factor' (SCF) means the water heating energy efficiency gain due to smart control under the conditions set out in point 3 of Annex VII;

(20) 'weekly electricity consumption with smart controls' ( $Q_{\text{elec,week,smart}}$ ) means the weekly electricity consumption of a water heater with the smart control function enabled, expressed in kWh in terms of final energy;

(21) 'weekly fuel consumption with smart controls' ( $Q_{\text{fuel,week,smart}}$ ) means the weekly fuel consumption of a water heater with the smart control function enabled, expressed in kWh in terms of GCV;

(22) 'weekly electricity consumption without smart controls' ( $Q_{\text{elec,week}}$ ) means the weekly electricity consumption of a water heater with the smart control function disabled, expressed in kWh in terms of final energy;

(23) 'weekly fuel consumption without smart controls' ( $Q_{\text{fuel,week}}$ ) means the weekly fuel consumption of a water heater with the smart control function disabled, expressed in kWh in terms of GCV;

(24) 'annual electricity consumption' (AEC) means the annual electricity consumption of a water heater under the declared load profile and under given climate conditions, expressed in kWh in terms of final energy;

(25) 'annual fuel consumption' (AFC) means the annual fossil and/or biomass fuel consumption of a water heater under the declared load profile and under given climate conditions, expressed in GJ in terms of GCV;

(26) 'ambient correction term' ( $Q_{\text{cor}}$ ) means a term which takes into account the fact that the place where the water heater is installed is not an isothermal place, expressed in kWh;

(27) 'standby heat loss' ( $Q_{\text{stby}}$ ) means the heat loss of a heat pump water heater in operating modes without heat demand, expressed in kW;

(28) 'average climate conditions', 'colder climate conditions' and 'warmer climate conditions' mean the temperatures and global solar irradiance conditions characteristic for the cities of Strasbourg, Helsinki and Athens, respectively;

(29) 'annual energy consumption' ( $Q_{\text{total}}$ ) means the annual energy consumption of a solar water heater, expressed in kWh in terms of primary energy and/or kWh in terms of GCV;

(30) 'annual non-solar heat contribution' ( $Q_{\text{nonsol}}$ ), means the annual contribution of electricity (expressed in kWh in terms of primary energy) and/or fuels (expressed in kWh in terms of GCV) to the useful heat output of a solar water heater or a package of water heater and solar device, taking into account the annual amount of heat captured by the solar collector and the heat losses of the solar hot water storage tank;

- (31) 'solar collector' means a device designed to absorb global solar irradiance and to transfer the heat energy so produced to a fluid passing through it; it is characterised by the collector aperture area, the zero-loss efficiency, the first order coefficient, the second-order coefficient and the incidence angle modifier;
- (32) 'global solar irradiance' means the rate of total incoming solar energy, both direct and diffuse, on a collector plane with an inclination of 45 degrees and southward orientation at the Earth's surface, expressed in  $W/m^2$ ;
- (33) 'collector aperture area' ( $A_{sol}$ ) means the maximum projected area through which unconcentrated solar radiation enters the collector, expressed in  $m^2$ ;
- (34) 'zero-loss efficiency' ( $\eta_0$ ) means the efficiency of the solar collector, when the solar collector mean fluid temperature is equal to the ambient temperature;
- (35) 'first-order coefficient' ( $a_1$ ) means the heat loss coefficient of a solar collector, expressed in  $W/(m^2 K)$ ;
- (36) 'second-order coefficient' ( $a_2$ ) means the coefficient measuring the temperature dependence of the first order coefficient, expressed in  $W/(m^2 K^2)$ ;
- (37) 'incidence angle modifier' (IAM) means the ratio of the useful heat output of the solar collector at a given incidence angle and its useful heat output at an incidence angle of 0 degrees;
- (38) 'incidence angle' means the angle between the direction to the sun and the direction perpendicular to the solar collector aperture;
- (39) 'solar hot water storage tank' means a hot water storage tank storing heat energy produced by one or more solar collectors;
- (40) 'heat generator water heating energy efficiency' ( $\eta_{wh, nonsol}$ ) means the water heating energy efficiency of a heat generator which is part of a solar water heater, expressed in %, established under average climate conditions and without using solar heat input;
- (41) 'auxiliary electricity consumption' ( $Q_{aux}$ ), for the purpose of Figure 1 in Annex IV referred to as 'auxiliary electricity', means the annual electricity consumption of a solar water heater or a solar-only system that is due to the pump power consumption and the standby power consumption, expressed in kWh in terms of final energy;
- (42) 'pump power consumption' (solpump) means the rated electrical power consumption of the pump in the collector loop of a solar water heater or solar-only system, expressed in W;
- (43) 'standby power consumption' (solstandby) means the rated electrical power consumption of a solar water heater or solar-only system when the pump and the heat generator are inactive, expressed in W;
- (44) 'model identifier' means the code, usually alphanumeric, which distinguishes a specific water heater, hot water storage tank, solar device or package of water heater and solar device model from other models with the same trade mark, supplier's name or dealer's name.

## ANNEX II

### Energy efficiency classes

#### 1. WATER HEATING ENERGY EFFICIENCY CLASSES OF WATER HEATERS

The water heating energy efficiency class of a water heater shall be determined on the basis of its water heating energy efficiency as set out in Table 1.

The water heating energy efficiency of a water heater shall be calculated in accordance with point 3 of Annex VIII, for solar water heaters and heat pump water heaters under average climate conditions.

Table 1

**Water heating energy efficiency classes of water heaters, categorised by declared load profiles,  $\eta_{wh}$  in %**

	<b>3XS</b>	<b>XXS</b>	<b>XS</b>	<b>S</b>	<b>M</b>	<b>L</b>	<b>XL</b>	<b>XXL</b>
<b>A+++</b>	$\eta_{wh} \geq 62$	$\eta_{wh} \geq 62$	$\eta_{wh} \geq 69$	$\eta_{wh} \geq 90$	$\eta_{wh} \geq 163$	$\eta_{wh} \geq 188$	$\eta_{wh} \geq 200$	$\eta_{wh} \geq 213$
<b>A++</b>	$53 \leq \eta_{wh} < 62$	$53 \leq \eta_{wh} < 62$	$61 \leq \eta_{wh} < 69$	$72 \leq \eta_{wh} < 90$	$130 \leq \eta_{wh} < 163$	$150 \leq \eta_{wh} < 188$	$160 \leq \eta_{wh} < 200$	$170 \leq \eta_{wh} < 213$
<b>A+</b>	$44 \leq \eta_{wh} < 53$	$44 \leq \eta_{wh} < 53$	$53 \leq \eta_{wh} < 61$	$55 \leq \eta_{wh} < 72$	$100 \leq \eta_{wh} < 130$	$115 \leq \eta_{wh} < 150$	$123 \leq \eta_{wh} < 160$	$131 \leq \eta_{wh} < 170$
<b>A</b>	$35 \leq \eta_{wh} < 44$	$35 \leq \eta_{wh} < 44$	$38 \leq \eta_{wh} < 53$	$38 \leq \eta_{wh} < 55$	$65 \leq \eta_{wh} < 100$	$75 \leq \eta_{wh} < 115$	$80 \leq \eta_{wh} < 123$	$85 \leq \eta_{wh} < 131$
<b>B</b>	$32 \leq \eta_{wh} < 35$	$32 \leq \eta_{wh} < 35$	$35 \leq \eta_{wh} < 38$	$35 \leq \eta_{wh} < 38$	$39 \leq \eta_{wh} < 65$	$50 \leq \eta_{wh} < 75$	$55 \leq \eta_{wh} < 80$	$60 \leq \eta_{wh} < 85$
<b>C</b>	$29 \leq \eta_{wh} < 32$	$29 \leq \eta_{wh} < 32$	$32 \leq \eta_{wh} < 35$	$32 \leq \eta_{wh} < 35$	$36 \leq \eta_{wh} < 39$	$37 \leq \eta_{wh} < 50$	$38 \leq \eta_{wh} < 55$	$40 \leq \eta_{wh} < 60$
<b>D</b>	$26 \leq \eta_{wh} < 29$	$26 \leq \eta_{wh} < 29$	$29 \leq \eta_{wh} < 32$	$29 \leq \eta_{wh} < 32$	$33 \leq \eta_{wh} < 36$	$34 \leq \eta_{wh} < 37$	$35 \leq \eta_{wh} < 38$	$36 \leq \eta_{wh} < 40$
<b>E</b>	$22 \leq \eta_{wh} < 26$	$23 \leq \eta_{wh} < 26$	$26 \leq \eta_{wh} < 29$	$26 \leq \eta_{wh} < 29$	$30 \leq \eta_{wh} < 33$	$30 \leq \eta_{wh} < 34$	$30 \leq \eta_{wh} < 35$	$32 \leq \eta_{wh} < 36$
<b>F</b>	$19 \leq \eta_{wh} < 22$	$20 \leq \eta_{wh} < 23$	$23 \leq \eta_{wh} < 26$	$23 \leq \eta_{wh} < 26$	$27 \leq \eta_{wh} < 30$	$27 \leq \eta_{wh} < 30$	$27 \leq \eta_{wh} < 30$	$28 \leq \eta_{wh} < 32$
<b>G</b>	$\eta_{wh} < 19$	$\eta_{wh} < 20$	$\eta_{wh} < 23$	$\eta_{wh} < 23$	$\eta_{wh} < 27$	$\eta_{wh} < 27$	$\eta_{wh} < 27$	$\eta_{wh} < 28$

## 2. ENERGY EFFICIENCY CLASSES OF HOT WATER STORAGE TANKS

The energy efficiency class of a hot water storage tank shall be determined on the basis of its standing loss as set out in Table 2.

Table 2

Energy efficiency classes of hot water storage tanks

Energy efficiency class	Standing loss $S$ in Watts, with storage volume $V$ in litres
A+	$S < 5,5 + 3,16 \cdot V^{0,4}$
A	$5,5 + 3,16 \cdot V^{0,4} \leq S < 8,5 + 4,25 \cdot V^{0,4}$
B	$8,5 + 4,25 \cdot V^{0,4} \leq S < 12 + 5,93 \cdot V^{0,4}$
C	$12 + 5,93 \cdot V^{0,4} \leq S < 16,66 + 8,33 \cdot V^{0,4}$
D	$16,66 + 8,33 \cdot V^{0,4} \leq S < 21 + 10,33 \cdot V^{0,4}$
E	$21 + 10,33 \cdot V^{0,4} \leq S < 26 + 13,66 \cdot V^{0,4}$
F	$26 + 13,66 \cdot V^{0,4} \leq S < 31 + 16,66 \cdot V^{0,4}$
G	$S > 31 + 16,66 \cdot V^{0,4}$

## ANNEX III

### The labels

#### 1. WATER HEATERS

##### 1.1. Label 1

##### 1.1.1. Conventional water heaters in water heating energy efficiency classes A to G

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex II;

IV. the water heating energy efficiency class, determined in accordance with point 1 of Annex II; the head of the arrow containing the water heating energy efficiency class of the water heater shall be placed at the same height as the head of the relevant energy efficiency class;

V. the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consump-

tion in GJ in terms of  $GCV$ , rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII;

VI. the sound power level  $L_{WA}$ , indoors, in dB, rounded to the nearest integer;

VII. for conventional water heaters able to work only during off-peak hours, the pictogram referred to in point 4(d)(10) of this Annex may be added.

(b) The design aspects of the label for conventional water heaters shall be in accordance with point 4 of this Annex.

### 1.1.2. Solar water heaters in water heating energy efficiency classes A to G

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII;

IV. the water heating energy efficiency class under average climate conditions, determined in accordance with point 1 of Annex II; the head of the arrow containing the water heating energy efficiency class of the water heater shall be placed at the same height as the head of the relevant energy efficiency

class;

V. the annual electricity consumption in kWh in terms of final energy or the annual fuel consumption in GJ in terms of GCV, under average, colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII;

VI. European solar map displaying three indicative global solar irradiance zones;

VII. the sound power level  $L_{WA}$ , indoors, in dB, rounded to the nearest integer.

(b) The design aspects of the label for solar water heaters shall be in accordance with point 5 of this Annex.

### 1.1.3. Heat pump water heaters in water heating energy efficiency classes A to G

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII;

IV. the water heating energy efficiency class under average climate conditions, determined in accordance with point 1 of Annex II; the head of the arrow containing the water heating energy efficiency

class of the water heater shall be placed at the same height as the head of the relevant energy efficiency class;

V. the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under average, colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII;

VI. European temperature map displaying three indicative temperature zones;

VII. the sound power level  $L_{WA}$ , indoors (if applicable) and outdoors, in dB, rounded to the nearest integer;

VIII. for heat pump water heaters able to work only during off-peak hours, the pictogram referred to in point 6(d)(11) of this Annex may be added.

(b) The design aspects of the label for heat pump water heaters shall be in accordance with point 6 of this Annex. By way of exception, where a model has been granted an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

## 1.2. Label 2

### 1.2.1. Conventional water heaters in water heating energy efficiency classes A<sup>+</sup> to F

- (a) The information listed in point 1.1.1(a) of this Annex shall be included in the label.
- (b) The design aspects of the label for conventional water heaters shall be in accordance with point 4 of this Annex.

**1.2.2. Solar water heaters in water heating energy efficiency classes A+ to F**

- (a) The information listed in point 1.1.2(a) of this Annex shall be included in the label.
- (b) The design aspects of the label for solar water heaters shall be in accordance with point 5 of this Annex.

### 1.2.3. Heat pump water heaters in water heating energy efficiency classes A<sup>+</sup> to F

(a) The information listed in point 1.1.3(a) of this Annex shall be included in the label.

(b) The design aspects of the label for heat pump water heaters shall be in accordance with point 6 of this Annex.

## 2. HOT WATER STORAGE TANKS

### 2.1. Label 1 for hot water storage tanks in energy efficiency classes A to G

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the water storage function;

IV. the energy efficiency class, determined in accordance with point 2 of Annex II; the head of the arrow containing the energy efficiency class of the hot water storage tank shall be placed at the same height as the head of the relevant energy efficiency class;

V. the standing loss in W, rounded to the nearest integer;

VI. the hot water storage tank volume in litres, rounded to the nearest integer.

(b) The design aspects of the label for hot water storage tanks shall be in accordance with point 7 of this Annex.

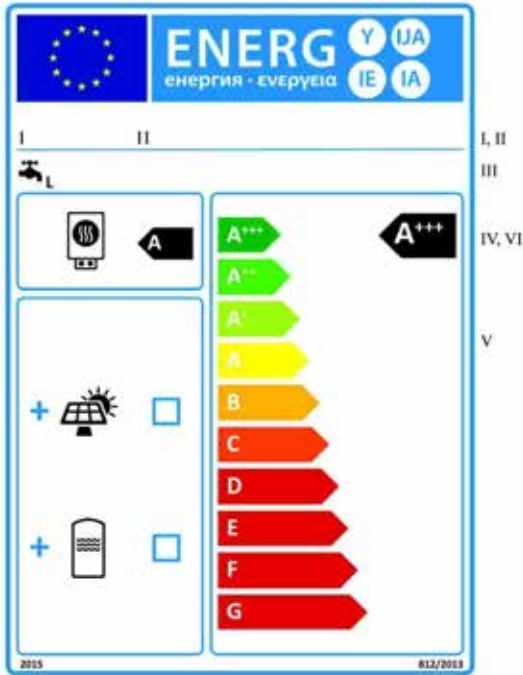

2.2. Label 2 for hot water storage tanks in energy efficiency classes A<sup>+</sup> to F

(a) The information listed in point 2.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for hot water storage tanks shall be in accordance with point 7 of this Annex.

### 3. PACKAGES OF WATER HEATER AND SOLAR DEVICE

Label for packages of water heater and solar device in water heating energy efficiency classes A<sup>+++</sup> to G

(a) The following information shall be included in the label:

- I. dealer's and/or supplier's name or trade mark;
- II. dealer's and/or supplier's model(s) identifier;
- III. the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII;
- IV. the water heating energy efficiency class of the water heater, determined in accordance with point 1 of Annex II;
- V. indication of whether a solar collector and hot water storage tank may be included in the package of water heater and solar device;
- VI. the water heating energy efficiency class of the package of water heater and solar device, determined in accordance with point 4 of Annex IV; the head of the arrow containing the water heating energy efficiency class of the package of water heater and solar device shall be placed at the same height as the head of the relevant energy efficiency class.

(b) The design aspects of the label for packages of water heater and solar device shall be in accordance with point 8 of this Annex. For packages of water heater and solar device in water heating energy efficiency classes A<sup>+++</sup> to D, the last classes E to G in the A<sup>+++</sup> to G scale may be omitted.

4. The design of the label for conventional water heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Water heating function:**

— **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII: Calibri bold 16 pt, 100 % black.

**6 A-G or A+-F scale:**

— **Arrow:** height: 7 mm, gap: 1 mm, colours:

- Highest class: X-00-X-00,
- Second class: 70-00-X-00,
- Third class: 30-00-X-00,
- Fourth class: 00-00-X-00,
- Fifth class: 00-30-X-00,
- Sixth class: 00-70-X-00,
- Last class: 00-X-X-00,

— **Text:** Calibri bold 16 pt, capitals, white, '+' symbol: superscript.

**7 Water heating energy efficiency class:**

— **Arrow:** width: 22 mm, height: 12 mm, 100 % black,

— **Text:** Calibri bold 24 pt, capitals, white, '+' symbol: superscript.

**8 Sound power level, indoors:**

— **Pictogram** as depicted,

— **Border:** 2 pt – colour: cyan 100 % – round corners: 3,5 mm,

— **Value 'YZ':** Calibri bold 15 pt, 100 % black,

— **Text 'dB':** Calibri regular 10 pt, 100 % black.

**9 Annual energy consumption in kWh/annum or GJ/annum:**

— **Border:** 2 pt – colour: cyan 100 % – round corners: 3,5 mm,

— **Value 'WXYZ' or 'YZ':** Calibri bold at least 20 pt, 100 % black,

— **Text 'kWh/annum' or 'GJ/annum':** Calibri regular at least 15 pt, 100 % black.

**10 If applicable, off-peak fitness:**

— **Pictogram** as depicted,

— **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

**11 Year of label introduction and number of Regulation:**

— **Text:** Calibri bold 10 pt.

**12 Supplier's name or trademark.**

**13 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

5. The design of the label for solar water heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Water heating function:**

- **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII: Calibri bold 16 pt, 100 % black.

**6 A-G or A+-F scale:**

- **Arrow:** height: 7 mm, gap: 1 mm, colours:
  - Highest class: X-00-X-00,
  - Second class: 70-00-X-00,
  - Third class: 30-00-X-00,
  - Fourth class: 00-00-X-00,
  - Fifth class: 00-30-X-00,
  - Sixth class: 00-70-X-00,
  - Last class: 00-X-X-00,
- **Text:** Calibri bold 16 pt, capitals, white, '+' symbol: superscript.

**7 Water heating energy efficiency class:**

- **Arrow:** width: 22 mm, height: 12 mm, 100 % black,
- **Text:** Calibri bold 24 pt, capitals, white, '+' symbol: superscript.

**8 Sound power level, indoors:**

- **Pictogram** as depicted,
- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Value 'YZ':** Calibri bold 15 pt, 100 % black,
- **Text 'dB':** Calibri regular 10 pt, 100 % black.

**9 Annual energy consumption in kWh/annum or GJ/annum:**

- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Values 'WXYZ' or 'YZ':** Calibri at least 13 pt, 100 % black,
- **Text 'kWh/annum' or 'GJ/annum':** Calibri regular at least 11 pt, 100 % black.

**10 European solar map and colour squares:**

- **Pictogram** as depicted,
- **Colours:** Dark blue: 86-51-00-00,  
Middle blue: 53-08-00-00,  
Light blue: 25-00-02-00.

**11 Year of label introduction and number of Regulation:**

- **Text:** Calibri bold 10 pt.

**12 Supplier's name or trademark.**

**13 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

6. The design of the label for heat pump water heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Water heating function:**

- **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII: Calibri bold 16 pt, 100 % black.

**6 A-G or A+-F scale:**

- **Arrow:** height: 7 mm, gap: 1 mm, colours:
  - Highest class: X-00-X-00,
  - Second class: 70-00-X-00,
  - Third class: 30-00-X-00,
  - Fourth class: 00-00-X-00,
  - Fifth class: 00-30-X-00,
  - Sixth class: 00-70-X-00,
  - Last class: 00-X-X-00,
- **Text:** Calibri bold 16 pt, capitals, white, '+' symbol: superscript.

**7 Water heating energy efficiency class:**

- **Arrow:** width: 22 mm, height: 12 mm, 100 % black,
- **Text:** Calibri bold 24 pt, capitals, white, '+' symbol: superscript.

**8 Sound power level, indoors (if applicable) and outdoors:**

- **Pictogram** as depicted,
- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Value 'YZ':** Calibri bold 15 pt, 100 % black,
- **Text 'dB':** Calibri regular 10 pt, 100 % black.

**9 Annual energy consumption in kWh/annum or GJ/annum:**

- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Values 'WXYZ' or 'YZ':** Calibri at least 13 pt, 100 % black,
- **Text 'kWh/annum' or 'GJ/annum':** Calibri regular at least 11 pt, 100 % black.

**10 European temperature map and colour squares:**

- **Pictogram** as depicted,
- **Colours:** Dark blue: 86-51-00-00,  
Middle blue: 53-08-00-00,  
Light blue: 25-00-02-00.

**11 If applicable, off-peak fitness:**

- **Pictogram** as depicted,
- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

**Year of label introduction and number of Regulation:**

- **Text:** Calibri bold 10 pt.

**12 Supplier's name or trademark.**

**13 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

7. The design of the label for hot water storage tanks shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- ① **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
- ② **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- ③ **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.

- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Storage function:**
  - **Pictogram** as depicted.
- 6 **A-G or A+-F scale:**
  - **Arrow:** height: 7 mm, gap: 1 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Last class: 00-X-X-00,
  - **Text:** Calibri bold 16 pt, capitals, white, '+' symbol: superscript.
- 7 **Energy efficiency class:**
  - **Arrow:** width: 22 mm, height: 12 mm, 100 % black,
  - **Text:** Calibri bold 24 pt, capitals, white, '+' symbol: superscript.
- 8 **Standing loss:**
  - **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
  - **Value 'YZ':** Calibri bold 45 pt, 100 % black,
  - **Text 'W':** Calibri regular 30 pt, 100 % black.
- 9 **Storage volume:**
  - **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
  - **Value 'XYZ':** Calibri bold 45 pt, 100 % black,
  - **Text 'L':** Calibri regular 30 pt, 100 % black.
- 10 **Year of label introduction and number of Regulation:**
  - **Text:** Calibri bold 10 pt.
- 11 **Supplier's name or trademark.**
- 12 **Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

8. The design of the label for packages of water heater and solar device shall be the following:

Whereby:

(a) The label shall be at least 210 mm wide and 297 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **EU label border stroke:** 6 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 191 mm, height: 37 mm.
- 4 **Sub-logos border:** 2 pt, colour: cyan 100 %, length: 191 mm.
- 5 **Water heating function:**

- **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 3 of Annex VII: Calibri bold 22 pt, 100 % black.

#### 6 **Water Heater:**

- **Pictogram** as depicted.
- **Water heating energy efficiency class of water heater:**
- **Arrow:** width: 24 mm, height: 14 mm, 100 % black,
- **Text:** Calibri bold 28 pt, capitals, white,
- **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

#### 7 **Package with solar collector and/or hot water storage tank:**

- **Pictograms** as depicted,
- **'+' symbol:** Calibri bold 50 pt, cyan 100 %,
- **Boxes:** width: 12 mm, height: 12 mm, border: 4 pt, cyan 100 %,
- **Border:** 3 pt – colour: cyan 100 % – round corners: 3,5 mm.

#### 8 **A+++–G scale with border:**

- **Arrow:** height: 15 mm, gap: 3 mm, colours:
  - Highest class: X-00-X-00,
  - Second class: 70-00-X-00,
  - Third class: 30-00-X-00,
  - Fourth class: 00-00-X-00,
  - Fifth class: 00-30-X-00,
  - Sixth class: 00-70-X-00,
  - Seventh class: 00-X-X-00,
  - If applicable, last classes: 00-X-X-00,
- **Text:** Calibri bold 30 pt, capitals, white, '+' symbols: superscript, aligned on a single row,
- **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

#### 9 **Water heating energy efficiency class for package of water heater and solar device:**

- **Arrow:** width: 33 mm, height: 19 mm, 100 % black,
- **Text:** Calibri bold 40 pt, capitals, white, '+' symbols: superscript, aligned on a single row.

#### 10 **Year of label introduction and number of Regulation:**

- **Text:** Calibri bold 12 pt.

#### 11 **Dealer's and/or supplier's name or trademark.**

#### 12 **Dealer's and/or supplier's model identifier:**

The dealer's and/or supplier's name or trade mark and model identifier shall fit in a space of 191 × 19 mm.

## ANNEX IV

### Product Fiche

#### 1. WATER HEATERS

1.1. The information in the product fiche of the water heater shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
  - (b) supplier's model identifier;
  - (c) the declared load profile, expressed by the appropriate letter and typical usage in accordance with Table 3 of Annex VII;
  - (d) the water heating energy efficiency class of the model, determined in accordance with point 1 of Annex II, whereby: for solar water heaters and heat pump water heaters, under average climate conditions;
  - (e) the water heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with point 3 of Annex VIII, whereby: for solar water heaters and heat pump water heaters, under average climate conditions;
  - (f) the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII, whereby: for solar water heaters and heat pump water heaters, under average climate conditions;
  - (g) if applicable, other load profiles for which the water heater is suitable to use and the corresponding water heating energy efficiency and annual electricity consumption as set out in points (e) and (f);
  - (h) the thermostat temperature settings of the water heater, as placed on the market by the supplier;
  - (i) the sound power level  $L_{WA}$ , indoors, in dB, rounded to the nearest integer (for heat pump water heaters if applicable);
  - (j) if applicable, an indication that the water heater is able to work only during off-peak hours;
  - (k) any specific precautions that shall be taken when the water heater is assembled, installed or maintained;
  - (l) where the value of *smart* is declared as being '1', an indication that the information on water heating energy efficiency, annual electricity and fuel consumption, as applicable, relate to enabled smart control settings only;
- in addition, for solar water heaters and heat pump water heaters:
- (m) the water heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 3 of Annex VIII;
  - (n) the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII; in addition, for solar water heaters:
  - (o) the collector aperture area in m<sup>2</sup>, to two decimal places;
  - (p) the zero-loss efficiency, to three decimal places;
  - (q) the first-order coefficient in W/(m<sup>2</sup> K), to two decimal places;
  - (r) the second-order coefficient in W/(m<sup>2</sup> K<sup>2</sup>), to three decimal places;
  - (s) the incidence angle modifier, to two decimal places;
  - (t) the storage volume in litres, rounded to the nearest integer;

(u) the pump power consumption in W, rounded to the nearest integer;  
 (v) the standby power consumption in W, to two decimal places; in addition, for heat pump water heaters:

(w) the sound power level  $L_{WA}$ , outdoors, in dB, rounded to the nearest integer.

1.2. One fiche may cover a number of water heater models supplied by the same supplier.

1.3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1.1 not already displayed on the label shall also be provided.

## 2. HOT WATER STORAGE TANKS

2.1. The information in the product fiche of the hot water storage tank shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier's name or trade mark;

(b) supplier's model identifier;

(c) the energy efficiency class of the model, determined in accordance with point 2 of Annex II;

(d) the standing loss in W, rounded to the nearest integer;

(e) the storage volume in litres, rounded to the nearest integer.

2.2. One fiche may cover a number of hot water storage tank models supplied by the same supplier.

2.3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 2.1 not already displayed on the label shall also be provided.

## 3. SOLAR DEVICES

3.1. The information in the product fiche of the solar device shall be provided in the following order and shall be included in the product brochure or other literature provided with the product (for pumps in the collector loop if applicable):

(a) supplier's name or trade mark;

(b) supplier's model identifier;

(c) the collector aperture area in  $m^2$ , to two decimal places;

(d) the zero-loss efficiency, to three decimal places;

(e) the first-order coefficient in  $W/(m^2 K)$ , to two decimal places;

(f) the second-order coefficient in  $W/(m^2 K^2)$ , to three decimal places;

(g) the incidence angle modifier, to two decimal places;

(h) the storage volume in litres, rounded to the nearest integer;

(i) the annual non-solar heat contribution  $Q_{nonsol}$  in kWh in terms of primary energy for electricity and/or in kWh in terms of GCV for fuels, for the load profiles M, L, XL and XXL under average climate conditions, rounded to the nearest integer;

(j) the pump power consumption in W, rounded to the nearest integer;

(k) the standby power consumption in W, to two decimal places;

(l) the annual auxiliary electricity consumption  $Q_{aux}$  in kWh in terms of final energy, rounded to the nearest integer.

3.2. One fiche may cover a number of solar device models supplied by the same supplier.

#### 4. PACKAGES OF WATER HEATER AND SOLAR DEVICE

The fiche for packages of water heater and solar device shall contain the elements set out in Figure 1 for evaluating the water heating energy efficiency of a package of water heater and solar device, where the following information shall be included:

- I: the value of the water heating energy efficiency of the water heater, expressed in %,
- II: the value of the mathematical expression  $(1,1 \times I - 10\%) \times II'$ , where  $Q_{ref}$  is taken from Table 3 in Annex VII and  $Q_{nonsol}$  from the product fiche of the solar device for the declared load profile M, L, XL or XXL of the water heater,
- III: the value of the mathematical expression  $(1,1 \times I - 10\%) \times II'$ , expressed in %, where  $Q_{aux}$  is taken from the product fiche of the solar device and  $Q_{ref}$  from Table 3 in Annex VII for the declared load profile M, L, XL or XXL.

Figure 1

#### Fiche for a package of water heater and solar device indicating the water heating energy efficiency of the package offered

Water heating energy efficiency of water heater ① %

Declared load profile:

---

Solar contribution  
From fiche of solar device

Auxiliary electricity

$(1,1 \times I - 10\%) \times II' =$    $=$   $+ \text{②} \%$

---

Water heating energy efficiency of package under average climate ③ %

---

Water heating energy efficiency class of package under average climate

	G	F	E	D	C	B	A	A <sup>+</sup>	A <sup>++</sup>	A <sup>+++</sup>
④ M	< 27 %	≥ 27 %	≥ 30 %	≥ 33 %	≥ 36 %	≥ 39 %	≥ 45 %	≥ 50 %	≥ 55 %	≥ 60 %
④ L	< 27 %	≥ 27 %	≥ 30 %	≥ 34 %	≥ 37 %	≥ 40 %	≥ 45 %	≥ 50 %	≥ 55 %	≥ 60 %
④ XL	< 27 %	≥ 27 %	≥ 30 %	≥ 35 %	≥ 38 %	≥ 41 %	≥ 45 %	≥ 50 %	≥ 55 %	≥ 60 %
④ XXL	< 28 %	≥ 28 %	≥ 32 %	≥ 36 %	≥ 40 %	≥ 43 %	≥ 47 %	≥ 51 %	≥ 55 %	≥ 59 %

Water heating energy efficiency under colder and warmer climate conditions

Colder:   $- 0,2 \times$    $=$   %

Warmer:   $+ 0,4 \times$    $=$   %

The energy efficiency of the package of products provided for in this fiche may not correspond to its actual energy efficiency once installed in a building, as this efficiency is influenced by further factors such as heat loss in the distribution system and the dimensioning of the products in relation to building size and characteristics.

## **ANNEX V**

### **Technical documentation**

#### **1. WATER HEATERS**

For water heaters, the technical documentation referred to in Article 3(1)(c) shall include:

- (a) the name and address of the supplier;
- (b) a description of the water heater model sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) the results of the measurements for the technical parameters specified in point 7 of Annex VII;
- (g) the results of the calculations for the technical parameters specified in point 2 of Annex VIII;
- (h) any specific precautions that shall be taken when the water heater is assembled, installed or maintained.

#### **2. HOT WATER STORAGE TANKS**

For hot water storage tanks, the technical documentation referred to in Article 3(2)(c) shall include:

- (a) the name and address of the supplier;
- (b) a description of the hot water storage tank model sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) the results of the measurements for the technical parameters specified in point 8 of Annex VII;
- (g) any specific precautions that shall be taken when the hot water storage tank is assembled, installed or maintained.

#### **3. SOLAR DEVICES**

The technical documentation of solar devices referred to in Article 3(3)(b) shall include:

- (a) the name and address of the supplier;
- (b) a description of the solar device model sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) the results of the measurements for the technical parameters as specified in point 9 of Annex VII;
- (g) any specific precautions that shall be taken when the solar device is assembled, installed or maintained.

#### **4. PACKAGES OF WATER HEATER AND SOLAR DEVICE**

For packages of water heater and solar device, the technical documentation referred to in Article 3(4) shall include:

- (a) the name and address of the supplier;

- (b) a description of the package of water heater and solar device model sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) technical parameters:
  - the water heating energy efficiency in %, rounded to the nearest integer,
  - the technical parameters set out in points 1, 2 and 3 of this Annex;
- (g) any specific precautions that shall be taken when the package of water heater and solar device is assembled, installed or maintained.

## ANNEX VI

### Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet<sup>15</sup>

#### 1. WATER HEATERS

1.1. The information referred to in Article 4(1)(b) shall be provided in the following order:

- (a) the declared load profile, expressed by the appropriate letter and typical usage in accordance with Table 3 of Annex VII;
- (b) the water heating energy efficiency class of the model, under average climate conditions, in accordance with point 1 of Annex II;
- (c) the water heating energy efficiency in %, under average climate conditions, rounded to the nearest integer and calculated in accordance with point 3 of Annex VIII;
- (d) the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under average climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII;
- (e) the sound power level, indoors, in dB, rounded to the nearest integer (for heat pump water heaters, if applicable); in addition, for solar water heaters and heat pump water heaters:
- (f) the water heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 3 of Annex VIII;
- (g) the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VIII; in addition, for solar water heaters:
- (h) the collector aperture area in m<sup>2</sup>, to two decimal places;
- (i) the storage volume in litres, rounded to the nearest integer; in addition, for heat pump water heaters:
- (j) the sound power level, outdoors, in dB, rounded to the nearest integer.

1.2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in point 1 of Annex IV.

1.3. The size and font in which the information referred in points 1.1 and 1.2 is printed or shown shall be legible.

#### 2. HOT WATER STORAGE TANKS

2.1. The information referred to in Article 4(2)(b) shall be provided in the following order:

- (a) the energy efficiency class of the model, determined in accordance with point 2 of Annex II;
- (b) the standing loss in W, rounded to the nearest integer;
- (c) the storage volume in litres, rounded to the nearest integer.

2.2. The size and font in which the information referred in point 2.1 is printed or shown shall be legible.

#### 3. PACKAGES OF WATER HEATER AND SOLAR DEVICE

3.1. The information referred to in Article 4(3)(b) shall be provided in the following order:

- (a) the water heating energy efficiency class of the model, determined in accordance with point 1 of

<sup>15</sup> In Annex VI, the title is replaced in accordance with Article 10(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

Annex II;

(b) the water heating energy efficiency in %, rounded to the nearest integer;

(c) the elements set out in Figure 1 of Annex IV.

3.2. The size and font in which the information referred in point 3.1 is printed or shown shall be legible.

## ANNEX VII

### Measurements

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements shall be made using harmonised standards the reference numbers of which have been published for this purpose in the *Official Journal of the European Union*, or using other reliable, accurate and reproducible measurement methods that take into account the generally recognised state-of-the-art methods. They shall meet the conditions and technical parameters set out in points 2 to 9.

2. General conditions for testing water heaters:

(a) measurements shall be carried out using the load profiles set out in Table 3;

(b) measurements shall be carried out using a 24-hour measurement cycle as follows:

— 00:00 to 06:59: no water draw-off,

— from 07:00: water draw-offs according to the declared load profile,

— from end of last water draw-off until 24:00: no water draw-off;

(c) the declared load profile shall be the maximum load profile or the load profile one below the maximum load profile.

### 3. Conditions for testing the smart control compliance (*smart*) of water heaters

Where the supplier deems it appropriate to declare the value of *smart* as being '1', measurements of the weekly electricity and/or fuel consumption with smart controls and the weekly electricity and/or fuel consumption without smart controls shall be carried out using a two-week measurement cycle as follows:

- days 1 to 5: random sequence of load profiles chosen from the declared load profile and the load profile one below the declared load profile, and smart control disabled,
- days 6 and 7: no water draw-offs, and smart control disabled,
- days 8 to 12: repetition of the same sequence applied for days 1 to 5, and smart control enabled,
- days 13 and 14: no water draw-offs, and smart control enabled,
- the difference between the useful energy content measured during days 1 to 7 and the useful energy content measured during days 8 to 14 shall not exceed 2 % of  $Q_{ref}$  of the declared load profile.

### 4. Conditions for testing solar water heaters

The solar collector, solar hot water storage tank, pump in the collector loop (if applicable) and heat generator shall be tested separately. Where the solar collector and solar hot water storage tank cannot be tested separately, they shall be tested in combination. The heat generator shall be tested under the conditions set out in point 2 of this Annex.

The results shall be used for the calculations set out in point 3(b) of Annex VIII under the conditions set out in Tables 4 and 5. For the purpose of establishing  $Q_{total}$  the efficiency of the heat generator using the Joule effect in electric resistance heating elements is assumed to be 100/CC, expressed in %.

### 5. Conditions for testing heat pump water heaters

- Heat pump water heaters shall be tested under the conditions set out in Table 6,
- Heat pump water heaters which use ventilation exhaust air as the heat source shall be tested under the conditions set out in Table 7.

### 6. Conditions for testing solar devices

The solar collector, solar hot water storage tank and pump in the collector loop (if applicable) shall be tested separately. Where the solar collector and solar hot water storage tank cannot be tested separately, they shall be tested in combination.

The results shall be used for the calculations of  $Q_{nonsol}$  for the load profiles M, L, XL and XXL under the average climate conditions set out in Tables 4 and 5 and  $Q_{aux}$ .

Table 4

## 7. Technical parameters of water heaters

The following parameters shall be established for water heaters:

- the daily electricity consumption  $Q_{elec}$  in kWh, rounded to three decimal places;
  - the declared load profile, expressed by the appropriate letter in accordance with Table 3 of this Annex;
  - the sound power level in dB, indoors, rounded to the nearest integer (for heat pump water heaters, if applicable); in addition, for water heaters using fossil and/or biomass fuels:
  - the daily fuel consumption  $Q_{fuel}$  in kWh in terms of GCV, rounded to three decimal places; in addition, for water heaters for which the value of smart is declared as being '1':
  - the weekly fuel consumption with smart controls  $Q_{fuel,week,smart}$  in kWh in terms of GCV, rounded to three decimal places;
  - the weekly electricity consumption with smart controls  $Q_{elec,week,smart}$  in kWh, rounded to three decimal places;
  - the weekly fuel consumption without smart controls  $Q_{fuel,week}$  in kWh in terms of GCV, rounded to three decimal places;
  - the weekly electricity consumption without smart controls  $Q_{elec,week}$  in kWh, rounded to three decimal places;
- in addition, for solar water heaters:
- the collector aperture area  $A_{sol}$  in m<sup>2</sup>, rounded to two decimal places;
  - the zero-loss efficiency  $\eta_0$ , rounded to three decimal places;
  - the first-order coefficient  $a_1$  in W/(m<sup>2</sup> K), rounded to two decimal places;
  - the second-order coefficient  $a_2$  in W/(m<sup>2</sup> K<sup>2</sup>), rounded to three decimal places;

- (m) the incidence angle modifier  $IAM$ , rounded to two decimal places;
  - (n) the pump power consumption  $sol_{pump}$  in W, rounded to two decimal places;
  - (o) the standby power consumption  $sol_{standby}$  in W, rounded to two decimal places;
- in addition, for heat pump water heaters:
- (p) the sound power level  $L_{WA}$  in dB, outdoors, rounded to the nearest integer.

### 8. Technical parameters of hot water storage tanks

The following parameters shall be established for hot water storage tanks:

- (a) the storage volume  $V$  in litres, rounded to one decimal place;
- (b) the standing loss  $S$  in W, rounded to one decimal place.

### 9. Technical parameters of solar devices

The following parameters shall be established for solar devices:

- (a) the collector aperture area  $A_{sol}$  in  $m^2$ , rounded to two decimal places;
- (b) the zero-loss efficiency  $\eta_0$ , rounded to three decimal places;
- (c) the first-order coefficient  $a_1$  in  $W/(m^2 K)$ , rounded to two decimal places;
- (d) the second-order coefficient  $a_2$  in  $W/(m^2 K^2)$ , rounded to three decimal places;
- (e) the incidence angle modifier  $IAM$ , rounded to two decimal place;
- (f) the pump power consumption  $sol_{pump}$  in W, rounded to two decimal places;
- (g) the standby power consumption,  $sol_{standby}$  in W, rounded to two decimal places.

## ANNEX VIII

### Method for calculating the water heating energy efficiency of water heaters

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, calculations shall be made using harmonised standards the reference numbers of which have been published for this purpose in the *Official Journal of the European Union*, or using other appropriate calculation methods that take into account the generally recognised state-of-the-art methods. They shall meet the technical parameters and calculations set out in points 2 to 6.

Technical parameters used for the calculations shall be measured in accordance with Annex VII.

#### 2. Technical parameters of water heaters

The following parameters shall be calculated for water heaters under average climate conditions:

- (a) the water heating energy efficiency  $\eta_{wh}$  in %, rounded to one decimal place;
- (b) the annual electricity consumption  $AEC$  in kWh in terms of final energy, rounded to the nearest integer;

in addition, for water heaters using fuels under average climate conditions:

- (c) the annual fuel consumption  $AFC$  in kWh in terms of  $GCV$ , rounded to the nearest integer; in addition, for solar water heaters under average climate conditions:

- (d) the heat generator water heating energy efficiency  $\eta_{wh,nonsol}$  in %, rounded to one decimal place;
- (e) the annual auxiliary electricity consumption  $Q_{aux}$  in kWh in terms of final energy, rounded to one decimal place;

in addition, for solar water heaters and heat pump water heaters under colder and warmer climate conditions:

- (f) the parameters set out in points (a) to (c);

in addition for solar water heaters under average, colder and warmer climate conditions:

- (g) the annual non-solar heat contribution  $Q_{nonsol}$  in kWh in terms of primary energy for electricity and/or in kWh in terms of  $GCV$  for fuels, rounded to one decimal place.

#### 3. Calculation of the water heating energy efficiency $\eta_{wh}$

- (a) Conventional water heaters and heat pump water heaters:

The water heating energy efficiency is calculated as follows:

$$\eta_{wh} = \frac{Q_{ref}}{(Q_{fuel} + CC \cdot Q_{elec})(1 - SCF \cdot smart) + Q_{cor}}$$

For water-/brine-to-water heat pump water heaters, the electricity consumption of one or more ground water pumps shall be taken into account.

- (b) Solar water heaters:

The water heating energy efficiency is calculated as follows:

$$\eta_{wh} = \frac{0,6 \cdot 366 \cdot Q_{ref}}{Q_{tota}}$$

Where:

$$Q_{\text{total}} = \frac{Q_{\text{nonsol}}}{1,1 \cdot \eta_{\text{wh,nonsol}} - 0,1} + Q_{\text{aux}} \cdot CC$$

#### 4. Calculation of the annual electricity consumption AEC and the annual fuel consumption AFC

(a) Conventional water heaters and heat pump water heaters:

The annual electricity consumption AEC in kWh in terms of final energy is calculated as follows:

$$AEC = 0,6 \cdot 366 \cdot \left( Q_{\text{elec}} \cdot (1 - SCF \cdot \text{smart}) + \frac{Q_{\text{cor}}}{CC} \right)$$

The annual fuel consumption AFC in GJ in terms of GCV is calculated as follows:

$$AFC = 0,6 \cdot 366 \cdot (Q_{\text{fuel}} \cdot (1 - SCF \cdot \text{smart}) + Q_{\text{cor}})$$

(b) Solar water heaters:

The annual electricity consumption AEC in kWh in terms of final energy is calculated as follows:

$$AEC = \frac{CC \cdot Q_{\text{elec}}}{Q_{\text{fuel}} + CC \cdot Q_{\text{elec}}} \cdot \frac{Q_{\text{total}}}{CC}$$

The annual fuel consumption AFC in GJ in terms of GCV is calculated as follows:

$$AFC = \frac{Q_{\text{fuel}}}{Q_{\text{fuel}} + CC \cdot Q_{\text{elec}}} \cdot Q_{\text{total}}$$

#### 5. Determination of the smart control factor SCF and of smart control compliance smart

(a) The smart control factor is calculated as follows:

$$SCF = 1 - \frac{Q_{\text{fuel,week,smart}} + CC \cdot Q_{\text{elec,week,smart}}}{Q_{\text{fuel,week}} + CC \cdot Q_{\text{elec,week}}}$$

(b) If  $SCF \geq 0,07$ , the value of *smart* shall be 1. In all other cases, the value of *smart* shall be 0.

#### 6. Determination of the ambient correction term $Q_{\text{cor}}$

The ambient correction term is calculated as follows:

(a) for conventional water heaters using electricity:

$$Q_{\text{cor}} = -k \cdot (CC \cdot (Q_{\text{elec}} \cdot (1 - SCF \cdot \text{smart}) - Q_{\text{ref}}))$$

(b) for conventional water heaters using fuels:

$$Q_{\text{cor}} = -k \cdot (Q_{\text{fuel}} \cdot (1 - SCF \cdot \text{smart}) - Q_{\text{ref}})$$

(c) for heat pump water heaters:

$$Q_{\text{cor}} = -k \cdot 24h \cdot P_{\text{stby}}$$

Where:

the k-values are given in Table 8 for each load profile.

*Table 8*

**k-values**

	<b>3XS</b>	<b>XXS</b>	<b>XS</b>	<b>S</b>	<b>M</b>	<b>L</b>	<b>XL</b>	<b>XXL</b>
<b>k</b>	0,23	0,23	0,23	0,23	0,23	0,23	0,23	0,0

## ANNEX IX<sup>16</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 9.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all other equivalent water heater models, hot water storage tanks models, solar device models or package of water heater and solar device models shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different equivalent models.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 9.
- (6) If the result referred to in point 5 is not achieved, the model and all other equivalent water heater models, hot water storage tanks models, solar device models or package of water heater and solar device models shall be considered not to comply with this Delegated Regulation.
- (7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being

<sup>16</sup> Annex IX is replaced in accordance with Article 10 and Annex X of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII and Annex VIII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 9 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 9**  
**Verification tolerances**

Parameters	Verification tolerances
Daily electricity consumption, $Q_{elec}$	The determined value shall not exceed the declared value by more than 5 %.
Sound power level, $L_{WA}$ , indoors and/or outdoors	The determined value shall not exceed the declared value by more than 2 dB.
Daily fuel consumption, $Q_{fuel}$	The determined value shall not exceed the declared value by more than 5 %.
Weekly fuel consumption with smart controls, $Q_{fuel,week,smart}$	The determined value shall not exceed the declared value by more than 5 %.
Weekly electricity consumption with smart controls, $Q_{elec,week,smart}$	The determined value shall not exceed the declared value by more than 5 %.
Weekly fuel consumption without smart controls, $Q_{fuel,week}$	The determined value shall not exceed the declared value by more than 5 %.
Weekly electricity consumption without smart controls, $Q_{elec,week}$	The determined value shall not exceed the declared value by more than 5 %.
Storage volume, $V$	The determined value shall not be lower than the declared value by more than 2 %.
Collector aperture area, $A_{sol}$	The determined value shall not be lower than the declared value by more than 2 %.
Pump power consumption, $sol_{pump}$	The determined value shall not exceed the declared value by more than 3 %.
Standby power consumption, $sol_{standby}$	The determined value shall not exceed the declared value by more than 5 %.
Standing loss, $S$	The determined value shall not exceed the declared value by more than 5 %.

**ANNEX X<sup>17</sup>****Information to be provided in the case of sale, hire or hire-purchase through the internet**

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;
- (b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile mag-

<sup>17</sup> Annex IX is added in accordance with Article 10(4) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

nification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## **DELEGATED REGULATION (EU) 811/2013 of 18 February 2013 supplementing Directive 2010/30/EU with regard to the energy labelling of space heaters, combination heaters, packages of space heater, temperature control and solar device and packages of combination heater, temperature control and solar device**

Incorporated and adapted by Ministerial Council Decision 2014/02/MC-EnC of 23 September 2014 adapting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2014/02/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products that have a significant potential for energy savings but exhibit a wide disparity in performance levels with equivalent functionality.

(2) The energy consumed by space heaters and by combination heaters providing space and water heating, accounts for a significant share of the total energy demand in the Union. Space heaters and combination heaters with equivalent functionality exhibit a wide disparity in terms of energy efficiency. The scope for reducing their energy consumption is significant and includes combining them with appropriate temperature controls and solar devices. Space heaters, combination heaters and packages of such heaters in combination with temperature controls and solar devices should therefore be covered by energy labelling requirements.

(3) Space heaters and combination heaters that are designed for using gaseous or liquid fuels predominantly (more than 50 %) produced from biomass have specific technical characteristics which require further technical, economic and environmental analyses. Depending on the outcome of the analyses, energy labelling requirements for those heaters should be set at a later stage, if appropriate.

(4) Harmonised provisions should be laid down on labelling and standard product information regarding the energy efficiency of space heaters and combination heaters in order to provide incentives for manufacturers to improve the energy efficiency of these heaters, to encourage end-users to purchase energy-efficient products and to contribute to the functioning of the internal market.

(5) As regards significant energy and cost savings for each type of heater, this Regulation should introduce a new labelling scale from A++ to G for the space heating function of boiler space heaters, cogeneration space heaters, heat pump space heaters, boiler combination heaters and heat pump combination heaters. While classes A to G cover the various types of conventional boilers when not combined with cogeneration or renewable energy technologies, classes A+ and A++ should promote the use of cogeneration and renewable energy sources.

(6) Furthermore, a new A-G labelling scale should be introduced for the water heating function of boiler combination heaters and heat pump combination heaters, in line with Commission Delegated Regulation

(EU) No 812/2013 of 18 February 2013 supplementing Directive 2010/30/EU of the European Parliament and of the Council with regard to the energy labelling of water heaters, hot water storage tanks and packages of water heater and solar device.

(7) Further classes A+++ and A+ should be added after four years to the seasonal space heating and water heating classes, respectively, unless the review of the Regulation proves otherwise, to accelerate the market penetration of high-efficiency space heaters and combination heaters using renewable energy sources.

(8) This Regulation should ensure that consumers get more accurate comparative information about the performance of heat pump heaters, based on a seasonal efficiency calculation and measurement method for three European climate zones. The Commission mandated the European standardisation bodies to investigate whether a similar method should be developed for other heaters. European standardised heating seasons for boiler heaters, cogeneration heaters and solar heaters could be considered in the review of this Regulation.

(9) The sound power level of a heater can be an important consideration for end-users. Information on sound power levels should be included on the labels of space heaters and combination heaters.

(10) The combined effect of this Regulation and Commission Regulation (EU) No 813/2013 of 2 August 2013 implementing Directive 2009/125/EC of the European Parliament and of the Council with regard to ecodesign requirements for space heaters and combination heaters is expected to result in estimated annual energy savings of around 1 900 PJ (about 45 Mtoe) by 2020, corresponding to about 110 Mt CO<sub>2</sub> emissions, compared to what would happen if no measures were taken.

(11) The information provided on the label should be obtained through reliable, accurate and reproducible measurement and calculation procedures that take into account recognised state-of-the-art measurement and calculation methods including, where available, harmonised standards adopted by the European standardisation bodies under a request from the Commission, in accordance with the procedures laid down in the Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations and of rules on Information Society services, for the purpose of establishing ecodesign requirements.

(12) This Regulation should specify a uniform design and content of product labels for space heaters and combination heaters.

(13) In addition, this Regulation should specify requirements for the product fiche and technical documentation for space heaters and combination heaters.

(14) Moreover, this Regulation should specify requirements for the information to be provided for any form of distance selling of space heaters and combination heaters and in any advertisements and technical promotional material for such heaters.

(15) In addition to the product labels and fiches for stand-alone space heaters and combination heaters laid down in this Regulation, package labels and fiches based on product fiches from suppliers should ensure that the end-user has easy access to information on the energy performance of packages of heaters combined with solar devices and/or temperature controls. The most efficient class A+++ may be reached by such a package.

(16) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress,

## **Article 1**

### **Subject matter and scope**

1. This Regulation establishes requirements for the energy labelling of, and the provision of supplementary product information on, space heaters and combination heaters with a rated heat output  $\leq 70$  kW, packages of space heater  $\leq 70$  kW, temperature control and solar device and packages of combination heater  $\leq 70$  kW, temperature control and solar device.

2. This Regulation shall not apply to:

- (a) heaters specifically designed for using gaseous or liquid fuels predominantly produced from biomass;
- (b) heaters using solid fuels;
- (c) heaters within the scope of Directive 2010/75/EU of the European Parliament and of the Council
- (d) heaters generating heat only for the purpose of providing hot drinking or sanitary water;
- (e) heaters for heating and distributing gaseous heat transfer media such as vapour or air;
- (f) cogeneration space heaters with a maximum electrical capacity of 50 kW or above.

## **Article 2**

### **Definitions**

In addition to the definitions set out in Article 2 of Directive 2010/30/EC, the following definitions shall apply for the purposes of this Regulation:

- (1) 'heater' means a space heater or combination heater;
- (2) 'space heater' means a device that
  - (a) provides heat to a water-based central heating system in order to reach and maintain at a desired level the indoor temperature of an enclosed space such as a building, a dwelling or a room; and
  - (b) is equipped with one or more heat generators;
- (3) 'combination heater' means a space heater that is designed to also provide heat to deliver hot drinking or sanitary water at given temperature levels, quantities and flow rates during given intervals, and is connected to an external supply of drinking or sanitary water;
- (4) 'water-based central heating system' means a system using water as a heat transfer medium to distribute centrally generated heat to heat emitters for the space heating of buildings, or parts thereof;
- (5) 'heat generator' means the part of a heater that generates the heat using one or more of the following processes:
  - (a) combustion of fossil fuels and/or biomass fuels;
  - (b) use of the Joule effect in electric resistance heating elements;
  - (c) capture of ambient heat from an air source, water source or ground source, and/or waste heat;
- (6) 'rated heat output' (Prated) means the declared heat output of a heater when providing space heating and, if applicable, water heating at standard rating conditions, expressed in kW; for heat pump space heaters and heat pump combination heaters the standard rating conditions for establishing the rated

heat output are the reference design conditions, as set out in Annex VII, Table 10;

(7) 'standard rating conditions' means the operating conditions of heaters under average climate conditions for establishing the rated heat output, seasonal space heating energy efficiency, water heating energy efficiency and sound power level;

(8) 'biomass' means the biodegradable fraction of products, waste and residues from biological origin from agriculture (including vegetal and animal substances), forestry and related industries including fisheries and aquaculture, as well as the biodegradable fraction of industrial and municipal waste;

(9) 'biomass fuel' means a gaseous or liquid fuel produced from biomass;

(10) 'fossil fuel' means a gaseous or liquid fuel of fossil origin;

(11) 'cogeneration space heater' means a space heater simultaneously generating heat and electricity in a single process;

(12) 'temperature control' means the equipment that interfaces with the end-user regarding the values and timing of the desired indoor temperature, and communicates relevant data to an interface of the heater such as a central processing unit, thus helping to regulate the indoor temperature(s);

(13) 'solar device' means a solar-only system, a solar collector, a solar hot water storage tank or a pump in the collector loop, which are placed on the market separately;

(14) 'solar-only system' means a device that is equipped with one or more solar collectors and solar hot water storage tanks and possibly pumps in the collector loop and other parts, which is placed on the market as one unit and is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(15) 'solar collector' means a device designed to absorb global solar irradiance and to transfer the heat energy so produced to a fluid passing through it;

(16) 'hot water storage tank' means a vessel for storing hot water for water and/or space heating purposes, including any additives, which is not equipped with any heat generator except possibly one or more back-up immersion heaters;

(17) 'solar hot water storage tank' means a hot water storage tank storing heat energy produced by one or more solar collectors;

(18) 'back-up immersion heater' means a Joule effect electric resistance heater that is part of a hot water storage tank and generates heat only when the external heat source is disrupted (including during maintenance periods) or out of order, or that is part of a solar hot water storage tank and provides heat when the solar heat source is not sufficient to satisfy required comfort levels;

(19) 'package of space heater, temperature control and solar device' means a package offered to the end-user containing one or more space heaters combined with one or more temperature controls and/or one or more solar devices;

(20) 'package of combination heater, temperature control and solar device' means a package offered to the end-user containing one or more combination heaters combined with one or more temperature controls, and/or one or more solar devices;

(21) 'seasonal space heating energy efficiency' ( $\eta_s$ ) means the ratio between the space heating demand for a designated heating season, supplied by a space heater, a combination heater, a package of space heater, temperature control and solar device or a package of combination heater, temperature control

and solar device, and the annual energy consumption required to meet this demand, expressed in %;

(22) 'water heating energy efficiency' ( $\eta_{wh}$ ) means the ratio between the useful energy in the drinking or sanitary water provided by a combination heater or a package of combination heater, temperature control and solar device, and the energy required for its generation, expressed in %;

(23) 'sound power level' ( $L_{WA}$ ) means the A-weighted sound power level, indoors and/or outdoors, expressed in dB.

For the purposes of Annexes II to VIII, additional definitions are set out in Annex I.

### Article 3

#### Responsibilities of suppliers and timetable

1. From **1 January 2018** suppliers placing space heaters on the market and/or putting them into service, including those integrated in packages of space heater, temperature control and solar device, shall ensure that:

(a) a printed label complying with the format and content of information set out in point 1.1 of Annex III is provided for each space heater conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II, whereby: for heat pump space heaters, the printed label is provided at least in the packaging of the heat generator; for space heaters intended for use in packages of space heater, temperature control and solar device, a second label complying with the format and content of information set out in point 3 of Annex III is provided for each space heater;

(b) a product fiche, as set out in point 1 of Annex IV, is provided for each space heater, whereby: for heat pump space heaters, the product fiche is provided at least for the heat generator; for space heaters intended for use in packages of space heater, temperature control and solar device, a second fiche, as set out in point 5 of Annex IV, is provided;

(c) the technical documentation, as set out in point 1 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific space heater model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific space heater model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model

**(f) an electronic label in the format and containing the information set out in point 1.1 of Annex III is made available to dealers for each space heater model conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;**

**(g) an electronic product fiche as set out in point 1 of Annex IV is made available to dealers for each space heater model, whereby for heat pump space heaters models, the electronic product fiche is made available to dealers at least for the heat generator.<sup>1</sup>**

<sup>1</sup> Article 3, paragraph 1, points (f) and (g) are added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

From 26 September 2019 a printed label complying with the format and content of information set out in point 1.2 of Annex III shall be provided for each space heater conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II, whereby: for heat pump space heaters, the printed label shall be provided at least in the packaging of the heat generator.

**From 1 January 2020 an electronic label in the format and containing the information set out in point 1.2 of Annex III shall be made available to dealers for each space heater model conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II.<sup>2</sup>**

2. From **1 January 2018** suppliers placing combination heaters on the market and/or putting them into service, including those integrated in packages of combination heater, temperature control and solar device, shall ensure that:

(a) a printed label complying with the format and content of information set out in point 2.1 of Annex III is provided for each combination heater conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II, whereby: for heat pump combination heaters, the printed label is provided at least in the packaging of the heat generator; for combination heaters intended for use in packages of combination heater, temperature control and solar device, a second label complying with the format and content of information set out in point 4 of Annex III is provided for each combination heater;

(b) a product fiche, as set out in point 2 of Annex IV, is provided for each combination heater, whereby: for heat pump combination heaters, the product fiche is provided at least for the heat generator; for combination heaters intended for use in packages of combination heater, temperature control and solar device, a second fiche, as set out in point 6 of Annex IV, is provided;

(c) the technical documentation, as set out in point 2 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific combination heater model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific combination heater model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model

**(f) an electronic label in the format and containing the information set out in point 2.1 of Annex III is made available to dealers for each combination heater model conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;**

**(g) an electronic product fiche as set out in point 2 of Annex IV is made available to dealers for each combination heater model, whereby for heat pump combination heaters models, the electronic product fiche is made available to dealers at least for the heat generator.<sup>3</sup>**

From 26 September 2019 a printed label complying with the format and content of information set out in point 2.2 of Annex III shall be provided for each combination heater conforming to the seasonal space

<sup>2</sup> Added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>3</sup> Article 3, paragraph 2, points (f) and (g) are added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II, whereby: for heat pump combination heaters, the printed label shall be provided at least in the packaging of the heat generator.

**From 1 January 2020 an electronic label in the format and containing the information set out in point 2.2 of Annex III shall be made available to dealers for each combination heater model conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II. <sup>4</sup>**

3. From **1 January 2018** suppliers placing temperature controls on the market and/or putting them into service shall ensure that:

(a) a product fiche, as set out in point 3 of Annex IV, is provided;

(b) the technical documentation, as set out in point 3 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

**(c) an electronic product fiche, as set out in point 3 of Annex IV, is made available to dealers for each temperature control model. <sup>5</sup>**

4. From **1 January 2018** suppliers placing solar devices on the market and/or putting them into service shall ensure that:

(a) a product fiche, as set out in point 4 of Annex IV, is provided;

(b) the technical documentation, as set out in point 4 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

**(c) an electronic product fiche, as set out in point 4 of Annex IV, is made available to dealers for each solar device model.<sup>6</sup>**

5. From **1 January 2018** suppliers placing packages of space heater, temperature control and solar device on the market and/or putting them into service shall ensure that:

(a) a printed label complying with the format and content of information set out in point 3 of Annex III is provided for each package of space heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;

(b) a product fiche, as set out in point 5 of Annex IV, is provided for each package of space heater, temperature control and solar device;

(c) the technical documentation, as set out in point 5 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific package of space heater, temperature control and solar device model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific package of space heater, temperature control and solar device model and describing its specific technical parameters includes a reference to the seasonal

<sup>4</sup> Added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>5</sup> Article 3, paragraph 3, point (c) is added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>6</sup> Article 3, paragraph 4, point (c) is added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

space heating energy efficiency class under average climate conditions for that model;

**(f) an electronic label in the format and containing the information set out in point 3 of Annex III is made available to dealers for each model comprising a package of space heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes set out in point 1 of Annex II;**

**(g) an electronic product fiche as set out in point 5 of Annex IV is made available to dealers for each model comprising a package of space heater, temperature control and solar device.<sup>7</sup>**

6. From **1 January 2018** suppliers placing packages of combination heater, temperature control and solar device on the market and/or putting them into service shall ensure that:

(a) a printed label complying with the format and content of information set out in point 4 of Annex III is provided for each package of combination heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;

(b) a product fiche, as set out in point 6 of Annex IV, is provided for each package of combination heater, temperature control and solar device;

(c) the technical documentation, as set out in point 6 of Annex V, is provided on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement relating to a specific package of combination heater, temperature control and solar device model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

(e) any technical promotional material concerning a specific package of combination heater, temperature control and solar device model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

**(f) an electronic label in the format and containing the information set out in point 4 of Annex III is made available to dealers for each model comprising a package of combination heater, temperature control and solar device conforming to the seasonal space heating energy efficiency classes and water heating energy efficiency classes set out in points 1 and 2 of Annex II;**

**(g) an electronic product fiche as set out in point 6 of Annex IV is made available to dealers for each model comprising a package of combination heater, temperature control and solar device.<sup>8</sup>**

<sup>7</sup> Article 3, paragraph 5, points (f) and (g) are added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>8</sup> Article 3, paragraph 6, points (f) and (g) are added in accordance with Article 9(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

## **Article 4**

### **Responsibilities of dealers**

1. Dealers of space heaters shall ensure that:

(a) each space heater, at the point of sale, bears the label provided by suppliers in accordance with Article 3(1), as set out in point 1 of Annex III, on the outside of the front of the appliance, in such a way as to be clearly visible;

**(b) space heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the space heater displayed, are marketed with the information provided by the suppliers in accordance with point 1 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;<sup>9</sup>**

(c) any advertisement relating to a specific space heater model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific space heater model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model.

2. Dealers of combination heaters shall ensure that:

(a) each combination heater, at the point of sale, bears the label provided by suppliers in accordance with Article 3(2), as set out in point 2 of Annex III, on the outside of the front of the appliance, in such a way as to be clearly visible;

**(b) combination heaters offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the combination heater displayed, are marketed with the information provided by the suppliers in accordance with point 2 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;<sup>10</sup>**

(c) any advertisement relating to a specific combination heater model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific combination heater model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model.

3. Dealers of packages of space heater, temperature control and solar device shall ensure, based on the label and fiches provided by suppliers in accordance with Article 3(1), (3), (4) and (5), that:

(a) any offer for a specific package includes the seasonal space heating energy efficiency and the seasonal space heating energy efficiency class for that package under average, colder or warmer climate conditions, as applicable, by displaying with the package the label set out in point 3 of Annex III and providing the fiche set out in point 5 of Annex IV, duly filled in according to the characteristics of that package;

**(b) packages of space heater, temperature control and solar device offered for sale, hire or**

<sup>9</sup> Article 4, paragraph 1, point (b) is replaced in accordance with Article 9(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>10</sup> Article 4, paragraph 2, point (b) is replaced in accordance with Article 9(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**hire-purchase, where the end-user cannot be expected to see the package of space heater, temperature control and solar device displayed, are marketed with the information provided in accordance with point 3 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;**<sup>11</sup>

(c) any advertisement relating to a specific package of space heater, temperature control and solar device model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific package of space heater, temperature control and solar device model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class under average climate conditions for that model.

4. Dealers of packages of combination heater, temperature control and solar device shall ensure, based on the label and fiches provided by suppliers in accordance with Article 3(2), (3), (4) and (6), that:

(a) any offer for a specific package of combination heater, temperature control and solar device includes the seasonal space heating energy efficiency, the water heating energy efficiency, the seasonal space heating energy efficiency class and the water heating energy efficiency class for that package under average, colder or warmer climate conditions, as applicable, by displaying with the package the label set out in point 4 of Annex III and providing the fiche set out in point 6 of Annex IV, duly filled in according to the characteristics of that package;

**(b) packages of combination heater, temperature control and solar device offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the package of combination heater, temperature control and solar device displayed, are marketed with the information provided in accordance with point 4 of Annex VI, except where the offer is made through the internet, in which case the provisions in Annex IX shall apply;**<sup>12</sup>

(c) any advertisement relating to a specific package of combination heater, temperature control and solar device model and containing energy-related or price information includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model;

(d) any technical promotional material concerning a specific package of combination heater, temperature control and solar device model and describing its specific technical parameters includes a reference to the seasonal space heating energy efficiency class and water heating energy efficiency class under average climate conditions for that model.

## **Article 5**

### **Measurement and calculation methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement and calculation methods which take into account the recognised state-of-the-art measurement and calculation methods, as set out in Annex VII.

<sup>11</sup> Article 4, paragraph 3, point (b) is replaced in accordance with Article 9(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>12</sup> Article 4, paragraph 4, point (b) is replaced in accordance with Article 9(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**Article 6****Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure set out in Annex VIII when assessing the conformity of the declared seasonal space heating energy efficiency class, water heating energy efficiency class, seasonal space heating energy efficiency, water heating energy efficiency and sound power level of heaters.

**Article 7****Review**<...><sup>13</sup>**Article 8****Entry into force and application**

**This Regulation shall apply from 1 January 2016<sup>14</sup>.**

**The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation<sup>15</sup>.**

**This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties<sup>16</sup>.**

## ANNEX I

### Definitions applicable for Annexes II to VIII

For the purposes of Annexes II to VIII the following definitions shall apply:

#### *Definitions related to heaters:*

- (1) 'boiler space heater', for the purposes of Figures 1 to 4 in Annex IV referred to as 'boiler', means a space heater that generates heat using the combustion of fossil fuels and/or biomass fuels, and/or using the Joule effect in electric resistance heating elements;
- (2) 'boiler combination heater', for the purposes of Figures 1 to 4 in Annex IV referred to as 'boiler', means a boiler space heater that is designed to also provide heat to deliver hot drinking or sanitary water at given temperature levels, quantities and flow rates during given intervals, and is connected to an external supply of drinking or sanitary water;
- (3) 'heat pump space heater', for the purposes of Figures 1 and 3 in Annex IV referred to as 'heat pump', means a space heater using ambient heat from an air source, water source or ground source, and/or waste heat for heat generation; a heat pump space heater may be equipped with one or more supplementary heaters using the Joule effect in electric resistance heating elements or the combustion of fossil and/or biomass fuels;
- (4) 'heat pump combination heater', for the purposes of Figures 1 and 3 in Annex IV referred to as 'heat pump', means a heat pump space heater that is designed to also provide heat to deliver hot drinking or sanitary water at given temperature levels, quantities and flow rates during given intervals, and is connected to an external supply of drinking or sanitary water;
- (5) 'supplementary heater' means a non-preferential heater that generates heat in cases where the heat demand is greater than the rated heat output of the preferential heater;
- (6) 'rated heat output of supplementary heater' ( $P_{sup}$ ) means the declared heat output of the supplementary heater when providing space heating and, if applicable, water heating at standard rating conditions, expressed in kW; if the supplementary heater is a heat pump space heater or heat pump combination heater, the standard rating condition for establishing the rated heat output of supplementary heater is the outdoor temperature  $T_j = + 7 \text{ }^\circ\text{C}$ ;
- (7) 'outdoor temperature' ( $T_j$ ) means the dry bulb outdoor air temperature, expressed in degrees Celsius; the relative humidity may be indicated by a corresponding wet bulb temperature;
- (8) 'annual energy consumption' ( $Q_{HE}$ ) means the annual energy consumption of a heater required for space heating to meet the reference annual heating demand for a designated heating season, expressed in kWh in terms of the final energy and/or in GJ in terms of GCV;
- (9) 'standby mode' means a condition where the heater is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only the following functions, which may persist for an indefinite time: reactivation function, or reactivation function and only an indication of enabled reactivation function, and/or information or status display;
- (10) 'standby mode power consumption' ( $P_{SB}$ ) means the power consumption of a heater in standby mode, expressed in kW;

(11) 'conversion coefficient' (CC) means a coefficient reflecting the estimated 40 % average EU generation efficiency referred to in Directive 2012/27/EU of the European Parliament and of the Council; the value of the conversion coefficient is  $CC = 2,5$ ;

(12) 'gross calorific value' (GCV) means the total amount of heat released by a unit quantity of fuel when it is burned completely with oxygen and when the products of combustion are returned to ambient temperature; this quantity includes the condensation heat of any water vapour contained in the fuel and of the water vapour formed by the combustion of any hydrogen contained in the fuel;

*Definitions related to boiler space heaters, boiler combination heaters and cogeneration space heaters:*

(13) 'seasonal space heating energy efficiency in active mode' ( $\eta_{son}$ ) means

- for fuel boiler space heaters and fuel boiler combination heaters, a weighted average of the useful efficiency at rated heat output and the useful efficiency at 30 % of the rated heat output, expressed in %;
- for electric boiler space heaters and electric boiler combination heaters, the useful efficiency at rated heat output, expressed in %;
- for cogeneration space heaters not equipped with supplementary heaters, the useful efficiency at rated heat output, expressed in %;
- for cogeneration space heaters equipped with supplementary heaters, a weighted average of the useful efficiency at rated heat output with supplementary heater disabled, and the useful efficiency at rated heat output with supplementary heater enabled, expressed in %;

(14) 'useful efficiency' ( $\eta$ ) means the ratio of the useful heat output and the total energy input of a boiler space heater, boiler combination heater or cogeneration space heater, expressed in %, whereby the total energy input is expressed in terms of GCV and/or in terms of final energy multiplied by CC;

(15) 'useful heat output' ( $P$ ) means the heat output of a boiler space heater, boiler combination heater or cogeneration space heater transmitted to the heat carrier, expressed in kW;

(16) 'electrical efficiency' ( $\eta_{el}$ ) means the ratio of the electricity output and the total energy input of a cogeneration space heater, expressed in %, whereby the total energy input is expressed in terms of GCV and/or in terms of final energy multiplied by CC;

(17) 'ignition burner power consumption' ( $P_{ign}$ ) means the power consumption of a burner intended to ignite the main burner, expressed in W in terms of GCV;

(18) 'condensing boiler' means a boiler space heater or boiler combination heater in which, under normal operating conditions and at given operating water temperatures, the water vapour in the combustion products is partially condensed, in order to make use of the latent heat of this water vapour for heating purposes;

(19) 'auxiliary electricity consumption' means the annual electricity required for the designated operation of a boiler space heater, boiler combination heater or cogeneration space heater, calculated from the electric power consumption at full load ( $el_{max}$ ), at part load ( $el_{min}$ ), in standby mode and default operating hours at each mode, expressed in kWh in terms of final energy;

(20) 'standby heat loss' ( $P_{stby}$ ) means the heat loss of a boiler space heater, boiler combination heater or cogeneration space heater in operating modes without heat demand, expressed in kW;

*Definitions related to heat pump space heaters and heat pump combination heaters:*

(21) 'rated coefficient of performance' ( $COP_{rated}$ ) or 'rated primary energy ratio' ( $PER_{rated}$ ) means the declared heat capacity, expressed in kW, divided by the energy input, expressed in kW in terms of GCV and/or in kW in terms of final energy multiplied by CC, for heating provided at standard rating conditions;

(22) 'reference design conditions' means the combination of the reference design temperature, the maximum bivalent temperature and the maximum operation limit temperature, as set out in Annex VII, Table 10;

(23) 'reference design temperature' ( $T_{designh}$ ) means the outdoor temperature, expressed in degrees Celsius, as set out in Annex VII, Table 10, at which the part load ratio is equal to 1;

(24) 'part load ratio' ( $pl(T_j)$ ) means the outdoor temperature minus 16 °C divided by the reference design temperature minus 16 °C;

(25) 'heating season' means a set of operating conditions for average, colder and warmer climate conditions, describing per bin the combination of outdoor temperatures and the number of hours these temperatures occur per season;

(26) 'bin' ( $bin_j$ ) means a combination of an outdoor temperature and bin hours, as set out in Annex VII, Table 12;

(27) 'bin hours' ( $H_j$ ) means the hours per heating season, expressed in hours per year, at which an outdoor temperature occurs for each bin, as set out in Annex VII, Table 12;

(28) 'part load for heating' ( $Ph(T_j)$ ) means the heating load at a specific outdoor temperature, calculated as the design load multiplied by the part load ratio and expressed in kW;

(29) 'seasonal coefficient of performance' ( $SCOP$ ) or 'seasonal primary energy ratio' ( $SPER$ ) means the overall coefficient of performance of a heat pump space heater or heat pump combination heater using electricity or the overall primary energy ratio of a heat pump space heater or heat pump combination heater using fuels, representative of the designated heating season, calculated as the reference annual heating demand divided by the annual energy consumption;

(30) 'reference annual heating demand' ( $Q_H$ ) means the reference heating demand for a designated heating season, to be used as the basis for calculating  $SCOP$  or  $SPER$  and calculated as the product of the design load for heating and the annual equivalent active mode hours, expressed in kWh;

(31) 'annual equivalent active mode hours' ( $H_{HE}$ ) means the assumed annual number of hours a heat pump space heater or heat pump combination heater has to provide the design load for heating to satisfy the reference annual heating demand, expressed in h;

(32) 'active mode coefficient of performance' ( $SCOP_{on}$ ) or 'active mode primary energy ratio' ( $SPER_{on}$ ) means the average coefficient of performance of the heat pump space heater or heat pump combination heater using electricity in active mode or the average primary energy ratio of the heat pump space heater or heat pump combination heater using fuels in active mode for the designated heating season;

(33) 'supplementary capacity for heating' ( $sup(T_j)$ ) means the rated heat output  $P_{sup}$  of a supplementary heater that supplements the declared capacity for heating to meet the part load for heating, if the declared capacity for heating is less than the part load for heating, expressed in kW;

(34) 'bin-specific coefficient of performance' ( $COP_{bin}(T_j)$ ) or 'bin-specific primary energy ratio' ( $PER_{bin}(T_j)$ ) means the coefficient of performance of the heat pump space heater or heat pump combination heater

using electricity or primary energy ratio of the heat pump space heater or heat pump combination heater using fuel specific for every bin in a season, derived from the part load for heating, declared capacity for heating and declared coefficient of performance for specified bins and calculated for other bins by interpolation or extrapolation, corrected where necessary by the degradation coefficient;

(35) 'declared capacity for heating' ( $Pdh(T_i)$ ) means the heating capacity a heat pump space heater or heat pump combination heater is able to deliver, for an outdoor temperature, expressed in kW;

(36) 'capacity control' means the ability of a heat pump space heater or heat pump combination heater to change its capacity by changing the volumetric flow rate of at least one of the fluids needed to operate the refrigeration cycle, to be indicated as 'fixed' if the volumetric flow rate cannot be changed or 'variable' if the volumetric flow rate is changed or varied in series of two or more steps;

(37) 'design load for heating' ( $Pdesignh$ ) means the rated heat output ( $Prated$ ) of a heat pump space heater or heat pump combination heater at the reference design temperature, whereby the design load for heating is equal to the part load for heating with outdoor temperature equal to reference design temperature, expressed in kW;

(38) 'declared coefficient of performance' ( $COPd(T_i)$ ) or 'declared primary energy ratio' ( $PERd(T_i)$ ) means the coefficient of performance or primary energy ratio at a limited number of specified bins;

(39) 'bivalent temperature' ( $T_{bin}$ ) means the outdoor temperature declared by the supplier for heating at which the declared capacity for heating equals the part load for heating and below which the declared capacity for heating requires supplementary capacity for heating to meet the part load for heating, expressed in degrees Celsius;

(40) 'operation limit temperature' ( $TOL$ ) means the outdoor temperature declared by the supplier for heating, below which the air-to-water heat pump space heater or air-to-water heat pump combination heater will not be able to deliver any heating capacity and the declared capacity for heating is equal to zero, expressed in degrees Celsius;

(41) 'heating water operation limit temperature' ( $WTOL$ ) means the outlet water temperature declared by the supplier for heating, above which the heat pump space heater or heat pump combination heater will not be able to deliver any heating capacity and the declared capacity heating is equal to zero, expressed in degrees Celsius;

(42) 'cycling interval capacity for heating' ( $Pcyc$ ) means the integrated heating capacity over the cycling test interval for heating, expressed in kW;

(43) 'cycling interval efficiency' ( $COPcyc$  or  $PERcyc$ ) means the average coefficient of performance or average primary energy ratio over the cycling test interval, calculated as the integrated heating capacity over the interval, expressed in kWh, divided by the integrated energy input over that same interval, expressed in kWh in terms of GCV and/or in kWh in terms of final energy multiplied by CC;

(44) 'degradation coefficient' ( $Cdh$ ) means the measure of efficiency loss due to cycling of a heat pump space heater or heat pump combination heater; if  $Cdh$  is not determined by measurement then the default degradation coefficient is  $Cdh = 0,9$ ;

(45) 'active mode' means the condition corresponding to the hours with a heating load for the enclosed space and activated heating function; this condition may involve cycling of the heat pump space heater or heat pump combination heater to reach or maintain a required indoor air temperature;

(46) 'off mode' means a condition in which the heat pump space heater or heat pump combination

heater is connected to the mains power source and is not providing any function, including conditions providing only an indication of off mode condition and conditions providing only functionalities intended to ensure electromagnetic compatibility pursuant to Directive 2004/108/EC of the European Parliament and of the Council <sup>(2)</sup>;

(47) 'thermostat-off mode' means the condition corresponding to the hours with no heating load and activated heating function, whereby the heating function is switched on but the heat pump space heater or heat pump combination heater is not operational; cycling in active mode is not considered as thermostat-off mode;

(48) 'crankcase heater mode' means the condition in which a heating device is activated to avoid the refrigerant migrating to the compressor so as to limit the refrigerant concentration in oil when the compressor is started;

(49) 'off mode power consumption' ( $P_{OFF}$ ) means the power consumption of a heat pump space heater or heat pump combination heater in off mode, expressed in kW;

(50) 'thermostat-off mode power consumption' ( $P_{TO}$ ) means the power consumption of the heat pump space heater or heat pump combination heater while in thermostat-off mode, expressed in kW;

(51) 'crankcase heater mode power consumption' ( $P_{CK}$ ) means the power consumption of the heat pump space heater or heat pump combination heater while in crankcase heater mode, expressed in kW;

(52) 'low-temperature heat pump' means a heat pump space heater that is specifically designed for low-temperature application, and that cannot deliver heating water with an outlet temperature of 52 °C at an inlet dry (wet) bulb temperature of – 7 °C (– 8 °C) in the reference design conditions for average climate;

(53) 'low-temperature application' means an application where the heat pump space heater delivers its declared capacity for heating at an indoor heat exchanger outlet temperature of 35 °C;

(54) 'medium-temperature application' means an application where the heat pump space heater or heat pump combination heater delivers its declared capacity for heating at an indoor heat exchanger outlet temperature of 55 °C;

#### *Definitions related to water heating in combination heaters:*

(55) 'load profile' means a given sequence of water draw-offs, as specified in Annex VII, Table 15; each combination heater meets at least one load profile;

(56) 'water draw-off' means a given combination of useful water flow rate, useful water temperature, useful energy content and peak temperature, as specified in Annex VII, Table 15;

(57) 'useful water flow rate' ( $f$ ) means the minimum flow rate, expressed in litres per minute, for which hot water is contributing to the reference energy, as specified in Annex VII, Table 15;

(58) 'useful water temperature' ( $T_m$ ) means the water temperature, expressed in degrees Celsius, at which hot water starts contributing to the reference energy, as specified in Annex VII, Table 15;

(59) 'useful energy content' ( $Q_{tap}$ ) means the energy content of hot water, expressed in kWh, provided at a temperature equal to, or above, the useful water temperature, and at water flow rates equal to, or above, the useful water flow rate, as specified in Annex VII, Table 15;

(60) 'energy content of hot water' means the product of the specific heat capacity of water, the average temperature difference between the hot water output and cold water input, and the total mass of the

hot water delivered;

(61) 'peak temperature' ( $T_p$ ) means the minimum water temperature, expressed in degrees Celsius, to be achieved during water draw-off, as specified in Annex VII, Table 15;

(62) 'reference energy' ( $Q_{ref}$ ) means the sum of the useful energy content of water draw-offs, expressed in kWh, in a particular load profile, as specified in Annex VII, Table 15;

(63) 'maximum load profile' means the load profile with the greatest reference energy that a combination heater is able to provide while fulfilling the temperature and flow rate conditions of that load profile;

(64) 'declared load profile' means the load profile applied when determining water heating energy efficiency;

(65) 'daily electricity consumption' ( $Q_{elec}$ ) means the consumption of electricity for water heating over 24 consecutive hours under the declared load profile, expressed in kWh in terms of final energy;

(66) 'daily fuel consumption' ( $Q_{fuel}$ ) means the consumption of fuels for water heating over 24 consecutive hours under the declared load profile, expressed in kWh in terms of GCV and, for the purposes of point 5(f) in Annex VII, expressed in GJ in terms of GCV;

(67) 'annual electricity consumption' (AEC) means the annual electricity consumption of a combination heater for water heating under the declared load profile and under given climate conditions, expressed in kWh in terms of final energy;

(68) 'annual fuel consumption' (AFC) means the annual fossil fuel and/or biomass fuel consumption of a combination heater for water heating under the declared load profile and under given climate conditions, expressed in GJ in terms of GCV;

#### *Definitions related to solar devices:*

(69) 'annual non-solar heat contribution' ( $Q_{nonsol}$ ), means the annual contribution of electricity (expressed in kWh in terms of primary energy) and/or fuels (expressed in kWh in terms of GCV) to the useful heat output of a package of combination heater, temperature control and solar device, taking into account the annual amount of heat captured by the solar collector and the heat losses of the solar hot water storage tank;

(70) 'collector aperture area' ( $A_{sol}$ ), for the purposes of Figures 1 to 4 in Annex IV referred to as 'collector size', means the maximum projected area through which unconcentrated solar radiation enters the collector, expressed in m<sup>2</sup>;

(71) 'collector efficiency' ( $\eta_{col}$ ) means the efficiency of the solar collector at a temperature difference between the solar collector and the surrounding air of 40 K and a global solar irradiance of 1 000 W/m<sup>2</sup>, expressed in %;

(72) 'standing loss' ( $S$ ) means the heating power dissipated from a solar hot water storage tank at given water and ambient temperatures, expressed in W;

(73) 'storage volume' ( $V$ ), for the purposes of Figures 1 to 4 in Annex IV referred to as 'tank volume', means the rated volume of a solar hot water storage tank, expressed in litres or m<sup>3</sup>;

(74) 'auxiliary electricity consumption' ( $Q_{aux}$ ), for the purpose of Figure 5 in Annex IV referred to as 'auxiliary electricity', means the annual electricity consumption of a solar-only system that is due to the pump power consumption and the standby power consumption, expressed in kWh in terms of final energy;

(75) 'pump power consumption' ( $solpump$ ) means the rated electrical power consumption of the pump

in the collector loop of a solar-only system, expressed in W;

(76) 'standby power consumption' (*solstandby*) means the rated electrical power consumption of a solar-only system when the pump and the heat generator are inactive, expressed in W;

*Other definitions:*

(77) 'average climate conditions', 'colder climate conditions' and 'warmer climate conditions' mean the temperature and global solar irradiance conditions characteristic for the cities of Strasbourg, Helsinki and Athens, respectively;

(78) 'model identifier' means the code, usually alphanumeric, which distinguishes a specific space heater, combination heater, temperature control, solar device, package of space heater, temperature control and solar device, or package of combination heater, temperature control and solar device model from other models with the same trade mark, supplier's name or dealer's name.

## ANNEX II

### Energy efficiency classes

#### 1. SEASONAL SPACE HEATING ENERGY EFFICIENCY CLASSES

The seasonal space heating energy efficiency class of a heater, with the exception of low-temperature heat pumps and heat pump space heaters for low-temperature application, shall be determined on the basis of its seasonal space heating energy efficiency as set out in Table 1.

The seasonal space heating energy efficiency classes of a low-temperature heat pump and a heat pump space heater for low-temperature application shall be determined on the basis of its seasonal space heating energy efficiency as set out in Table 2.

The seasonal space heating energy efficiency of a heater shall be calculated in accordance with points 3 and 4 of Annex VII, for heat pump space heaters, heat pump combination heaters and low-temperature heat pumps under average climate conditions.

*Table 1*

#### Seasonal space heating energy efficiency classes of heaters, with the exception of low-temperature heat pumps and heat pump space heaters for low-temperature application

Seasonal space heating energy efficiency class	Seasonal space heating energy efficiency $\eta_s$ in %
A <sup>+++</sup>	$\eta_s \geq 150$
A <sup>++</sup>	$125 \leq \eta_s < 150$
A <sup>+</sup>	$98 \leq \eta_s < 125$
A	$90 \leq \eta_s < 98$
B	$82 \leq \eta_s < 90$
C	$75 \leq \eta_s < 82$
D	$36 \leq \eta_s < 75$
E	$34 \leq \eta_s < 36$
F	$30 \leq \eta_s < 34$
G	$\eta_s < 30$

Table 2

**Seasonal space heating energy efficiency classes of low-temperature heat pumps and heat pump space heaters for low-temperature application**

Seasonal space heating energy efficiency class	Seasonal space heating energy efficiency $\eta_s$ in %
A <sup>+++</sup>	$\eta_s \geq 175$
A <sup>++</sup>	$150 \leq \eta_s < 175$
A <sup>+</sup>	$123 \leq \eta_s < 150$
A	$115 \leq \eta_s < 123$
B	$107 \leq \eta_s < 115$
C	$100 \leq \eta_s < 107$
D	$61 \leq \eta_s < 100$
E	$59 \leq \eta_s < 61$
F	$55 \leq \eta_s < 59$
G	$\eta_s < 55$

## 2. WATER HEATING ENERGY EFFICIENCY CLASSES

The water heating energy efficiency class of a combination heater shall be determined on the basis of its water heating energy efficiency as set out in Table 3.

The water heating energy efficiency of a combination heater shall be calculated in accordance with point 5 of Annex VII.

Table 3

**Water heating energy efficiency classes of combination heaters, categorised by declared load profiles,  $\eta_{wh}$  in %**

	<b>3XS</b>	<b>XXS</b>	<b>XS</b>	<b>S</b>	<b>M</b>	<b>L</b>	<b>XL</b>	<b>XXL</b>
<b>A<sup>+++</sup></b>	$\eta_{wh} \geq 62$	$\eta_{wh} \geq 62$	$\eta_{wh} \geq 69$	$\eta_{wh} \geq 90$	$\eta_{wh} \geq 163$	$\eta_{wh} \geq 188$	$\eta_{wh} \geq 200$	$\eta_{wh} \geq 213$
<b>A<sup>++</sup></b>	$53 \leq \eta_{wh} < 62$	$53 \leq \eta_{wh} < 62$	$61 \leq \eta_{wh} < 69$	$72 \leq \eta_{wh} < 90$	$130 \leq \eta_{wh} < 163$	$150 \leq \eta_{wh} < 188$	$160 \leq \eta_{wh} < 200$	$170 \leq \eta_{wh} < 213$
<b>A<sup>+</sup></b>	$44 \leq \eta_{wh} < 53$	$44 \leq \eta_{wh} < 53$	$53 \leq \eta_{wh} < 61$	$55 \leq \eta_{wh} < 72$	$100 \leq \eta_{wh} < 130$	$115 \leq \eta_{wh} < 150$	$123 \leq \eta_{wh} < 160$	$131 \leq \eta_{wh} < 170$
<b>A</b>	$35 \leq \eta_{wh} < 44$	$35 \leq \eta_{wh} < 44$	$38 \leq \eta_{wh} < 53$	$38 \leq \eta_{wh} < 55$	$65 \leq \eta_{wh} < 100$	$75 \leq \eta_{wh} < 115$	$80 \leq \eta_{wh} < 123$	$85 \leq \eta_{wh} < 131$
<b>B</b>	$32 \leq \eta_{wh} < 35$	$32 \leq \eta_{wh} < 35$	$35 \leq \eta_{wh} < 38$	$35 \leq \eta_{wh} < 38$	$39 \leq \eta_{wh} < 65$	$50 \leq \eta_{wh} < 75$	$55 \leq \eta_{wh} < 80$	$60 \leq \eta_{wh} < 85$
<b>C</b>	$29 \leq \eta_{wh} < 32$	$29 \leq \eta_{wh} < 32$	$32 \leq \eta_{wh} < 35$	$32 \leq \eta_{wh} < 35$	$36 \leq \eta_{wh} < 39$	$37 \leq \eta_{wh} < 50$	$38 \leq \eta_{wh} < 55$	$40 \leq \eta_{wh} < 60$

<b>D</b>	$26 \leq \eta_{wh} < 29$	$26 \leq \eta_{wh} < 29$	$29 \leq \eta_{wh} < 32$	$29 \leq \eta_{wh} < 32$	$33 \leq \eta_{wh} < 36$	$34 \leq \eta_{wh} < 37$	$35 \leq \eta_{wh} < 38$	$36 \leq \eta_{wh} < 40$
<b>E</b>	$22 \leq \eta_{wh} < 26$	$23 \leq \eta_{wh} < 26$	$26 \leq \eta_{wh} < 29$	$26 \leq \eta_{wh} < 29$	$30 \leq \eta_{wh} < 33$	$30 \leq \eta_{wh} < 34$	$30 \leq \eta_{wh} < 35$	$32 \leq \eta_{wh} < 36$
<b>F</b>	$19 \leq \eta_{wh} < 22$	$20 \leq \eta_{wh} < 23$	$23 \leq \eta_{wh} < 26$	$23 \leq \eta_{wh} < 26$	$27 \leq \eta_{wh} < 30$	$27 \leq \eta_{wh} < 30$	$27 \leq \eta_{wh} < 30$	$28 \leq \eta_{wh} < 32$
<b>G</b>	$\eta_{wh} < 19$	$\eta_{wh} < 20$	$\eta_{wh} < 23$	$\eta_{wh} < 23$	$\eta_{wh} < 27$	$\eta_{wh} < 27$	$\eta_{wh} < 27$	$\eta_{wh} < 28$

### 3. ENERGY EFFICIENCY CLASSES OF SOLAR HOT WATER STORAGE TANKS, IF (PART OF) A SOLAR DEVICE

The energy efficiency class of a solar hot water storage tank, if (part of) a solar device, shall be determined on the basis of its standing loss as set out in Table 4.

Table 4

#### Energy efficiency classes of solar hot water storage tanks, if (part of) a solar device

Energy efficiency class	Standing loss $S$ in Watts, with storage volume $V$ in litres
<b>A+</b>	$S < 5,5 + 3,16 \cdot V^{0,4}$
<b>A</b>	$5,5 + 3,16 \cdot V^{0,4} \leq S < 8,5 + 4,25 \cdot V^{0,4}$
<b>B</b>	$8,5 + 4,25 \cdot V^{0,4} \leq S < 12 + 5,93 \cdot V^{0,4}$
<b>C</b>	$12 + 5,93 \cdot V^{0,4} \leq S < 16,66 + 8,33 \cdot V^{0,4}$
<b>D</b>	$16,66 + 8,33 \cdot V^{0,4} \leq S < 21 + 10,33 \cdot V^{0,4}$
<b>E</b>	$21 + 10,33 \cdot V^{0,4} \leq S < 26 + 13,66 \cdot V^{0,4}$
<b>F</b>	$26 + 13,66 \cdot V^{0,4} \leq S < 31 + 16,66 \cdot V^{0,4}$
<b>G</b>	$S > 31 + 16,66 \cdot V^{0,4}$

## ANNEX III

### The labels

#### 1. SPACE HEATERS

##### 1.1. Label 1

##### 1.1.1. Boiler space heaters in seasonal space heating energy efficiency classes A<sup>++</sup> to G

(a) The following information shall be included in the label:

- I. supplier's name or trade mark;
- II. supplier's model identifier;
- III. the space heating function;
- IV. the seasonal space heating energy efficiency class, determined in accordance with point 1 of Annex

II; the head of the arrow containing the seasonal space heating energy efficiency class of the boiler space heater shall be placed at the same height as the head of the relevant energy efficiency class;

V. the rated heat output in kW, rounded to the nearest integer;

VI. the sound power level LWA , indoors, in dB, rounded to the nearest integer.

(b) The design aspects of the label for boiler space heaters shall be in accordance with point 5 of this Annex.

### 1.1.2. Cogeneration space heaters in seasonal space heating energy efficiency classes A<sup>++</sup> to G

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the space heating function;

IV. the seasonal space heating energy efficiency class, determined in accordance with point 1 of Annex II; the head of the arrow containing the seasonal space heating energy efficiency class of the cogeneration space heater shall be placed at the same height as the head of the relevant energy efficiency class;

V. the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer;

VI. the sound power level LWA , indoors, in dB, rounded to the nearest integer;

VII. the additional electricity generation function.

(b) The design aspects of the label for cogeneration space heaters shall be in accordance with point 6 of this Annex.

**1.1.3. Heat pump space heaters, except low-temperature heat pumps, in seasonal space heating energy efficiency classes A++ to G**

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the space heating function for medium- and low-temperature application, respectively;

IV. the seasonal space heating energy efficiency class under average climate conditions for medium- and low-temperature application, respectively, determined in accordance with point 1 of Annex II; the head of the arrow containing the seasonal space heating energy efficiency class of the heat pump space heater for medium- and low-temperature application, respectively, shall be placed at the same height as the head of the relevant energy efficiency class;

V. the rated heat output, including the rated heat output of any supplementary heater, in kW, under average, colder and warmer climate conditions for medium- and low-temperature application, respectively, rounded to the nearest integer;

VI. European temperature map displaying three indicative temperature zones;

VII. the sound power level LWA , indoors (if applicable) and outdoors, in dB, rounded to the nearest integer.

(b) The design aspects of the label for heat pump space heaters shall be in accordance with point 7 of this Annex. By way of exception, where a model has been granted an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

### 1.1.4. Low-temperature heat pumps in seasonal space heating energy efficiency classes A++ to G

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the space heating function for low-temperature application;

IV. the seasonal space heating energy efficiency class under average climate conditions, determined in accordance with point 1 of Annex II; the head of the arrow containing the seasonal space heating energy efficiency class of the low-temperature heat pump shall be placed at the same height as the head of the relevant energy efficiency class;

V. the rated heat output, including the rated heat output of any supplementary heater, in kW, under average, colder and warmer climate conditions, rounded to the nearest integer;

VI. European temperature map displaying three indicative temperature zones;

VII. the sound power level LWA, indoors (if applicable) and outdoors, in dB, rounded to the nearest integer.

(b) The design aspects of the label for low-temperature heat pumps shall be in accordance with point 8 of this Annex. By way of exception, where a model has been granted an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

## 1.2. Label 2

### 1.2.1. Boiler space heaters in seasonal space heating energy efficiency classes A+++ to D

(a) The information listed in point 1.1.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for boiler space heaters shall be in accordance with point 5 of this Annex.

**1.2.2. Cogeneration space heaters in seasonal space heating energy efficiency classes A<sup>+++</sup> to D**

(a) The information listed in point 1.1.2(a) of this Annex shall be included in the label.

(b) The design aspects of the label for cogeneration space heaters shall be in accordance with point 6 of this Annex.

### 1.2.3. Heat pump space heaters, except low-temperature heat pumps, in seasonal space heating energy efficiency classes A<sup>+++</sup> to D

(a) The information listed in point 1.1.3(a) of this Annex shall be included in the label.

(b) The design aspects of the label for heat pump space heaters shall be in accordance with point 7 of this Annex.

**1.2.4. Low-temperature heat pumps in seasonal space heating energy efficiency classes A+++ to D**

(a) The information listed in point 1.1.4(a) of this Annex shall be included in the label.

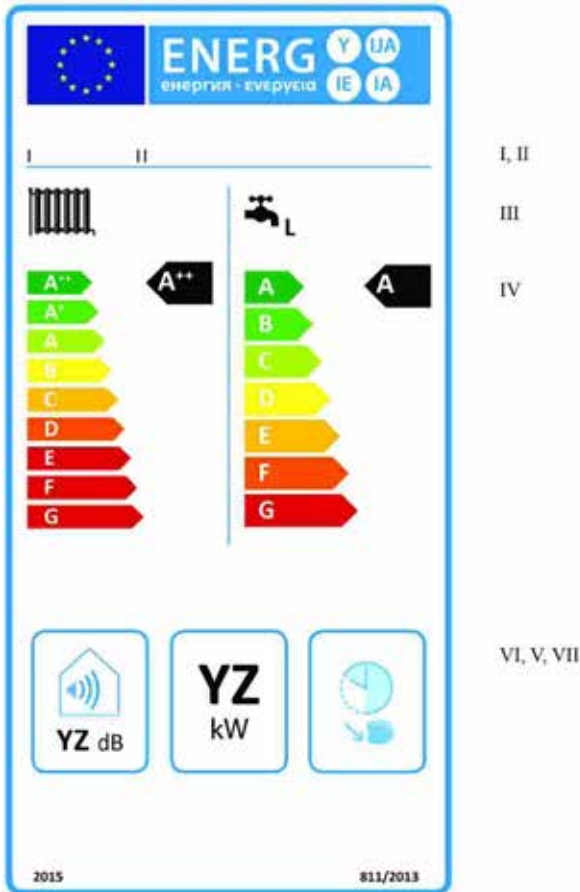

(b) The design aspects of the label for low-temperature heat pumps shall be in accordance with point 8 of this Annex.

## 2. COMBINATION HEATERS

### 2.1. Label 1

#### 2.1.1 Boiler combination heaters in seasonal space heating energy efficiency classes A<sup>++</sup> to G and in water heating energy efficiency classes A to G

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the space heating function and the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII;

IV. the seasonal space heating energy efficiency class and the water heating energy efficiency class, determined in accordance with points 1 and 2 of Annex II; the head of the arrows containing the seasonal space heating energy efficiency class and water heating energy efficiency class of the boiler combination heater shall be placed at the same height as the head of the relevant energy efficiency class;

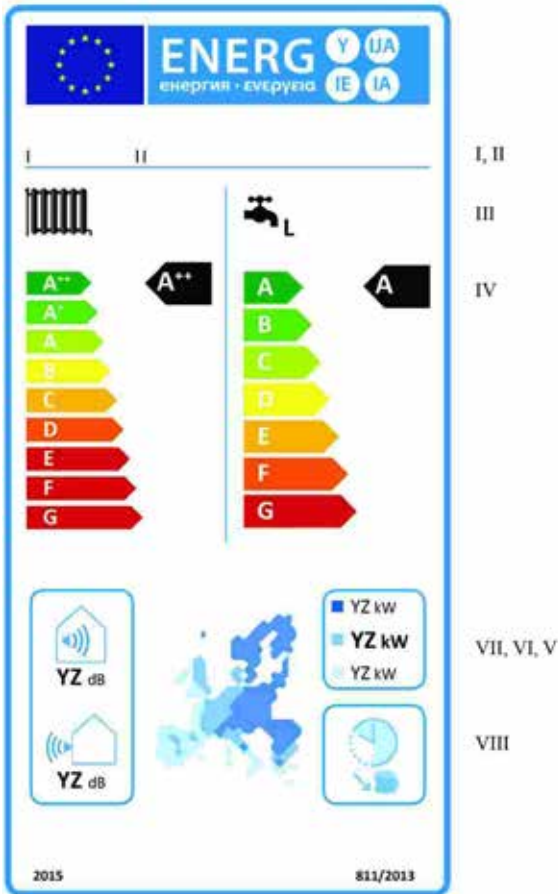

V. the rated heat output in kW, rounded to the nearest integer;

VI. the sound power level LWA, indoors, in dB, rounded to the nearest integer.

VII. for boiler combination heaters able to work only during off-peak hours, the pictogram referred to in point 9(d)(11) of this Annex may be added.

(b) The design aspects of the label for boiler combination heaters shall be in accordance with point 9 of this Annex.

**2.1.2. Heat pump combination heaters in seasonal space heating energy efficiency classes A++ to G and in water heating energy efficiency classes A to G**

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

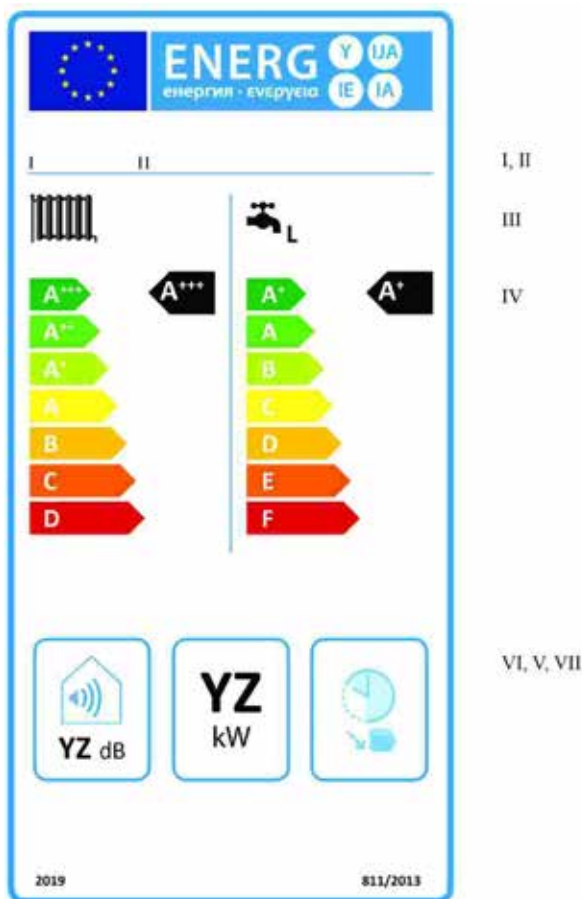

II. supplier's model identifier;

III. the space heating function for medium-temperature application and the water heating function, includ-

- ing the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII;
- IV. the seasonal space heating energy efficiency class under average climate conditions for medium-temperature application and the water heating energy efficiency class under average climate conditions, determined in accordance with points 1 and 2 of Annex II; the head of the arrows containing the seasonal space heating energy efficiency class and water heating energy efficiency class of the heat pump combination heater shall be placed at the same height as the head of the relevant energy efficiency class;
  - V. the rated heat output, including the rated heat output of any supplementary heater, in kW, under average, colder and warmer climate conditions, rounded to the nearest integer;
  - VI. European temperature map displaying three indicative temperature zones;
  - VII. the sound power level LWA, indoors (if applicable) and outdoors, in dB, rounded to the nearest integer;
  - VIII. for heat pump combination heaters able to work only during off-peak hours, the pictogram referred to in point 10(d)(12) of this Annex may be added.
- (b) The design aspects of the label for heat pump combination heaters shall be in accordance with point 10 of this Annex.

## 2.2. Label 2

### 2.2.1. Boiler combination heaters in seasonal space heating energy efficiency classes A<sup>+++</sup> to D and in water heating energy efficiency classes A<sup>+</sup> to F

(a) The information listed in point 2.1.1(a) of this Annex shall be included in the label.

(b) The design aspects of the label for boiler combination heaters shall be in accordance with point 9 of this Annex.

**2.2.2. Heat pump combination heaters in seasonal space heating energy efficiency classes A<sup>+++</sup> to D and in water heating energy efficiency classes A<sup>+</sup> to F**

(a) The information listed in point 2.1.2(a) of this Annex shall be included in the label.

(b) The design aspects of the label for heat pump combination heaters shall be in accordance with point 10 of this Annex.

### 3. PACKAGES OF SPACE HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

*Label for packages of space heater, temperature control and solar device in seasonal space heating energy efficiency classes A<sup>+++</sup> to G*

(a) The following information shall be included in the label:

I. dealer's and/or supplier's name or trade mark;

II. dealer's and/or supplier's model(s) identifier;

III. the space heating function;

IV. the seasonal space heating energy efficiency class of the space heater, determined in accordance with point 1 of Annex II;

V. indication of whether a solar collector, hot water storage tank, temperature control and/or supplementary space heater may be included in the package of space heater, temperature control and solar device;

VI. the seasonal space heating energy efficiency class of the package of space heater, temperature control and solar device, determined in accordance with point 5 of Annex IV; the head of the arrow containing

the seasonal space heating energy efficiency class

of the package of space heater, temperature control and solar device shall be placed at the same height as the head of the relevant energy efficiency class.

(b) The design aspects of the label for packages of space heater, temperature control and solar device shall be in accordance with point 11 of this Annex. For packages of space heater, temperature control and solar device in seasonal space heating energy efficiency classes A+++ to D, the last classes E to G in the A+++ to G scale may be omitted.

#### 4. PACKAGES OF COMBINATION HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

**Label for packages of combination heater, temperature control and solar device in seasonal space heating and water heating energy efficiency classes A+++ to G**

(a) The following information shall be included in the label:

I. dealer's and/or supplier's name or trade mark;

II. dealer's and/or supplier's model(s) identifier;

III. the space heating function and the water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII;

IV. the seasonal space heating and water heating energy efficiency classes of the combination heater, determined in accordance with points 1 and 2 of Annex II;

V. indication of whether a solar collector, hot water storage tank, temperature control and/or supplementary heater, may be included in the package of combination heater, temperature control and solar device;

VI. the seasonal space heating energy efficiency class of the package of combination heater, temperature control and solar device, determined in accordance with point 6 of Annex IV; the head of the arrow containing the seasonal space heating energy efficiency class of the package of combination heater, temperature control and solar device shall be placed at the same height as the head of the relevant energy efficiency class;

VII. the water heating energy efficiency class of the package of combination heater, temperature control and solar device, determined in accordance with point 6 of Annex IV; the head of the arrow containing the water heating energy efficiency class of the package of combination heater, temperature control and solar device shall be placed at the same height as the head of the relevant energy efficiency class.

(b) The design aspects of the label for packages of combination heater, temperature control and solar device shall be in accordance with point 12 of this Annex. For packages of combination heater, temperature control and solar device in seasonal space heating and/or water heating energy efficiency classes A+++ to D, the last classes E to G in the A+++ to G scale may be omitted.

5. The design of the label for boiler space heaters shall be the following:

Whereby:

- The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- The background shall be white.
- Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Space heating function:**
  - **Pictogram** as depicted.
- 6 **A++-G and A+++-D scales, respectively:**
  - **Arrow:** height: 5 mm, gap: 1,3 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Seventh class: 00-X-X-00,
    - Eighth class: 00-X-X-00,
    - Last class: 00-X-X-00,
  - **Text:** Calibri bold 14 pt, capitals, white, '+' symbols: superscript, aligned on a single row;
  - **Arrow:** height: 7 mm, gap: 1 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Last class: 00-X-X-00,
  - **Text:** Calibri bold 16 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 7 **Seasonal space heating energy efficiency class:**
  - **Arrow:** width: 22 mm, height: 12 mm, 100 % black,
  - **Text:** Calibri bold 24 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 8 **Sound power level, indoors:**
  - **Pictogram** as depicted,
  - **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
  - **Value 'YZ':** Calibri bold 20 pt, 100 % black,
  - **Text 'dB':** Calibri regular 15 pt, 100 % black.

**9 Rated heat output:**

- **Border:** 2 pt – colour: cyan 100 % – round corners: 3,5 mm,
- **Value 'YZ':** Calibri bold 45 pt, 100 % black,
- **Text 'kW':** Calibri regular 30 pt, 100 % black.

**10 Year of label introduction and number of Regulation:**

- **Text:** Calibri bold 10 pt.

**11 Supplier's name or trademark.****12 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

6. The design of the label for cogeneration space heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

① **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.

② **EU logo:** Colours: X-80-00-00 and 00-00-X-00.

③ **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.

④ **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.

⑤ **Space heating function:**

— **Pictogram** as depicted.

⑥ **A++-G and A+++-D scales, respectively:**

— **Arrow:** height: 5 mm, gap: 1,3 mm, colours:

— Highest class: X-00-X-00,

— Second class: 70-00-X-00,

— Third class: 30-00-X-00,

— Fourth class: 00-00-X-00,

— Fifth class: 00-30-X-00,

— Sixth class: 00-70-X-00,

— Seventh class: 00-X-X-00,

— Eighth class: 00-X-X-00,

— Last class: 00-X-X-00,

— **Text:** Calibri bold 14 pt, capitals, white, '+' symbols: superscript, aligned on a single row;

— **Arrow:** height: 7 mm, gap: 1 mm, colours:

— Highest class: X-00-X-00,

— Second class: 70-00-X-00,

— Third class: 30-00-X-00,

— Fourth class: 00-00-X-00,

— Fifth class: 00-30-X-00,

— Sixth class: 00-70-X-00,

— Last class: 00-X-X-00,

— **Text:** Calibri bold 16 pt, capitals, white, '+' symbols: superscript, aligned on a single row.

⑦ **Seasonal space heating energy efficiency class:**

- **Arrow:** width: 22 mm, height: 12 mm, 100 % black,
- **Text:** Calibri bold 24 pt, capitals, white, '+' symbols: superscript, aligned on a single row.

**8 Sound power level, indoors:**

- **Pictogram** as depicted,
- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Value 'YZ':** Calibri bold 20 pt, 100 % black,
- **Text 'dB':** Calibri regular 15 pt, 100 % black.

**9 Rated heat output:**

- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Value 'YZ':** Calibri bold 45 pt, 100 % black,
- **Text 'kW':** Calibri regular 30 pt, 100 % black.

**10 Electricity function:**

- **Pictogram** as depicted,
- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

**11 Year of label introduction and number of Regulation:**

- **Text:** Calibri bold 10 pt.

**12 Supplier's name or trademark.**

**13 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

7. The design of the label for heat pump space heaters shall be the following:

Whereby:

- (a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- (b) The background shall be white.
- (c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- (d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Space heating function:**
  - **Pictogram** as depicted.
- 6 **Medium- and low-temperature application:**
  - **Text** '55 °C' and '35 °C': Calibri regular 14 pt, 100 % black.
- 7 **A++-G and A+++-D scales, respectively:**
  - **Arrow:** height: 5 mm, gap: 1,3 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Seventh class: 00-X-X-00,
    - Eighth class: 00-X-X-00,
    - Last class: 00-X-X-00,
  - **Text:** Calibri bold 14 pt, capitals, white, '+' symbols: superscript, aligned on a single row;
  - **Arrow:** height: 7 mm, gap: 1 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Last class: 00-X-X-00,
  - **Text:** Calibri bold 16 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 8 **Seasonal space heating energy efficiency class:**
  - **Arrow:** width: 19 mm, height: 12 mm, 100 % black,
  - **Text:** Calibri bold 24 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 9 **Sound power level, indoors (if applicable) and outdoors:**
  - **Pictogram** as depicted,
  - **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,

- **Value 'YZ'**: Calibri bold 20 pt, 100 % black,
- **Text 'dB'**: Calibri regular 15 pt, 100 % black.

**10 Rated heat output:**

- **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Values 'YZ'**: Calibri at least 15 pt, 100 % black,
- **Text 'kW'**: Calibri regular 15 pt, 100 % black.

**11 European temperature map and colour squares:**

- **Pictogram** as depicted,
- **Colours**:
  - Dark blue: 86-51-00-00,
  - Middle blue: 53-08-00-00,
  - Light blue: 25-00-02-00.

**12 Year of label introduction and number of Regulation:**

- **Text**: Calibri bold 10 pt.

**13 Supplier's name or trademark.**

**14 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

8. The design of the label for low-temperature heat pumps shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1** EU label border stroke: 4 pt, colour: cyan 100 %, round corners: 3,5 mm.

**2** EU logo: Colours: X-80-00-00 and 00-00-X-00.

- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Space heating function:**  
— **Pictogram** as depicted.
- 6 **Low-temperature application:**  
**Text** '35 °C': Calibri regular 14 pt, 100 % black.
- 7 **A++-G and A+++-D scales, respectively:**  
— **Arrow:** height: 5 mm, gap: 1,3 mm, colours:  
— Highest class: X-00-X-00,  
— Second class: 70-00-X-00,  
— Third class: 30-00-X-00,  
— Fourth class: 00-00-X-00,  
— Fifth class: 00-30-X-00,  
— Sixth class: 00-70-X-00,  
— Seventh class: 00-X-X-00,  
— Eighth class: 00-X-X-00,  
— Last class: 00-X-X-00,  
— **Text:** Calibri bold 14 pt, capitals, white, '+' symbols: superscript, aligned on a single row;  
— **Arrow:** height: 7 mm, gap: 1 mm – colours:  
— Highest class: X-00-X-00,  
— Second class: 70-00-X-00,  
— Third class: 30-00-X-00,  
— Fourth class: 00-00-X-00,  
— Fifth class: 00-30-X-00,  
— Sixth class: 00-70-X-00,  
— Last class: 00-X-X-00,  
— **Text:** Calibri bold 16 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 8 **Seasonal space heating energy efficiency class:**  
— **Arrow:** width: 22 mm, height: 12 mm, 100 % black,  
— **Text:** Calibri bold 24 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 9 **Sound power level, indoors (if applicable) and outdoors:**  
— **Pictogram** as depicted,  
— **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,  
— **Value 'YZ':** Calibri bold 20 pt, 100 % black,  
— **Text 'dB':** Calibri regular 15 pt, 100 % black.

**10 Rated heat output:**

- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Values 'YZ':** Calibri at least 18 pt, 100 % black,
- **Text 'kW':** Calibri regular 13,5 pt, 100 % black.

**11 European temperature map and colour squares:**

- **Pictogram** as depicted,

**Colours:**

- Dark blue: 86-51-00-00,
- Middle blue: 53-08-00-00,
- Light blue: 25-00-02-00.

**12 Year of label introduction and number of Regulation:**

- **Text:** Calibri bold 10 pt.

**13 Supplier's name or trademark.****14 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

9. The design of the label for boiler combination heaters shall be the following:

Whereby:

(a) The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

① **EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.

② **EU logo:** Colours: X-80-00-00 and 00-00-X-00.

③ **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm,

height: 17 mm.

- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Space heating function:**
  - **Pictogram** as depicted.
- 6 **Water heating function:**
  - **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII: Calibri bold 16 pt, 100 % black.
- 7 **A++-G and A-G, A+++-D or A+-F scales, respectively:**
  - **Arrow:** height: 5 mm, gap: 1,3 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Seventh class: 00-X-X-00,
    - Eighth class: 00-X-X-00,
    - Last class: 00-X-X-00,
  - **Text:** Calibri bold 14 pt, capitals, white, '+' symbols: superscript, aligned on a single row;
    - **Arrow:** height: 7 mm, gap: 1 mm, colours:
      - Highest class: X-00-X-00,
      - Second class: 70-00-X-00,
      - Third class: 30-00-X-00,
      - Fourth class: 00-00-X-00,
      - Fifth class: 00-30-X-00,
      - Sixth class: 00-70-X-00,
      - Last class: 00-X-X-00,
    - **Text:** Calibri bold 16 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 8 **Seasonal space heating and water heating energy efficiency classes:**
  - **Arrow:** width: 14 mm, height: 9 mm, 100 % black,
  - **Text:** Calibri bold 18 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- 9 **Rated heat output:**
  - **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
  - **Value 'YZ':** Calibri bold 37,5 pt, 100 % black,
  - **Text 'kW':** Calibri regular 18 pt, 100 % black.
- 10 **Sound power level, indoors:**

- **Pictogram** as depicted,
- **Border**: 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Value 'YZ'**: Calibri bold 20 pt, 100 % black,
- **Text 'dB'**: Calibri regular 15 pt, 100 % black.

**11 If applicable, off-peak fitness:**

- **Pictogram** as depicted,
- **Border**: 2 pt – colour: cyan 100 % – round corners: 3,5 mm.

**12 Year of label introduction and number of Regulation:**

- **Text**: Calibri bold 10 pt.

**13 Supplier's name or trademark.**

**14 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

10. The design of the label for heat pump combination heaters shall be the following:

Whereby:

- The label shall be at least 105 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- The background shall be white.
- Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 EU label border stroke:** 4 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 86 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt, colour: cyan 100 %, length: 86 mm.
- 5 **Space heating function:**  
— **Pictogram** as depicted.
- 6 **Water heating function:**  
— **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII: Calibri bold 16 pt, 100 % black.
- 7 **A++-G and A-G, A+++-D or A+-F scales, respectively:**  
— **Arrow:** height: 5 mm, gap: 1,3 mm, colours:  
— Highest class: X-00-X-00,

— **Arrow:** width: 14 mm, height: 9 mm, 100 % black,  
— **Text:** Calibri bold 18 pt, capitals, white, '+' symbols: superscript, aligned on a single row.
- Rated heat output:**  
— **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- 9 — **Values 'YZ':** Calibri at least 12 pt, 100 % black,  
— **Text 'kW':** Calibri regular 10 pt, 100 % black.

**10 European temperature map and colour squares:**

- **Pictogram** as depicted,
- **Colours:**
  - Dark blue: 86-51-00-00,
  - Middle blue: 53-08-00-00,
  - Light blue: 25-00-02-00.

**11 Sound power level, indoors (if applicable) and outdoors:**

- **Pictogram** as depicted,
- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm,
- **Value 'YZ':** Calibri bold 15 pt, 100 % black,
- **Text 'dB':** Calibri regular 10 pt, 100 % black.

**12 If applicable, off-peak fitness:**

- **Pictogram** as depicted,
- **Border:** 2 pt, colour: cyan 100 %, round corners: 3,5 mm.

**13 Year of label introduction and number of Regulation:**

- **Text:** Calibri bold 10 pt.

**14 Supplier's name or trademark.****15 Supplier's model identifier:**

The supplier's name or trade mark and model identifier shall fit in a space of 86 × 12 mm.

**11. The design of the label for packages of space heater, temperature control and solar device shall be the following:**

Whereby:

- (a) The label shall be at least 210 mm wide and 297 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- (b) The background shall be white.
- (c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- (d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border stroke:** 6 pt, colour: cyan 100 %, round corners: 3,5 mm.

- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 191 mm, height: 37 mm.
- 4 **Sub-logos border:** 2 pt, colour: cyan 100 %, length: 191 mm.
- 5 **Space heating function:**  
— **Pictogram** as depicted.
- 6 **Space heater:**  
— **Pictogram** as depicted,  
— Seasonal space heating energy efficiency class of space heater:  
— **Arrow:** width: 24 mm, height: 14 mm, 100 % black;  
— **Text:** Calibri bold 28 pt, capitals, white, '+' symbols: superscript, aligned on a single row,  
— **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 7 **Package with solar collector, hot water storage tank, temperature control and/or supplementary heater:**  
— **Pictograms** as depicted,

11 Dealer's and/or supplier's name or trademark.

12 Dealer's and/or supplier's model identifier:

The dealer's and/or supplier's name or trade mark and model identifier shall fit in a space of 191 × 19 mm.

12. The design of the label for packages of combination heater, temperature control and solar device shall be the following:

Whereby:

(a) The label shall be at least 210 mm wide and 297 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours are coded as CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **EU label border stroke:** 6 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 2 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** Colour: X-00-00-00. Pictogram as depicted: EU logo + energy label: width: 191 mm, height: 37 mm.
- 4 **Sub-logos border:** 2 pt, colour: cyan 100 %, length: 191 mm.
- 5 **Combination heater:**
  - **Pictograms** as depicted; for water heating function, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII: Calibri bold 16 pt, 100 % black.
  - **Seasonal space heating and water heating energy efficiency class of combination heater:**
    - **Arrow:** width: 19 mm, height: 11 mm, 100 % black,
    - **Text:** Calibri bold 23 pt, capitals, white, '+' symbols: superscript, aligned on a single row,
    - **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 6 **Package with solar collector, hot water storage tank, temperature control and/or supplementary heater:**
  - **Pictograms** as depicted,
  - **'+' symbol:** Calibri bold 50 pt, cyan 100 %,
  - **Boxes:** width: 12 mm, height: 12 mm, border: 4 pt, cyan 100 %,
  - **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.
- 7 **Space heating function:**
  - **Pictogram** as depicted.
- 8 **A+++-G scale with border:**
  - **Arrow:** height: 6,5 mm, gap: 1 mm, colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Seventh class: 00-X-X-00,
    - If applicable, last classes: 00-X-X-00,
  - **Text:** Calibri bold 16 pt, capitals, white, '+' symbols: superscript, aligned on a single row,

— **Border:** 3 pt, colour: cyan 100 %, round corners: 3,5 mm.

**9 Seasonal space heating and water heating energy efficiency class, respectively, for package of combination heater, temperature control and solar device:**

— **Arrow:** width: 24 mm, height: 14 mm, 100 % black,

— **Text:** Calibri bold 28 pt, capitals, white, '+' symbols: superscript, aligned on a single row.

**10 Water heating function:**

— **Pictogram** as depicted, including the declared load profile expressed as the appropriate letter in accordance with Table 15 of Annex VII: Calibri bold 22 pt, 100 % black.

**11 Year of label introduction and number of Regulation:**

— **Text:** Calibri bold 12 pt.

**12 Dealer's and/or supplier's name or trademark.**

**13 Dealer's and/or supplier's model identifier:**

The dealer's and/or supplier's name or trade mark and model identifier shall fit in a space of 191 × 19 mm.

## ANNEX IV

### Product fiche

#### 1. SPACE HEATERS

1.1. The information in the product fiche of the space heater shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trademark;
- (b) supplier's model identifier;
- (c) the seasonal space heating energy efficiency class of the model, determined in accordance with point 1 of Annex II;
- (d) the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer (for heat pump space heaters under average climate conditions);
- (e) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump space heaters under average climate conditions);
- (f) the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump space heaters under average climate conditions);
- (g) the sound power level  $L_{WA}$ , indoors, in dB, rounded to the nearest integer (for heat pump space heaters if applicable);
- (h) any specific precautions that shall be taken when the space heater is assembled, installed or maintained; in addition, for cogeneration space heaters:
  - (i) the electrical efficiency in %, rounded to the nearest integer;
 in addition, for heat pump space heaters:
  - (j) the rated heat output, including the rated heat output of any supplementary heater, in kW, under colder and warmer climate conditions, rounded to the nearest integer;
  - (k) the seasonal space heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII;
  - (l) the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII;
  - (m) the sound power level  $L_{WA}$ , outdoors, in dB, rounded to the nearest integer.

1.2. One fiche may cover a number of space heater models supplied by the same supplier.

1.3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1.1 not already displayed on the label shall also be provided.

#### 2. COMBINATION HEATERS

2.1. The information in the product fiche of the combination heater shall be provided in the following

order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trademark;
- (b) supplier's model identifier;
- (c) for space heating, the medium-temperature application (and for heat pump combination heaters the low-temperature application, if applicable); for water heating, the declared load profile, expressed as the appropriate letter and typical usage in accordance with Table 15 of Annex VII;
- (d) the seasonal space heating energy efficiency class and the water heating energy efficiency class of the model, determined in accordance with points 1 and 2 of Annex II;
- (e) the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer (for heat pump combination heaters under average climate conditions);
- (f) for space heating, the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump combination heaters under average climate conditions); for water heating, the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII (for heat pump combination heaters under average climate conditions);
- (g) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump combination heaters under average climate conditions); the water heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII (for heat pump combination heaters under average climate conditions);
- (h) the sound power level  $L_{WA}$ , indoors, in dB, rounded to the nearest integer (for heat pump combination heaters if applicable);
- (i) if applicable, an indication that the combination heater is able to work only during off-peak hours;
- (j) any specific precautions that shall be taken when the combination heater is assembled, installed or maintained;

in addition, for heat pump combination heaters:

- (k) the rated heat output, including the rated heat output of any supplementary heater, in kW, under colder and warmer climate conditions, rounded to the nearest integer;
- (l) for space heating, the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII; for water heating, the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII;
- (m) the seasonal space heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII; the water heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII;
- (n) the sound power level  $L_{WA}$ , outdoors, in dB, rounded to the nearest integer.

2.2. One fiche may cover a number of combination heater models supplied by the same supplier.

2.3. The information contained in the fiche may be given in the form of a copy of the label, either in colour

or in black and white. Where this is the case, the information listed in point 2.1 not already displayed on the label shall also be provided.

### 3. TEMPERATURE CONTROLS

3.1. The information in the product fiche of the temperature control shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
- (b) supplier's model identifier;
- (c) the class of the temperature control;
- (d) the contribution of the temperature control to seasonal space heating energy efficiency in %, rounded to one decimal place.

3.2. One fiche may cover a number of temperature control models supplied by the same supplier.

### 4. SOLAR DEVICES

4.1. The information in the product fiche of the solar device shall be provided in the following order and shall be included in the product brochure or other literature provided with the product (for pumps in the collector loop if applicable):

- (a) supplier's name or trade mark;
- (b) supplier's model identifier;
- (c) the collector aperture area in m<sup>2</sup>, to two decimal places;
- (d) the collector efficiency in %, rounded to the nearest integer;
- (e) the energy efficiency class of the solar hot water storage tank, determined in accordance with point 3 of Annex II;
- (f) the standing loss of the solar hot water storage tank in W, rounded to the nearest integer;
- (g) the storage volume of the solar hot water storage tank in litres and m<sup>3</sup>;
- (h) the annual non-solar heat contribution  $Q_{nonsol}$  in kWh in terms of primary energy for electricity and/or in kWh in terms of GCV for fuels, for the load profiles M, L, XL and XXL under average climate conditions, rounded to the nearest integer;
- (i) the pump power consumption in W, rounded to the nearest integer;
- (j) the standby power consumption in W, to two decimal places;
- (k) the annual auxiliary electricity consumption  $Q_{aux}$  in kWh in terms of final energy, rounded to the nearest integer.

4.2. One fiche may cover a number of solar device models supplied by the same supplier.

### 5. PACKAGES OF SPACE HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

The fiche for packages of space heater, temperature control and solar device shall contain the elements set out in Figure 1, Figure 2, Figure 3 and Figure 4, respectively, for evaluating the seasonal space heating energy efficiency of a package of space heater, temperature control and solar device, including the

following information:

- I: the value of the seasonal space heating energy efficiency of the preferential space heater, expressed in %;
- II: the factor for weighting the heat output of preferential and supplementary heaters of a package as set out in Tables 5 and 6 of this Annex, respectively;
- III: the value of the mathematical expression:  $294 / (11 \cdot Prated)$ , whereby *Prated* is related to the preferential space heater;
- IV: the value of the mathematical expression  $115 / (11 \cdot Prated)$ , whereby *Prated* is related to the preferential space heater; in addition, for preferential heat pump space heaters:
- V: the value of the difference between the seasonal space heating energy efficiencies under average and colder climate conditions, expressed in %;
- VI: the value of the difference between the seasonal space heating energy efficiencies under warmer and average climate conditions, expressed in %.

## 6. PACKAGES OF COMBINATION HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

The fiche for packages of combination heater, temperature control and solar device shall contain the elements set out in points (a) and (b):

(a) the elements set out in Figure 1 and Figure 3, respectively, for evaluating the seasonal space heating energy efficiency of a package of combination heater, temperature control and solar device, including the following information:

- I: the value of the seasonal space heating energy efficiency of the preferential combination heater, expressed in %;
  - II: the factor for weighting the heat output of the preferential and supplementary heaters of a package as set out in Tables 5 and 6 of this Annex, respectively;
  - III: the value of the mathematical expression:  $294 / (11 \cdot Prated)$ , whereby *Prated* is related to the preferential combination heater;
  - IV: the value of the mathematical expression  $115 / (11 \cdot Prated)$ , whereby *Prated* is related to the preferential combination heater;
- in addition, for preferential heat pump combination heaters:

- V: the value of the difference between the seasonal space heating energy efficiencies under average and colder climate conditions, expressed in %;
- VI: the value of the difference between the seasonal space heating energy efficiencies under warmer and average climate conditions, expressed in %;

(b) the elements set out in Figure 5 for evaluating the water heating energy efficiency of a package of combination heater, temperature control and solar device, where the following information shall be included:

- I: the value of the water heating energy efficiency of the combination heater, expressed in %;
- II: the value of the mathematical expression  $(220 \cdot Q_{ref}) / Q_{nonsol}$ , where  $Q_{ref}$  is taken from Table 15 in Annex VII and  $Q_{nonsol}$  from the product fiche of the solar device for the declared load profile M, L, XL or XXL of the combination heater;

— III: the value of the mathematical expression  $(Q_{aux} \cdot 2,5) / (220 \cdot Q_{ref})$ , expressed in %, where  $Q_{aux}$  is taken from the product fiche of the solar device and  $Q_{ref}$  from Table 15 in Annex VII for the declared load profile M, L, XL or XXL.

- (3) The intermediate values are calculated by linear interpolation between the two adjacent values.
- (4) *Prated* is related to the preferential space heater or combination heater.

## ANNEX V

### Technical documentation

#### 1. SPACE HEATERS

For space heaters, the technical documentation referred to in Article 3(1)(c) shall include:

- (a) the name and address of the supplier;
- (b) a description of the space heater model sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) technical parameters:
  - for boiler space heaters and cogeneration space heaters, the technical parameters set out in Table 7, measured and calculated in accordance with Annex VII;
  - for heat pump space heaters, the technical parameters set out in Table 8, measured and calculated in accordance with Annex VII;
  - for heat pump space heaters where the information relating to a specific model comprising a combination of indoor and outdoor units has been obtained by calculation on the basis of design and/or extrapolation from other combinations, the details of such calculations and/or extrapolations, and of any tests undertaken to verify the accuracy of the calculations, including details of the mathematical model for calculating the performance of such combinations and details of the measurements taken to verify this model;
- (g) any specific precautions that shall be taken when the space heater is assembled, installed or maintained.

#### 2. COMBINATION HEATERS

For combination heaters, the technical documentation referred to in Article 3(2)(c) shall include:

- (a) the name and address of the supplier;
- (b) a description of the combination heater model sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) technical parameters:
  - for boiler combination heaters, the technical parameters set out in Table 7, measured and calculated in accordance with Annex VII;
  - for heat pump combination heaters, the technical parameters set out in Table 8, measured and calculated in accordance with Annex VII;
  - for heat pump combination heaters where the information relating to a specific model comprising a combination of indoor and outdoor units has been obtained by calculation on the basis of design and/or extrapolation from other combinations, the details of such calculations and/or extrapolations, and of any tests undertaken to verify the accuracy of the calculations, including

details of the mathematical model for calculating the performance of such combinations and details of the measurements taken to verify this model;

(g) any specific precautions that shall be taken when the combination heater is assembled, installed or maintained.

Table 7

### Technical parameters for boiler space heaters, boiler combination heaters and cogeneration space heaters

Model(s): [information identifying the model(s) to which the information relates]							
Condensing boiler: [yes/no]							
Low-temperature <sup>(?)</sup> boiler: [yes/no]							
B11 boiler: [yes/no]							
Cogeneration space heater: [yes/no]				If yes, equipped with a supplementary heater: [yes/no]			
Combination heater: [yes/no]							
Item	Symbol	Value	Unit	Item	Symbol	Value	Unit
<b>Rated heat output</b>	<i>Prated</i>	x	kW	<b>Seasonal space heating energy efficiency</b>	$\eta_s$	x	%
For boiler space heaters and boiler combination heaters: Useful heat output				For boiler space heaters and boiler combination heaters: Useful efficiency			
At rated heat output and high-temperature regime <sup>(1)</sup>	$P_4$	x,x	kW	At rated heat output and high-temperature regime <sup>(1)</sup>	$\eta_4$	x,x	%
At 30 % of rated heat output and low-temperature regime <sup>(2)</sup>	$P_1$	x,x	kW	At 30 % of rated heat output and low-temperature regime <sup>(2)</sup>	$\eta_1$	x,x	%
For cogeneration space heaters: Useful heat output				For cogeneration space heaters: Useful efficiency			
At rated heat output of cogeneration space heater with supplementary heater disabled	$P_{CHP100+Sup0}$	x,x	kW	At rated heat output of cogeneration space heater with supplementary heater disabled	$\eta_{CHP100+Sup0}$	x,x	%
At rated heat output of cogeneration space heater with supplementary heater enabled	$P_{CHP100+Sup100}$	x,x	kW	At rated heat output of cogeneration space heater with supplementary heater enabled	$\eta_{CHP100+Sup100}$	x,x	%
For cogeneration space heaters: Electrical efficiency				Supplementary heater			

At rated heat output of cogeneration space heater with supplementary heater disabled	$\eta_{el,CHP100+Sup0}$	x,x	%	Rated heat output	$P_{sup}$	x,x	kW
At rated heat output of cogeneration space heater with supplementary heater enabled	$\eta_{el,CHP100+Sup100}$	x,x	%	Type of energy input			
Auxiliary electricity consumption				Other items			
At full load	$el_{max}$	x,x	kW	Standby heat loss	$P_{stby}$	x,x	kW
At part load	$el_{min}$	x,x	kW	Ignition burner power consumption	$P_{ign}$	x,x	kW
In standby mode	$P_{SB}$	x,xxx	kW	Annual energy consumption	$Q_{HE}$	x	kWh or GJ
				Sound power level, indoors	$L_{WA}$	x	dB
For combination heaters:							
<b>Declared load profile</b>				<b>Water heating energy efficiency</b>	$\eta_{wh}$	x	%
Daily electricity consumption	$Q_{elec}$	x,xxx	kWh	Daily fuel consumption	$Q_{fuel}$	x,xxx	kWh
Annual electricity consumption	AEC	x	kWh	Annual fuel consumption	AFC	x	GJ
Contact details	Name and address of the supplier.						

Table 8

**Technical parameters for heat pump space heaters and heat pump combination heaters**

Model(s): [information identifying the model(s) to which the information relates]
Air-to-water heat pump: [yes/no]
Water-to-water heat pump: [yes/no]
Brine-to-water heat pump: [yes/no]
Low-temperature heat pump: [yes/no]
Equipped with a supplementary heater: [yes/no]
Heat pump combination heater: [yes/no]
Parameters shall be declared for medium-temperature application, except for low-temperature heat pumps. For low-temperature heat pumps, parameters shall be declared for low-temperature application.

Parameters shall be declared for average, colder and warmer climate conditions.							
Item	Symbol	Value	Unit	Item	Symbol	Value	Unit
<b>Rated heat output</b> <sup>(3)</sup>	<i>P<sub>rated</sub></i>	x	kW	<b>Seasonal space heating energy efficiency</b>	$\eta_s$	x	%
Declared capacity for heating for part load at indoor temperature 20 °C and outdoor temperature $T_j$				Declared coefficient of performance or primary energy ratio for part load at indoor temperature 20 °C and outdoor temperature $T_j$			
$T_j = -7$ °C	<i>P<sub>dh</sub></i>	x,x	kW	$T_j = -7$ °C	<i>COP<sub>d</sub></i> or <i>PER<sub>d</sub></i>	x, x x or x,x	– or %
$T_j = +2$ °C	<i>P<sub>dh</sub></i>	x,x	kW	$T_j = +2$ °C	<i>COP<sub>d</sub></i> or <i>PER<sub>d</sub></i>	x, x x or x,x	– or %
$T_j = +7$ °C	<i>P<sub>dh</sub></i>	x,x	kW	$T_j = +7$ °C	<i>COP<sub>d</sub></i> or <i>PER<sub>d</sub></i>	x, x x or x,x	– or %
$T_j = +12$ °C	<i>P<sub>dh</sub></i>	x,x	kW	$T_j = +12$ °C	<i>COP<sub>d</sub></i> or <i>PER<sub>d</sub></i>	x, x x or x,x	– or %
$T_j$ = bivalent temperature	<i>P<sub>dh</sub></i>	x,x	kW	$T_j$ = bivalent temperature	<i>COP<sub>d</sub></i> or <i>PER<sub>d</sub></i>	x, x x or x,x	– or %
$T_j$ = operation limit temperature	<i>P<sub>dh</sub></i>	x,x	kW	$T_j$ = operation limit temperature	<i>COP<sub>d</sub></i> or <i>PER<sub>d</sub></i>	x, x x or x,x	– or %
For air-to-water heat pumps: $T_j = -15$ °C (if $TOL < -20$ °C)	<i>P<sub>dh</sub></i>	x,x	kW	For air-to-water heat pumps: $T_j = -15$ °C (if $TOL < -20$ °C)	<i>COP<sub>d</sub></i> or <i>PER<sub>d</sub></i>	x, x x or x,x	– or %
Bivalent temperature	$T_{biv}$	x	°C	For air-to-water heat pumps: Operation limit temperature	<i>TOL</i>	x	°C
Cycling interval capacity for heating	<i>P<sub>cych</sub></i>	x,x	kW	Cycling interval efficiency	<i>COP<sub>cyc</sub></i> or <i>PER<sub>cyc</sub></i>	x, x x or x,x	– or %
Degradation co-efficient <sup>(4)</sup>	<i>C<sub>dh</sub></i>	x,x	—	Heating water operating limit temperature	<i>WTOL</i>	x	°C
Power consumption in modes other than active mode				Supplementary heater			
Off mode	$P_{OFF}$	x,xxx	kW	Rated heat output <sup>(4)</sup>	$P_{sup}$	x,x	kW
Thermostat-off mode	$P_{TO}$	x,xxx	kW	Type of energy input			
Standby mode	$P_{SB}$	x,xxx	kW				
Crankcase heater mode	$P_{CK}$	x,xxx	kW

Annual electricity consumption	AEC	x	kWh	Annual fuel consumption	AFC	x	GJ
Contact details	Name and address of the supplier.						

### 3. TEMPERATURE CONTROLS

For temperature controls, the technical documentation referred to in Article 3(3)(b) shall include:

- the name and address of the supplier;
- a description of the temperature control model sufficient for its unambiguous identification;
- where appropriate, the references of the harmonised standards applied;
- where appropriate, the other technical standards and specifications used;
- the identification and signature of the person empowered to bind the supplier;
- technical parameters:
  - the class of the temperature control;
  - the contribution of the temperature control to seasonal space heating energy efficiency in %, rounded to one decimal place;
- any specific precautions that shall be taken when the temperature control is assembled, installed or maintained.

### 4. SOLAR DEVICES

For solar devices, the technical documentation referred to in Article 3(4)(b) shall include:

- the name and address of the supplier;
- a description of the solar device model sufficient for its unambiguous identification;
- where appropriate, the references of the harmonised standards applied;
- where appropriate, the other technical standards and specifications used;
- the identification and signature of the person empowered to bind the supplier;
- technical parameters (for pumps in the collector loop if applicable):
  - the collector aperture area  $A_{sol}$  in m<sup>2</sup>, to two decimal places;
  - the collector efficiency  $\eta_{col}$  in %, rounded to the nearest integer;

- the energy efficiency class of the solar hot water storage tank, determined in accordance with point 3 of Annex II;
- the standing loss  $S$  of the solar hot water storage tank in  $W$ , rounded to the nearest integer;
- the storage volume  $V$  of the solar hot water storage tank in litres and  $m^3$ ;
- the annual non-solar heat contribution  $Q_{nonsol}$  in kWh in terms of primary energy for electricity and/or in kWh in terms of  $GCV$  for fuels, for the load profiles M, L, XL and XXL under average climate conditions, rounded to the nearest integer;
- the pump power consumption  $sol_{pump}$  in  $W$ , rounded to the nearest integer;
- the standby power consumption  $sol_{standby}$  in  $W$ , to two decimal places;
- the annual auxiliary electricity consumption  $Q_{aux}$  in kWh in terms of final energy, rounded to the nearest integer;

(g) any specific precautions that shall be taken when the solar device is assembled, installed or maintained.

## 5. PACKAGES OF SPACE HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

For packages of space heater, temperature control and solar device, the technical documentation referred to in Article 3(5)(c) shall include:

- (a) the name and address of the supplier;
- (b) a description of the package of space heater, temperature control and solar device model sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) technical parameters:
  - the seasonal space heating energy efficiency in %, rounded to the nearest integer;
  - the technical parameters set out in points 1, 3 and 4 of this Annex;
- (g) any specific precautions that shall be taken when the package of space heater, temperature control and solar device is assembled, installed or maintained.

## 6. PACKAGES OF COMBINATION HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

For packages of combination heater, temperature control and solar device, the technical documentation referred to in Article 3(6)(c) shall include:

- (a) the name and address of the supplier;
- (b) a description of the package of combination heater, temperature control and solar device model sufficient for its unambiguous identification;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;

(f) technical parameters:

- the seasonal space heating energy efficiency and water heating energy efficiency in %, rounded to the nearest integer;
- the technical parameters set out in points 2, 3 and 4 of this Annex;

(g) any specific precautions that shall be taken when the package of combination heater, temperature control and solar device is assembled, installed or maintained.

(<sup>1</sup>) High-temperature regime means 60 °C return temperature at heater inlet and 80 °C feed temperature at heater outlet.

(<sup>2</sup>) Low temperature means for condensing boilers 30 °C, for low-temperature boilers 37 °C and for other heaters 50 °C return temperature (at heater inlet).

(<sup>3</sup>) For heat pump space heaters and heat pump combination heaters, the rated heat output  $P_{rated}$  is equal to the design load for heating  $P_{designh}$ , and the rated heat output of a supplementary heater  $P_{sup}$  is equal to the supplementary capacity for heating  $sup(T_j)$ .

(<sup>4</sup>) If  $C_{dh}$  is not determined by measurement then the default degradation coefficient is  $C_{dh} = 0,9$ .

## ANNEX VI

### Information to be provided in the cases where end-users cannot be expected to see the product displayed, except on the internet<sup>17</sup>

#### 1. SPACE HEATERS

1.1. The information referred to in Article 4(1)(b) shall be provided in the following order:

- (a) the seasonal space heating energy efficiency class of the model, determined in accordance with point 1 of Annex II;
- (b) the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer (for heat pump space heaters, under average climate conditions);
- (c) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump space heaters, under average climate conditions);
- (d) the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump space heaters, under average climate conditions);
- (e) the sound power level  $L_{WA}$ , indoors, in dB, rounded to the nearest integer (for heat pump space heaters if applicable);

in addition, for cogeneration space heaters:

- (f) the electrical efficiency in %, rounded to the nearest integer;

in addition, for heat pump space heaters:

- (g) the rated heat output, including the rated heat output of any supplementary heater, in kW, under colder and warmer climate conditions, rounded to the nearest integer;
- (h) the seasonal space heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII;
- (i) the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII;
- (j) the sound power level  $L_{WA}$ , outdoors, in dB, rounded to the nearest integer;

in addition, for low-temperature heat pumps:

- (k) an indication that the low-temperature heat pump is only suitable for low-temperature application;

1.2. The size and font in which the information referred in point 1.1 is printed or shown shall be legible.

#### 2. COMBINATION HEATERS

2.1. The information referred to in Article 4(2)(b) shall be provided in the following order:

- (a) for space heating, the medium-temperature application; for water heating, the declared load profile,

<sup>17</sup> Title is replaced in accordance with Article 9(3) and Annex IX of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

- expressed as the appropriate letter and typical usage in accordance with Table 15 of Annex VII;
- (b) the seasonal space heating energy efficiency class and the water heating energy efficiency class of the model, determined in accordance with points 1 and 2 of Annex II;
- (c) the rated heat output, including the rated heat output of any supplementary heater, in kW, rounded to the nearest integer (for heat pump combination heaters, under average climate conditions);
- (d) for space heating, the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump combination heaters, under average climate conditions); for water heating, the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII (for heat pump combination heaters, under average climate conditions);
- (e) the seasonal space heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with points 3 and 4 of Annex VII (for heat pump combination heaters, under average climate conditions); the water heating energy efficiency in %, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII (for heat pump combination heaters, under average climate conditions);
- (f) the sound power level  $L_{WA}$ , indoors, in dB, rounded to the nearest integer (for heat pump combination heaters if applicable);
- (g) if applicable, an indication that the combination heater is able to work only during off-peak hours; in addition, for heat pump combination heaters:
- (h) the rated heat output, including the rated heat output of any supplementary heater, in kW, under colder and warmer climate conditions, rounded to the nearest integer;
- (i) for space heating, the annual energy consumption in kWh in terms of final energy and/or in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII; for water heating, the annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ in terms of GCV, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII;
- (j) the seasonal space heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 4 of Annex VII; the water heating energy efficiency in %, under colder and warmer climate conditions, rounded to the nearest integer and calculated in accordance with point 5 of Annex VII;
- (k) the sound power level  $L_{WA}$ , outdoors, in dB, rounded to the nearest integer.
- 2.2. The size and font in which the information referred in point 2.1 is printed or shown shall be legible.

### 3. PACKAGES OF SPACE HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE

3.1. The information referred to in Article 4(3)(b) shall be provided in the following order:

- (a) the seasonal space heating energy efficiency class of the model, determined in accordance with point 1 of Annex II;
- (b) the seasonal space heating energy efficiency in %, rounded to the nearest integer;

(c) the elements set out in Figure 1, Figure 2, Figure 3 and Figure 4, respectively, of Annex IV.

3.2. The size and font in which the information referred in point 3.1 is printed or shown shall be legible.

#### **4. PACKAGES OF COMBINATION HEATER, TEMPERATURE CONTROL AND SOLAR DEVICE**

4.1. The information referred to in Article 4(4)(b) shall be provided in the following order:

(a) the seasonal space heating energy efficiency class and the water heating energy efficiency class of the model, determined in accordance with points 1 and 2 of Annex II;

(b) the seasonal space heating energy efficiency and the water heating energy efficiency in %, rounded to the nearest integer;

(c) the elements set out in Figure 1 and Figure 3, respectively, of Annex IV;

(d) the elements set out in Figure 5 of Annex IV.

4.2. The size and font in which the information referred in point 4.1 is printed or shown shall be legible.

## ANNEX VII

### Measurements and calculations

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published for this purpose in the *Official Journal of the European Union*, or using other reliable, accurate and reproducible methods that take into account the generally recognised state-of-the-art methods. They shall meet the conditions and technical parameters set out in points 2 to 6.

#### 2. General conditions for measurements and calculations

(a) For the purposes of the measurements set out in points 3 to 7, the indoor ambient temperature shall be set at 20 °C.

(b) For the purposes of the calculations set out in points 3 to 7, electricity consumption shall be multiplied by a conversion coefficient  $CC$  of 2,5, unless the annual electricity consumption is expressed in final energy for the end-user, as set out in points 3(b), 4(g), 5(e) and 6.

(c) For heaters equipped with supplementary heaters, the measurement and calculation of rated heat output, seasonal space heating energy efficiency, water heating energy efficiency, sound power level and emissions of nitrogen oxides shall take account of the supplementary heater.

(d) Declared values for rated heat output, seasonal space heating energy efficiency, water heating energy efficiency, annual energy consumption and sound power level shall be rounded to the nearest integer.

#### 3. Seasonal space heating energy efficiency and consumption of boiler space heaters, boiler combination heaters and cogeneration space heaters

(a) The seasonal space heating energy efficiency  $\eta_s$  shall be calculated as the seasonal space heating energy efficiency in active mode  $\eta_{son}$ , corrected by contributions accounting for temperature controls, auxiliary electricity consumption, standby heat loss, ignition burner power consumption (if applicable) and, for cogeneration space heaters, corrected by adding the electrical efficiency multiplied by a conversion coefficient  $CC$  of 2,5.

(b) The annual energy consumption  $Q_{HE}$  in kWh in terms of final energy and/or in GJ in terms of  $GCV$  shall be calculated as the ratio of the reference annual heating demand and the seasonal space heating energy efficiency.

#### 4. Seasonal space heating energy efficiency and consumption of heat pump space heaters and heat pump combination heaters

(a) For establishing the rated coefficient of performance  $COP_{rated}$  or rated primary energy ratio  $PER_{rated}$ , or the sound power level, the operating conditions shall be the standard rating conditions set out in Table 9 and the same declared capacity for heating shall be used.

(b) The active mode coefficient of performance  $SCOP_{on}$  for average, colder and warmer climate conditions shall be calculated on the basis of the part load for heating  $Ph(T)$ , the supplementary capacity for heating  $sup(T)$  (if applicable), and the bin-specific coefficient of performance  $COPbin(T)$  or bin-specific primary energy ratio  $PERbin(T)$ , weighted by the bin-hours for which the bin conditions apply, using the following conditions:

- the reference design conditions set out in Table 10;

- the European reference heating season under average, colder and warmer climate conditions set out in Table 12;
- if applicable, the effects of any degradation of energy efficiency caused by cycling, depending on the type of control of the heating capacity.

(c) The reference annual heating demand  $Q_H$  shall be the design load for heating  $P_{designh}$  for average, colder and warmer climate conditions, multiplied by the annual equivalent active mode hours  $H_{HE}$  of 2 066, 2 465 and 1 336 for average, colder and warmer climate conditions, respectively.

(d) The annual energy consumption  $Q_{HE}$  shall be calculated as the sum of:

- the ratio of the reference annual heating demand  $Q_H$  and the active mode coefficient of performance  $SCOP_{on}$  or active mode primary energy ratio  $SPER_{on}$ ; and
- the energy consumption for off, thermostat-off, standby, and crankcase heater mode during the heating season.

(e) The seasonal coefficient of performance  $SCOP$  or seasonal primary energy ratio  $SPER$  shall be calculated as the ratio of the reference annual heating demand  $Q_H$  and the annual energy consumption  $Q_{HE}$ .

(f) The seasonal space heating energy efficiency  $\eta_s$  shall be calculated as the seasonal coefficient of performance  $SCOP$  divided by the conversion coefficient  $CC$  or the seasonal primary energy ratio  $SPER$ , corrected by contributions accounting for temperature controls and, for water-/brine-to-water heat pump space heaters and heat pump combination heaters, the electricity consumption of one or more ground water pumps.

(g) The annual energy consumption  $Q_{HE}$  in kWh in terms of final energy and/or GJ in terms of  $GCV$  shall be calculated as the ratio of the reference annual heating demand  $Q_H$  and the seasonal space heating energy efficiency  $\eta_s$ .

## 5. Water heating energy efficiency of combination heaters

The water heating energy efficiency  $\eta_{wh}$  of a combination heater shall be calculated as the ratio between the reference energy  $Q_{ref}$  and the energy required for its generation under the following conditions:

- (a) measurements shall be carried out using the load profiles set out in Table 15;
- (b) measurements shall be carried out using a 24-hour measurement cycle as follows:
  - 00:00 to 06:59: no water draw-off;
  - from 07:00: water draw-offs according to the declared load profile;
  - from end of last water draw-off until 24:00: no water draw-off;
- (c) the declared load profile shall be the maximum load profile or the load profile one below the maximum load profile;
- (d) for heat pump combination heaters, the following additional conditions apply:
  - heat pump combination heaters shall be tested under the conditions set out in Table 9;
  - heat pump combination heaters which use ventilation exhaust air as the heat source shall be tested under the conditions set out in Table 11;
- (e) the annual electricity consumption  $AEC$  in kWh in terms of final energy shall be calculated as daily electricity consumption  $Q_{elec}$  in kWh in terms of final energy multiplied by 220;
- (f) the annual fuel consumption  $AFC$  in GJ in terms of  $GCV$  shall be calculated as daily fuel consumption

$Q_{fuel}$  multiplied by 220.

## 6. Conditions for measurements and calculations of solar devices

The solar collector, solar hot water storage tank and pump in the collector loop (if applicable) shall be tested separately. Where the solar collector and solar hot water storage tank cannot be tested separately, they shall be tested in combination.

The results shall be used for the determination of the standing loss  $S$  and the calculations of the collector efficiency  $\eta_{col}$ , the annual non-solar heat contribution  $Q_{nonsol}$  for the load profiles M, L, XL and XXL under the average climate conditions set out in Tables 13 and 14, and the annual auxiliary electricity consumption  $Q_{aux}$  in kWh in terms of final energy.

Table 9

### Standard rating conditions for heat pump space heaters and heat pump combination heaters

Heat source	Outdoor heat exchanger		Indoor heat exchanger			
	Climate condition	Inlet dry bulb (wet bulb) temperature	Heat pump space heaters and heat pump combination heaters, except low-temperature heat pumps		Low-temperature heat pumps	
			Inlet temperature	Outlet temperature	Inlet temperature	Outlet temperature
Outdoor air	Average	+ 7 °C (+ 6 °C)	+47 °C	+55 °C	+30 °C	+35 °C
	Colder	+ 2 °C (+ 1 °C)				
	Warmer	+ 14 °C (+ 13 °C)				
Exhaust air	All	+ 20 °C (+ 12 °C)				
		Inlet / outlet temperature				
Water	All	+ 10 °C / + 7 °C				
Brine	All	0 °C/– 3 °C

## ANNEX VIII<sup>18</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
  - (2) The model shall be considered to comply with the applicable requirements if:
    - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
    - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
    - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 16.
  - (3) If the results referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.
  - (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing.
  - (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 16.
  - (6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.
  - (7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.
- The Contracting Party authorities shall only apply the verification tolerances that are set out

<sup>18</sup> Annex VIII is replaced in accordance with Article 9 and Annex IX of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

in Table 16 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 16**  
**Verification tolerances**

Parameters	Verification tolerances
Space-heating energy efficiency, $\eta_s$	The determined value shall not be lower than the declared value by more than 8 %.
Water-heating energy efficiency, $\eta_{wh}$	The determined value shall not be lower than the declared value by more than 8 %.
Sound power level	The determined value shall not exceed the declared value by more than 2 dB(A).
Class of the temperature control	The class of the temperature controls corresponds to the declared class of the unit.
Collector efficiency, $\eta_{col}$	The determined value shall not be lower than the declared value by more than 5 %.
Standing loss, S	The determined value shall not exceed the declared value by more than 5 %.
Auxiliary electricity consumption, $Q_{aux}$	The determined value shall not exceed the declared value by more than 5 %.

## ANNEX IX<sup>19</sup>

### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3 or in the case of a package where appropriate duly filled in based on the label and fiches provided by suppliers in accordance with Article 3, shall be shown on the display mechanism in proximity to the price of the product or package in accordance with the timetable set out in Article 3. If both a product and a package are shown, but with a price indicated only for the package, only the package label shall be displayed. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product or package on the label;

(b) indicate on the arrow the energy efficiency class of the product or package in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product or package;

(b) the image shall link to the label;

<sup>19</sup> Annex IX is added in accordance with Article 9(4) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;**

**(d) the label shall be displayed by pop up, new tab, new page or inset screen display;**

**(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;**

**(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;**

**(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product or package in a font size equivalent to that of the price.**

**(5) The appropriate product fiche made available by suppliers in accordance with Article 3 shall be shown on the display mechanism in proximity to the price of the product or package. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.**

## **DELEGATED REGULATION (EU) 874/2012 of 12 July 2012 supplementing Directive 2010/30/EU with regard to energy labelling of electrical lamps and luminaires**

Incorporated and adapted by Ministerial Council Decision 2014/02/MC-EnC of 23 September 2014 adapting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2014/02/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products having significant potential for energy savings and a wide disparity in performance levels with equivalent functionality.

(2) Provisions on the energy labelling of household lamps were established by Commission Directive 98/11/EC.

(3) The electricity used by electrical lamps accounts for a significant share of total electricity demand in the Union. In addition to the energy efficiency improvements already achieved, the scope for further reducing the energy consumption of electrical lamps is substantial.

(4) Directive 98/11/EC should be repealed and new provisions should be set out in this Regulation in order to ensure that the energy label provides dynamic incentives for suppliers further to improve the energy efficiency of electrical lamps and to speed up the market shift towards energy-efficient technologies. The scope of Directive 98/11/EC is limited to certain technologies within the category of household lamps. In order to use the label to improve the energy efficiency of other lamp technologies, including in professional lighting, this Regulation should also cover directional lamps, extra low voltage lamps, light-emitting diodes, and lamps used predominantly in professional lighting, such as high-intensity discharge lamps.

(5) Luminaires are often sold with incorporated or accompanying lamps. This Regulation should ensure that consumers are informed about the compatibility of the luminaire with energy-saving lamps and about the energy efficiency of the lamps included with the luminaire. At the same time, this Regulation should not impose a disproportionate administrative burden on luminaire manufacturers and retailers, nor should it discriminate between luminaires as regards the obligation to provide consumers with information on energy efficiency.

(6) The information provided on the label should be obtained through reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods including, where available, harmonised standards adopted by the European standardisation bodies, as listed in Annex I to Directive 98/34/EC of the European Parliament and of the Council.

(7) This Regulation should specify a uniform design and content for the label for electrical lamps and luminaires.

(8) In addition, this Regulation should specify requirements for the technical documentation of electrical lamps and luminaires and for the fiche of electrical lamps.

(9) Moreover, this Regulation should specify requirements for the information to be provided for any form of distance selling, advertisements and technical promotional materials for electrical lamps and luminaires.

(10) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.

(11) In order to facilitate the transition from Directive 98/11/EC to this Regulation, household lamps labelled in accordance with this Regulation should be considered compliant with Directive 98/11/EC.

(12) Directive 98/11/EC should therefore be repealed.

## **Article 1**

### **Subject matter and scope**

1. This Regulation establishes requirements for labelling of and providing supplementary product information on electrical lamps such as:

- (a) filament lamps;
- (b) fluorescent lamps;
- (c) high-intensity discharge lamps;
- (d) LED lamps and LED modules.

This Regulation also establishes requirements for labelling luminaires designed to operate such lamps and marketed to end users, including when they are integrated into other products that are not dependent on energy input in fulfilling their primary purpose during use (such as furniture).

2. The following products shall be excluded from the scope of this Regulation:

- (a) lamps and LED modules with a luminous flux of less than 30 lumens;
- (b) lamps and LED modules marketed for operation with batteries;
- (c) lamps and LED modules marketed for applications where their primary purpose is not lighting, such as:
  - (i) emission of light as an agent in chemical or biological processes (such as polymerisation, photodynamic therapy, horticulture, petcare, anti-insect products);
  - (ii) image capture and image projection (such as camera flashlights, photocopiers, video projectors);
  - (iii) heating (such as infrared lamps);
  - (iv) signalling (such as airfield lamps). These lamps and LED modules are not excluded when they are marketed for lighting;
- (d) lamps and LED modules marketed as part of a luminaire and not intended to be removed by the end-user, except when they are offered for sale, hire or hire purchase or displayed separately to the end user, for example as spare parts;
- (e) lamps and LED modules marketed as part of a product whose primary purpose is not lighting. However, if they are offered for sale, hire or hire purchase or displayed separately, for example as spare parts, they shall be included within the scope of this Regulation;

(f) lamps and LED modules that do not comply with requirements becoming applicable in 2013 and 2014 according to Regulations implementing Directive 2009/125/EC of the European Parliament and of the Council;

(g) luminaires that are designed to operate exclusively with the lamps and LED modules listed in points (a) to (c).

## **Article 2**

### **Definitions**

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

(1) 'Light source' means a surface or object designed to emit mainly visible optical radiation produced by a transformation of energy. The term 'visible' refers to a wavelength of 380-780 nm;

(2) 'Lighting' means the application of light to a scene, objects or their surroundings so that they may be seen by humans;

(3) 'Accent lighting' means a form of lighting where light is directed so as to highlight an object or a part of an area;

(4) 'Lamp' means a unit whose performance can be assessed independently and which consists of one or more light sources. It may include additional components necessary for starting, power supply or stable operation of the unit or for distributing, filtering or transforming the optical radiation, in cases where those components cannot be removed without permanently damaging the unit;

(5) 'Lamp cap' means that part of a lamp which provides connection to the electrical supply by means of a lamp holder or lamp connector and may also serve to retain the lamp in the lamp holder;

(6) 'Lamp holder' or 'socket' means a device which holds the lamp in position, usually by having the cap inserted in it, in which case it also provides the means of connecting the lamp to the electric supply;

(7) 'Directional lamp' means a lamp having at least 80 % light output within a solid angle of  $\pi$  sr (corresponding to a cone with angle of 120°);

(8) 'Non-directional lamp' means a lamp that is not a directional lamp;

(9) 'Filament lamp' means a lamp in which light is produced by means of a threadlike conductor which is heated to incandescence by the passage of an electric current. The lamp may contain gases influencing the process of incandescence;

(10) 'Incandescent lamp' means a filament lamp in which the filament operates in an evacuated bulb or is surrounded by inert gas;

(11) '(Tungsten) halogen lamp' means a filament lamp in which the filament is made of tungsten and is surrounded by gas containing halogens or halogen compounds. They may be supplied with an integrated power supply;

(12) 'Discharge lamp' means a lamp in which the light is produced, directly or indirectly, by an electric discharge through a gas, a metal vapour or a mixture of several gases and vapours;

(13) 'Fluorescent lamp' means a discharge lamp of the low pressure mercury type in which most of the

light is emitted by one or more layers of phosphors excited by the ultraviolet radiation from the discharge. Fluorescent lamps may be supplied with an integrated ballast;

(14) 'Fluorescent lamp without integrated ballast' means a single- or double-capped fluorescent lamp without integrated ballast;

(15) 'High-intensity discharge lamp' means an electric discharge lamp in which the light producing arc is stabilised by wall temperature and the arc has a bulb wall loading in excess of 3 watts per square centimetre;

(16) 'Light-emitting diode (LED)' means a light source which consists of a solid state device embodying a p-n junction. The junction emits optical radiation when excited by an electric current;

(17) 'LED package' means an assembly having one or more LED(s). The assembly may include an optical element and thermal, mechanical and electrical interfaces;

(18) 'LED module' means an assembly having no cap and incorporating one or more LED packages on a printed circuit board. The assembly may have electrical, optical, mechanical and thermal components, interfaces and control gear;

(19) 'LED lamp' means a lamp incorporating one or more LED modules. The lamp may be equipped with a cap;

(20) 'Lamp control gear' means a device located between the electrical supply and one or more lamps, which provides a functionality related to the operation of the lamp(s), such as transforming the supply voltage, limiting the current of the lamp(s) to the required value, providing a starting voltage and pre-heating current, preventing cold starting, correcting the power factor or reducing radio interference. The device may be designed to connect to other lamp control gear to perform these functions. The term does not include:

- control devices,
- power supplies converting the mains voltage to another supply voltage that are designed to supply in the same installation both lighting products and products whose primary purpose is not lighting;

(21) 'Control device' means an electronic or mechanical device controlling or monitoring the luminous flux of the lamp by other means than power conversion for the lamp, such as timer switches, occupancy sensors, light sensors and daylight regulation devices. In addition, phase cut dimmers shall also be considered as control devices;

(22) 'External lamp control gear' means non-integrated lamp control gear designed to be installed outside the enclosure of a lamp or luminaire, or to be removed from the enclosure without permanently damaging the lamp or the luminaire;

(23) 'Ballast' means lamp control gear inserted between the supply and one or more discharge lamps which by means of inductance, capacitance or a combination of inductance and capacitance, serves mainly to limit the current of the lamp(s) to the required value;

(24) 'Halogen lamp control gear' means lamp control gear that transforms mains voltage to extra low voltage for halogen lamps;

(25) 'Compact fluorescent lamp' means a fluorescent lamp that includes all the components necessary for starting and stable operation of the lamp;

(26) 'Luminaire' means an apparatus which distributes, filters or transforms the light transmitted from one or more lamps and which includes all the parts necessary for supporting, fixing and protecting the lamps and, where necessary, circuit auxiliaries together with the means for connecting them to the electric supply;

(27) 'Point of sale' means a physical location where the product is displayed or offered for sale, hire or hire-purchase to the end-user;

(28) 'End-user' means a natural person buying or expected to buy an electrical lamp or luminaire for purposes which are outside his trade, business, craft or profession;

(29) 'Final owner' means the person or entity owning a product during the use phase of its life cycle, or any person or entity acting on behalf of such a person or entity.

### Article 3

#### Responsibilities of suppliers

1. Suppliers of electrical lamps placed on the market as individual products shall ensure that:

(a) a product fiche, as set out in Annex II, is made available;

(b) the technical documentation as set out in Annex III is made available on request to the authorities of the **Contracting Parties** and to the Commission;

(c) any advertisement, formal price quote or tender offer disclosing energy-related or price information for a specific lamp states the energy efficiency class;

(d) any technical promotional material concerning a specific lamp which describes its specific technical parameters states the energy efficiency class of that lamp;

(e) if the lamp is intended to be marketed through a point of sale, a label produced in the format and containing information as set out in Annex I.1 is placed or printed on, or attached to, the outside of the individual packaging, and the packaging displays the nominal power of the lamp outside the label;

**(f) an electronic label in the format and containing the information set out in point 1 of Annex I is made available to dealers for each lamp model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other lamp models.<sup>1</sup>**

2. Suppliers of luminaires intended to be marketed to end-users shall ensure that:

(a) the technical documentation as set out in Annex III is made available on request to the authorities of the **Contracting Parties** and to the Commission;

(b) the information contained in the label according to Annex I.2 is provided in the following situations:

(i) in any advertisement, formal price quote or tender offer disclosing energy-related or price information for a specific luminaire;

(ii) in any technical promotional material concerning a specific lamp which describes its specific technical parameters. In these cases the information may be provided in formats other than the one set out in Annex I.2, such as fully textual;

<sup>1</sup> Article 3, paragraph 1, points (f) is added in accordance with Article 7(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

(c) if the luminaire is intended to be marketed through a point of sale, a label produced in the format and containing information as set out in Annex I is made available free of charge to dealers in electronic or paper format. If the supplier chooses a delivery system in which labels are provided only on request from dealers, the supplier shall promptly deliver the labels on request;

(d) if the luminaire is placed on the market in a packaging for end-users that includes electrical lamps which the end-user can replace in the luminaire, the original packaging of those lamps is included in the luminaire's packaging. If not, then the outside or inside of the luminaire packaging must present, in some other form, the information given on the lamps' original packaging and required by this Regulation and by Commission regulations setting ecodesign requirements for lamps pursuant to Directive 2009/125/EC;

**(e) an electronic label in the format and containing information set out in point 2 of Annex I is made available to dealers for each luminaire model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other luminaire models.<sup>2</sup>**

Suppliers of luminaires intended to be marketed through a point of sale who provide information under this Regulation shall be considered to have fulfilled their responsibilities as distributors with respect to the product information requirements for lamps laid down in Commission regulations setting ecodesign requirements for lamps pursuant to Directive 2009/125/EC.

#### **Article 4**

##### **Responsibilities of dealers**

1. Dealers of electrical lamps shall ensure that:

(a) **each model offered for sale, hire or hire-purchase where the final owner cannot be expected to see the product displayed is marketed with the information to be provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label has been made available in accordance with Article 3(1)(f) the provisions in Annex VIII shall apply instead;**<sup>3</sup>

(b) any advertisement, formal price quote or tender offer disclosing energy-related or price information for a specific model states the energy efficiency class;

(c) any technical promotional material concerning a specific model which describes its specific technical parameters states the energy efficiency class of that model.

2. Dealers of luminaires marketed to end-users shall ensure that:

(a) the information contained in the label in accordance with Annex I.2 is provided in the following situations:

(i) in any advertisement, formal price quote or tender offer disclosing energy-related or price information for a specific luminaire;

(ii) in any technical promotional material concerning a specific luminaire which describes its specific

<sup>2</sup> Article 3, paragraph 2, points (e) is added in accordance with Article 7(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>3</sup> Article 4, paragraph 1, point (a) is replaced in accordance with Article 7(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

technical parameters. In these cases the information may be provided in formats other than the one set out in Annex I.2, such as fully textual;

(b) each model presented at a point of sale is accompanied by the label as set out in Annex I.2. The label shall be displayed in one or both of the following ways:

(i) in proximity to the displayed luminaire, so as to be clearly visible and identifiable as the label belonging to the model, without having to read the brand name and model number on the label;

(ii) clearly accompanying the most directly-visible information about the displayed luminaire (such as price or technical information) in the point of sale;

(c) if the luminaire is sold in a packaging for end-users that includes electrical lamps which the end-user can replace in the luminaire, the original packaging of those lamps is included in the luminaire's packaging. If not, then the outside or inside of the luminaire packaging must present, in some other form, the information given on the lamps' original packaging and required by this Regulation and by Commission regulations setting ecodesign requirements for lamps pursuant to Directive 2009/125/EC.

**(d) each model offered for sale, hire or hire-purchase through the internet and for which an electronic label has been made available in accordance with Article 3(2)(e) is accompanied by the label in accordance with Annex VIII.<sup>4</sup>**

### **Article 5**

#### **Measurement methods**

The information to be provided under Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods, as set out in Annex V.

### **Article 6**

#### **Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure laid down in Annex V when assessing the conformity of the declared energy efficiency class and energy consumption.

### **Article 7**

#### **Revision**

<...><sup>5</sup>

<sup>4</sup> Article 4, paragraph 2, points (d) is added in accordance with Article 7(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>5</sup> Not applicable

### **Article 8**

#### **Repeal**

<...><sup>6</sup>

### **Article 9**

#### **Transitional provisions**

1. Articles 3(2) and 4(2) shall not apply to luminaires before **1 July 2016**.
2. Article 3(1)(c-d) and Article 4(1)(a-c) shall not apply to printed advertisements and printed technical promotional material published before **1 July 2016**.
3. Lamps referred to in Article 1(1) and (2) of Directive 98/11/EC placed on the market before **1 January 2016** shall comply with the provisions set out in Directive 98/11/EC.
4. Lamps referred to in Article 1(1) and (2) of Directive 98/11/EC which comply with the provisions of this Regulation and which are placed on the market or offered for sale, hire or hire-purchase before **1 January 2016** shall be regarded as complying with the requirements of Directive 98/11/EC.

### **Article 10**

#### **Entry into force and application**

1. **This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties<sup>7</sup>.**

2. It shall apply from **1 January 2016**, except in the cases listed in Article 9.

This Regulation shall be binding in its entirety and directly applicable in all **Contracting Parties**.

**The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation<sup>8</sup>.**

8 The text displayed here corresponds to Article 2(3) of Decision 2014/02/MC-EnC

## ANNEX I

### Label

#### 1. LABEL FOR ELECTRICAL LAMPS PRESENTED AT A POINT OF SALE

(1) The label shall be as in the following illustration if it is not printed on the packaging:

(2) The following information shall be included on the label:

- I. supplier's name or trade mark;
- II. supplier's model identifier, meaning the code, usually alphanumeric, which distinguishes a specific lamp model from other models with the same trade mark or supplier's name;
- III. the energy efficiency class determined in accordance with Annex VI; the head of the arrow containing the energy efficiency class of the lamp shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
- IV. weighted energy consumption ( $E_c$ ) in kWh per 1 000 hours, calculated and rounded up to the nearest integer in accordance with Annex VII.

(3) If the label is printed on the packaging and the information specified in point (2)(I), (II) and (IV) is included elsewhere on the packaging, that information may be omitted from the label. The label shall then be chosen from the following illustrations:

(4) The design of the label shall be as follows:

where:

(a) the size specifications in the figure above and in point (d) apply to a lamp label 36 mm wide and 75 mm high. If the label is printed in a different format, its content must nevertheless remain proportionate to the specifications above.

The label version specified in points (1) and (2) must be at least 36 mm wide and 75 mm high, and the versions specified in point (3) must be, respectively, at least 36 mm wide and 68 mm high and at least 36 mm wide and 62 mm high. If no side of the packaging is large enough to contain the label and its blank border or if this would cover more than 50 % of the surface area of the largest side, the label and border may be reduced, but by no more than is required to meet both these conditions. However, in no case may the label be reduced to less than 40 % (by height) of its standard size. If the packaging is too small to take such a reduced label, a 36 mm wide and 75 mm high label must be attached to the lamp or the packaging;

(b) the background shall be white for both the multicoloured and the monochrome versions of the label;

(c) for the multicoloured version of the label, the colours shall be CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black;

(d) the label shall meet all the following requirements (numbers refer to the figure above; colour specifications apply only to the multicoloured version of the label):

- 1 **Border stroke:** 2 pt — colour: Cyan 100 % — round corners: 1 mm.
  - 2 **EU logo** — colours: X-80-00-00 and 00-00-X-00.
  - 3 **Energy logo:** colour: X-00-00-00. Pictogram as depicted: EU logo and energy logo (combined): width: 30 mm, height: 9 mm.
  - 4 **Sub-logos border:** 1 pt — colour: Cyan 100 % — length: 30 mm.
  - 5 **A++-E scale**
    - **Arrow:** height: 5 mm, gap: 0,8 mm — colours:
      - Highest class: X-00-X-00,
      - Second class: 70-00-X-00,
      - Third class: 30-00-X-00,
      - Fourth class: 00-00-X-00,
      - Fifth class: 00-30-X-00,
      - Sixth class: 00-70-X-00,
      - Last class: 00-X-X-00.
    - **Text:** Calibri bold 15 pt, capitals and white; '+' symbols: Calibri bold 15 pt, Superscript, white, aligned on a single row.
  - 6 **Energy efficiency class**
    - **Arrow:** width: 11,2 mm, height: 7 mm, 100 % black.
    - **Text:** Calibri bold 20 pt, capitals and white; '+' symbols: Calibri bold 20 pt, Superscript, white, aligned on a single row.
  - 7 **Weighted energy consumption**
    - Value:** Calibri bold 16 pt, 100 % black; and Calibri regular 9 pt, 100 % black.
  - 8 **Supplier's name or trade mark**
  - 9 **Supplier's model identifier**
    - The suppliers' name or trade mark and the model identifier shall fit in a space of 30 × 7 mm. Nothing else placed or printed on, or attached to, the individual packaging shall obscure the label or reduce its visibility.
- By way of derogation, if a model has been awarded an 'EU ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU ecolabel may be added.

## 2. LABEL FOR LUMINAIRES PRESENTED AT A POINT OF SALE

(1) The label shall be the relevant language version, and shall be as shown in the following illustration, or as in variants defined under points (2) and (3):

(2) The following information shall be included in the label:

- I. the supplier's name or trade mark;
- II. the supplier's model identifier, meaning the code, usually alphanumeric, which distinguishes a specific luminaire model from other models with the same trade mark or supplier's name;
- III. the sentence as shown in the example in point (1), or one of its alternatives from the examples in point (3) below, as applicable. Instead of the word 'luminaire', a more precise term may be used describing the particular luminaire type or the product into which the luminaire is integrated (such as furniture), as long as it remains clear that the term refers to the product on sale that operates the light sources;
- IV. the range of energy-efficiency classes according to part 1 of this Annex, accompanied by the following elements, as applicable:
  - (a) a 'bulb' pictogram indicating the classes of user-replaceable lamps with which the luminaire is compatible according to state-of-the-art requirements for compatibility;
  - (b) a cross over the classes of lamps with which the luminaire is not compatible according to state-of-

the-art requirements for compatibility;

(c) the letters 'LED' arranged vertically along the classes A to A++ if the luminaire contains LED modules not intended to be removed by the end-user. If such a luminaire does not contain sockets for user-replaceable lamps, the classes from B to E shall be covered by a cross;

V. one of the following options, as applicable:

(a) if the luminaire operates with lamps that are replaceable by the end-user, and such lamps are included in the packaging of the luminaire, the sentence as shown in the example in point (1), containing the appropriate energy classes. Where necessary, the sentence can be adjusted to refer to one lamp or several lamps, and several energy classes can be listed;

(b) if the luminaire contains only LED modules not intended to be removed by the end-user, the sentence as shown in the example in point (3)(b);

(c) if the luminaire contains both LED modules not intended to be removed by the end-user and sockets for replaceable lamps, and such lamps are not included with the luminaire, the sentence as shown in the example in point (3)(d);

(d) if the luminaire operates only with lamps that are replaceable by the end-user and there are no such lamps included with the luminaire, the space shall be left empty, as shown in the example in point (3)(a).

(3) The following illustrations provide examples of typical luminaire labels in addition to the illustration in point (1), without showing all possible combinations:

(a) luminaire operating with user-replaceable lamps compatible with lamps of all energy classes with no lamps included:

(b) luminaire containing only non-replaceable LED modules:

(c) luminaire containing both non-replaceable LED modules and sockets for user-replaceable lamps, with lamps included:

(d) luminaire containing both non-replaceable LED modules and sockets for user-replaceable lamps, with lamps not included:

(4) The design of the label shall be as in the figures below:

(a) the label version shall be at least 50 mm wide and 100 mm high;

(b) the background shall be white or transparent, but the letters of the energy classes shall always be white. When the background is transparent, the dealer shall ensure that the label is applied to a surface which is white or a light shade of grey that preserves the legibility of all the elements of the label;

(c) the colours shall be CMYK — cyan, magenta, yellow and black, following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black;

(d) the label shall fulfil all of the following requirements (the numbers refer to the figure above):

- ❶ **Border stroke:** 2 pt — colour: Cyan 100 % — round corners: 1 mm.
- ❷ **Sub-logos border:** 1 pt — colour: Cyan 100 % — length: 43 mm.
- ❸ **Luminaire logo:** stroke: 1 pt — colour: Cyan 100 % — Size: 13 mm × 13 mm — round corners: 1 mm. Pictogram as depicted, or the supplier's own pictogram or photo, if it describes better the

luminaire belonging to the label.

4 **Text:** Calibri Regular 9 pt or larger, 100 % black.

5 **A++-E scale**

— **Arrow:** height: 5 mm, gap: 0,8 mm — colours:

— Highest class: X-00-X-00,

— Second class: 70-00-X-00,

— Third class: 30-00-X-00,

— Fourth class: 00-00-X-00,

— Fifth class: 00-30-X-00,

— Sixth class: 00-70-X-00,

— Last class: 00-X-X-00.

— **Text:** Calibri bold 14 pt, capitals and white; '+' symbols: Calibri bold 14 pt, Superscript, white, aligned on a single row.

6 **LED text:** Verdana Regular 15 pt, 100 % black.

7 **Cross:** colour: 13-X-X-04, stroke: 3 pt.

8 **Bulb logo:** Pictogram as depicted.

9 **Text:** Calibri Regular 10 pt or larger, 100 % black.

10 **Numbering of the Regulation:** Calibri bold 10 pt, 100 % black.

11 **EU logo:** Colours: X-80-00-00 and 00-00-X-00.

12 **Supplier's name or trademark.**

13 **Supplier's model identifier:**

The supplier's name or trade mark and the model identifier shall fit into a space measuring 43 × 10 mm.

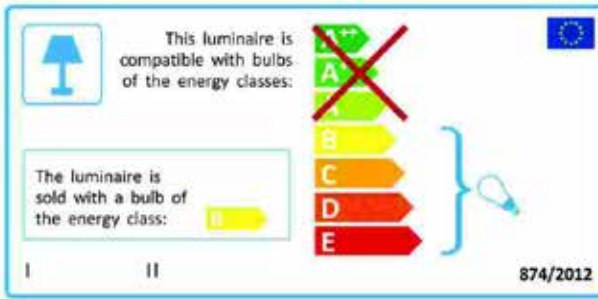

14 **Energy class arrow**

— **Arrow:** height: 3,9 mm, width: as shown in the illustration in point (4) but reduced in the same proportion as the height, colour: the colour defined in point, as applicable.

— **Text:** Calibri bold 10,5 pt, capitals and white; '+' symbols: Calibri bold 10,5 pt, Superscript, white, aligned on a single row.

If there is not enough space for displaying the energy class arrows within the area of the sentence referred to in point (2)(V)(a), the area between the number of the Regulation and the EU logo may be used for that purpose;

(e) the label may also be displayed in horizontal orientation, in which case it shall be at least 100 mm wide and 50 mm high. The components of the label shall be as described in points (b) to (d) and shall be arranged according to the following examples, as applicable. If there is not enough space for displaying the energy class arrows in the text box to the left from the A++ to E scale, the text box may be enlarged vertically as necessary.

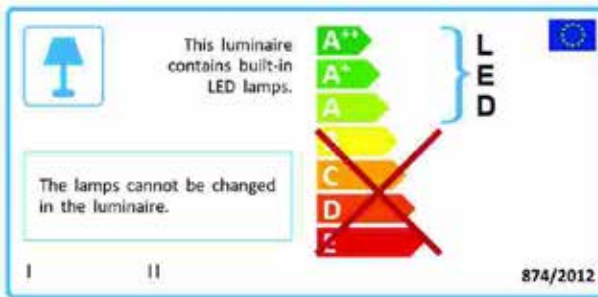

This luminaire is compatible with bulbs of the energy classes:

The luminaire is sold with a bulb of the energy class: II

~~A<sup>++</sup>~~  
~~A<sup>+</sup>~~

## **ANNEX II**

### **Product fiche for electrical lamps**

The fiche shall contain the information specified for the label. Where product brochures are not supplied, the label provided with the product can also be considered to be the fiche.

## **ANNEX III**

### **Technical documentation**

The technical documentation referred to in Article 3(1)(b) and (2)(a) shall include:

- (a) the name and address of the supplier;
- (b) a general description of the model, sufficient for it to be unequivocally and easily identified;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) the technical parameters for determining energy consumption and energy efficiency in the case of electrical lamps, and compatibility with lamps in the case of luminaires, specifying at least one realistic combination of product settings and conditions in which to test the product;
- (g) for electrical lamps, the results of calculations performed in accordance with Annex VII.

The information contained in this technical documentation may be merged with the technical documentation provided in accordance with measures under Directive 2009/125/EC.

## **ANNEX IV**

### **Information to be provided in cases where final owners cannot be expected to see the product displayed**

1. The information referred to in Article 4(1)(a) shall be provided in the following order:
  - (a) the energy efficiency class as defined in Annex VI;
  - (b) where required by Annex I, the weighted energy consumption in kWh per 1 000 hours, rounded up to the nearest integer and calculated in accordance with part 2 of Annex VII.
2. When other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex II.
3. The size and font in which all the information referred to in this Annex is printed or shown shall be legible.

## ANNEX V<sup>9</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

#### 1. VERIFICATION PROCEDURE FOR ELECTRICAL LAMPS AND LED MODULES MARKETED AS INDIVIDUAL PRODUCTS

(1) The Contracting Party authorities shall verify a sample batch of a minimum of 20 lamps of the same model from the same supplier, where possible obtained in equal proportions from four randomly selected sources.

(2) The model shall be considered to comply with the applicable requirements if:

(a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and

(b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and

(c) when testing the units of model, the arithmetical mean of the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) is within the respective tolerance of 10 %.

(3) If the results referred to in points 2(a), (b) or (c) are not achieved, the model shall be considered not to comply with this Delegated Regulation.

(4) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to point 3.

The Contracting Party authorities shall use measurement procedures that reflect generally recognised, current best practice and are reliable, accurate and reproducible, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

<sup>9</sup> Annex V is replaced in accordance with Article 7 and Annex VII of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**The Contracting Party authorities shall only apply the verification tolerance of 10 % and shall only use the procedure described in points 1 to 4 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.**

## **2. VERIFICATION PROCEDURE FOR LUMINAIRES INTENDED TO BE MARKETED OR MARKETED TO THE END-USER**

**The luminaire shall be considered to comply with the requirements laid down in this Regulation if it is accompanied by the required product information, if it is claimed to be compatible with all the lamp energy efficiency classes it is compatible with, and if, when applying state-of-the-art methods and criteria for assessing compatibility, it is found to be compatible with the lamp energy efficiency classes with which it is claimed to be compatible pursuant to points (2)(IV)(a) and (b) of part 2 of Annex I.**

## ANNEX VI

### Energy efficiency classes

The energy efficiency class of lamps shall be determined on the basis of their energy efficiency index (EEI) as set out in Table 1.

The EEI of lamps shall be determined in accordance with Annex VII.

*Table 1*

#### Energy efficiency classes for lamps

<b>Energy efficiency class</b>	<b>Energy efficiency index (EEI) for non-directional lamps</b>	<b>Energy efficiency index (EEI) for directional lamps</b>
A++ (most efficient)	$EEI \leq 0,11$	$EEI \leq 0,13$
A+	$0,11 < EEI \leq 0,17$	$0,13 < EEI \leq 0,18$
A	$0,17 < EEI \leq 0,24$	$0,18 < EEI \leq 0,40$
B	$0,24 < EEI \leq 0,60$	$0,40 < EEI \leq 0,95$
C	$0,60 < EEI \leq 0,80$	$0,95 < EEI \leq 1,20$
D	$0,80 < EEI \leq 0,95$	$1,20 < EEI \leq 1,75$
E (least efficient)	$EEI > 0,95$	$EEI > 1,75$

## ANNEX VII

## Method for calculating the energy efficiency index and energy consumption

## 1. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the energy efficiency index (EEI) of a model, its power corrected for any control gear losses is compared with its reference power. The reference power is obtained from the useful luminous flux, which is the total flux for non-directional lamps, and the flux in a 90° or 120° cone for directional lamps.

The EEI is calculated as follows and rounded to two decimal places:

$$EEI = P_{cor}/P_{ref}$$

where:

$P_{cor}$  is the rated power ( $P_{rated}$ ) for models without external control gear and the rated power ( $P_{rated}$ ) corrected in accordance with Table 2 for models with external control gear. The rated power of the lamps is measured at their nominal input voltage.

Table 2

## Power correction if the model requires external control gear

Scope of the correction	Power corrected for control gear losses ( $P_{cor}$ )
Lamps operating on external halogen lamp control gear	$P_{rated} \times 1,06$
Lamps operating on external LED lamp control gear	$P_{rated} \times 1,10$
Fluorescent lamps of 16 mm diameter (T5 lamps) and 4-pin single capped fluorescent lamps operating on external fluorescent lamp control gear	$P_{rated} \times 1,10$
Other lamps operating on external fluorescent lamp control gear	$P_{rated} \times \frac{0,24\sqrt{\Phi_{use}} + 0,0103\Phi_{use}}{0,15\sqrt{\Phi_{use}} + 0,0097\Phi_{use}}$
Lamps operating on external high-intensity discharge lamp control gear	$P_{rated} \times 1,10$
Lamps operating on external low pressure sodium lamp control gear	$P_{rated} \times 1,15$

$P_{ref}$  is the reference power obtained from the useful luminous flux of the model ( $\Phi_{use}$ ) by the following formulae:

- For models with  $\Phi_{use} < 1\,300$  lumen:  $P_{ref} = 0,88\sqrt{\Phi_{use}} + 0,049\Phi_{use}$
- For models with  $\Phi_{use} \geq 1\,300$  lumen:  $P_{ref} = 0,07341\Phi_{use}$ . The useful luminous flux ( $\Phi_{use}$ ) is defined in accordance with Table 3.

Table 3

**Definition of the useful luminous flux**

Model	Useful luminous flux ( $\Phi_{use}$ )
Non-directional lamps	Total rated luminous flux ( $\Phi$ )
Directional lamps with a beam angle $\geq 90^\circ$ other than filament lamps and carrying a textual or graphical warning on their packaging that they are not suitable for accent lighting	Rated luminous flux in a $120^\circ$ cone ( $\Phi_{120^\circ}$ )
Other directional lamps	Rated luminous flux in a $90^\circ$ cone ( $\Phi_{90^\circ}$ )

**2. CALCULATION OF THE ENERGY CONSUMPTION**

The weighted energy consumption ( $E_c$ ) is calculated in kWh/1 000 h as follows and is rounded to two decimal places:

$$E_c = \frac{P_{cor} \times 1000h}{1000}$$

where

$P_{cor}$  is the power corrected for any control gear losses in accordance with part 1 above.

## ANNEX VIII<sup>10</sup>

### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 4 of this Annex the following definitions shall apply:

- (a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) or Article 3(2)(e) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile mag-

<sup>10</sup> Annex VIII is added in accordance with Article 7(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

nification shall apply;

**(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;**

**(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.**

## **DELEGATED REGULATION (EU) 392/2012 of 1 March 2012 supplementing Directive 2010/30/EU with regard to energy labelling of household tumble driers**

Incorporated and adapted by Ministerial Council Decision 2014/02/MC-EnC of 23 September 2014 adapting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2014/02/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts for the labelling of energy-related products representing significant potential for energy savings and presenting a wide disparity in performance levels with equivalent functionality.

(2) Provisions for the energy labelling of household tumble driers were established by Commission Directive 95/13/EC of 23 May 1995 implementing Council Directive 92/75/EEC with regard to energy labelling of household electric tumble driers.

(3) The energy used by household tumble driers accounts for a significant part of total household energy demand in the Union. In addition to the energy efficiency improvements already achieved, the scope for further reducing the energy consumption of household tumble driers is substantial.

(4) Directive 95/13/EC should be repealed and new provisions should be laid down by this Regulation in order to ensure that the energy label provides dynamic incentives for suppliers to further improve the energy efficiency of household tumble driers and to accelerate market transformation towards energy-efficient technologies.

(5) Household combined washer-driers are addressed in Commission Directive 96/60/EC of 19 September 1996 implementing Council Directive 92/75/EEC with regard to energy labelling of household combined washer-driers. They have particular characteristics and should therefore be exempted from the scope of this Regulation.

(6) The information provided on the label should be obtained through reliable, accurate and reproducible measurement procedures which take into account the recognised state-of-the-art measurement methods, including, where available, harmonised standards adopted by the European standardisation bodies, as listed in Annex I to Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations.

(7) This Regulation should specify a uniform design and content for the label for household tumble driers, including gas-fired driers.

(8) In addition, this Regulation should specify requirements as to the 'technical documentation' and the 'product fiche' for household tumble driers.

(9) Moreover, this Regulation should specify requirements as to the information to be provided for any

form of distance selling and advertisement of household tumble driers and any form of technical promotional material for such appliances.

(10) It is appropriate to provide for a review of this Regulation in order to take into account technological progress.

(11) In order to facilitate the transition from Directive 95/13/EC to this Regulation, household tumble driers labelled in accordance with this Regulation should be considered as compliant with Directive 95/13/EC.

(12) Directive 95/13/EC should therefore be repealed.

### **Article 1**

#### **Subject matter and scope**

1. This Regulation establishes requirements for the labelling of and the provision of supplementary product information on electric mains-operated and gas-fired household tumble driers and built-in household tumble driers, including those sold for non-household use.

2. This Regulation shall not apply to household combined washer-driers and household spin-extractors.

### **Article 2**

#### **Definitions**

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

(1) 'household tumble drier' means an appliance in which textiles are dried by tumbling in a rotating drum, through which heated air is passed and which is designed to be used principally for non-professional purposes;

(2) 'built-in household tumble drier' means a household tumble drier intended to be installed in a cabinet, a prepared recess in a wall or a similar location, requiring furniture finishing;

(3) 'household combined washer-drier' means a household washing machine which includes both a spin extraction function and also a means for drying the textiles, usually by heating and tumbling;

(4) 'household spin-extractor', also known commercially as 'spin-drier', means an appliance in which water is removed from the textiles by centrifugal action in a rotating drum and drained through an automatic pump and which is designed to be used principally for non-professional purposes;

(5) 'air-vented tumble drier' means a tumble drier that draws in fresh air, passes it over the textiles and vents the resulting moist air into the room or outside;

(6) 'condenser tumble drier' means a tumble drier which includes a device (either using condensation or any other means) for removing moisture from the air used for the drying process;

(7) 'automatic tumble drier' means a tumble drier which switches off the drying process when a certain moisture content of the load is detected, for example through conductivity or temperature sensing;

(8) 'non-automatic tumble drier' means a tumble drier which switches off the drying process after a

predefined period, usually controlled by a timer, but which may also be manually switched off;

(9) 'programme' means a series of operations that are predefined and which are declared by the supplier as suitable for drying certain types of textile;

(10) 'cycle' means a complete drying process, as defined for the selected programme;

(11) 'programme time' means the time that elapses from the initiation of the programme until the completion of the programme, excluding any end-user programmed delay;

(12) 'rated capacity' means the maximum mass in kilograms, indicated by the supplier in 0,5 kilogram increments of dry textiles of a particular type, which can be treated in a household tumble drier with the selected programme, when loaded in accordance with the supplier's instructions;

(13) 'partial load' means half of the rated capacity of a household tumble drier for a given programme;

(14) 'condensation efficiency' means the ratio between the mass of moisture condensed by a condenser tumble drier and the mass of moisture removed from the load at the end of a cycle;

(15) 'off-mode' means a condition where the household tumble drier is switched off using appliance controls or switches accessible to and intended for operation by the end-user during normal use to attain the lowest power consumption that may persist for an indefinite time while the household tumble drier is connected to a power source and used in accordance with the supplier's instructions; where there is no control or switch accessible to the end-user, 'off-mode' means the condition reached after the household tumble drier reverts to a steady-state power consumption on its own;

(16) 'left-on mode' means the lowest power consumption mode that may persist for an indefinite time after completion of the programme without any further intervention by the end-user besides unloading of the household tumble drier;

(17) 'equivalent household tumble drier' means a model of household tumble drier placed on the market with the same rated capacity, technical and performance characteristics, energy consumption, condensation efficiency where relevant, standard cotton programme time and airborne acoustical noise emissions during drying as another model of household tumble drier placed on the market under a different commercial code number by the same supplier;

(18) 'end-user' means a consumer buying or expected to buy a household tumble drier;

(19) 'point of sale' means a location where household tumble driers are displayed or offered for sale, hire or hire-purchase.

(20) 'standard cotton programme' means the cycle which dries cotton laundry with an initial moisture content of the load of 60% up to a remaining moisture content of the load of 0%.

### **Article 3**

#### **Responsibilities of suppliers**

Suppliers shall ensure that:

(a) each household tumble drier is supplied with a printed label in the format and containing the information set out in Annex I;

(b) a product fiche, as set out in Annex II, is made available;

(c) technical documentation as set out in Annex III is made available on request to the authorities of the **Contracting Parties** and to the Commission;

(d) any advertisement for a specific model of household tumble drier contains the energy efficiency class, if the advertisement discloses energy-related or price information;

(e) any technical promotional material concerning a specific model of household tumble drier which describes its specific technical parameters includes the energy efficiency class of that model;

**(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household tumble drier model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household tumble drier models;**

**(g) an electronic product fiche as set out in Annex II is made available to dealers for each household tumble drier model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household tumble drier models.<sup>1</sup>**

#### **Article 4**

##### **Responsibilities of dealers**

Dealers shall ensure that:

(a) each household tumble drier, at the point of sale, bears the label provided by suppliers in accordance with Article 3(a) on the outside of the front or top of the household tumble drier, in such a way as to be clearly visible;

**(b) household tumble driers offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed, as specified in Article 7 of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC, are marketed with the information provided by suppliers in accordance with Annex IV to this Regulation. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;<sup>2</sup>**

(c) any advertisement for a specific model of household tumble drier contains a reference to the energy efficiency class, if the advertisement discloses energy-related or price information;

(d) any technical promotional material concerning a specific model of household tumble drier which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

<sup>1</sup> Article 3, points (f) and (g) are added in accordance with Article 6(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>2</sup> Article 4, point (b) is replaced in accordance with Article 6(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

### **Article 5**

#### **Measurement methods**

The information to be provided under Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods.

### **Article 6**

#### **Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure set out in Annex V for assessing the conformity of the declared energy efficiency class, the energy consumption per cycle, the condensation efficiency class where applicable, the rated capacity, the power consumption in off-mode and left-on mode, the duration of the left-on mode, the programme time and airborne acoustical noise emissions.

### **Article 7**

#### **Revision**

<...><sup>3</sup>

### **Article 8**

#### **Repeal**

<...><sup>4</sup>

### **Article 9**

#### **Transitional provisions**

1. Article 3(d) and (e) and Article 4(b), (c) and (d) shall not apply to printed advertisements and printed technical promotional material published before **30 April 2016**.
2. Household tumble driers placed on the market before **1 January 2016** shall comply with the provisions of Directive 95/13/EC.
3. Household tumble driers which comply with the provisions of this Regulation and which are placed on the market or offered for sale, hire or hire-purchase before **1 January 2016** shall be regarded as complying with the requirements of Directive 95/13/EC.

---

<sup>3</sup> Not applicable

<sup>4</sup> *ibid.*

### **Article 10**

#### **Entry into force and application**

1. **This Decision (2014/02/MC-EnC) enters into force upon its adoption (23 September 2014) and it is addressed to the Contracting Parties<sup>5</sup>.**

2. It shall apply from **1 January 2016**. However, Article 3(d) and (e) and Article 4(b), (c) and (d) shall apply from **30 April 2016**.

**The Secretariat shall monitor and review the implementation of the Delegated Regulations referred to in Article 1 in the Contracting Parties. Contracting Parties shall communicate to the Energy Community Secretariat the text of the main provisions of national law which they adopt in the field covered by these Delegated Regulations, in the next year of the deadline for the overall implementation<sup>6</sup>.**

6 The text displayed here corresponds to Article 2(3) of Decision 2014/02/MC-EnC

## ANNEX I

### Label

#### 1. LABEL FOR AIR-VENTED HOUSEHOLD TUMBLE DRIER

1.1. The following information shall be included in the label for air vented household tumble driers:

- I. supplier's name or trade mark;
- II. supplier's model identifier, meaning the code, usually alphanumeric, which distinguishes a specific household tumble drier model from other models with the same trade mark or supplier's name;
- III. the energy efficiency class as defined in point 1 of Annex VI; the head of the arrow containing the energy efficiency class of the household tumble drier shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
- IV. weighted annual energy consumption ( $AE_c$ ) in kWh/year, rounded up to the nearest integer and calculated in accordance with Annex VII;

V. information on the type of household tumble drier;

VI. cycle time corresponding to the standard cotton programme at full load in minutes and rounded to the nearest minute;

VII. rated capacity, in kg, for the standard cotton programme at full load;

VIII. the sound power level (weighted average value —  $L_{WA}$ ), during the drying phase, for the standard cotton programme at full load, expressed in dB, rounded to the nearest integer.

1.2. The design of the label for air vented household tumble driers shall be in accordance with point 4 of this Annex. Where a model has been granted an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

## 2. LABEL FOR CONDENSER HOUSEHOLD TUMBLE DRIER

2.1. In addition to the information listed in point 1.1, the label for condenser household tumble driers shall include:

IX. the condensation efficiency class in accordance with point 2 of Annex VI.

2.2. The design of the label for condenser household tumble driers shall be in accordance with point 4 of this Annex. Where a model has been awarded an 'EU Ecolabel' under Regulation (EC) No 66/2010, a copy of the EU Ecolabel may be added.

### 3. LABEL FOR GAS-FIRED HOUSEHOLD TUMBLE DRIER

3.1. The information listed in point 1.1 shall be included in the label for gas fired household tumble driers.

3.2. The design of the label for gas fired household tumble driers shall be in accordance with point 4 of this Annex. Where a model has been awarded an 'EU Ecolabel' under Regulation (EC) No 66/2010, a copy of the EU Ecolabel may be added.

#### 4. LABEL DESIGN

4.1. For air vented household tumble driers, the design of the label shall be as in the figure below.

Whereby

(a) The label must be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours shall be CMYK — cyan, magenta, yellow and black following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above).

- 1 **Eu label border stroke:** 5 pt — colour: Cyan 100 % — round corners: 3,5 mm.
- 2 **EU logo** — colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** colour: X-00-00-00. Pictogram as depicted; EU logo and energy logo (combined):

width: 92 mm, height: 17 mm.

4 **Sub-logos border:** 1 pt — colour: Cyan 100 % — length: 92,5 mm.

5 **A-G scale**

— **Arrow:** height: 7 mm, gap: 0,75 mm – colours:

— Highest class: X-00-X-00,

— Second class: 70-00-X-00,

— Third class: 30-00-X-00,

— Fourth class: 00-00-X-00,

— Fifth class: 00-30-X-00,

— Sixth class: 00-70-X-00,

— Last class: 00-X-X-00.

— **Text:** Calibri bold 18 pt, capitals and white; '+' symbols: Calibri bold 12 pt, white aligned on a single row.

6 **Energy efficiency class**

— **Arrow:** width: 26 mm, height: 14 mm, 100 % black;

— **Text:** Calibri bold 29 pt, capitals and white; '+' symbols: Calibri bold 18 pt, white aligned on a single row.

7 **Energy**

— **Text:** Calibri regular 11 pt, capitals, 100 % black.

8 **Weighted annual energy consumption:**

— **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.

— **Value:** Calibri bold 30 pt, 100 % black.

— **Second line:** Calibri regular 14 pt, 100 % black.

9 **Type of household tumble drier:**

— **Pictogram** as depicted

— **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.

10 **Cycle time:**

— **Pictogram** as depicted

— **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.

— **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

11 **Rated capacity:**

— **Pictogram** as depicted

— **Border:** 2 pt — colour: Cyan 100% — round corners: 3,5 mm.

— **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

12 **Sound power level:**

— **Pictogram** as depicted

- **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.
- **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

- 13 **Asterisk:** Calibri regular 6 pt, 100 % black.
- 14 **Supplier's name or trade mark**
- 15 **Supplier's model identifier**
- 16 The supplier's name or trademark and model identifier should fit in a space of 92 × 15 mm.
- 17 **Numbering of the Regulation:** Calibri bold 9 pt, 100 % black.

4.2. For condenser household tumble driers, the design of the label shall be as in the figure below.

Whereby

(a) The label must be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours shall be CMYK — cyan, magenta, yellow and black following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above).

- 1 **Eu label border stroke:** 5 pt — colour: Cyan 100 % — round corners: 3,5 mm.
- 2 **EU logo** — colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** colour: X-00-00-00. Pictogram as depicted; EU logo and energy logo (combined): width: 92 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt — colour: Cyan 100 % — length: 92,5 mm.
- 5 **A-G scale**
  - **Arrow:** height: 7 mm, gap: 0,75 mm — colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Last class: 00-X-X-00.
  - **Text:** Calibri bold 18 pt, capitals and white; '+' symbols: Calibri bold 12 pt, white aligned on a single row.
- 6 **Energy efficiency class**
  - **Arrow:** width: 26 mm, height: 14 mm, 100 % black;
  - **Text:** Calibri bold 29 pt, capitals and white; '+' symbols: Calibri bold 18 pt, white aligned on a single row.
- 7 **Energy**
  - **Text:** Calibri regular 11 pt, capitals, 100 % black.
- 8 **Weighted annual energy consumption:**
  - **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.
  - **Value:** Calibri bold 30 pt, 100 % black.
  - **Second line:** Calibri regular 14 pt, 100 % black.
- 9 **Type of household tumble drier:**
  - **Pictogram** as depicted
  - **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.
- 10 **Cycle time:**
  - **Pictogram** as depicted
  - **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.

— **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

**11 Rated capacity:**

— **Pictogram** as depicted

— **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.

— **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

**12 Sound power level:**

— **Pictogram** as depicted

— **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.

— **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

**13 Asterisk:** Calibri regular 6 pt, 100 % black.

**14 Supplier's name or trade mark**

**15 Supplier's model identifier**

**16** The supplier's name or trademark and model identifier should fit in a space of 92 × 15 mm.

**17 Numbering of the Regulation:** Calibri bold 9 pt, 100 % black.

**18 Condensation efficiency class:**

— **Pictogram** as depicted

— **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.

— **Value:** Calibri regular 16 pt, horizontal scale 75 %, 100 % black and Calibri bold 22 pt, horizontal scale 75 %, 100 % black.

4.3. For gas fired household tumble driers, the design of the label shall be as in the figure below.

Whereby

(a) The label must be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours shall be CMYK — cyan, magenta, yellow and black following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above).

- 1 **Eu label border stroke:** 5 pt — colour: Cyan 100 % — round corners: 3,5 mm.
- 2 **EU logo** — colours: X-80-00-00 and 00-00-X-00.
- 3 **Energy label:** colour: X-00-00-00. Pictogram as depicted; EU logo and energy logo (combined): width: 92 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt — colour: Cyan 100 % — length: 92,5 mm.

**5 A-G scale**

- **Arrow:** height: 7 mm, gap: 0,75 mm — colours:
  - Highest class: X-00-X-00,
  - Second class: 70-00-X-00,
  - Third class: 30-00-X-00,
  - Fourth class: 00-00-X-00,
  - Fifth class: 00-30-X-00,
  - Sixth class: 00-70-X-00,
  - Last class: 00-X-X-00.
- **Text:** Calibri bold 18 pt, capitals and white; '+-' symbols: Calibri bold 12 pt, white aligned on a single row.

- **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.
- **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

**12 Sound power level:**

- **Pictogram** as depicted
- **Border:** 2 pt — colour: Cyan 100 % — round corners: 3,5 mm.
- **Value:** Calibri bold 24 pt, 100 % black; and Calibri regular 16 pt, 100 % black.

- 13 **Asterisk:** Calibri regular 6 pt, 100 % black
- 14 **Supplier's name or trade mark**
- 15 **Supplier's model identifier**
- 16 The supplier's name or trademark and model identifier should fit in a space of 92 × 15 mm.
- 17 **Numbering of the Regulation:** Calibri bold 9 pt, 100 % black.

## ANNEX II

### Product Fiche

1. The information in the product fiche of household tumble driers shall be given in the following order and shall be included in the product brochure or other literature provided with the product:

(a) supplier's name or trade mark;

(b) supplier's model identifier, which means the code, usually alphanumeric, which distinguishes a specific household tumble drier model from other models with the same trade mark or supplier's name;

(c) rated capacity in kg of cotton laundry for the standard cotton programme at full load;

(d) whether the household tumble drier is an air-vented, condenser or gas-fired household tumble drier;

(e) energy efficiency class in accordance with point 1 of Annex VI;

(f) for electric mains-operated household tumble drier:

the weighted Annual Energy Consumption ( $AE_e$ ) rounded up to one decimal place; it shall be described as: 'Energy consumption "X" kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.';

for household gas-fired tumble drier:

the weighted Annual Energy Consumption ( $AE_{C(Gas)}$ ) rounded up to one decimal place; it shall be described as: 'Energy consumption "X" kWh-Gas per year, based on 160 drying cycles of the standard cotton programme at full and partial load. Actual energy consumption per cycle will depend on how the appliance is used.';

and

the weighted Annual Energy Consumption ( $AE_{C(Gas)e}$ ) rounded up to one decimal place; it shall be described as: 'Energy consumption "X" kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.';

(g) whether the household tumble drier is an 'automatic tumble drier' or 'non-automatic tumble drier';

(h) where the household tumble drier has been awarded an 'EU Ecolabel award' under Regulation (EC) No 66/2010, this information may be included;

(i) the energy consumption ( $E_{dry}$ ,  $E_{dry/2}$ ,  $E_{g_{dry}}$ ,  $E_{g_{dry/2}}$ ,  $E_{g_{dry,a}}$ ,  $E_{g_{dry/2,d}}$ ) of the standard cotton programme at full and partial load;

(j) the power consumption of the off-mode ( $P_o$ ) and of the left-on mode ( $P_l$ ) for the standard cotton programme at full load;

(k) if the household tumble drier is equipped with a power management system, the duration of the 'left-on mode';

(l) indication that the 'standard cotton programme' used at full and partial load is the standard drying programme to which the information in the label and the fiche relates, that this programme is suitable for drying normal wet cotton laundry and that it is the most efficient programme in terms of energy consumption for cotton;

(m) the weighted programme time ( $T_{\downarrow}$ ) of the 'standard cotton programme at full and partial load' in minutes and rounded to the nearest minute as well as the programme time of the 'standard cotton programme at full load' ( $T_{dry}$ ) and the programme time of the 'standard cotton programme at partial load' ( $T_{dry/2}$ ) in minutes and rounded to the nearest minute;

(n) if the household tumble drier is a condenser tumble drier, the condensation efficiency class in accordance with point 2 of Annex VI, expressed as 'condensation efficiency class 'X' on a scale from G (least efficient) to A (most efficient)'; this may be expressed by other means provided it is clear that the scale is from G (least efficient) to A (most efficient);

(o) if the household tumble drier is a condenser tumble drier, the average condensation efficiency  $C_{dry}$  and  $C_{dry/2}$  of the standard cotton programme at full load and partial load and the weighted condensation efficiency ( $C_{\downarrow}$ ) for the 'standard cotton programme at full and partial load', as a percentage and rounded to the nearest whole percent;

(p) the sound power level (weighted average value —  $L_{WA}$ ) expressed in dB and rounded to the nearest integer for the standard cotton programme at full load;

(q) if the household tumble drier is intended to be built-in, an indication to this effect.

2. One product fiche may cover a number of household tumble drier models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.

## ANNEX III

### Technical documentation

1. The technical documentation referred to in Article 3(c) shall include:

- (a) the name and address of the supplier;
- (b) a general description of the household tumble drier model, sufficient for it to be unequivocally and easily identified;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) the identification and signature of the person empowered to bind the supplier;
- (f) technical parameters for measurements as follows:

(i) for electric mains-operated household tumble drier:

the energy consumption ( $E_{dry}$ ,  $E_{dry\frac{1}{2}}$ ,  $Eg_{dry}$ ,  $Eg_{dry\frac{1}{2}}$ ,  $Eg_{dry,a}$ ,  $Eg_{dry\frac{1}{2},d}$ ) of the standard cotton programme at full and partial load,

for household gas-fired tumble drier:

the weighted Annual Energy Consumption ( $AE_{C(Gas)}$ ) rounded up to one decimal place; it shall be described as: 'Energy consumption "X" kWh-Gas per year, based on 160 drying cycles of the standard cotton programme at full and partial load. Actual energy consumption per cycle will depend on how the appliance is used';

and

the weighted Annual Energy Consumption ( $AE_{C(Gas)l}$ ) rounded up to one decimal place; it shall be described as: 'Energy consumption "X" kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.';

(ii) power consumption in 'off-mode' and the power consumption in 'left-on mode';

(iii) the programme time of the 'standard cotton programme at full load' ( $T_{dry}$ ) and the programme time of the 'standard cotton programme at partial load' ( $T_{dry\frac{1}{2}}$ ), in minutes and rounded to the nearest minute;

(iv) if the household tumble drier is equipped with a power management system, the duration of the 'left-on mode';

(v) if the household tumble drier is a condenser tumble drier, the average condensation efficiency  $C_{dry}$  of the standard cotton programme at full load and the average condensation efficiency of the standard cotton programme at partial load  $C_{dry\frac{1}{2}}$ ;

(vi) the sound power level;

(g) the results of calculations performed in accordance with Annex VII.

2. Where the information included in the technical documentation for a particular household tumble drier model has been obtained by calculation on the basis of design or by extrapolation from other equivalent household tumble driers, or both, the documentation shall include details of such calculations

or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent household tumble drier models where the information was obtained in the same way.

## ANNEX IV

**Information to be provided in cases where end-users cannot be expected to see the product displayed**

1. The information referred to in Article 4(b) shall be provided in the following order:

- (a) the rated capacity in kg of cotton, for the standard cotton programme at full load;
- (b) whether the household tumble drier is an air-vented, condenser or gas-fired household tumble drier;
- (c) the energy efficiency class as defined in point 1 of Annex VI;
- (d) for electric mains-operated household tumble drier:

the weighted Annual Energy Consumption ( $AE_e$ ) rounded up to the nearest integer, to be described as: 'Energy consumption "X" kWh per year, based on 160 drying cycles of the standard cotton programmes at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.';

for household gas-fired tumble drier:

the weighted Annual Energy Consumption ( $AE_{C(Gas)}$ ) rounded up to one decimal place; it shall be described as: 'Energy consumption "X" kWh-Gas per year, based on 160 drying cycles of the standard cotton programme at full and partial load. Actual energy consumption per cycle will depend on how the appliance is used';

and

the weighted Annual Energy Consumption ( $AE_{C(Gas)el}$ ) rounded up to one decimal place; it shall be described as: 'Energy consumption "X" kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.';

- (e) whether the household tumble drier is an 'automatic tumble drier' or 'non-automatic tumble drier';
  - (f) the energy consumption ( $E_{dry}$ ,  $E_{dry/2}$ ,  $Eg_{dry}$ ,  $Eg_{dry/2}$ ,  $Eg_{dry,a}$ ,  $Eg_{dry/2,d}$ ) of the standard cotton programme at full and partial load, rounded up to two decimal places and calculated in accordance with Annex VII;
  - (g) the power consumption of the off-mode ( $P_o$ ) and the left-on mode ( $P$ ) for the standard cotton programme at full load;
  - (h) the programme time of the 'standard cotton programme at full load' ( $T_{dry}$ ) and the programme time of the 'standard cotton programme at partial load' ( $T_{dry/2}$ ), in minutes and rounded to the nearest minute, calculated in accordance with Annex VII;
  - (i) if the household tumble drier is a condenser tumble drier, the condensation efficiency class in accordance with point 2 of Annex VI;
  - (j) the sound power level (weighted average value —  $L_{WA}$ ) for the standard cotton programme at full load, expressed in dB and rounded to the nearest integer;
  - (k) if the household tumble drier is intended to be built-in, an indication to this effect.
2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex II.
3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.

## ANNEX V<sup>7</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household tumble drier models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household tumble drier models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being

<sup>7</sup> Annex V is replaced in accordance with Article 6 and Annex VI of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

taken on the non-compliance of the model according to points 3 and 6.

Contracting Parties' authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 1**  
**Verification tolerances**

Parameters	Verification tolerances
Weighted annual energy consumption ( $AE_c$ )	The determined value shall not exceed the declared value of $AE_c$ by more than 6 %.
Weighted energy consumption ( $E_t$ )	The determined value shall not exceed the declared value of $E_t$ by more than 6 %.
Weighted condensation efficiency ( $C_t$ )	The determined value shall not be less than the declared value of $C_t$ by more than 6 %.
Weighted programme time ( $T_t$ )	The determined value shall not exceed the declared value of $T_t$ by more than 6 %.
Power consumption in off mode and left-on mode ( $P_o$ and $P_l$ )	The determined values of power consumption $P_o$ and $P_l$ of more than 1,00 W shall not exceed the declared values of $P_o$ and $P_l$ by more than 6 %. The determined value of power consumption $P_o$ and $P_l$ of less than or equal to 1,00 W shall not exceed the declared values of $P_o$ and $P_l$ by more than 0,10 W.
Duration of the left-on mode ( $T_l$ )	The determined value shall not exceed the declared value of $T_l$ by more than 6 %.
Sound power level, $L_{WA}$	The determined value shall not exceed the declared value of $L_{WA}$ .

## ANNEX VI

### Energy efficiency classes and condensation efficiency classes

#### 1. ENERGY EFFICIENCY CLASSES

The energy efficiency class of a household tumble drier shall be determined on the basis of its Energy Efficiency Index (*EEI*) as set out in Table 1.

The Energy Efficiency Index (*EEI*) of a household tumble drier shall be determined in accordance with point 1 of Annex VII.

Table 1

#### Energy efficiency classes

Energy efficiency class	Energy Efficiency Index
A+++ (most efficient)	$EEI < 24$
A++	$24 \leq EEI < 32$
A+	$32 \leq EEI < 42$
A	$42 \leq EEI < 65$
B	$65 \leq EEI < 76$
C	$76 \leq EEI < 85$
D (least efficient)	$85 \leq EEI$

#### 2. CONDENSATION EFFICIENCY CLASSES

The condensation efficiency class of a condenser household tumble drier shall be determined on the basis of the weighted condensation efficiency ( $C_t$ ) as set out in Table 2.

The weighted condensation efficiency ( $C_t$ ) of a condenser household tumble drier shall be determined in accordance with point 2 of Annex VII.

Table 2

#### Condensation efficiency classes

Condensation efficiency class	Weighted condensation efficiency
A (most efficient)	$C_t > 90$
B	$80 < C_t \leq 90$
C	$70 < C_t \leq 80$
D	$60 < C_t \leq 70$
E	$50 < C_t \leq 60$
F	$40 < C_t \leq 50$
G (least efficient)	$C_t \leq 40$

## ANNEX VII

### Method for calculating the Energy Efficiency Index and the weighted condensation efficiency

#### 1. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the Energy Efficiency Index (*EEI*) of a household tumble drier model, the weighted Annual Energy Consumption of a household tumble drier for the standard cotton programme at full and partial load is compared to its Standard Annual Energy Consumption.

(a) The Energy Efficiency Index (*EEI*) is calculated as follows and rounded to one decimal place:

$$EEI = \frac{AE_C}{SAE_C} \times 100$$

where:

$AE_C$  = weighted Annual Energy Consumption of the household tumble drier.

$SAE_C$  = standard Annual Energy Consumption of the household tumble drier.

(b) The Standard Annual Energy Consumption ( $SAE_C$ ) is calculated in kWh/year as follows and rounded to two decimal places:

— for all household tumble driers that are not air-vented:

$$SAE_C = 140 \times c^{0,8}$$

— for air-vented household tumble driers:

$$SAE_C = 140 \times c^{0,8} - \left( 30 \times \frac{T_t}{60} \right)$$

where:

$c$  is the rated capacity of the household tumble drier for the standard cotton programme.

$T_t$  is the weighted programme time for the standard cotton programme.

(c) The weighted Annual Energy Consumption ( $AE_C$ ) is calculated in kWh/year as follows and is rounded to two decimal places:

$$(i) \quad AE_C = E_t \times 160 + \frac{\left[ P_o \times \frac{525\,600 - (T_t \times 160)}{2} + P_l \times \frac{525\,600 - (T_t \times 160)}{2} \right]}{60 \times 1\,000}$$

where:

$E_t$  = weighted energy consumption, in kWh and rounded to two decimal places.

$P_o$  = power in 'off-mode' for the standard cotton programme at full load, in W and rounded to two decimal places.

$P_l$  = power in 'left-on mode' for the standard cotton programme at full load, in W and rounded to two

decimal places.

$T_t$  = weighted programme time, in minutes and rounded to the nearest minute.

**160** = total number of drying cycles per year.

(ii) When the household tumble drier is equipped with a power management system, with the household tumble drier reverting automatically to 'off-mode' after the end of the programme, the weighted Annual Energy Consumption ( $AE_C$ ) is calculated taking into consideration the effective duration of the 'left-on mode', according to the following formula:

$$AE_C = E_t \times 160 + \frac{\{(P_1 \times T_1 \times 160) + P_o \times [525\,600 - (T_t \times 160) - (T_1 \times 160)]\}}{60 \times 1000}$$

where:

$T_1$  = duration of the 'left-on mode' for the standard cotton programme at full load, in minutes and rounded to the nearest minute.

(d) The weighted programme time ( $T_t$ ) for the standard cotton programme is calculated in minutes as follows and rounded to the nearest minute:

$$T_t = (3 \times T_{dry} + 4 \times T_{dry\frac{1}{2}}) / 7$$

where:

$T_{dry}$  = programme time for the standard cotton programme at full load, in minutes and rounded to the nearest minute.

$T_{dry\frac{1}{2}}$  = programme time for the standard cotton programme at partial load, in minutes and rounded to the nearest minute.

(e) The weighted energy consumption ( $E_t$ ) is calculated in kWh as follows and rounded to two decimal places:

$$E_t = (3 \times E_{dry} + 4 \times E_{dry\frac{1}{2}}) / 7$$

where:

$E_{dry}$  = energy consumption of the standard cotton programme at full load, in kWh and rounded to two decimal places.

$E_{dry\frac{1}{2}}$  = energy consumption of the standard cotton programme at partial load, in kWh and rounded to two decimal places.

(f) For gas-fired household tumble driers, the energy consumption for the standard cotton programme at full and partial load is calculated in kWh and rounded to two decimal places, as:

$$E_{dry} = \frac{E_{g,dry}}{f_g} + E_{g,dry,a} \quad E_{dry\hat{A}_i} = \frac{E_{g,dry\hat{A}_i}}{f_g} + E_{g,dry\hat{A}_i,a}$$

where:

$E_{g,dry}$  = gas consumption of the standard cotton programme at full load, in kWh and rounded to two decimal places.

$E_{g,dry\frac{1}{2}}$  = gas consumption of the standard cotton programme at partial load, in kWh and rounded to

two decimal places.

$Eg_{dry,a}$  = auxiliary electricity consumption of the standard cotton programme at full load, in kWh and rounded to two decimal places.

$Eg_{dry^{1/2},a}$  = auxiliary electricity consumption of the standard cotton programme at partial load, in kWh and rounded to two decimal places.

$f_g = 2,5$ .

## 2. CALCULATION FOR THE PRODUCT INFORMATION DESCRIBED IN 'ANNEX II PRODUCT FICHE', 'ANNEX III TECHNICAL DOCUMENTATION' AND 'ANNEX IV INFORMATION TO BE PROVIDED IN CASES WHERE END-USERS CANNOT BE EXPECTED TO SEE THE PRODUCT DISPLAYED'

For gas-fired household tumble driers, the energy consumption on gas for the standard cotton programme at full and partial load for the information in Annex II, III and IV is calculated in kWh<sub>Gas</sub> and rounded to two decimal places, as:

$$AE_{C(Gas)} = 160 \times (3 \times Eg_{dry} + 4 \times Eg_{dry^{1/2}}) / 7$$

For gas-fired household tumble driers, the energy consumption on electricity for the standard cotton programme at full and partial load for the information in Annex II, III and IV is calculated in kWh and rounded to two decimal places, as:

$$AE_{C(Gas)el} = 160 \times (3 \times Eg_{dry,a} + 4 \times Eg_{dry^{1/2},d}) / 7 + ((P_i \times T_i \times 160) + P_o \times [525\,600 - (T_i \times 160) - (T_i \times 160)]) / 60 \times 1\,000$$

## 3. CALCULATION OF THE WEIGHTED CONDENSATION EFFICIENCY

The condensation efficiency of a programme is the ratio between the mass of moisture condensed and collected in the container of a condenser household tumble drier and the mass of moisture removed from the load by the programme, the latter being the difference between the mass of the wet test load before drying and the mass of the test load after drying. For calculating the weighted condensation efficiency, the average condensation efficiency for the standard cotton programme at both full and partial load is considered.

The weighted condensation efficiency ( $C_c$ ) of a programme is calculated as a percentage and rounded to the nearest whole percent as:

$$C_c = (3 \times C_{dry} + 4 \times C_{dry^{1/2}}) / 7$$

where:

$C_{dry}$  = average condensation efficiency of the standard cotton programme at full load.

$C_{dry^{1/2}}$  = average condensation efficiency of the standard cotton programme at partial load. The average condensation efficiency  $C$  is calculated from the condensation efficiencies of test runs and expressed

$$C = \frac{1}{(n-1)} \sum_{j=2}^n \left( \frac{W_{wj}}{W_i - W_f} \times 100 \right)$$

as a percentage:

*where:*

**n** is the number of test runs, comprising at least four valid test runs for the selected programme.

**j** is the test run number.

**W<sub>wj</sub>** is the mass of water collected in the condenser reservoir during test run *j*.

**W<sub>i</sub>** is the mass of the wet test load before drying.

**W<sub>f</sub>** is the mass of the test load after drying.

## ANNEX VIII<sup>8</sup>

### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 4 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile mag-

<sup>8</sup> Annex VIII is added in accordance with Article 6(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

nification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## Delegated Regulation (EU) 626/2011 of 4 May 2011 supplementing Directive 2010/30/EU with regard to energy labelling of air conditioners

Incorporated and adapted by Ministerial Council Decision 2011/03/MC-EnC of 6 October 2011 on adopting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products

*The adaptations made by Ministerial Council Decisions 2011/03/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

- (1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products representing significant potential for energy savings and having a wide disparity in performance levels with equivalent functionality.
- (2) Provisions for the energy labelling of air conditioners were established by Commission Directive 2002/31/EC of 22 March 2002 implementing Council Directive 92/75/EEC with regard to energy labelling of household air-conditioners. The implementing Directive establishes different labelling scales for air conditioners using different technologies and the determination of energy efficiency is based on full load operation only.
- (3) The electricity used by air conditioners accounts for a significant part of total household and commercial electricity demand in the Union. In addition to the energy efficiency improvements already achieved, the scope for further reducing the energy consumption of air conditioners is substantial.
- (4) Directive 2002/31/EC should be repealed and new provisions should be laid down by this Regulation in order to ensure that the energy label provides dynamic incentives for manufacturers to further improve the energy efficiency of air conditioners and to accelerate the market transformation towards energy-efficient technologies.
- (5) The provisions of this Regulation should apply to air-to-air air conditioners up to 12 kW cooling power output (or heating power output, if only heating function is provided).
- (6) Technological developments in the energy efficiency improvement of air conditioners have been very rapid in recent years. This has allowed several third-countries to introduce stringent minimum energy efficiency requirements and led to a process of introducing new energy labelling schemes based on seasonal performance. Today's appliances, excluding single and double duct air conditioners, that achieve the highest efficiency levels have largely surpassed the A efficiency levels established by Directive 2002/31/EC.
- (7) This Regulation introduces two energy efficiency scales based on the primary function and on specific aspects important to consumer. Given that air conditioners are used mainly in part-load conditions, the efficiency testing should be changed to a seasonal efficiency measurement method, except for single and double duct air conditioners. The seasonal measurement method takes better into account the benefits of the inverter driven technology and the conditions in which these appliances are used. The new efficiency calculation method with an Ecodesign implementing measure setting minimum energy

efficiency requirements higher than the current A level, will lead to a reclassification of these appliances. Consequently, split, window and wall air conditioners should have a new A-G energy efficiency class scale with a "+" added on the top of the scale every two years until the A+++ class has been reached.

(8) For double duct and single duct air conditioners, steady-state energy efficiency performance indicators should continue to be applied, as there are currently no inverter units on the market. As no reclassification of these appliances is appropriate, single and double duct air conditioners should have an A+++D scale. While these, inherently less efficient than split appliances, can go only up to an A+ energy efficiency class in a scale of A+++D, the more efficient split appliances can reach up to the A+++ energy efficiency class.

(9) This Regulation should ensure that consumers get more accurate comparative information about the performance of air conditioners.

(10) The combined effect of energy labeling set out in this Regulation and of Regulation implementing Directive 2009/125/EC of the European Parliament and of the Council with regard to ecodesign requirements for air conditioners is expected to result in annual electricity savings of 11 TWh by 2020, compared to the situation if no measures are taken.

(11) The noise level of an air conditioner could be an important aspect for end-users. In order to enable them to make an informed decision, information on noise emissions should be included on the label of air conditioners.

(12) The information provided on the label should be obtained through reliable, accurate and reproducible measurement procedures, which take into account the recognised state of the art measurement methods including, where available, harmonised standards adopted by the European standardisation bodies, as listed in Annex I to Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations.

(13) This Regulation should specify a uniform design and requirements as to the content of labels for air conditioners.

(14) In addition, this Regulation should specify requirements as to the technical documentation and the fiche for air conditioners.

(15) Moreover, this Regulation should specify requirements as to the information to be provided for any form of distance selling, advertisements and technical promotional material of air conditioners.

(16) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.

(17) In order to facilitate the transition from Directive 2002/31/EC to this Regulation, air conditioners labelled in accordance with this Regulation should be considered compliant with Directive 2002/31/EC.

(18) Suppliers wishing to place on the market air conditioners that can meet the requirements for higher energy efficiency classes should be allowed to provide labels showing those classes in advance of the date for mandatory display of such classes.

(19) Directive 2002/31/EC should therefore be repealed.

## **Article 1**

### **Subject matter and scope**

1. This Regulation establishes requirements for the labelling and the provision of supplementary product information for electric mains-operated air conditioners with a rated capacity of  $\leq 12$  kW for cooling, or heating, if the product has no cooling function.
2. This Regulation shall not apply to:
  - a) appliances that use non-electric energy sources;
  - b) air conditioners of which the condenser- or evaporator-side, or both, do not use air for heat transfer medium.

## **Article 2**

### **Definitions**

In addition to the definitions set out in Article 2 of Directive 2010/30/EU of the European Parliament and of the Council, the following definitions shall apply:

- (1) "air conditioner" means a device capable of cooling or heating, or both, indoor air, using a vapour compression cycle driven by an electric compressor, including air conditioners that provide additional functionalities such as dehumidification, air-purification, ventilation or supplemental air-heating by means of electric resistance heating and appliances that may use water (either condensate water that is formed on the evaporator side or externally added water) for evaporation on the condenser, provided that the device is also able to function without the use of additional water, using air only;
- (2) "double duct air conditioner" means an air conditioner in which, during cooling or heating, the condenser or evaporator intake air is introduced from the outdoor environment to the unit by a duct and rejected to the outdoor environment by a second duct, and which is placed wholly inside the space to be conditioned, near a wall;
- (3) "single duct air conditioner" means an air conditioner in which, during cooling or heating, the condenser or evaporator intake air is introduced from the space containing the unit and discharged outside this space;
- (4) "rated capacity" (Prated) means the cooling or heating capacity of the vapour compression cycle of the unit at standard rating conditions;
- (5) "end-user" means a consumer buying or expected to buy an air conditioner;
- (6) "point of sale" means a location where air conditioners are displayed or offered for sale, hire or hire-purchase.

Additional definitions for the purpose of Annexes II to VIII are set out in Annex I.

### **Article 3**

#### **Responsibilities of suppliers**

1. Suppliers shall take action as described in points (a) to (g):

(a) a printed label is provided for each air conditioner respecting energy efficiency classes as set out in Annex II. The label shall comply with the format and content of information as set out in Annex III. For air conditioners, except single and double duct air conditioners, a printed label must be provided, at least in the packaging of the outdoor unit, for at least one combination of indoor and outdoor units at capacity ratio 1. For other combinations, the information can be alternatively provided on a free access web site;

(b) a product fiche, as set out in Annex IV, is made available. For air conditioners, except single and double duct air conditioners, a product fiche must be provided at least in the packaging of the outdoor unit, for at least one combination of indoor and outdoor units at capacity ratio 1. For other combinations, the information can be alternatively provided on a free access web site;

(c) technical documentation as set out in Annex V is made available electronically on request to the authorities of the **Contracting Parties** and to the **Secretariat**;

(d) any advertisement for a specific model of an air conditioner shall contain the energy efficiency class, if the advertisement discloses energy-related or price information. Where more than one efficiency class is possible, the supplier or the manufacturer, as appropriate, shall declare the energy efficiency class for heating at least in "Average" heating season. Information in the cases where end-users cannot be expected to see the product displayed is to be provided as set out in Annex VI;

(e) any technical promotional material concerning a specific model of an air conditioner which describes its specific technical parameters shall include the energy efficiency class of that model as set out Annex II;

(f) instructions for use are made available;

(g) single ducts shall be named "local air conditioners" in packaging, product documentation and in any advertisement material, whether electronic or in paper;

**(h) an electronic label in the format and containing the information set out in Annex III is made available to dealers for each air conditioner model placed on the market from 1 January 2020 with a new model identifier, respecting energy efficiency classes set out in Annex II. It may also be made available to dealers for other air conditioner models;**

**(i) an electronic product fiche as set out in Annex IV is made available to dealers for each air conditioner model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other air conditioner models.<sup>1</sup>**

2. The energy efficiency class shall be determined as set out in Annex VII.

3. The format of the label for air conditioners except for single and double duct air conditioners shall be as set out in Annex III.

4. For the air conditioners, except for single and double duct air conditioners, the format of the label set out in Annex III shall be applied according to the following timetable:

(a) as regards air conditioners, except single duct and double duct air conditioners, placed on the mar-

---

<sup>1</sup> Article 3, points (h) and (i) are added in accordance with Article 5(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

ket from 1 January 2013, labels with energy efficiency classes A, B, C, D, E, F, G shall be in accordance with point 1.1 of Annex III for reversible air conditioners, with point 2.1 of Annex III for cooling-only air conditioners and with point 3.1 of Annex III for heating-only air conditioners;

(b) as regards air conditioners, except single duct and double duct air conditioners, placed on the market from 1 January 2015, labels with energy efficiency classes A+, A, B, C, D, E, F, shall be in accordance with point 1.2 of Annex III for reversible air conditioners, with point 2.2 of Annex III for cooling-only air conditioners and with point 3.2 of Annex III for heating-only air conditioners;

(c) as regards air conditioners, except single duct and double duct air conditioners, placed on the market from 1 January 2017, labels with energy efficiency classes A++, A+, A, B, C, D, E, shall be in accordance with point 1.3 of Annex III for reversible air conditioners, with point 2.3 of Annex III for cooling-only air conditioners and with point 3.3 of Annex III for heating-only air conditioners;

(d) as regards air conditioners, except single duct and double duct air conditioners, placed on the market from 1 January 2019, labels with energy efficiency classes A+++, A++, A+, A, B, C, D shall be in accordance with point 1.4 of Annex III for reversible air conditioners, with point 2.4 of Annex III for cooling-only air conditioners and with point 3.4 of Annex III for heating-only air conditioners.

5. The format of the label for double duct air conditioners placed on the market from 1 January 2013 with energy efficiency classes A+++, A++, A+, A, B, C, D shall be in accordance with point 4.1 of Annex III for reversible double duct air conditioners, with point 4.3 of Annex III for cooling-only double duct air conditioners and with point 4.5 of Annex III for heating-only double duct air conditioners.

6. The format of the label for single duct air conditioners placed on the market from 1 January 2013 with energy efficiency classes A+++, A++, A+, A, B, C, D shall be in accordance with point 5.1 of Annex III for reversible single duct air conditioners, with point 5.3 of Annex III for cooling-only single ducts air conditioners and with point 5.5 of Annex III heating-only single duct air conditioners.

#### **Article 4**

#### **Responsibilities of dealers**

Dealers shall ensure that:

(a) air conditioners, at the point of sale, bear the label provided by suppliers in accordance with Article 3(1) on the outside of the front or top of the appliance, in such a way as to be clearly visible;

**(b) air conditioners offered for sale, hire or hire purchase where the end-user cannot be expected to see the product displayed, are marketed with the information provided by suppliers in accordance with Annexes IV and VI. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1)(h) and 3(1)(i) the provisions of Annex IX shall apply instead;<sup>2</sup>**

(c) any advertisement for a specific model of air conditioner contains a reference to the energy efficiency class, if the advertisement discloses energy-related or price information. Where more than one efficiency class is possible, the supplier/manufacturer will declare the energy efficiency class at least in "Average" season zone;

<sup>2</sup> Article 4, point (b) is replaced in accordance with Article 5(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

(d) any technical promotional material concerning a specific model which describes the technical parameters of an air conditioner includes a reference to the energy efficiency class(es) of the model and the instructions for use provided by the supplier. Where more than one efficiency class is possible, the supplier/manufacturer will declare the energy efficiency class at least in "Average" season zone;

(e) single ducts shall be named "local air conditioners" in packaging, product documentation and in any promotional or advertisement material, whether electronic or in paper.

#### ***Article 5***

#### **Measurement methods**

The information to be provided under Article 3 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state of the art calculation and measurement methods, as set out in Annex VII.

#### ***Article 6***

#### **Verification procedure for market surveillance purposes**

When **Contracting Parties** assess the conformity of the declared energy efficiency class, the annual or hourly energy consumption, as appropriate, and the noise emissions, they shall apply the procedure laid down in Annex VIII.

#### ***Article 7***

#### **Revision**

<...>

#### ***Article 8***

#### **Repeal**

<...>

#### ***Article 9***

#### **Transitional provision**

1. Air conditioners placed on the market before 1 January 2013 shall comply with the provisions set out in Directive 2002/31/EC.

**Article 10**

**Entry into force and application**

**1. This Decision [2011/03/MC-EnC] enters into force upon its adoption <...> <sup>3</sup>**

2. It shall apply from 1 January 2013.

This Regulation shall be binding in its entirety and directly applicable in all **Contracting Parties**.

**Article 2(5) of Decision 2011/03/MC-EnC**

**The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <...> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.**

---

<sup>3</sup> The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.

## ANNEX I

### Definitions applicable for the purposes of annexes II to VII

For the purposes of Annexes II to VII, the following definitions shall apply:

- (1) 'Reversible air conditioner' means an air conditioner capable of both cooling and heating;
- (2) 'Standard rating conditions' means the combination of indoor ( $T_{in}$ ) and outdoor temperatures ( $T_j$ ) that describe the operating conditions while establishing the sound power level, rated capacity, rated air flow rate, rated energy efficiency ratio (EER<sub>rated</sub>) and/or rated coefficient of performance (COP<sub>rated</sub>), as set out in Annex VII, table 2;
- (3) 'Indoor temperature' ( $T_{in}$ ) means the dry bulb indoor air temperature [ $^{\circ}\text{C}$ ] (with the relative humidity indicated by the corresponding wet bulb temperature);
- (4) 'Outdoor temperature' ( $T_j$ ) means the dry bulb outdoor air temperature [ $^{\circ}\text{C}$ ] (with the relative humidity indicated by the corresponding wet bulb temperature);
- (5) 'Rated energy efficiency ratio' (EER<sub>rated</sub>) means the declared capacity for cooling [kW] divided by the rated power input for cooling [kW] of a unit when providing cooling at standard rating conditions;
- (6) 'Rated coefficient of performance' (COP<sub>rated</sub>) means the declared capacity for heating [kW] divided by the rated power input for heating [kW] of a unit when providing heating at standard rating conditions;
- (7) 'Global warming potential' (GWP) means the measure of how much 1 kg of the refrigerant applied in the vapour compression cycle is estimated to contribute to global warming, expressed in kg CO<sub>2</sub> equivalents over a 100 year time horizon;

GWP values considered will be those set out in Annex I of Regulation (EC) No 842/2006 of the European Parliament and of the Council;

for fluorinated refrigerants, the GWP values shall be those published in the Third Assessment Report (TAR), adopted by the Intergovernmental Panel on Climate Change<sup>4</sup> (2001 IPCC GWP values for a 100 year period);

for non-fluorinated gases, the GWP values are those published in the first IPCC assessment<sup>5</sup> over a 100 year period;

total GWP values for mixtures of refrigerants shall be based on the formula stated in Annex I of the Regulation (EC) No 842/2006;

for refrigerants not included in the above references, the IPCC UNEP 2010 report on Refrigeration, Air Conditioning and Heat Pumps, dated February 2011, or newer, shall be used as a reference;

- (8) 'Off mode' is a condition in which the air conditioner or comfort fan is connected to the mains power source and is not providing any function. As off mode also are considered conditions providing only an indication of off mode condition, as well as conditions providing only functionalities intended to ensure electromagnetic compatibility pursuant to Directive 2004/108/EC of the European Parliament and of the Council;

<sup>4</sup> IPCC Third Assessment Climate Change 2001. A Report of the Intergovernmental Panel on Climate Change: [http://www.ipcc.ch/publications\\_and\\_data/publications\\_and\\_data\\_reports.shtml](http://www.ipcc.ch/publications_and_data/publications_and_data_reports.shtml)

<sup>5</sup> Climate Change, The IPCC Scientific Assessment, J.T Houghton, G.J.Jenkins, J.J. Ephraums (ed.) Cambridge University Press, Cambridge (UK) 1990.

- (9) 'Standby mode' means a condition where the equipment is connected to the mains power source, depends on energy input from the mains power source to work as intended and provides only the following functions, which may persist for an indefinite time: reactivation function, or reactivation function and only an indication of enabled reactivation function, and/or information or status display;
- (10) 'Reactivation function' means a function facilitating the activation of other modes, including active mode, by remote switch including remote control, internal sensor, timer to a condition providing additional functions, including the main function;
- (11) 'Information or status display' is a continuous function providing information or indicating the status of the equipment on a display, including clocks;
- (12) 'Sound power level' means the A-weighted sound power level [dB(A)] indoors and/or outdoors measured at standard rating conditions for cooling (or heating, if the product has no cooling function);
- (13) 'Reference design conditions' means the combination of requirements for the reference design temperature, the maximum bivalent temperature and the maximum operation limit temperature, as set out in Annex VII, Table 3;
- (14) 'Reference design temperature' means the outdoor temperature [°C] for either cooling ( $T_{designc}$ ) or heating ( $T_{designh}$ ) as described in Annex VII, Table 3, at which the part load ratio shall be equal to 1, and which varies according the designated cooling or heating season;
- (15) 'Part load ratio' ( $pl(T_j)$ ) means the outdoor temperature minus 16°C, divided by the reference design temperature minus 16°C, for either cooling or heating;
- (16) 'Season' means one of the four sets of operating conditions (available for four seasons: one cooling season, three heating seasons: average / colder / warmer) describing per bin the combination of outdoor temperatures and the number of hours these temperatures occur per season for which the unit is declared fit for purpose;
- (17) 'Bin' (with index 'j') means a combination of an outdoor temperature ( $T_j$ ) and bin hours ( $h_j$ ), as set out in Annex VII, Table 1;
- (18) 'Bin hours' means the hours per season ( $h_j$ ) the outdoor temperature occurs for each bin, as set out in Annex VII, Table 1;
- (19) 'Seasonal energy efficiency ratio' (SEER) is the overall energy efficiency ratio of the unit, representative for the whole cooling season, calculated as the reference annual cooling demand divided by the annual electricity consumption for cooling;
- (20) 'Reference annual cooling demand' (QC) means the reference cooling demand [kWh/a] to be used as basis for calculation of SEER and calculated as the product of the design load for cooling ( $P_{designc}$ ) and the equivalent active mode hours for cooling (HCE);
- (21) 'Equivalent active mode hours for cooling' (HCE) means the assumed annual number of hours [h/a] the unit must provide the design load for cooling ( $P_{designc}$ ) in order to satisfy the reference annual cooling demand, as set out in Annex VII, Table 4;
- (22) 'Annual electricity consumption for cooling' (QCE) means the electricity consumption [kWh/a] required to meet the reference annual cooling demand and is calculated as the reference annual cooling demand divided by the active mode seasonal energy efficiency ratio (SEER<sub>on</sub>), and the electricity consumption of the unit for thermostat off-, standby-, off- and crankcase heater-mode during the cooling season;

(23) 'Active seasonal mode energy efficiency ratio' (SEERon) means the average energy efficiency ratio of the unit in active mode for the cooling function, constructed from part load and bin-specific energy efficiency ratio's (EERbin(T<sub>j</sub>)) and weighted by the bin hours the bin condition occurs;

(24) 'Part load' means the cooling load (P<sub>c</sub>(T<sub>j</sub>)) or the heating load (P<sub>h</sub>(T<sub>j</sub>)) [kW] at a specific outdoor temperature T<sub>j</sub>, calculated as the design load multiplied by the part load ratio;

(25) 'Bin-specific energy efficiency ratio' (EERbin(T<sub>j</sub>)) means the energy efficiency ratio specific for every bin j with outdoor temperature T<sub>j</sub> in a season, derived from the part load, declared capacity and declared energy efficiency ratio (EERd(T<sub>j</sub>)) for specified bins (j) and calculated for other bins through inter/extrapolation, when necessary corrected by the degradation coefficient;

(26) 'Seasonal coefficient of performance' (SCOP) is the overall coefficient of performance of the unit, representative for the whole designated heating season (the value of SCOP pertains to a designated heating season), calculated as the reference annual heating demand divided by the annual electricity consumption for heating;

(27) 'Reference annual heating demand' (QH) means the reference heating demand [kWh/a], pertaining to a designated heating season, to be used as basis for calculation of SCOP and calculated as the product of the design load for heating (P<sub>designh</sub>) and the seasonal equivalent active mode hours for heating (H HE);

(28) 'Equivalent active mode hours for heating' (HHE) means the assumed annual number of hours [h/a] the unit must provide the design load for heating (P<sub>designh</sub>) in order to satisfy the reference annual heating demand, as set out in Annex VII, Table 4;

(29) 'Annual electricity consumption for heating' (QHE) means the electricity consumption [kWh/a] required to meet the indicated reference annual heating demand and which pertains to a designated heating season; and is calculated as the reference annual heating demand divided by the active mode seasonal coefficient of performance (SCOPon), and the electricity consumption of the unit for thermostat off-, standby-, off- and crankcase heater-mode during the heating season;

(30) 'Active mode seasonal coefficient of performance' (SCOPon) means the average coefficient of performance of the unit in active mode for the designated heating season, constructed from the part load, electric back up heating capacity (where required) and bin-specific coefficients of performance (COPbin(T<sub>j</sub>)) and weighted by the bin hours the bin condition occurs;

(31) 'Electric back-up heater capacity' (elbu(T<sub>j</sub>)) is the heating capacity [kW] of a real or assumed electric back-up heater with COP of 1 that supplements the declared capacity for heating (P<sub>dh</sub>(T<sub>j</sub>)) in order to meet the part load for heating (P<sub>h</sub>(T<sub>j</sub>)) in case P<sub>dh</sub>(T<sub>j</sub>) is less than P<sub>h</sub>(T<sub>j</sub>), for the outdoor temperature (T<sub>j</sub>);

(32) 'Bin-specific coefficient of performance' (COPbin(T<sub>j</sub>)) means the coefficient of performance specific for every bin j with outdoor temperature T<sub>j</sub> in a season, derived from the part load, declared capacity and declared coefficient of performance (COPd(T<sub>j</sub>)) for specified bins (j) and calculated for other bins through inter/extrapolation, when necessary corrected by the degradation coefficient;

(33) 'Declared capacity' [kW] is the capacity of the vapour compression cycle of the unit for cooling (P<sub>dc</sub>(T<sub>j</sub>)) or heating (P<sub>dh</sub>(T<sub>j</sub>)), pertaining to an outdoor temperature T<sub>j</sub> and indoor temperature (T<sub>in</sub>), as declared by the manufacturer;

(34) 'Function' means the indication of whether the unit is capable of indoor air cooling, indoor air heating or both;

(35) 'Design load' means the declared cooling load (P<sub>designc</sub>) and/or declared heating load (P<sub>designh</sub>)

[kW] at the reference design temperature, whereby

(a) for cooling mode,  $P_{designc}$  is equal to the declared capacity for cooling at  $T_j$  equal to  $T_{designc}$ ;

(b) for heating mode,  $P_{designh}$  is equal to the part load at  $T_j$  equal to  $T_{designh}$ ;

(36) 'Declared energy efficiency ratio' (EERd( $T_j$ )) means the energy efficiency ratio at a limited number of specified bins ( $j$ ) with outdoor temperature ( $T_j$ ), as declared by the manufacturer;

(37) 'Declared coefficient of performance' (COPd( $T_j$ )) means the coefficient of performance at a limited number of specified bins ( $j$ ) with outdoor temperature ( $T_j$ ), as declared by the manufacturer;

(38) 'Bivalent temperature' ( $T_{biv}$ ) means the outdoor temperature ( $T_j$ ) [°C] declared by the manufacturer for heating at which the declared capacity equals the part load and below which the declared capacity must be supplemented with electric back up heater capacity in order to meet the part load for heating;

(39) 'Operation limit temperature' ( $T_{ol}$ ) means the outdoor temperature [°C] declared by the manufacturer for heating, below which air conditioner will not be able to deliver any heating capacity. Below this temperature, the declared capacity is equal to zero;

(40) 'Active mode' means the mode corresponding to the hours with a cooling or heating load of the building and whereby the cooling or heating function of the unit is activated. This condition may involve on/off-cycling of the unit in order to reach or maintain a required indoor air temperature;

(41) 'Thermostat-off mode' means a mode corresponding to the hours with no cooling or heating load whereby the cooling or heating function of the unit is switched on but the unit is not operational as there is no cooling or heating load. This condition is therefore related to outdoor temperatures and not to indoor loads. Cycling on / off in active mode is not considered as thermostat off;

(42) 'Crankcase heater operation mode' means a condition where the unit has activated a heating device to avoid the refrigerant migrating to the compressor in order to limit the refrigerant concentration in oil at compressor start;

(43) 'Thermostat-off mode operating hours' (HTO) means the annual number of hours [h/a] the unit is considered to be in thermostat-off mode, the value of which depends on the designated season and function;

(44) 'Standby mode operating hours' (HSB) means the annual number of hours [h/a] the unit is considered to be in standby mode, the value of which depends on the designated season and function;

(45) 'Off-mode hours' (HOFF) means the annual number of hours [h/a] the unit is considered to be in off-mode, the value of which depends on the designated season and function;

(46) 'Crankcase heater mode operating hours' (HCK) means the annual number of hours [h/a] the unit is considered to be in crankcase heater operation mode, the value of which depends on the designated season and function;

(47) 'Electricity consumption of single and double ducts' (QSD respectively QDD) means the electricity consumption of single or double duct air conditioners for the cooling and/or heating mode (whichever applies) [single duct in kWh/h, double duct in kWh/a];

(48) 'Capacity ratio' means the ratio of the total declared cooling or heating capacity of all operating indoor units to the declared cooling or heating capacity of the outdoor unit at standard rating conditions.

## ANNEX II

### Energy efficiency classes

1. The energy efficiency of air conditioners shall be determined on the basis of measurements and calculations set out Annex VII.

Both the SEER and SCOP shall take into account the reference design conditions and the operational hours per relevant mode of operation, and the SCOP shall relate to the heating season 'average', as laid down in Annex VII. The rated energy efficiency ratio ( $EER_{rated}$ ) and the rated coefficient of performance ( $COP_{rated}$ ) shall relate to standard rating conditions, as laid down in Annex VII.

Table 1

#### Energy efficiency classes for air conditioners except double ducts and single ducts

Energy Efficiency Class	SEER	SCOP
<b>A+++</b>	SEER $\geq$ 8.50	SCOP $\geq$ 5.10
<b>A++</b>	$6.10 \leq$ SEER $<$ 8.50	$4.60 \leq$ SCOP $<$ 5.10
<b>A+</b>	$5.60 \leq$ SEER $<$ 6.10	$4.00 \leq$ SCOP $<$ 4.60
<b>A</b>	$5.10 \leq$ SEER $<$ 5.60	$3.40 \leq$ SCOP $<$ 4.00
<b>B</b>	$4.60 \leq$ SEER $<$ 5.10	$3.10 \leq$ SCOP $<$ 3.40
<b>C</b>	$4.10 \leq$ SEER $<$ 4.60	$2.80 \leq$ SCOP $<$ 3.10
<b>D</b>	$3.60 \leq$ SEER $<$ 4.10	$2.50 \leq$ SCOP $<$ 2.80
<b>E</b>	$3.10 \leq$ SEER $<$ 3.60	$2.20 \leq$ SCOP $<$ 2.50
<b>F</b>	$2.60 \leq$ SEER $<$ 3.10	$1.90 \leq$ SCOP $<$ 2.20
<b>G</b>	SEER $<$ 2.60	SCOP $<$ 1.90

Table 2

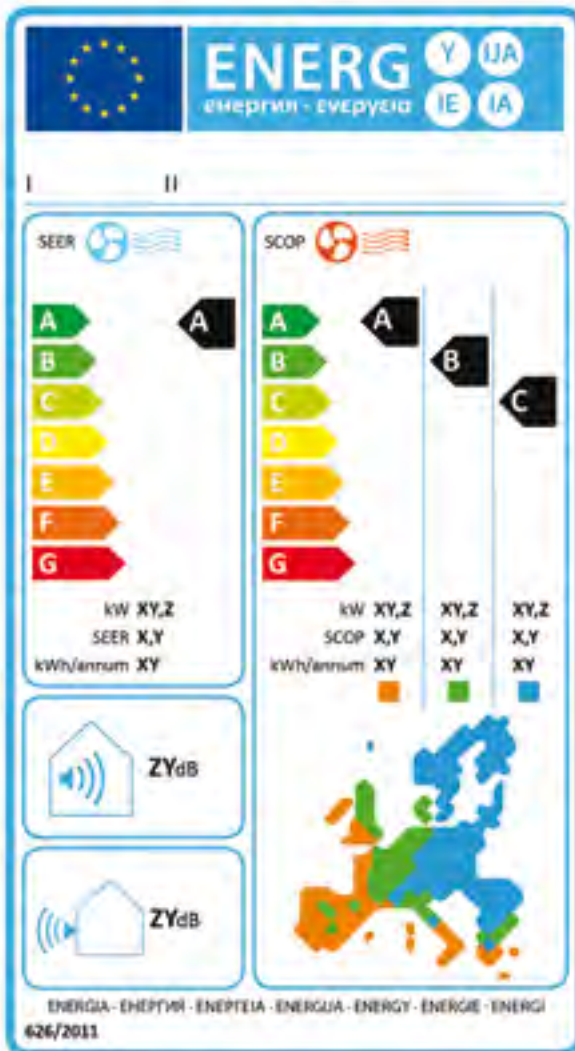

#### Energy efficiency classes for double ducts and single ducts

Energy Efficiency Class	Double ducts		Single ducts	
	$EER_{rated}$	$COP_{rated}$	$EER_{rated}$	$COP_{rated}$
<b>A+++</b>	$\geq$ 4.10	$\geq$ 4.60	$\geq$ 4.10	$\geq$ 3.60

## ANNEX III The label

### 1. LABEL OF AIR CONDITIONERS, EXCEPT SINGLE DUCT AND DOUBLE DUCT AIR CONDITIONERS

#### 1.1. Reversible air conditioners classified in energy efficiency classes A to G

I  
II  
III  
  
IV  
  
V  
VI  
VII  
VIII  
IX  
  
X  
  
XI

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. text 'SEER' and 'SCOP' for cooling and heating, with a blue fan and air wave indication for SEER and red fan and air wave indication for SCOP;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency must be indicated for cooling and heating. For heating, energy efficiency for Average heating season is mandatory. Indication of efficiency for Warmer and Colder seasons is optional;

V. for cooling mode: design load in kW, rounded up to one decimal;

VI. for heating mode: design load in kW, for up to 3 heating seasons rounded up to one decimal. Values for heating seasons for which the design load is not provided shall be indicated as 'X';

VII. for cooling mode: seasonal energy efficiency ratio (SEER value), rounded up to one decimal;

VIII. for heating mode: seasonal coefficient of performance (SCOP value), for up to 3 heating seasons rounded up to one decimal. Values for heating seasons for which SCOP is not provided shall be indicated as 'X';

IX. annual energy consumption in kWh per year, for cooling and heating, rounded up to the nearest integer. Values for climate profiles for which annual energy consumption is not provided shall be indicated as 'X';

X. sound power levels for indoor and outdoor units expressed in dB(A) re1 pW, rounded to the nearest integer;

XI European map with a display of three indicative heating seasons and corresponding colour squares.

All the requested values shall be determined in accordance with Annex VII.

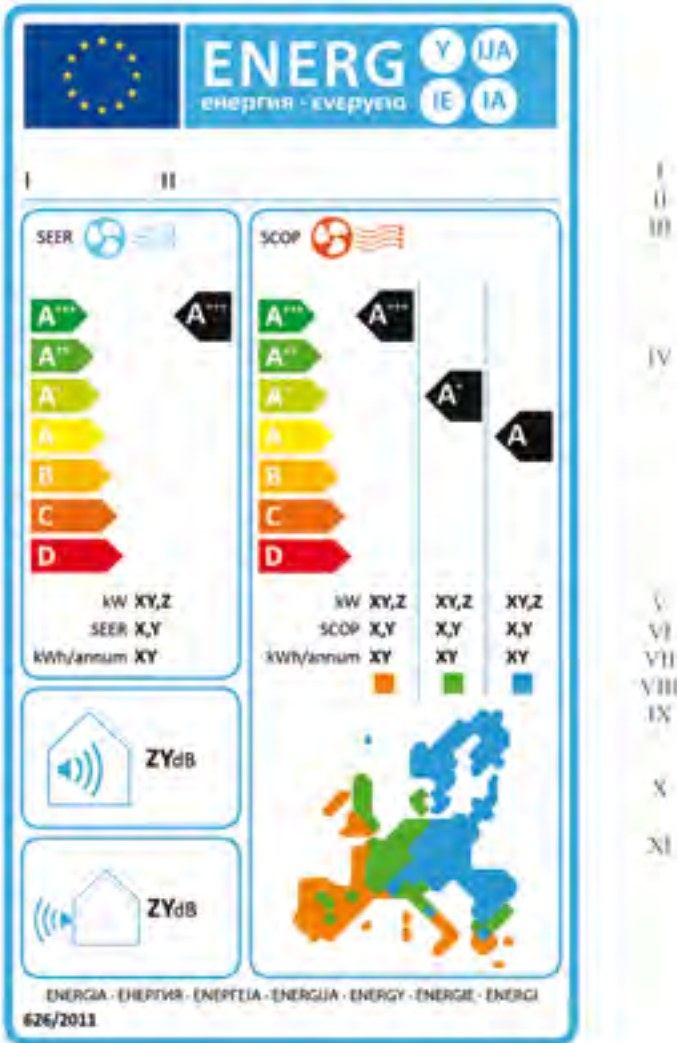

(b) The design of the label shall be in accordance with point 1.5. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU eco-label may be added.

## 1.2. Reversible air conditioners classified in energy efficiency classes A+ to F

- (a) The information listed in point 1.1 shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 1.5.

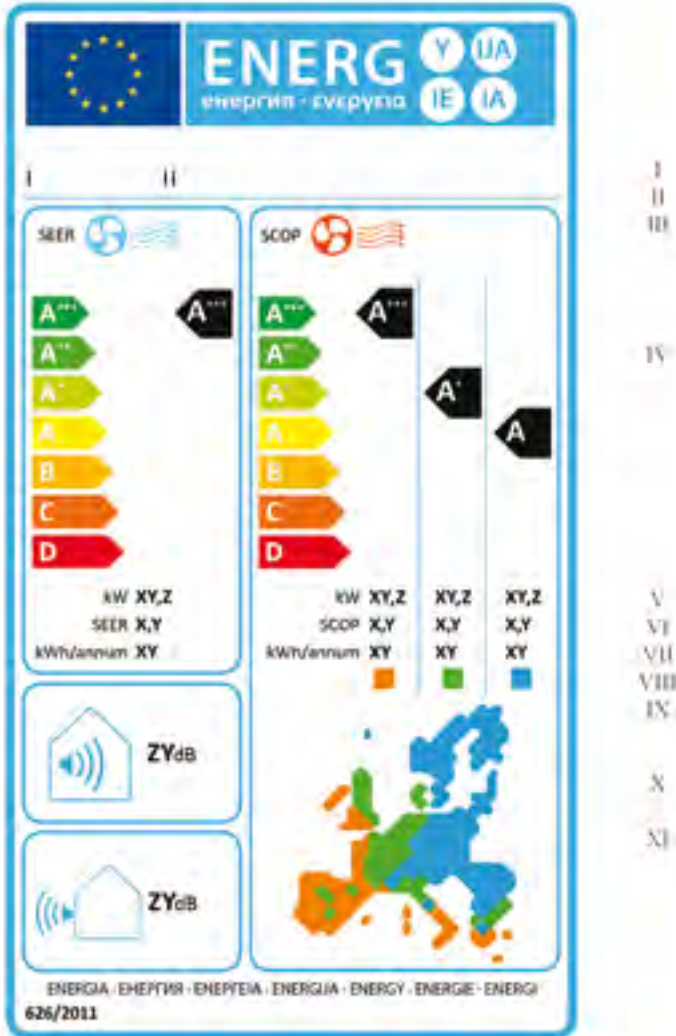

1.3. Reversible air conditioners classified in energy efficiency classes A++ to E

(a) The information listed in point 1.1 shall be included in the label.

(b) The design aspects of the label shall be in accordance with point 1.5.

1.4. Reversible air conditioners classified in energy efficiency classes A+++ to D

- (a) The information listed in point 1.1 shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 1.5.

### 1.5. Label design

Whereby:

(i) The label shall be at least 120 mm wide and 210 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke 5 pt – colour: cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label:**

**Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 102 mm, height: 20 mm.

**4 Sub-logos border:** 1 pt – colour: cyan 100% – length: 103,6 mm.

**5 SEER and SCOP indication:**

**Border:** 2 pt – colour: cyan 100% – round corners: 3,5 mm.

**Text:** Calibri regular 10 pt, capitals, 100% black.

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1 mm – colours:

Highest class: X-00-X-00

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 16 pt, capitals, white.

**7 Energy efficiency class(es):**

- **Arrow:** width: 11 mm, height: 10 mm, 100% black;

- **Text:** Calibri bold 18 pt, capitals, white.

**8 Energy**

- **Text:** Calibri regular 9 pt, capitals, 100% black.

**9 Rated capacity for cooling and heating in kW:**

- **Text 'kW':** Calibri regular 10 pt, 100% black.

- **Value 'XY,Z':** Calibri bold 11 pt, 100% black.

**10 SCOP and SEER values, rounded up to one decimal:**

- Text 'SEER'/'SCOP': Calibri regular 10 pt, capitals, 100% black.
- Value 'X,Y': Calibri bold 11 pt, 100% black.

**11 Annual energy consumption in kWh/annum:**

- Text 'kWh/annum': Calibri regular 10 pt, 100 % black.
- Value 'XY': Calibri bold 11 pt, 100 % black.

**12 Noise emissions:**

- **Border:** 2 pt – colour: cyan 100 % – round corners: 3,5 mm.
- **Value:** Calibri bold 15 pt, 100 % black;  
Calibri **regular** 12 pt, 100 % black.

**13 European map and colour squares:**

- **Colours:**

Orange: 00-46-46-00.

Green: 59-00-47-00.

Blue: 54-08-00-00.

**14 Supplier's name or trademark.**

**15 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 102 × 13 mm.

**16 Reference period:** Text: Calibri bold 10 pt.

2. LABEL OF AIR CONDITIONERS, EXCEPT SINGLE DUCT AND DOUBLE DUCT AIR CONDITIONERS

2.1. Cooling-only air conditioners classified in energy efficiency classes A to G

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. text 'SEER', with a blue fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. design load for cooling in kW, rounded up to one decimal;

VI. seasonal energy efficiency ratio (SEER value), rounded up to one decimal;

VII. annual energy consumption in kWh per year, rounded up to the nearest integer;

VIII. sound power levels for indoor and outdoor units expressed in dB(A) re1 pW, rounded to the nearest integer.

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 2.5. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.

## 2.2. Cooling-only air conditioners classified in energy efficiency classes A+ to F

- (a) The information listed in point 2.1 shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 2.5.

2.3. Cooling-only air conditioners classified in energy efficiency classes A++ to E

I  
II  
III  
IV  
V  
VI  
VII  
VIII

- (a) The information listed in point 2.1 shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 2.5.

## 2.4. Cooling-only air conditioners classified in energy efficiency classes A+++ to D

- (a) The information listed in point 2.1 shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 2.5.

### 2.5. Label design

Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label:**

**Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 93 mm, height: 18 mm.

**4 Sub-logos border:** 1 pt – colour: cyan 100% – length: 93,7 mm.

**5 SEER indication:**

**Text:** Calibri regular 10 pt, capitals, 100% black.

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1,3 mm – colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals, white.

**7 Energy efficiency class:**

- **Arrow:** Width: 23 mm, height: 15 mm, 100% black;

- **Text:** Calibri bold 29 pt, capitals, white.

**8 Energy:**

- **Text:** Calibri regular 8 pt, capitals, 100% black.

**9 Rated capacity in kW:**

**Text 'kW':** Calibri regular 14 pt, 100% black.

**Value 'XY,Z':** Calibri bold 22 pt, 100% black.

**10 SEER value rounded up to one decimal:**

- **Border:** 3 pt – colour: cyan 100% – round corners: 3,5 mm.

- **Text 'SEER'**: Calibri regular 14 pt, capitals, 100% black.
- **Value 'X,Y'**: Calibri bold 22 pt, 100% black.

**11 Annual energy consumption in kWh/annum:**

- **Text 'kWh/annum'**: Calibri regular 14 pt, 100% black.
- **Value 'XY'**: Calibri bold 22 pt, 100% black.

**12 Noise emissions:**

- **Border**: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
- **Value**: Calibri bold 22 pt, 100% black.
- **Text**: Calibri regular 14 pt, 100% black.

**13 Supplier's name or trademark.**

**14 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 90 × 15 mm.

**15 Reference period:** Text: Calibri bold 10 pt.

### 3. LABEL OF AIR CONDITIONERS, EXCEPT SINGLE DUCT AND DOUBLE DUCT AIR CONDITIONERS

#### 3.1. Heating-only air conditioners classified in energy efficiency classes A to G

I  
II  
III  
  
IV  
  
V  
VI  
VII  
  
VIII  
IX

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. text 'SCOP', with red fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency for Average heating season is mandatory. Indication of efficiency for Warmer and Colder climates is optional;

V. design load for heating in kW, for up to 3 heating seasons rounded up to one decimal. Values for heating seasons for which design load is not provided shall be indicated as 'X';

VI. seasonal coefficient of performance (SCOP) for up to 3 heating seasons rounded up to one decimal. Values for heating seasons for which SCOP is not provided shall be indicated as 'X';

VII. annual energy consumption in kWh per year, rounded up to the nearest integer. Values for heating seasons for which annual energy consumption is not provided shall be indicated as 'X';

VIII. sound power levels for indoor and outdoor units expressed in dB(A) re1 pW, rounded to the nearest integer;

IX. European map with a display of three indicative heating seasons and corresponding colour squares.

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 3.5. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.

## 3.2. Heating-only air conditioners classified in energy efficiency classes A+ to F

- (a) The information listed in point 3.1 shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 3.5.

3.3. Heating-only air conditioners classified in energy efficiency classes A++ to E

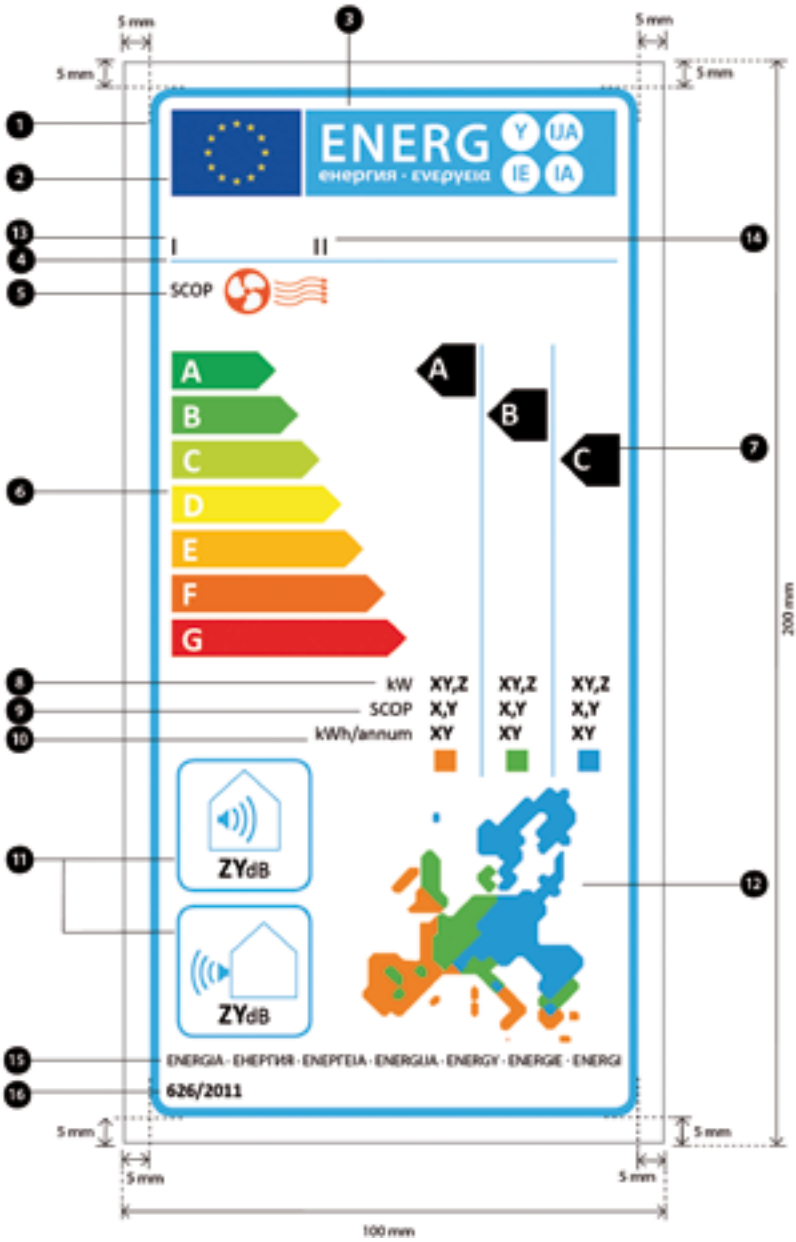

- (a) The information listed in point 3.1 shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 3.5.

3.4. Heating-only air conditioners classified in energy efficiency classes A+++ to D

- (a) The information listed in point 3.1 shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 3.5.

### 3.5. Label design

Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label:**

**Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 93 mm, height: 18 mm.

**4 Sub-logos border:** 1 pt – colour: cyan 100% – length: 93,7 mm.

**5 SCOP indication:**

**Text:** Calibri regular 10 pt, capitals, 100% black.

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1,3 mm – colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals, white.

**7 Energy efficiency class(es):**

- **Arrow:** width: 11 mm, height: 10 mm, 100% black;

- **Text:** Calibri bold 18 pt, capitals, white.

**8 Rated capacity in kW:**

- **Text 'kW':** Calibri regular 10 pt, 100% black.

- **Value 'XY,Z':** Calibri bold 11 pt, 100% black.

**9 SCOP values, rounded up to one decimal:**

- **Text 'SCOP':** Calibri regular 10 pt, capitals, 100% black.

- **Value 'X,Y':** Calibri bold 11 pt, 100% black.

**10 Annual energy consumption in kWh/annum:**

- **Text 'kWh/annum':** Calibri regular 10 pt, 100% black.
- **Value 'XY':** Calibri bold 11 pt, 100% black.

**11 Noise emissions:**

- **Border:** 2 pt – colour: cyan 100% – round corners: 3,5 mm.
- **Value:** Calibri bold 15 pt, 100% black.
- **Text:** Calibri regular 12 pt, 100% black.

**12 European map and colour squares:**

**Colours:**

- Orange: 00-46-46-00.
- Green: 59-00-47-00.
- Blue: 54-08-00-00.

**13 Supplier's name or trademark.**

**14 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 90 × 15 mm.

**15 Energy:** Text: Calibri regular 8 pt, capitals, 100% black.

**16 Reference period:** Text: Calibri bold 10, pt.

#### 4. LABEL OF DOUBLE DUCT AIR CONDITIONERS

##### 4.1. Reversible double duct air conditioners classified in energy efficiency classes A+++ to D

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. text 'EER' and 'COP' for cooling and heating, with a blue fan and air wave indication for EER and red fan and air wave indication for COP;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency must be indicated for cooling and heating;

V. Rated capacity for cooling and heating mode in kW, rounded up to one decimal;

VI. EER rated and COP rated , rounded up to one decimal;

VII. hourly energy consumption in kWh per 60 minutes, for cooling and heating mode, rounded up to the nearest integer;

VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer.

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 4.2. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.

## 4.2. Label Design

Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label:**

**Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

**4 Sub-logos border:** 1 pt – colour: cyan 100% – length: 92,5 mm.

**5 EER and COP indication:**

**Text:** Calibri regular 10 pt, 100% black

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1,3 mm – colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals, white;  
Calibri bold 7 pt, white.

**7 Energy efficiency classes:**

- **Arrow:** width: 11 mm, height: 10 mm, 100% black;

- **Text:** Calibri bold 18 pt, capitals, white.  
Calibri bold 7 pt, white.

**8 Energy:**

- **Text:** Calibri regular 8 pt, capitals, 100% black.

**9 'Minutes'-translation:**

- **Text:** Calibri regular 7 pt, 100% black.

**10 Rated capacity for cooling and heating mode in kW:**

- **Text 'kW'**: Calibri regular 14 pt, 100% black.
- **Value 'XY,Z'**: Calibri bold 22 pt, 100% black.

**11 COP and EER values, rounded up to one decimal:**

- **Text 'EER'/'COP'**: Calibri regular 14 pt, capitals, 100% black.
- **Value 'X,Y'**: Calibri bold 22 pt, 100% black.

**12 Hourly energy consumption in kWh/60min:**

- **Text 'kWh/60min\*'**: Calibri regular 14 pt, 100% black.
- **Value 'XY'**: Calibri bold 22 pt, 100% black.

**13 Noise emissions:**

- **Border**: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
- **Value**: Calibri bold 22 pt, 100% black.
- **Text**: Calibri regular 14 pt, 100% black.

**14 Supplier's name or trademark.****15 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

**16 Reference period: Text:** Calibri bold 10 pt.

4.3. Cooling-only double duct air conditioners classified in energy efficiency classes A+++ to D

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. text 'EER', with a blue fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. Rated capacity for cooling in kW, rounded up to one decimal;

VI. EER rated , rounded up to one decimal;

VII. hourly energy consumption in kWh per 60 minutes, rounded up to the nearest integer;

VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer;

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 4.4. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.

#### 4.4. Label Design

Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke: 5 pt – colour: Cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label:**

**Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

**4 Sub-logos border:** 1 pt – colour: cyan 100% – length: 92,5 mm.

**5 EER indication:**

**Text:** Calibri regular 10 pt, capitals, 100% black

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1,3 mm – colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals, white;  
Calibri bold 7 pt, white.

**7 Energy efficiency class:**

- **Arrow:** width: 20 mm, height: 15 mm, 100% black;

- **Text:** Calibri bold 30 pt, capitals, white;  
Calibri bold 14 pt, white.

**8 Energy**

- **Text:** Calibri regular 8 pt, capitals, 100% black.

**9 ‘Minutes’-translation:**

- **Text:** Calibri regular 7 pt, 100% black.

**10 Rated capacity in kW:**

- **Text 'kW':** Calibri regular 14 pt, 100% black.
- **Value 'XY,Z':** Calibri bold 22 pt, 100% black.

**11 EER value, rounded up to one decimal:**

- **Text 'EER':** Calibri regular 14 pt, capitals, 100% black.
- **Value 'X,Y':** Calibri bold 22 pt, 100% black.

**12 Hourly energy consumption in kWh/60min:**

- **Text 'kWh/60min\*':** Calibri regular 14 pt, 100% black.
- **Value 'XY':** Calibri bold 22 pt, 100% black.

**13 Noise emissions:**

- **Border:** 2 pt – colour: 100% cyan – round corners: 3,5 mm.
- **Value:** Calibri bold 22 pt, 100% black.
- **Text:** Calibri regular 14 pt, 100% black.

**14 Supplier's name or trademark.**

**15 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

**16 Reference period: Text:** Calibri bold 10 pt.

4.5. Heating-only double duct air conditioners classified in energy efficiency classes A+++ to D

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. text 'COP' with red fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. rated capacity for heating in kW, rounded up to one decimal;

VI. COP rated , rounded up to one decimal;

VII. hourly energy consumption in kWh per 60 minutes, rounded up to the nearest integer;

VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer.

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 4.6. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.

Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label:**

**Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

**4 Sub-logos border:** 1 pt – colour: 100% cyan – length: 92,5 mm.

**5 COP indication:**

**Text:** Calibri regular 10 pt, capitals, 100% black

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1,3 mm – colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals, white;  
Calibri bold 7 pt, white.

**7 Energy efficiency class:**

- **Arrow:** width: 20 mm, height: 15 mm, 100% black;

- **Text:** Calibri bold 30 pt, capitals, white;  
Calibri bold 14 pt, white.

**8 Energy:**

- **Text:** Calibri regular 8 pt, capitals, 100% black.

**9 'Minutes'-translation:**

- **Text:** Calibri regular 7 pt, 100% black.

**10 Rated capacity in kW:**

- **Text 'kW'**: Calibri regular 14 pt, 100% black.
- **Value 'XY,Z'**: Calibri bold 22 pt, 100% black.

**11 COP value, rounded up to one decimal:**

- **Text 'COP'**: Calibri regular 14 pt, capitals, 100% black.
- **Value 'X,Y'**: Calibri bold 22 pt, 100% black.

**12 Hourly energy consumption in kWh/60min:**

- **Text 'kWh/60min\*'**: Calibri regular 14 pt, 100% black.
- **Value 'XY'**: Calibri bold 22 pt, 100% black.

**13 Noise emissions:**

- **Border**: 2 pt – colour: cyan 100% – round corners: 3,5 mm.
- **Value**: Calibri bold 22 pt, 100% black.
- **Text**: Calibri regular 14 pt, 100% black.

**14 Supplier's name or trademark.****15 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

**16 Reference period: Text:** Calibri bold 10 pt.

5. LABEL OF SINGLE DUCT AIR CONDITIONERS

5.1. Reversible single duct air conditioners classified in energy efficiency classes A+++ to D

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. text 'EER' and 'COP' for cooling and heating, with a blue fan and air wave indication for EER and red fan and air wave indication for COP;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class. Energy efficiency must be indicated for cooling and heating;

V. rated capacity for cooling and heating mode in kW, rounded up to one decimal;

VI.  $EER_{rated}$  and  $COP_{rated}$ , rounded up to one decimal;

VII. hourly energy consumption in kWh per 60 minutes, for cooling and heating, rounded up to one decimal;

VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer.

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 5.2. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.

## 5.2. Label Design

Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours are coded as CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label:**

**Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

**4 Sub-logos border:** 1 pt – colour: cyan 100% – length: 92,5 mm.

**5 EER and COP indication:**

- **Border:** 2 pt – colour: cyan 100% – round corners: 3,5 mm.

- **Text:** Calibri regular 10 pt, capitals, 100% black.

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1,3 mm – colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals, white;

Calibri bold 7 pt, white.

**7 Energy efficiency classes:**

- **Arrow:** Width: 11 mm, height: 10 mm, 100% black;

- **Text:** Calibri bold 18 pt, capitals, white.

**8 Energy:**

- **Text:** Calibri regular 8 pt, capitals, 100% black.

**9 'Minutes'-translation:**

- **Text:** Calibri regular 7 pt, 100% black.

**10 Rated capacity for cooling and heating in kW:**

- **Text 'kW':** Calibri regular 14 pt, 100% black.
- **Value 'XY,Z':** Calibri bold 22 pt, 100% black.

**11 EER and COP values, rounded up to one decimal:**

- **Text:** Calibri regular 14 pt, capitals, 100% black.
- **Value 'X,Y':** Calibri bold 22 pt, 100% black.

**12 Hourly energy consumption in kWh/60min:**

- **Text 'kWh/60min\*':** Calibri regular 14 pt, 100% black.
- **Value 'XY':** Calibri bold 22 pt, 100% black.

**13 Noise emissions:**

- **Border:** 2 pt – colour: cyan 100% – round corners: 3,5 mm.
- **Value:** Calibri bold 22 pt, 100% black.
- **Text:** Calibri regular 14 pt, 100% black.

**14 Supplier's name or trademark.**

**15 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

**16 Reference period: Text:** Calibri bold 10 pt.

5.3. Cooling-only single duct air conditioners classified in energy efficiency classes A+++ to D

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. text 'EER', with a blue fan and air wave indication;

IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

V. rated capacity for cooling in kW, rounded up to one decimal;

VI. EER rated , rounded up to one decimal;

VII. hourly energy consumption in kWh per 60 minutes, rounded up to one decimal;

VIII. sound power level for indoor unit expressed in dB(A) re1 pW, rounded to the nearest integer.

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 5.4. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.

## 5.4. Label Design

Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label: Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

**4 Sub-logos border:** 1 pt – colour: cyan 100% – length: 92,5 mm.

**5 EER indication:**

**Text:** Calibri regular 10 pt, capitals, 100% black.

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1,3 mm – colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals, white;  
Calibri bold 7 pt, white.

**7 Energy efficiency class:**

- **Arrow:** Width: 20 mm, height: 15 mm, 100% black;

- **Text:** Calibri bold 30 pt, capitals, white;  
Calibri bold 14 pt, capitals, white.

**8 Energy:**

- **Text:** Calibri regular 8 pt, capitals, 100% black.

**9 'Minutes'-translation:**

- **Text:** Calibri regular 7 pt, 100% black.

**10 Rated capacity in kW:**

- **Text 'kW'**: Calibri regular 14 pt, 100% black.
- **Value 'XY,Z'**: Calibri bold 22 pt, 100% black.

**11 EER value, rounded up to one decimal:**

- **Text 'EER'**: Calibri regular 14 pt, capitals, 100% black.
- **Value 'X,Y'**: Calibri bold 22 pt, 100% black.

**12 Hourly energy consumption in kWh/60min:**

- **Text 'kWh/60min\*'**: Calibri regular 14 pt, 100% black.
- **Value 'XY'**: Calibri bold 22 pt, 100% black.

**13 Noise emissions:**

- **Border**: 2 pt – colour: 100% cyan – round corners: 3,5 mm.
- **Value**: Calibri bold 22 pt, 100% black.
- **Text**: Calibri regular 14 pt, 100% black.

**14 Supplier's name or trademark.****15 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

**16 Reference period:**

- **Text**: Calibri bold 10 pt.

5.5. Heating-only single duct air conditioners classified in energy efficiency classes A+++ to D

(a) The following information shall be included in the label:

- I. supplier's name or trade mark;
- II. supplier's model identifier;
- III. text 'COP' with red fan and air wave indication;
- IV. the energy efficiency; the head of the arrow containing the energy efficiency class of the appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;
- V. rated capacity for heating in kW, rounded up to one decimal;
- VI.  $COP_{rated}$ , rounded up to one decimal;
- VII. hourly energy consumption in kWh per 60 minutes, rounded to the nearest integer;
- VIII. sound power level for indoor unit expressed in dB(A) re 1 pW, rounded to the nearest integer.

All the requested values shall be determined in accordance with Annex VII.

(b) The design of the label shall be in accordance with point 5.6. By way of derogation, where a model has been granted an 'EU eco-label' under Regulation (EC) No 66/2010, a copy of the EU eco-label may be added.

### 5.6. Label Design

Whereby:

(i) The label shall be at least 100 mm wide and 200 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(ii) The background shall be white.

(iii) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(iv) The label shall fulfil all of the following requirements (numbers refer to the figure above):

**1 EU label border:** stroke: 5 pt – colour: cyan 100% – round corners: 3,5 mm.

**2 EU logo:** Colours: X-80-00-00 and 00-00-X-00.

**3 Energy label:**

**Colour:** X-00-00-00.

**Pictogram** as depicted: EU logo + energy label: width: 82 mm, height: 16 mm.

**4 Sub-logos border:** 1 pt – colour: cyan 100% – length: 92,5 mm.

**5 COP indication:**

**Text:** Calibri regular 10 pt, capitals, 100% black

**6 A-G scale:**

- **Arrow:** height: 7 mm, gap: 1,3 mm – colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals, white;

Calibri bold 7 pt, white.

**7 Energy efficiency class:**

- **Arrow:** Width: 20 mm, height: 15 mm, 100% black;

- **Text:** Calibri bold 30 pt, capitals, white;

Calibri bold 14 pt, capitals, white.

**8 Energy:**

- **Text:** Calibri regular 8 pt, capitals, 100% black.

**9 'Minutes'-translation:**

- **Text:** Calibri regular 7 pt, 100% black.

**10 Rated capacity in kW:**

- **Text 'kW':** Calibri regular 14 pt, 100% black.
- **Value 'XY,Z':** Calibri bold 22 pt, 100% black.

**11 COP value, rounded up to one decimal:**

- **Text 'COP':** Calibri regular 14 pt, capitals, 100% black.
- **Value 'X,Y':** Calibri bold 22 pt, 100% black.

**12 Hourly energy consumption in kWh/60 minutes:**

- **Text 'kWh/60min\*':** Calibri regular 14 pt, 100% black.
- **Value 'XY':** Calibri bold 22 pt, 100% black.

**13 Noise emissions:**

- **Border:** 2 pt – colour: cyan 100% – round corners: 3,5 mm.
- **Value:** Calibri bold 22 pt, 100% black.
- **Text:** Calibri regular 14 pt, 100% black.

**14 Supplier's name or trademark.**

**15 Supplier's model identifier:**

The suppliers' name or trade mark and model identifier should fit in a space of 82 × 10,5 mm.

**16 Reference period: Text:** Calibri bold 10 pt.

## ANNEX IV

### Product fiche

1. The information in the product fiche shall be given in the order specified below:

- (a) supplier's name or trade mark;
- (b) model identifier of the indoor air conditioner or of the indoor and outdoor elements of the air conditioner;
- (c) without prejudice to any requirements under the Union eco-label scheme, where a model has been granted a 'European Union eco-label' under Regulation (EC) No 66/2010, a copy of the eco-label may be added;
- (d) inside and outside sound power levels at standard rating conditions, on cooling and/or heating modes;
- (e) the name and GWP of the refrigerant used and a standard text as follows:

'Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to [xxx]. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be [xxx] times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.'

2. Additionally, the following information shall be included in the product fiche on air conditioners on the cooling mode, when efficiency is declared on the basis of the seasonal energy efficiency ratio (SEER):

- (a) the SEER and the energy efficiency class of the model (model of a unit or of a combination of units) determined in accordance with definitions and test procedures in Annex I and VII for the cooling mode as well as with the class limits defined in Annex II;
- (b) the indicative annual electricity consumption  $Q_{CE}$  in kWh/a during the cooling season, determined in accordance with definitions and test procedures in Annex I and VII, respectively. It shall be described as: 'Energy consumption "XYZ" kWh per year, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.';
- (c) the design load  $P_{designc}$  in kW of the appliance in cooling mode determined in accordance with definitions and test procedures in Annex I and VII, respectively;

3. Additionally, the following notes define the information to be included in the fiche on the heating mode, when efficiency is declared on the basis of seasonal coefficient of performance (SCOP):

- (a) the SCOP and the energy efficiency class of the model, or combination, in heating mode determined in accordance with definitions and test procedures in Annex I and VII, respectively, as well as with the class limits defined in Annex II;
- (b) the indicative annual electricity consumption for an average heating season  $Q_{HE}$  in kWh/a, determined in accordance with definitions and test procedures in Annex I and VII, respectively. It shall be described as: 'Energy consumption "XYZ" kWh per year, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.';

(c) other designated heating seasons for which the unit is declared fit for purpose, with options of warmer (optional) or colder (optional) seasons, as defined in Annex I;

(d) the design load  $P_{\text{designh}}$  in kW of the appliance in heating mode determined in accordance with definitions and test procedures in Annex I and VII;

(e) the declared capacity and an indication of the back up heating capacity assumed for the calculation of SCOP at reference design conditions.

4. Additionally, the following notes define the information to be included in the fiche of air conditioners, when efficiency is declared on the basis of energy efficiency ratio ( $EER_{\text{rated}}$ ) or coefficient of performance ( $COP_{\text{rated}}$ ):

(a) the energy efficiency class of the model, determined in accordance with definitions and test procedures in Annex I and VII, as well as the class limits defined in Annex II;

(b) for double ducts, the indicative hourly electricity consumption  $Q_{\text{DD}}$  in kWh/60 minutes determined in accordance with definitions and test procedures in Annex I and VII. It shall be described as: 'Energy consumption "X,Y" kWh per 60 minutes, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.';

(c) for single ducts, the indicative hourly electricity consumption  $Q_{\text{SD}}$  in kWh/60 minutes determined in accordance with definitions and test procedures in Annex I and VII. It shall be described as: 'Energy consumption "X,Y" kWh per 60 minutes, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.';

(d) the cooling capacity  $P_{\text{rated}}$  in kW of the appliance determined in accordance with definitions and test procedures in Annex I and VII;

(e) the heating capacity  $P_{\text{rated}}$  in kW of the appliance determined in accordance with definitions and test procedures in Annex I and VII.

5. One fiche may cover a number of appliance models supplied by the same supplier.

6. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in points 1-4 not already displayed on the label shall also be provided.

## **ANNEX V**

### **Technical documentation**

The technical documentation referred to in Article 3 (1)(c) shall include at least the following items:

- (a) the name and address of the supplier;
- (b) a general description of the appliance model, sufficient for it to be unequivocally and easily identified. Single ducts shall be referred to as 'local air conditioners';
- (c) where appropriate, the references for the harmonised standards applied;
- (d) where appropriate, the other calculation methods, measurement standards and specifications used;
- (e) identification and signature of the person empowered to bind the supplier;
- (f) where appropriate the technical parameters for measurements, established in accordance with Annex VII:
  - (i) overall dimensions;
  - (ii) specification of the type of the air conditioner;
  - (iii) specification whether the appliance is designed for cooling or heating only or for both;
  - (iv) the energy efficiency class of the model as defined in Annex II;
  - (v) The energy efficiency ratio (EER rated ) and coefficient of performance (COP rated ) for single and double duct air conditioners or seasonal energy efficiency ratio (SEER) and seasonal coefficient of performance (SCOP) for other air conditioners;
  - (vi) The heating season for which the appliance is declared fit for purpose;
  - (vii) Sound power levels expressed in dB(A) re1 pW, rounded to the nearest integer;
  - (viii) the name and GWP of refrigerant used.
- (g) the results of calculations performed in accordance with Annex VII.

Suppliers may include additional information at the end of the above list.

Where the information included in the technical documentation file for a particular air conditioner model has been obtained by calculation on the basis of design, or extrapolation from other equivalent appliances, or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent appliance models where the information was obtained on the same basis.

## **ANNEX VI**

### **Information to be provided in the cases where end-users Cannot be expected to see the product displayed**

1. The information referred to in Article 4(b) shall be provided in the following order:
  - (a) The energy efficiency class of the model as defined in Annex II;
  - (b) for air conditioners other than single ducts and double ducts:
    - (i) the seasonal energy efficiency ratio (SEER) and/or seasonal coefficient of performance (SCOP);
    - (ii) the design load (in kW);
    - (iii) the annual electricity consumption;
    - (iv) the cooling and/or each heating ('Average, Colder, Warmer') season the appliance is declared fit for purpose;
  - (c) for single duct and double duct air conditioners:
    - (i) the energy efficiency ratio (EER) and/or coefficient of performance (COP);
    - (ii) the rated capacity (kW);
    - (iii) for double ducts, the hourly electricity consumption for cooling and/or heating;
    - (iv) for single ducts, the hourly electricity consumption for cooling and/or heating;
  - (d) Sound power levels expressed in dB(A) re1 pW, rounded to the nearest integer;
  - (e) Name and GWP of refrigerant used.
2. Where other information contained in the product information fiche is also provided, it shall be in the form and order specified in Annex IV.
3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.

## ANNEX VII

### Measurements and calculations

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published in the Official Journal of European Union, or other reliable, accurate and reproducible method, which takes into account the generally recognised state of the art methods, and whose results are deemed to be of low uncertainty.
2. The determination of the seasonal energy consumption and seasonal energy efficiency ratio (SEER) and seasonal coefficient of performance (SCOP) shall take into account:
  - (a) European seasonal conditions, as defined in Table 1 of this Annex;
  - (b) Reference design conditions, as defined in Table 3 of this Annex;
  - (c) Electric energy consumption for all relevant modes of operation, using time periods as defined in Table 4 of this Annex;
  - (d) Effects of the degradation of the energy efficiency caused by on/off cycling (if applicable) depending on the type of control of the cooling and/or heating capacity;
  - (e) Corrections on the seasonal coefficients of performance in conditions where the heating load can not be met by the heating capacity;
  - (f) The contribution of a back-up heater (if applicable) in the calculation of the seasonal efficiency of a unit in heating mode.
3. Where the information relating to a specific model, being a combination of indoor and outdoor unit(s), has been obtained by calculation on the basis of design, and/or extrapolation from other combinations, the documentation should include details of such calculations and/or extrapolations, and of tests undertaken to verify the accuracy of the calculations undertaken (including details of the mathematical model for calculating performance of such combinations, and of measurements taken to verify this model).
4. The energy efficiency ratio ( $EER_{rated}$ ) and, when applicable, coefficient of performance ( $COP_{rated}$ ) for double ducts and single ducts shall be established at the standard rating conditions as defined in Table 2 of this Annex.
5. The calculation of electricity consumption for cooling and/or heating shall take into account electric energy consumption of all relevant modes of operation, when appropriate, using time periods as defined in Table 4 of this Annex.

Table 1

**Bin number (j), outdoor temperature (Tj) in °C and number of hours per bin (hj) for the cooling season and for heating seasons 'average', 'warmer' and 'colder'. 'db' = dry bulb temperature**

Cooling season			Heating season				
j	Tj	hj	Average		Warmer	Colder	
#	°C	h	j	Tj	hjA	hjW	hjC
	db		#	°C	h	h	h
1	17	205	1 to 8	-30 to -23	0	0	0
2	18	227	9	-22	0	0	1

## ANNEX VIII<sup>6</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.
- (7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerances that are set out

<sup>6</sup> Annex VIII is replaced in accordance with Article 5 and Annex V of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 1**  
**Verification tolerances**

Parameters	Verification tolerances
Seasonal energy efficiency ratio (SEER)	The determined value shall not be lower than the declared value by more than 8 %.
Seasonal coefficient of performance (SCOP)	The determined value shall not be lower than the declared value by more than 8 %.
Power consumption in off mode	The determined value shall not exceed the declared value by more than 10 %.
Power consumption in standby mode	The determined value shall not exceed the declared value by more than 10 %.
Energy efficiency ratio ( $EER_{rated}$ )	The determined value shall not be lower than the declared value by more than 10 %.
Coefficient of performance ( $COP_{rated}$ )	The determined value shall not be lower than the declared value by more than 10 %.
Sound power level	The determined value shall not exceed the declared value by more than 2 dB(A).'

**ANNEX IX<sup>7</sup>****Information to be provided in the case of sale, hire or hire-purchase through the internet**

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) "display mechanism" means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) "nested display" means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) "tactile screen" means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) "alternative text" means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(h) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(4) to 3(6). The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;

<sup>7</sup> Annex IX is added in accordance with Article 5(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;**

**(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;**

**(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.**

**(5) The appropriate product fiche made available by suppliers in accordance with Article 3(1)(i) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.**

## Delegated Regulation (EU) 1062/2010 of 28 September 2010 supplementing Directive 2010/30/EU with regard to energy labelling of televisions

Incorporated and adapted by Ministerial Council Decision 2011/03/MC-EnC of 6 October 2011 on adopting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2011/03/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

- (1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy related products representing significant potential for energy savings and having a wide disparity in performance levels with equivalent functionality.
- (2) The electricity used by televisions accounts for a significant share of total household electricity demand in the Union and televisions with equivalent functionality have a wide disparity in terms of energy efficiency. The energy efficiency of televisions can be significantly improved. Televisions should therefore be covered by requirements on energy labelling.
- (3) Harmonised provisions for indicating the energy efficiency and consumption of televisions by labelling and standard product information should be established in order to provide incentives for manufacturers to improve the energy efficiency of televisions, encourage end-users to purchase energy-efficient models, reduce the electricity consumption of these products, and contribute to the functioning of the internal market.
- (4) The combined effect of the provisions set out in this Regulation and in Commission Regulation (EC) No 642/2009 of 22 July 2009 implementing Directive 2005/32/EC of the European Parliament and of the Council with regard to ecodesign requirements for televisions could amount to annual electricity savings of 43 TWh by 2020, compared to the situation if no measures were taken.
- (5) The information provided on the label should be obtained through reliable, accurate and reproducible measurement procedures that take into account the recognised state-of-the-art measurement methods including, where available, harmonised standards adopted by the European standardisation bodies, as listed in Annex I to Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations and of rules on Information Society services.
- (6) This Regulation should specify a uniform design and content for the label for televisions.
- (7) In addition, this Regulation should specify requirements as to the technical documentation and the fiche for televisions.
- (8) Moreover, this Regulation should specify requirements as to the information to be provided for any form of distance selling, advertisements and technical promotional material of televisions.
- (9) In order to encourage the manufacturing of energy efficient televisions suppliers wishing to place on the

market televisions that can meet the requirements for higher energy efficiency classes should be allowed to provide labels showing those classes in advance of the date for mandatory display of such classes.

(10) Provision should be made for a review of this Regulation taking into account technological progress.

### **Article 1**

#### **Subject matter**

This Regulation establishes requirements for the labelling and the provision of supplementary product information for televisions.

### **Article 2**

#### **Definitions**

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply:

(1) "television" means a television set or a television monitor;

(2) "television set" means a product designed primarily for the display and reception of audiovisual signals which is placed on the market under one model or system designation, and which consists of:

(a) a display;

(b) one or more tuner(s)/receiver(s) and optional additional functions for data storage and/or display such as digital versatile disc (DVD), hard disk drive (HDD) or videocassette recorder (VCR), either in a single unit combined with the display, or in one or more separate units;

(3) "television monitor" means a product designed to display on an integrated screen a video signal from a variety of sources, including television broadcast signals, which optionally controls and reproduces audio signals from an external source device, which is linked through standardised video signal paths including cinch (component, composite), SCART, HDMI, and future wireless standards (but excluding non-standardised video signal paths like DVI and SDI), but cannot receive and process broadcast signals;

(4) "on-mode" means the condition where the television is connected to the mains power source and produces sound and picture;

(5) "home-mode" means the television setting which is recommended by the manufacturer for normal home use;

(6) "standby-mode(s)" means a condition where the equipment is connected to the mains power source, depends on energy input from the mains power source to function properly and offers the following functions only, which may persist for an indefinite time:

(a) reactivation function, or reactivation function and only an indication of enabled reactivation function; and/or

(b) information or status display;

(7) "off-mode" means a condition in which the equipment is connected to the mains power source and

is not providing any function; the following shall also be considered as off-mode:

- (a) conditions providing only an indication of off-mode condition;
- (b) conditions providing only functionalities intended to ensure electromagnetic compatibility pursuant to Directive 2004/108/EC of the European Parliament and of the Council;
- (8) "reactivation function" means a function facilitating the activation of other modes, including on-mode, by remote switch including remote control, internal sensor, timer to a condition providing additional functions, including on-mode;
- (9) "information or status display" means a continuous function providing information or indicating the status of the equipment on a display, including clocks;
- (10) "forced menu" means a set of television settings, pre-defined by the manufacturer, of which the user of the television must select a particular setting upon initial start-up of the television;
- (11) "peak luminance ratio" means the ratio of the peak luminance of the home-mode condition or of the on-mode condition of the television as set by the supplier, as applicable, and the peak luminance of the brightest on-mode condition;
- (12) "point of sale" means a location where televisions are displayed or offered for sale, hire or hire purchase;
- (13) "end-user" means a consumer buying or expected to buy a television.

### **Article 3**

#### **Responsibilities of suppliers**

1. Suppliers shall ensure that:

- (a) each television is supplied with a printed label in the format and containing information as set out in Annex V;
- (b) a product fiche, as set out in Annex III, is made available;
- (c) the technical documentation, as set out in Annex IV, is made available on request to the authorities of **Contracting Parties** and to the **Secretariat**;
- (d) any advertisement for a specific television model contains the energy efficiency class, if the advertisement discloses energy-related or price information;
- (e) any technical promotional material concerning a specific television model, which describes its specific technical parameters, includes the energy efficiency class of that model;
- (f) an electronic label in the format and containing the information set out in Annex V is made available to dealers for each television model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other television models;**
- (g) an electronic product fiche as set out in Annex III is made available to dealers for each television model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other television models.<sup>1</sup>**

<sup>1</sup> Article 3, points (f) and (g) are added in accordance with Article 4(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

2. The energy efficiency classes shall be based on the Energy Efficiency Index calculated in accordance with Annex II.

3. The format of the label set out in Annex V shall be applied according to the following timetable:

(a) for televisions placed on the market from 30 November 2011, labels for televisions with energy efficiency classes:

(i) A, B, C, D, E, F, G shall be in accordance with point 1 of Annex V or, where suppliers deem appropriate, with point 2 of that Annex;

(ii) A+ shall be in accordance with point 2 of Annex V;

(iii) A++ shall be in accordance with point 3 of Annex V;

(iv) A+++ shall be in accordance with point 4 of Annex V;

(b) for televisions placed on the market from 1 January 2014 with energy efficiency classes A+, A, B, C, D, E, F, labels shall be in accordance with point 2 of Annex V or, where suppliers deem appropriate, with point 3 of that Annex;

(c) for televisions placed on the market from 1 January 2017 with energy efficiency classes A++, A+, A, B, C, D, E, labels shall be in accordance with point 3 of Annex V or, where suppliers deem appropriate, with point 4 of that Annex;

(d) for televisions placed on the market from 1 January 2020 with energy efficiency classes A+++, A++, A+, A, B, C, D labels shall be in accordance with point 4 of Annex V.

#### **Article 4**

##### **Responsibilities of dealers**

Dealers shall ensure that:

(a) each television, at the point of sale, bears the label provided by suppliers in accordance with Article 3(1) on the front of the television, in such a way as to be clearly visible;

**(b) televisions offered for sale, hire or hire-purchase, where the end-user cannot be expected to see the television displayed, are marketed with the information to be provided by the suppliers in accordance with Annex VI. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(1)(f) and 3(1)(g) the provisions in Annex IX shall apply instead;<sup>2</sup>**

(c) any advertisement for a specific television model contains the energy efficiency class, if the advertisement discloses energy-related or price information;

(d) any technical promotional material concerning a specific television model, which describes its specific technical parameters, includes the energy efficiency class of that model.

<sup>2</sup> Article 4, point (b) is replaced in accordance with Article 4(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**Article 5****Measurement methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods, as set out in Annex VII.

**Article 6****Verification procedure for market surveillance purposes**

Contracting Parties shall apply the procedure laid down in Annex VIII when assessing the conformity of the declared energy efficiency class.

**Article 7****Revision**

&lt;...&gt;

**Article 8****Transitional provision**

Article 3(1)(d) and (e) and Article 4(b), (c) and (d) shall not apply to printed advertisement and printed technical promotional material published before **30 April 2013**.

**Article 9****Entry into force**

**This Decision [2011/03/MC-EnC] enters into force upon its adoption <...><sup>3</sup>**

It shall apply from **31 December 2012**. However, Article 3(1)(d) and (e) and Article 4(b), (c) and (d) shall apply from **30 April 2013**.

This Regulation shall be binding in its entirety and directly applicable in all **Contracting Parties**.

**Article 2(5) of Decision 2011/03/MC-EnC**

**The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <...> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.**

---

<sup>3</sup> The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.

## ANNEX I

### Energy efficiency class

The energy efficiency class of a television shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1. The Energy Efficiency Index of a television shall be determined in accordance with point 1 of Annex II.

Table 1  
Energy efficiency class of a television

Energy Efficiency Class	Energy Efficiency Index
<b>A+++ (most efficient)</b>	$EEI < 0.10$
<b>A++</b>	$0.10 \leq EEI < 0.16$
<b>A+</b>	$0.16 \leq EEI < 0.23$
<b>A</b>	$0.23 \leq EEI < 0.30$
<b>B</b>	$0.30 \leq EEI < 0.42$
<b>C</b>	$0.42 \leq EEI < 0.60$
<b>D</b>	$0.60 \leq EEI < 0.80$
<b>E</b>	$0.80 \leq EEI < 0.90$
<b>F</b>	$0.90 \leq EEI < 1.00$
<b>G (least efficient)</b>	$1.00 \leq EEI$

## ANNEX II

### Method for calculating the energy efficiency index and the Annual on-mode energy consumption

1. The Energy Efficiency Index (EEI) is calculated as  $EEI = P/P_{ref}(A)$ , where:

- $P_{ref}(A) = P_{basic} + A \times 4.3224 \text{ Watts/dm}^2$ ,
- $P_{basic} = 20 \text{ Watts}$  for television sets with one tuner/receiver and no hard disc,
- $P_{basic} = 24 \text{ Watts}$  for television sets with hard disc(s),
- $P_{basic} = 24 \text{ Watts}$  for television sets with two or more tuners/receivers,
- $P_{basic} = 28 \text{ Watts}$  for television sets with hard disc(s) and two or more tuners/receivers,
- $P_{basic} = 15 \text{ Watts}$  for television monitors,
- A is the visible screen area expressed in  $\text{dm}^2$ ,
- P is the on-mode power consumption of the television in Watts measured in accordance with Annex VII, rounded to one decimal place.

2. The annual on-mode energy consumption E in kWh is calculated as  $E = 1,46 \times P$ .

3. Televisions with automatic brightness control

For the purposes of calculating the Energy Efficiency Index and the annual on-mode energy consumption referred to in points 1 and 2, the on-mode power consumption as established according to the procedure set out in Annex VII is reduced by 5% if the following conditions are fulfilled when the television is placed on the market:

- (a) the luminance of the television in the home-mode or the on-mode condition as set by the supplier, is automatically reduced between an ambient light intensity of at least 20 lux and 0 lux;
- (b) the automatic brightness control is activated in the home-mode condition or the on-mode condition of the television as set by the supplier.

## **ANNEX III**

### **Product fiche**

1. The information in the product fiche of the television shall be provided in the following order, and shall be included in the product brochure or other literature provided with the product:

(a) supplier's name or trade mark;

(b) supplier's model identifier; where model identifier means the code, usually alphanumeric, which distinguishes a specific television model from other models of the same trade mark or supplier's name;

(c) the energy efficiency class of the model in accordance with Annex I, Table 1; where the television has been awarded an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council,

this information may be included;

(d) the visible screen diagonal in centimetres and in inches;

(e) the on-mode power consumption measured in accordance with the procedure set out in Annex VII;

(f) the annual energy consumption calculated in accordance with Annex II in kWh per year, rounded to the first integer; it shall be described as: 'Energy consumption XYZ kWh per year, based on the power consumption of the television operating 4 hours per day for 365 days. The actual energy consumption will depend on how the television is used.';

(g) the standby and off-mode power consumption or both measured in accordance with the procedure set out in Annex VII;

(h) the screen resolution in physical horizontal and vertical pixel count.

2. One fiche may cover a number of television models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label must also be provided.

## ANNEX IV

### Technical documentation

The technical documentation referred to in Article 3(1)(c) shall include:

- (a) the name and address of the supplier;
- (b) a general description of the television model, sufficient for it to be unequivocally and easily identified;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) identification and signature of the person empowered to bind the supplier;
- (f) test parameters for measurements:
  - (i) ambient temperature;
  - (ii) test voltage in V and frequency in Hz;
  - (iii) total harmonic distortion of the electricity supply system;
  - (iv) the input terminal for the audio and video test signals;
  - (v) information and documentation on the instrumentation, set-up and circuits used for electrical testing;
- (g) on-mode parameters:
  - (i) the power consumption data in Watts rounded to the first decimal place for power measurements up to 100 Watts, and to the first integer for power measurements above 100 Watts;
  - (ii) the characteristics of the dynamic broadcast-content video signal representing typical broadcast TV content;
  - (iii) the sequence of steps for achieving a stable condition with respect to power consumption;
  - (iv) for televisions with a forced menu, the ratio of the peak luminance of the home-mode and the peak luminance of the brightest on-mode condition provided by the television, expressed as a percentage;
  - (v) for television monitors, a description of the relevant characteristics of the tuner used for measurements;
- (h) for each standby or off-mode:
  - (i) the power consumption data in Watts rounded to the second decimal place;
  - (ii) the measurement method used;
  - (iii) description of how the mode was selected or programmed;
  - (iv) sequence of events to reach the mode where the television automatically changes modes.

## ANNEX V Label

### 1. LABEL 1

(a) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier, where 'model identifier' means the code, usually alphanumeric, which distinguishes a specific television model from other models of the same trade mark or supplier's name;

III. the energy efficiency class of the television, determined in accordance with Annex I. The head of the arrow containing the energy efficiency class of the television shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. on-mode power consumption in Watts, rounded to the first integer;

V. annual on-mode energy consumption calculated in accordance with point 2 of Annex II, in kWh, rounded to the first integer;

VI. visible screen diagonal in inches and centimetres.

For televisions with an easily visible switch, which puts the television in a condition with power consumption not exceeding 0,01 Watts when operated to the off position, the symbol defined in point 8 of point 5 may be added.

Where a model has been granted a 'European Union Ecolabel' under Regulation (EC) No 66/2010, a copy of the EU Ecolabel may be added.

(b) The design aspects of the label shall be in accordance with point 5.

## 2. LABEL 2

- (a) The information listed in point 1(a) shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 5.

### 3. LABEL 3

- (a) The information listed in point 1(a) shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 5.

## 4. LABEL 4

- (a) The information listed in point 1(a) shall be included in the label.
- (b) The design aspects of the label shall be in accordance with point 5.

**5. The design of the label shall be the following:**

Whereby:

- (a) The label shall be at least 60 mm wide and 120 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.
- (b) For televisions with screen area above 29 dm<sup>2</sup> the background shall be white. For televisions with screen area of 29 dm<sup>2</sup> or below the background shall be white or transparent.
- (c) Colours are CMYK - cyan, magenta, yellow and black and are given following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.
- (d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **Border stroke:** 3 pt - colour: Cyan 100% - round corners: 3,5 mm.
- 2 **EU logo - colours:** X-80-00-00 and 00-00-X-00.
- 3 **Label logos: colour:** X-00-00-00  
**Pictogram as depicted;** EU logo and label logo (combined): width: 51 mm, height: 9 mm.
- 4 **Sub-logos border:** 1 pt - colour: Cyan 100 % - length: 51 mm.
- 5 **A-G scale**
  - **Arrow:** height: 3,8 mm, gap: 0,75 mm - colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Last class: 00-X-X-00.
  - **Text:** Calibri bold 10 pt, capitals, white; '+' symbols: Calibri bold 7 pt, capitals, white.
- 6 **Energy efficiency class**
  - **Arrow:** width: 26 mm, height: 8 mm, 100 % black.
  - **Text:** Calibri bold 15 pt, capitals, white; '+' symbols: Calibri bold 10 pt, capitals, white.
- 7 **Energy - Text:** Calibri regular 7pt, capitals, 100 % black.
- 8 **Switch logo:**
  - **Pictogram** as depicted, Border: 1 pt - colour: Cyan 100 % - round corners: 3,5 mm.
- 9 **Text related to on-mode power consumption:**
  - **Border:** 1 pt - colour: Cyan 100 % - round corners: 3,5 mm.
  - **Value:** Calibri bold 14 pt, 100 % black.
  - **Second line:** Calibri regular 11 pt, 100 % black.
- 10 **Television screen diagonal size:**
  - **Pictogram** as depicted
  - **Border:** 1 pt - colour: Cyan 100 % - round corners: 3,5 mm.
  - **Value:** Calibri bold 14 pt, 100 % black. Calibri regular 11pt, 100 % black.
- 11 **Text related to annual energy consumption:**
  - **Border:** 2 pt - colour: Cyan 100 % - round corners: 3,5 mm.
  - **Value:** Calibri bold 25 pt, 100 % black.
  - **Second line:** Calibri regular 11 pt, 100 % black.

**12 Supplier's name or trade mark**

**13 Supplier's model identifier**

**14** The supplier's name or trade mark and model information should fit in a space of 51 × 8 mm.

**15 Reference period:**

- **Text:** Calibri bold 8 pt

- **Text:** Calibri light 9 pt.

## **ANNEX VI**

### **Information to be provided in the cases where end-users cannot be expected to see the product displayed**

1. The information referred to in Article 4(b) shall be provided in the following order:
  - (a) the energy efficiency class of the model as defined in Annex I;
  - (b) the on-mode power consumption as referred to in point 1 of Annex II;
  - (c) the annual power consumption in accordance with point 2 of Annex II;
  - (d) the visible screen diagonal.
2. Where other information contained in the product information fiche is also provided, it shall be in the form and order specified in Annex III.
3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.

## ANNEX VII

### Measurements

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements shall be made using a reliable, accurate and reproducible measurement procedure that takes into account the generally recognised state-of-the-art measurement methods, including methods set out in documents the reference numbers of which have been published for that purpose in the Official Journal of the European Union.

2. Measurements of on-mode power consumption referred to in point 1 of Annex II

(a) General conditions:

(i) measurements shall be made at an ambient temperature of 23 °C +/- 5 °C;

(ii) measurements shall be made using a dynamic broadcast-content video signal representing typical broadcast TV content; The measurement shall be the average power consumed over ten consecutive minutes;

(iii) measurements shall be made after the television has been in the off-mode for a minimum of 1 hour immediately followed by a minimum of 1 hour in the on-mode and shall be completed before a maximum of 3 hours in on-mode. The relevant video signal shall be displayed during the entire on-mode duration. For televisions that are known to stabilise within 1 hour, these durations may be reduced if the resulting measurement can be shown to be within 2 % of the results that would otherwise be achieved using the durations described here;

**(iv) <...><sup>4</sup>**

(v) measurements shall be made with the Automatic Brightness Control function, if such a function exists, made inactive. If the Automatic Brightness Control function exists and cannot be made inactive, then the measurements shall be performed with the light entering directly into the ambient light sensor at a level of 300 lux, or more.

(b) Conditions for measuring the on-mode power consumption of televisions:

(i) television sets without forced menu: The power consumption shall be measured in the on-mode condition of the television as delivered by the manufacturer, that is, the brightness controls of the television shall be in the position adjusted by the manufacturer for the end user;

(ii) television sets with forced menu: The power consumption shall be measured in the 'home-mode' condition;

(iii) television monitors without forced menu: The television monitor shall be connected to an appropriate tuner. The power consumption shall be measured in the on-mode condition of the television as delivered by the manufacturer, that is, the brightness controls of the television monitor shall be in the position adjusted by the manufacturer for the end user. The power consumption of the tuner is not relevant for the measurements of on-mode power consumption of the television monitor;

(iv) television monitors with forced menu: The television monitor shall be connected to an appro-

<sup>4</sup> Deleted in accordance with Article 4 and Annex IV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

private tuner. The power consumption shall be measured in the 'home-mode' condition.

### 3. <...><sup>5</sup>

#### 4. Measurements of peak luminance ratio referred to in Table 2 of Annex VIII<sup>6</sup>

(a) Measurements of peak luminance shall be made with a luminance meter, detecting that portion of the screen exhibiting a full (100 %) white image, which is part of a 'full screen test' test pattern that does not exceed the average picture level (APL) point where any power limiting occurs in the display luminance drive system.

(b) Measurements of luminance ratio shall be made without disturbing the luminance meter's detection point on the display whilst switching between the home-mode condition or the on-mode condition of the television as set by the supplier, as applicable, and the brightest on-mode condition.

---

<sup>5</sup> Deleted in accordance with Article 4 and Annex IV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

<sup>6</sup> Title is replaced in accordance with Article 4 and Annex IV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

## Annex VIII<sup>7</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 2.
- (3) If the result referred to in points 2(a) or (b) are not achieved, the model shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 2.
- (6) If the result referred to in point 5 is not achieved, the model shall be considered not to comply with this Delegated Regulation.
- (7) The Contracting Party authorities shall provide all relevant information to the authorities of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

<sup>7</sup> Annex VIII is replaced in accordance with Article 4 and Annex IV of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 2 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 2**  
**Verification tolerances**

<b>Parameters</b>	<b>Verification tolerances</b>
<b>On-mode power consumption</b>	The determined value shall not exceed the declared value by more than 7 %.
<b>Off-mode/standby power consumption</b>	The determined value shall not exceed the declared value by more than 0,10 W.
<b>Peak luminance ratio</b>	The determined value shall not be lower than 60 % of the peak luminance of the brightest on-mode condition provided by the television.

## ANNEX IX<sup>8</sup>

### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(1)(f) shall be shown on the display mechanism in proximity to the price of the product in accordance with the timetable set out in Article 3(3). The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 5 of Annex V. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

<sup>8</sup> Annex IX is added in accordance with Article 4(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**(e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;**

**(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;**

**(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.**

**(5) The appropriate product fiche made available by suppliers in accordance with Article 3(1)(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.**

## Delegated Regulation (EU) 1061/2010 of 28 September 2010 supplementing Directive 2010/30/EU with regard to energy labelling of household washing machines

Incorporated and adapted by Ministerial Council Decision 2011/03/MC-EnC of 6 October 2011 on adopting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2011/03/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products representing significant potential for energy savings and having a wide disparity in performance levels with equivalent functionality.

(2) Provisions on the energy labelling of household washing machines were established by Commission Directive 95/12/EC of 23 May 1995 implementing Council Directive 92/75/EEC with regard to energy labelling of household electric washing machines.

(3) The electricity used by household washing machines accounts for a significant share of total household electricity demand in the Union. In addition to the energy efficiency improvements already achieved, the scope for further reducing the energy consumption of household washing machines is substantial.

(4) Directive 95/12/EC should be repealed and new provisions should be laid down by this Regulation in order to ensure that the energy label provides dynamic incentives for suppliers to further improve the energy efficiency of household washing machines and to accelerate the market transformation towards energy-efficient technologies.

(5) Household combined washer-driers fall within the scope of Commission Directive 96/60/EC of 19 September 1996 implementing Council Directive 92/75/EEC with regard to energy labelling of household combined washer-driers and should therefore be excluded from the scope of this Regulation. However, considering that they offer similar functionalities to household washing machines, a revision of Directive 96/60/EC should take place as soon as possible.

(6) The information provided on the label should be obtained through reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods including, where available, harmonised standards adopted by the European standardisation bodies, as listed in Annex I to Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations and of rules on Information Society services.

(7) This Regulation should specify a uniform design and content for the label for household washing machines.

(8) In addition, this Regulation should specify requirements as to the technical documentation and the

fiche for household washing machines.

(9) Moreover, this Regulation should specify requirements as to the information to be provided for any form of distance selling, advertisements and technical promotional materials for household washing machines.

(10) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.

(11) In order to facilitate the transition from Directive 95/12/EC to this Regulation, provisions should be made that household washing machines labelled in accordance with this Regulation should be considered as compliant with Directive 95/12/EC.

(12) Directive 95/12/EC should therefore be repealed.

### **Article 1**

#### **Subject matter and scope**

1. This Regulation establishes requirements for the labelling of and the provision of supplementary product information on electric mains-operated household washing machines and electric mains-operated household washing machines that can also be powered by batteries, including those sold for non-household use and built-in household washing machines.

2. This Regulation shall not apply to household combined washer-driers.

### **Article 2**

#### **Definitions**

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purposes of this Regulation:

(1) "household washing machine" means an automatic washing machine which cleans and rinses textiles using water, which also has a spin extraction function and which is designed to be used principally for non-professional purposes;

(2) "built-in household washing machine" means a household washing machine intended to be installed in a cabinet, a prepared recess in a wall or a similar location, requiring furniture finishing;

(3) "automatic washing machine" means a washing machine where the load is fully treated by the machine without the need for user intervention at any point during the programme;

(4) "household combined washer-drier" means a household washing machine which includes both a spin extraction function and also a means for drying the textiles, usually by heating and tumbling;

(5) "programme" means a series of operations that are pre-defined and which are declared by the supplier as suitable for washing certain types of textile;

(6) "cycle" means a complete washing, rinsing and spinning process, as defined for the selected programme;

- (7) “programme time” means the time that elapses from the initiation of the programme until the completion of the programme excluding any end-user programmed delay;
- (8) “rated capacity” means the maximum mass in kilograms stated by the supplier at 0.5 kg intervals of dry textiles of a particular type, which can be treated in a household washing machine on the selected programme, when loaded in accordance with the supplier’s instructions;
- (9) “partial load” means half of the rated capacity of a household washing machine for a given programme;
- (10) “remaining moisture content” means the amount of moisture contained in the load at the end of the spinning phase;
- (11) “off-mode” means a condition where the household washing machine is switched off using appliance controls or switches accessible to and intended for operation by the end-user during normal use to attain the lowest power consumption that may persist for an indefinite time while the household washing machine is connected to a power source and used in accordance with the supplier’s instructions; where there is no control or switch accessible to the end-user, “off-mode” means the condition reached after the household washing machine reverts to a steady-state power consumption on its own;
- (12) “left-on mode” means the lowest power consumption mode that may persist for an indefinite time after completion of the programme without any further intervention by the end-user besides unloading of the household washing machine;
- (13) “equivalent household washing machine” means a model of household washing machine placed on the market with the same rated capacity, technical and performance characteristics, energy and water consumption and airborne acoustical noise emissions during washing and spinning as another model of household washing machine placed on the market under a different commercial code number by the same supplier;
- (14) “end-user” means a consumer buying or expected to buy a household washing machine;
- (15) “point of sale” means a location where household washing machines are displayed or offered for sale, hire or hire-purchase.

### **Article 3**

#### **Responsibilities of suppliers**

Suppliers shall ensure that:

- (a) each household washing machine, is supplied with a printed label in the format and containing information as set out in Annex I;
- (b) a product fiche, as set out in Annex II, is made available;
- (c) the technical documentation as set out in Annex III is made available on request to the authorities of the **Contracting Parties** and to the **Secretariat**;
- (d) any advertisement for a specific model of household washing machine contains the energy efficiency class, if the advertisement discloses energy-related or price information;
- (e) any technical promotional material concerning a specific model of household washing machine which describes its specific technical parameters includes the energy efficiency class of that model;

**(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household washing machine model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household washing machine models;**

**(g) an electronic product fiche as set out in Annex II is made available to dealers for each household washing machine model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household washing machine models.<sup>1</sup>**

#### **Article 4**

##### **Responsibilities of dealers**

Dealers shall ensure that:

(a) each household washing machine, at the point of sale, bears the label provided by suppliers in accordance with Article 3(a) on the outside of the front or top of the household washing machine, in such a way as to be clearly visible;

**(b) household washing machines offered for sale, hire or hire-purchase where the end-user cannot be expected to see the product displayed are marketed with the information to be provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;<sup>2</sup>**

(c) any advertisement for a specific model of household washing machine contains a reference to its energy efficiency class, if the advertisement discloses energy-related or price information;

(d) any technical promotional material concerning a specific model of household washing machine, which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

#### **Article 5**

##### **Measurement methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods.

---

1 Article 3, points (f) and (g) are added in accordance with Article 3(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

2 Article 4, point (b) is replaced in accordance with Article 3(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**Article 6****Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure laid down in Annex V when assessing the conformity of the declared energy efficiency class, the annual energy consumption, annual water consumption, spin-drying efficiency class, power consumption in off-mode and left-on mode, duration of the left-on mode, remaining moisture content, spin speed and airborne acoustical noise emissions.

**Article 7****Revision**

&lt;...&gt;

**Article 8****Repeal**

&lt;...&gt;

**Article 9****Transitional provisions**

1. Articles 3(d), (e), 4(b), (c) and (d) shall not apply to printed advertisements and printed technical promotional material published before **30 April 2013**.
2. Household washing machines placed on the market before **31 December 2012** shall comply with the provisions set out in Directive 95/12/EC.
3. <...>

**Article 10****Entry into force and application**

1. **This Decision [2011/03/MC-EnC] enters into force upon its adoption <...><sup>3</sup>**
2. It shall apply from **31 December 2012**. However, Articles 3(d), (e), 4(b), (c) and (d) shall apply from **30 April 2013**.

This Regulation shall be binding in its entirety and directly applicable in all **Contracting Parties**.

**Article 2(5) of Decision 2011/03/MC-EnC**

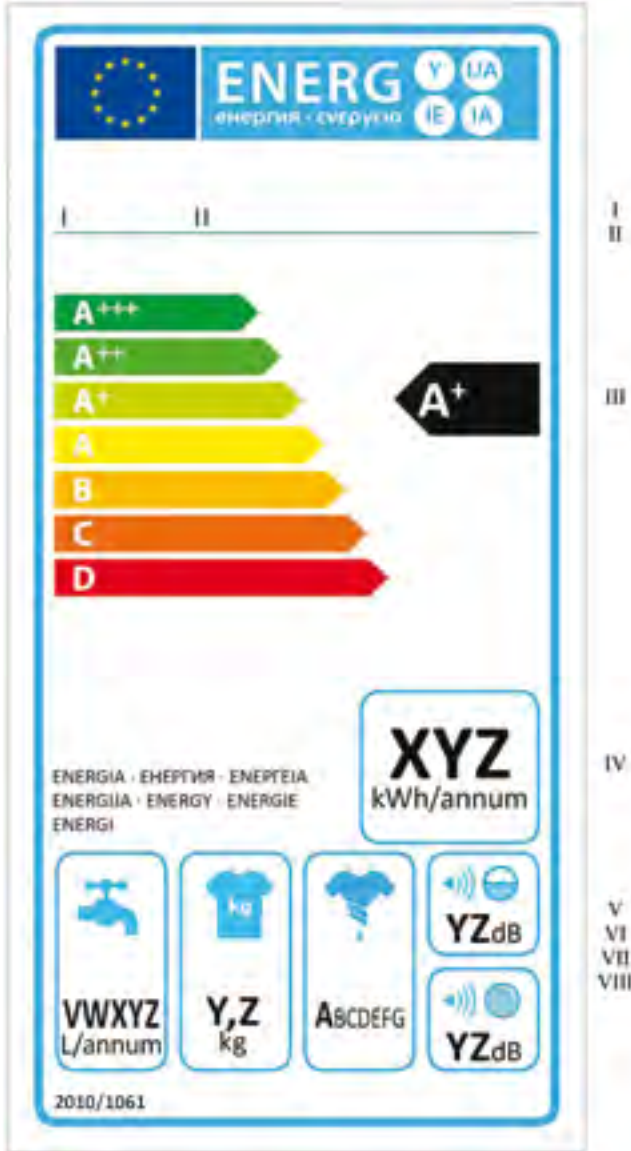

**The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <...> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.**

---

<sup>3</sup> The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.

# ANNEX I Label

## 1. LABEL

(1) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier, meaning the code, usually alphanumeric, which distinguishes a specific household washing machine model from other models with the same trade mark or supplier's name;

III. the energy efficiency class determined in accordance with point 1 of Annex VI; the head of the arrow containing the energy efficiency class of the household washing machine shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. weighted annual energy consumption ( $AE_c$ ) in kWh per year, rounded up to the nearest integer in accordance with Annex VII;

V. weighted annual water consumption ( $AW_c$ ), in litres per year, rounded up to the nearest integer in accordance with Annex VII;

VI. rated capacity, in kg, for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at full load, whichever is the lower;

VII. the spin-drying efficiency class as set out in point 2 of Annex VI;

VIII. airborne acoustical noise emissions, during the washing and spinning phases, for the standard 60 °C cotton programme at full load, expressed in dB(A) re 1 pW, rounded to the nearest integer.

(2) The design of the label shall be in accordance with point 2. By way of derogation, where a model has been awarded an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

## 2. LABEL DESIGN

The design of the label shall be as in the figure below.

Whereby:

(a) The label must be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

❶ **Border stroke:** 5 pt - colour: Cyan 100% - round corners: 3,5 mm.

❷ **EU logo - colours:** X-80-00-00 and 00-00-X-00.

❸ **Energy logo:** colour: X-00-00-00.

**Pictogram as depicted:** EU logo and energy logo (combined): width: 92 mm, height: 17 mm.

❹ **Sub-logos border:** 1 pt - colour: Cyan 100% - length: 92,5 mm.

❺ **A-G scale**

- **Arrow:** height: 7 mm, gap: 0,75 mm - colours:

- Highest class: X-00-X-00,

- Second class: 70-00-X-00,

- Third class: 30-00-X-00,

- Fourth class: 00-00-X-00,

- Fifth class: 00-30-X-00,

- Sixth class: 00-70-X-00,

- Last class: 00-X-X-00.

- **Text:** Calibri bold 18 pt, capitals and white; '+' symbols: Calibri bold 12 pt, capitals, white, aligned on a single row.

❻ **Energy efficiency class**

- **Arrow:** width: 26 mm, height: 14 mm, 100% black.

## ANNEX II

### Product fiche

1. The information in the product fiche of the household washing machine shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
- (b) supplier's model identifier, meaning the code, usually alphanumeric, which distinguishes a specific household washing machine model from other models with the same trade mark or supplier's name;
- (c) rated capacity in kg of cotton for the standard 60 °C cotton programme at full load or the 40 °C cotton programme at full load, whichever is the lower;
- (d) energy efficiency class in accordance with point 1 of Annex VI;
- (e) where the household washing machine has been awarded an 'EU Ecolabel award' under Regulation (EC) No 66/2010, this information may be included;
- (f) weighted annual energy consumption ( $AE_c$ ) in kWh per year, rounded up to the nearest integer; it shall be described as: 'Energy consumption "X" kWh per year, based on 220 standard washing cycles for cotton programmes at 60 °C and 40 °C at full and partial load, and the consumption of the low-power modes. Actual energy consumption will depend on how the appliance is used.';
- (g) the energy consumption ( $E_{t,60}$ ,  $E_{t,60\frac{1}{2}}$ ,  $E_{t,40\frac{1}{2}}$ ) of the standard 60 °C cotton programme at full load and partial load and of the standard 40 °C cotton programme at partial load;
- (h) weighted power consumption of the off-mode and of the left-on mode;
- (i) weighted annual water consumption ( $AW_c$ ) in litres per year, rounded up to the nearest integer; it shall be described as: 'Water consumption "X" litres per year, based on 220 standard washing cycles for cotton programmes at 60 °C and 40 °C at full and partial load. Actual water consumption will depend on how the appliance is used.';
- (j) spin-drying efficiency class determined in accordance with point 2 of Annex VI, expressed as 'spin-drying efficiency class "X" on a scale from G (least efficient) to A (most efficient)'; this may be expressed by other means provided it is clear that the scale is from G (least efficient) to A (most efficient);
- (k) maximum spin speed attained for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at partial load, whichever is the lower, and remaining moisture content attained for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at partial load, whichever is the greater;
- (l) indication that the 'standard 60 °C cotton programme' and the 'standard 40 °C cotton programme' are the standard washing programmes to which the information in the label and the fiche relates, that these programmes are suitable to clean normally soiled cotton laundry and that they are the most efficient programmes in terms of combined energy and water consumption;
- (m) the programme time of the 'standard 60 °C cotton programme' at full and partial load and of the 'standard 40 °C cotton programme' at partial load in minutes and rounded to the nearest minute;
- (n) the duration of the left-on mode (T) if the household washing machine is equipped with a power management system;

(o) airborne acoustical noise emissions expressed in dB(A) re 1 pW and rounded to the nearest integer during the washing and spinning phases for the standard 60 °C cotton programme at full load;

(p) if the household washing machine is intended to be built-in, an indication to this effect.

2. One fiche may cover a number of household washing machine models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.

### ANNEX III

#### Technical documentation

1. The technical documentation referred to in Article 3(c) shall include:

- (a) the name and address of the supplier;
- (b) a general description of the washing machine model, sufficient for it to be unequivocally and easily identified;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) identification and signature of the person empowered to bind the supplier;
- (f) an indication stating whether the household washing machine model releases or not silver ions during the washing cycle as follows: 'This product releases/does not release silver ions during the washing cycle.';
- (g) technical parameters for measurements as follows:
  - (i) energy consumption;
  - (ii) programme time;
  - (iii) water consumption;
  - (iv) power consumption in 'off-mode';
  - (v) power consumption in 'left-on mode';
  - (vi) 'left-on mode' duration;
  - (vii) remaining moisture content;
  - (viii) airborne acoustical noise emissions;
  - (ix) maximum spin speed;
- (h) the results of calculations performed in accordance with Annex VII.

2. Where the information included in the technical documentation file for a particular household washing machine model has been obtained by calculation on the basis of design, or extrapolation from other equivalent household washing machines or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent household washing machine models where the information was obtained on the same basis.

## ANNEX IV

### **Information to be provided in the cases where end-users cannot be expected to see the product displayed**

1. The information referred to in Article 4(b) shall be provided in the following order:
  - (a) the rated capacity in kg of cotton, for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at full load, whichever is the lower;
  - (b) the energy efficiency class as defined in point 1 of Annex VI;
  - (c) the weighted annual energy consumption in kWh per year, rounded up to the nearest integer and calculated in accordance with point 1(c) of Annex VII;
  - (d) the weighted annual water consumption in litres per year, rounded up to the nearest integer and calculated in accordance with point 2(a) of Annex VII;
  - (e) the spin-drying efficiency class in accordance with point 2 of Annex VI;
  - (f) the maximum spin speed attained for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at partial load, whichever is the lower, and the remaining moisture content attained for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at partial load, whichever is the greater;
  - (g) airborne acoustical noise emissions during the washing and spinning phases, for the standard 60 °C cotton programme at full load, expressed in dB(A) re 1 pW and rounded to the nearest integer;
  - (h) if the household washing machine is produced in order to be built-in, an indication to this effect.
2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex II.
3. The size and font, in which all the information referred in this Annex is printed or shown, shall be legible.

## ANNEX V<sup>4</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household washing machine models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household washing machine models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (7) The Contracting Party authorities shall provide all relevant information to the authorities

<sup>4</sup> Annex V is replaced in accordance with Article 3 and Annex III of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

Contracting Parties' authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in the a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 1**  
**Verification tolerances**

Parameters	Verification tolerances
Annual energy consumption ( $AE_c$ )	The determined value shall not exceed the declared value of $AE_c$ by more than 10 %.
Energy consumption ( $E_t$ )	The determined value shall not exceed the declared value of $E_t$ by more than 10 %. Where three additional units need to be selected, the arithmetic mean of the determined values of these three units shall not exceed the declared value of $E_t$ by more than 6 %.
Programme time ( $T_t$ )	The determined value shall not exceed the declared values $T_t$ by more than 10 %.
Water consumption ( $W_t$ )	The determined value shall not exceed the declared value of $W_t$ by more than 10 %.
Remaining moisture content (D)	The determined value shall not exceed the declared value of D by more than 10 %.
Spin speed	The determined value shall not be less than the declared value by more than 10 %.
Power consumption in off mode and left-on mode ( $P_o$ and $P_l$ )	Determined values of power consumption $P_o$ and $P_l$ of more than 1,00 W shall not exceed the declared values of $P_o$ and $P_l$ by more than 10 %. The determined values of power consumption $P_o$ and $P_l$ of less than or equal to 1,00 W shall not exceed the declared values of $P_o$ and $P_l$ by more than 0,10 W.
Duration of the left-on mode ( $T_l$ )	The determined value shall not exceed the declared value of $T_l$ by more than 10 %.
Airborne acoustical noise emissions	The determined value shall meet the declared value.

## ANNEX VI

### Energy efficiency classes and spin-drying efficiency classes

#### 1. ENERGY EFFICIENCY CLASSES

The energy efficiency class of a household washing machine shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1.

The Energy Efficiency Index (EEI) of a household washing machine shall be determined in accordance with point 1 of Annex VII.

**Table 1**  
**Energy efficiency classes**

Energy Efficiency Class	Energy Efficiency Index
<b>A+++ (most efficient)</b>	EEI < 46
<b>A++</b>	$46 \leq \text{EEI} < 52$
<b>A+</b>	$52 \leq \text{EEI} < 59$
<b>A</b>	$59 \leq \text{EEI} < 68$
<b>B</b>	$68 \leq \text{EEI} < 77$
<b>C</b>	$77 \leq \text{EEI} < 87$
<b>D (least efficient)</b>	EEI $\geq$ 87

#### 2. SPIN-DRYING EFFICIENCY CLASSES

The spin-drying efficiency class of a household washing machine shall be determined on the basis of the remaining moisture content (D) as set out in Table 2.

The remaining moisture content (D) of a household washing machine shall be determined in accordance with point 3 of Annex VII.

**Table 2**  
**Spin-drying efficiency classes**

Spin-drying Efficiency Class	Remaining moisture content (%)
<b>A (most efficient)</b>	D < 45
<b>B</b>	$45 \leq D < 54$
<b>C</b>	$54 \leq D < 63$
<b>D</b>	$63 \leq D < 72$
<b>E</b>	$72 \leq D < 81$
<b>F</b>	$81 \leq D < 90$
<b>G (least efficient)</b>	D $\geq$ 90

## ANNEX VII

### Method for calculating the energy efficiency index, annual water consumption and remaining moisture content

#### 1. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the Energy Efficiency Index (EEI) of a household washing machine model, the weighted annual energy consumption of a household washing machine for the standard 60 °C cotton programme at full and partial load and for the standard 40 °C cotton programme at partial load is compared to its standard annual energy consumption.

(a) The Energy Efficiency Index (EEI) is calculated as follows and rounded to one decimal place:

$$\text{where:} \quad EEI = \frac{AE_C}{SAE_C} \times 100$$

$AE_C$  = annual energy consumption of the household washing machine;

$SAE_C$  = standard annual energy consumption of the household washing machine.

(b) The standard annual energy consumption ( $SAE_C$ ) is calculated in kWh/year as follows and rounded to two decimal places:

$$SAE_C = 47,0 \times c + 51,7$$

where:

$c$  = rated capacity of the household washing machine for the standard 60 °C cotton programme at full load or the standard 40 °C cotton programme at full load, whichever is the lower.

(c) The weighted annual energy consumption ( $AE_C$ ) is calculated in kWh/year as follows and is rounded to two decimal places:

$$AE_C = E_t \times 220 + \frac{\left[ P_o \times \frac{525\,600 - (T_t \times 200)}{2} + P_l \times \frac{525\,600 - (T_t \times 200)}{2} \right]}{60 \times 1\,000}$$

where:

$E_t$  = weighted energy consumption;

$P_o$  = weighted power in 'off-mode';

$P_l$  = weighted power in the 'left-on mode';

$T_t$  = weighted programme time;

220 = total number of standard washing cycles per year.

(ii) Where the household washing machine is equipped with a power management system, with the household washing machine reverting automatically to 'off-mode' after the end of the programme, the weighted annual energy consumption ( $AE_C$ ) is calculated taking into consideration the effective duration of 'left-on mode', according to the following formula:

$$AE_C = E_i \times 220 + \frac{\{(P_l \times T_l \times 220) + P_o \times [525\,600 - (T_l \times 200) - (T_l \times 200)]\}}{60 \times 1\,000}$$

where:

$T_l$  = time in 'left-on mode'.

(d) The weighted energy consumption ( $E_t$ ) is calculated in kWh as follows and rounded to three decimal places:

$$E_t = [3 \times E_{t,60} + 2 \times E_{t,60\frac{1}{2}} + 2 \times E_{t,40\frac{1}{2}}]/7$$

where:

$E_{t,60}$  = energy consumption of the standard 60 °C cotton programme at full load;

$E_{t,60\frac{1}{2}}$  = energy consumption of the standard 60 °C cotton programme at partial load;

$E_{t,40\frac{1}{2}}$  = energy consumption of the standard 40 °C cotton programme at partial load.

(e) The weighted power in 'off-mode' ( $P_o$ ) is calculated in W as follows and rounded to two decimal places:

$$P_o = (3 \times P_{o,60} + 2 \times P_{o,60\frac{1}{2}} + 2 \times P_{o,40\frac{1}{2}})/7$$

where:

$P_{o,60}$  = power in 'off-mode' of the standard 60 °C cotton programme at full load;

$P_{o,60\frac{1}{2}}$  = power in 'off-mode' of the standard 60 °C cotton programme at partial load;

$P_{o,40\frac{1}{2}}$  = power in 'off-mode' of the standard 40 °C cotton programme at partial load.

(f) The weighted power in the 'left-on mode' ( $P_l$ ) is calculated in W as follows and rounded to two decimal places:

$$P_l = (3 \times P_{l,60} + 2 \times P_{l,60\frac{1}{2}} + 2 \times P_{l,40\frac{1}{2}})/7$$

where:

$P_{l,60}$  = power in 'left-on mode' of the standard 60 °C cotton programme at full load;

$P_{l,60\frac{1}{2}}$  = power in 'left-on mode' of the standard 60 °C cotton programme at partial load;

$P_{l,40\frac{1}{2}}$  = power in 'left-on mode' of the standard 40 °C cotton programme at partial load.

(g) The weighted programme time ( $T_t$ ) is calculated in minutes as follows and rounded to the nearest minute:

$$T_t = (3 \times T_{t,60} + 2 \times T_{t,60\frac{1}{2}} + 2 \times T_{t,40\frac{1}{2}}) / 7$$

where:

$T_{t,60}$  = programme time of the standard 60 °C cotton programme at full load;

$T_{t,60\frac{1}{2}}$  = programme time of the standard 60 °C cotton programme at partial load;

$T_{t,40\frac{1}{2}}$  = programme time of the standard 40 °C cotton programme at partial load.

(h) The weighted time in 'left-on mode' ( $T_l$ ) is calculated in minutes as follows and rounded to the nearest minute:

$$T_l = (3 \times T_{l,60} + 2 \times T_{l,60\frac{1}{2}} + 2 \times T_{l,40\frac{1}{2}}) / 7$$

where:

$T_{l,60}$  = time in 'left-on mode' of the standard 60 °C cotton programme at full load;

$T_{l,60\frac{1}{2}}$  = time in 'left-on mode' of the standard 60 °C cotton programme at partial load;

$T_{l,40\frac{1}{2}}$  = time in 'left-on mode' of the standard 40 °C cotton programme at partial load.

## 2. CALCULATION OF THE WEIGHTED ANNUAL WATER CONSUMPTION

(a) The weighted annual water consumption ( $AW_c$ ) of a household washing machine is calculated in litres as follows and rounded up to the integer:

$$AW_c = W_t \times 220$$

where:

$W_t$  = weighted water consumption;

220 = total number of standard washing cycles per year.

(b) The weighted water consumption ( $W_t$ ) is calculated in litres as follows and rounded up to the integer

$$W_t = (3 \times W_{t,60} + 2 \times W_{t,60\frac{1}{2}} + 2 \times W_{t,40\frac{1}{2}}) / 7$$

where:

$W_{t,60}$  = water consumption of the standard 60 °C cotton programme at full load;

$W_{t,60\frac{1}{2}}$  = water consumption of the standard 60 °C cotton programme at partial load;

$W_{t,40\frac{1}{2}}$  = water consumption of the standard 40 °C cotton programme at partial load.

### 3. CALCULATION OF THE WEIGHTED REMAINING MOISTURE CONTENT

The weighted remaining moisture content (D) of a household washing machine is calculated in percentage as follows and rounded to the nearest whole percent:

$$D = (3 \times D_{60} + 2 \times D_{60\frac{1}{2}} + 2 \times D_{40\frac{1}{2}}) / 7$$

*where:*

$D_{60}$  is the residual moisture content for the standard 60 °C cotton programme at full load, in percentage and rounded to the nearest whole per cent;

$D_{60\frac{1}{2}}$  is the residual moisture content for the standard 60 °C cotton programme at partial load, in percentage and rounded to the nearest whole per cent;

$D_{40\frac{1}{2}}$  is the residual moisture content for the standard 40 °C cotton programme at partial load, in percentage and rounded to the nearest whole per cent.

## ANNEX VIII<sup>5</sup>

### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile mag-

<sup>5</sup> Annex VIII is added in accordance with Article 3(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

nification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## Delegated Regulation (EU) 1060/2010 of 28 September 2010 supplementing Directive 2010/30/EU with regard to energy labelling of household refrigerating appliances

Incorporated and adapted by Ministerial Council Decision 2011/03/MC-EnC of 6 October 2011 on adopting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2011/03/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

(1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products representing significant potential for energy savings and having a wide disparity in performance levels with equivalent functionality.

(2) Provisions on the energy labelling of household refrigerating appliances were established by Commission Directive 94/2/EC of 21 January 1994 implementing Council Directive 92/75/EEC with regard to energy labelling of household electric refrigerators, freezers and their combinations.

(3) The electricity used by household refrigerating appliances accounts for a significant share of total household electricity demand in the Union. In addition to the energy efficiency improvements already achieved, the scope for further reducing the energy consumption of household refrigerating appliances is substantial.

(4) Directive 94/2/EC should be repealed and new provisions should be laid down by this Regulation in order to ensure that the energy label provides dynamic incentives for manufacturers to further improve the energy efficiency of household refrigerating appliances and to accelerate the market transformation towards energy-efficient technologies.

(5) The combined effect of the provisions set out in this Regulation, and in Commission Regulation (EC) No 643/2009 of 22 July 2009 implementing Directive 2005/32/EC of the European Parliament and of the Council with regard to ecodesign requirements for household refrigerating appliances<sup>1</sup>, could amount to annual electricity savings of 6 TWh by 2020<sup>2</sup>, compared to the situation if no measures were taken.

(6) There is also an opportunity for energy savings for products in the growing markets of absorption-type refrigerating appliances and wine storage appliances. Those appliances should therefore be included in the scope of this Regulation.

(7) Absorption-type refrigerating appliances are noiseless, but consume significantly more energy than compression-type appliances. In order for end-users to make an informed decision, information on airborne acoustical noise emissions of household refrigerating appliances should be included on the label.

(8) The information provided on the label should be obtained through reliable, accurate and reproducible measurement procedures that take into account the recognised state-of-the-art measurement methods including, where available, harmonised standards adopted by the European standardisation bodies, as

listed in Annex I to Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations and of rules on Information Society services<sup>3</sup>.

(9) This Regulation should specify a uniform design and content for the label for household refrigerating appliances.

(10) In addition, this Regulation should specify requirements as to the technical documentation and the fiche for household refrigerating appliances.

(11) Moreover, this Regulation should specify requirements as to the information to be provided for any form of distance selling, advertisements and technical promotional materials for household refrigerating appliances.

(12) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.

(13) In order to facilitate the transition from Directive 94/2/EC to this Regulation, household refrigerating appliances labelled in accordance with this Regulation should be considered compliant with Directive 94/2/EC.

(14) Directive 94/2/EC should therefore be repealed.

## **Article 1**

### **Subject matter and scope**

1. This Regulation establishes requirements for the labelling of and the provision of supplementary product information on electric mains-operated household refrigerating appliances with a storage volume between 10 and 1500 litres.

2. This Regulation shall apply to electric mains-operated household refrigerating appliances, including those sold for non-household use or for the refrigeration of items other than foodstuffs and including built-in appliances.

It shall also apply to electric mains-operated household refrigerating appliances that can be battery-operated.

3. This Regulation shall not apply to:

(a) refrigerating appliances that are primarily powered by energy sources other than electricity, such as liquefied petroleum gas (LPG), kerosene and bio-diesel fuels;

(b) battery-operated refrigerating appliances that can be connected to the mains through an AC/DC converter, purchased separately;

(c) custom-made refrigerating appliances, made on a one-off basis and not equivalent to other refrigerating appliance models;

(d) refrigerating appliances for tertiary sector application where the removal of refrigerated foodstuffs is electronically sensed and that information can be automatically transmitted through a network connection to a remote control system for accounting;

(e) appliances where the primary function is not the storage of foodstuffs through refrigeration, such as

stand-alone ice-makers or chilled drinks dispensers.

## **Article 2**

### **Definitions**

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply:

- (1) “foodstuffs” means food, ingredients, beverages including wine, and other items primarily intended for consumption which require refrigeration at specified temperatures;
- (2) “household refrigerating appliance” means an insulated cabinet, with one or more compartments, intended for refrigerating or freezing foodstuffs, or for the storage of refrigerated or frozen foodstuffs for non-professional purposes, cooled by one or more energy-consuming processes, including appliances sold as building kits to be assembled by the end-user;
- (3) “built-in appliance” means a fixed refrigerating appliance intended to be installed in a cabinet, in a prepared recess in a wall or similar location, and requiring furniture finishing;
- (4) “refrigerator” means a refrigerating appliance intended for the preservation of foodstuffs with at least one compartment suitable for the storage of fresh food and/or beverages, including wine;
- (5) “compression-type refrigerating appliance” means a refrigerating appliance in which refrigeration is effected by means of a motor-driven compressor;
- (6) “absorption-type refrigerating appliance” means a refrigerating appliance in which refrigeration is effected by an absorption process using heat as the energy source;
- (7) “refrigerator-freezer” means a refrigerating appliance with at least one fresh-food storage compartment and at least one compartment suitable for the freezing of fresh food and the storage of frozen foodstuffs under three-star storage conditions (the food-freezer compartment);
- (8) “frozen-food storage cabinet” means a refrigerating appliance with one or more compartments suitable for the storage of frozen foodstuffs;
- (9) “food freezer” means a refrigerating appliance with one or more compartments suitable for freezing foodstuffs with temperatures ranging from ambient temperature down to – 18 °C, and which is also suitable for the storage of frozen foodstuffs under three-star storage conditions; a food freezer may also include two-star sections and/or compartments within the compartment or cabinet;
- (10) “wine storage appliance” means a refrigerating appliance that has no compartment other than one or more wine storage compartments;
- (11) “multi-use appliance” means a refrigerating appliance that has no compartment other than one or more multi-use compartments;
- (12) “equivalent household refrigerating appliance” means a household refrigerating appliance model placed on the market with the same gross and storage volumes, same technical, efficiency and performance characteristics, and same compartment types as another household refrigerating appliance model placed on the market under a different commercial code number by the same manufacturer;
- (13) “end-user” means a consumer buying or expected to buy a household refrigerating appliance;

(14) “point of sale” means a location where household refrigerating appliances are displayed or offered for sale, hire or hire-purchase.

The definitions set out in Annex I shall also apply.

### **Article 3**

#### **Responsibilities of suppliers**

Suppliers shall ensure that:

(a) each household refrigerating appliance is supplied with a printed label in the format and containing information as set out in Annex II;

(b) a product fiche, as set out in Annex III, is made available;

(c) the technical documentation as set out in Annex IV is made available on request to the authorities of **Contracting Parties** and to the **Secretariat**;

(d) any advertisement for a specific model of household refrigerating appliance contains the energy efficiency class, if the advertisement discloses energy-related or price information;

(e) any technical promotional material concerning a specific model of household refrigerating appliance which describes its specific technical parameters includes the energy efficiency class of that model;

**(f) an electronic label in the format and containing the information set out in Annex II is made available to dealers for each household refrigerating appliance model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household refrigerating appliance models;**

**(g) an electronic product fiche as set out in Annex III is made available to dealers for each household refrigerating appliance model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household refrigerating appliance models.<sup>1</sup>**

### **Article 4**

#### **Responsibilities of dealers**

Dealers shall ensure that:

(a) each household refrigerating appliance at the point of sale bears the label provided by suppliers in accordance with Article 3(a) on the outside of the front or top of the appliance, in such a way as to be clearly visible;

**(b) household refrigerating appliances offered for sale, hire or hire purchase where the end-user cannot be expected to see the product displayed, are marketed with the information to be provided by the suppliers in accordance with Annex V. Where the offer for is made through the internet and an electronic label and an electronic product fiche have**

---

<sup>1</sup> Article 3, points (f) and (g) are added in accordance with Article 2(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

been made available in accordance with Article 3(f) and 3(g) the provisions of Annex X shall apply instead;<sup>2</sup>

(c) any advertisement for a specific model of household refrigerating appliance contains its energy efficiency class, if the advertisement discloses energy-related or price information;

(d) any technical promotional material concerning a specific model of household refrigerating appliance, which describes its specific technical parameters, includes the energy efficiency class of that model.

### **Article 5**

#### **Measurement methods**

The information to be provided pursuant to Article 3 shall be obtained by reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods, as set out in Annex VI.

### **Article 6**

#### **Verification procedure for market surveillance purposes**

Contracting Parties shall apply the procedure laid down in Annex VII when assessing the conformity of the declared energy efficiency class, the annual energy consumption, the fresh and frozen food volumes, the freezing capacity and the airborne acoustical noise emissions.

### **Article 7**

#### **Revision**

<...>

### **Article 8**

#### **Repeal**

<...>

### **Article 9**

#### **Transitional provisions**

1. Articles 3(d), (e), 4(b), (c) and (d) shall not apply to printed advertisement and printed technical promotional material published before **30 April 2013**.

2. Household refrigerating appliances placed on the market before **31 December 2012** shall comply with the provisions set out in Directive 94/2/EC.

<sup>2</sup> Article 4, point (b) is replaced in accordance with Article 2(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

3. Household refrigerating appliances which comply with the provisions of this Regulation and which are placed on the market or offered for sale, hire or hire-purchase before **31 December 2012** shall be regarded as complying with the requirements of Directive 94/2/EC.

### **Article 10**

#### **Entry into force and application**

**1. This Decision [2011/03/MC-EnC] enters into force upon its adoption <...><sup>3</sup>**

2. It shall apply from **31 December 2012**. However, Articles 3(d), (e), 4(b), (c) and (d) shall apply from **30 April 2013**.

This Regulation shall be binding in its entirety and directly applicable in all **Contracting Parties**.

#### **Article 2(5) of Decision 2011/03/MC-EnC**

**The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <...> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.**

---

<sup>3</sup> The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.

## ANNEX I

### Definitions applicable for the purposes of Annexes II to IX

For the purposes of Annexes II to IX, the following definitions shall apply:

- (a) 'frost-free system' means a system automatically operated to prevent the permanent formation of frost, where cooling is provided by forced air circulation, the evaporator or evaporators are defrosted by an automatic defrost system, and the water from defrosting is disposed of automatically;
- (b) 'frost-free compartment' means any compartment defrosted by a frost-free system;
- (c) 'refrigerator-cellar' means a refrigerating appliance where at least one fresh-food storage compartment and one cellar compartment, but no frozen-food storage, chill or ice-making compartments, are present;
- (d) 'cellar' means a refrigerating appliance where only one or more cellar compartments are present;
- (e) 'refrigerator-chiller' means a refrigerating appliance where at least a fresh-food storage compartment and a chill compartment, but no frozen-food storage compartments, are present;
- (f) 'compartments' means any of the compartments listed in points (g) to (n);
- (g) 'fresh-food storage compartment' means a compartment designed for the storage of unfrozen foodstuffs, which may itself be divided into sub-compartments;
- (h) 'cellar compartment' means a compartment intended for the storage of particular foodstuffs or beverages at a temperature warmer than that of a fresh-food storage compartment;
- (i) 'chill compartment' means a compartment intended specifically for the storage of highly perishable foodstuffs; (j) 'ice-making compartment' means a low-temperature compartment intended specifically for the freezing and storage of ice;
- (k) 'frozen-food storage compartment' means a low-temperature compartment intended specifically for the storage of frozen foodstuffs and classified according to temperature as follows:
  - (i) 'one-star compartment': a frozen-food storage compartment in which the temperature is not warmer than  $-6\text{ }^{\circ}\text{C}$ ;
  - (ii) 'two-star compartment': a frozen-food storage compartment in which the temperature is not warmer than  $-12\text{ }^{\circ}\text{C}$ ;
  - (iii) 'three-star compartment': a frozen-food storage compartment in which the temperature is not warmer than  $-18\text{ }^{\circ}\text{C}$ ;
  - (iv) 'food freezer compartment' (or 'four-star compartment'): a compartment suitable for freezing at least 4,5 kg of foodstuffs per 100 l of storage volume, and in no case less than 2 kg, from ambient temperature down to  $-18\text{ }^{\circ}\text{C}$  over a period of 24 hours, which is also suitable for the storage of frozen food under three-star storage conditions, and may include two-star sections within the compartment;
  - (v) '0-star compartment': a frozen-food storage compartment in which the temperature is  $< 0\text{ }^{\circ}\text{C}$  and which can also be used for the freezing and storage of ice but is not intended for the storage of highly perishable foodstuffs;

(l) 'wine storage compartment' means a compartment exclusively designed either for short-term wine storage to bring wines to the ideal drinking temperature or for long-term wine storage to allow wine to mature, with the following features:

(i) continuous storage temperature, either pre-set or set manually according to the manufacturer's instructions, in the range from + 5 °C to + 20 °C;

(ii) storage temperature(s) within a variation over time of less than 0,5 K at each declared ambient temperature specified by the climate class for household refrigerating appliances;

(iii) active or passive control of the compartment humidity in the range from 50% to 80%;

(iv) constructed to reduce the transmission of vibration to the compartment, whether from the refrigerator compressor or from any external source;

(m) 'multi-use compartment' means a compartment intended for use at two or more of the temperatures of the compartment types and capable of being set by the end-user to continuously maintain the operating temperature range applicable to each compartment type according to the manufacturer's instructions; however, where a feature can shift temperatures in a compartment to a different operating temperature range for a period of limited duration only (such as a fast-freeze facility), the compartment is not a 'multi-use compartment' as defined by this Regulation;

(n) 'other compartment' means a compartment, other than a wine storage compartment, intended for the storage of particular foodstuffs at a temperature warmer than + 14 °C;

(o) 'two-star section' means part of a food-freezer, a food-freezer compartment, a three-star compartment or a three-star frozen-food storage cabinet which does not have its own individual access door or lid and in which the temperature is not warmer than – 12 °C;

(p) 'chest freezer', means a food freezer in which the compartment(s) is (are) accessible from the top of the appliance or which has both top-opening type and upright type compartments but where the gross volume of the top-opening type compartment(s) exceeds 75% of the total gross volume of the appliance;

(q) 'top-opening type' or 'chest type' means a refrigerating appliance with its compartment(s) accessible from the top of the appliance;

(r) 'upright type' means a refrigerating appliance with its compartment(s) accessible from the front of the appliance;

(s) 'fast freeze' means a reversible feature to be activated by the end-user according to the manufacturer's instructions, which decreases the storage temperature of the freezer or freezer compartment to achieve faster freezing of unfrozen foodstuffs;

(t) 'model identifier' means the code, usually alphanumeric, which distinguishes a specific refrigerating appliance model from other models with the same trade mark or supplier's name.

## ANNEX II Label

### 1. LABEL FOR HOUSEHOLD REFRIGERATING APPLIANCES CLASSIFIED IN ENERGY EFFICIENCY CLASSES A+++ TO C

(1) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier;

III. the energy efficiency class determined in accordance with Annex IX; the head of the arrow containing the energy efficiency class of the household refrigerating appliance shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. annual energy consumption (AE C ) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 3(2) of Annex VIII;

V. sum of the storage volumes of all compartments that do not merit a star rating (i.e. operating temperature  $> -6$  °C), rounded to the nearest integer;

VI. sum of the storage volumes of all frozen-food storage compartments that merit a star rating (i.e. operating temperature  $\leq -6$  °C), rounded to the nearest integer and star rating of the compartment with the highest share of that sum; where the household refrigerating appliances has no frozen-food storage compartment(s) the supplier shall declare '- L' instead of a value and leave the position for star rating blank;

VII. airborne acoustical noise emissions expressed in dB(A) re1 pW, rounded to the nearest integer.

However, for wine storage appliances, points V and VI are replaced by the rated capacity in number of standard bottles of 75 centilitres that may be fitted in the appliance in accordance with the manufacturer's instructions.

(2) The design of the label shall be in accordance with point 3(1) of this Annex. By way of derogation, where a model has been awarded an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

2. LABEL FOR HOUSEHOLD REFRIGERATING APPLIANCES CLASSIFIED IN ENERGY EFFICIENCY CLASSES D TO G

(1) The information listed in point 1(1) shall be included in this label.

(2) The design of the label shall be in accordance with point 3(2) of this Annex. By way of derogation, where a model has been awarded an 'EU Ecolabel' under Regulation (EC) No 66/2010, a copy of the EU Ecolabel may be added.

### 3. LABEL DESIGN

(1) For household refrigerating appliances classified in energy efficiency classes A+++ to C, except for wine storage appliances, the design of the label shall be as the following:

Whereby:

(a) The label shall be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background of the label shall be white.

(c) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

❶ **EU label border stroke:** 5 pt - colour: Cyan 100% – round corners: 3,5 mm.

❷ **EU logo - colours:** X-80-00-00 and 00-00-X-00.

❸ **Energy label:** colour: X-00-00-00.

**Pictogram as depicted:** EU logo + energy label: width: 92 mm, height: 17 mm.

❹ **Sub-logos border:** 1 pt - colour: Cyan 100% – length: 92,5 mm.

❺ **A-G scale**

- **Arrow:** height: 7 mm, gap: 0,75 mm - colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class: 00-X-X-00.

- **Text:** Calibri bold 19 pt, capitals and white; ‘+’ symbols: Calibri bold 13 pt, capitals, white, aligned on a single row.

❻ **Energy efficiency class**

- **Arrow:** width: 26 mm, height: 14 mm, 100% black;

- **Text:** Calibri bold 29 pt, capitals and white; ‘+’ symbols: Calibri bold 18 pt, capitals, white and aligned on a single row.

❼ **Energy**

- **Text:** Calibri regular 11 pt, capitals, black.

❽ **Annual energy consumption:**

- **Border:** 3 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 45 pt, 100% black.

- **Second line:** Calibri regular 17 pt, 100% black.

❾ **Storage volumes of all compartments that do not merit a star rating:**

- **Border:** 3 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 25 pt, 100% black. Calibri regular 17 pt, 100% black.

**10 Airborne acoustical noise emissions:**

- **Border:** 3 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 25 pt, 100% black.

Calibri regular 17 pt, 100% black.

**11 Storage volumes of all frozen-food storage compartments that merit a star rating:**

- **Border:** 3 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 25 pt, 100% black.

Calibri regular 17 pt, 100% black.

**12 Supplier's name or trademark**

**13 Supplier's model identifier**

**14** The supplier's name or trademark and model identifier should fit in a space of 90 x 15 mm.

**15 Numbering of the Regulation:** Text: Calibri bold 11 pt.

(2) For household refrigerating appliances classified in energy efficiency classes D to G, except for wine storage appliances, the design of the label shall be the following:

Whereby:

The design of the label shall be in accordance with point 3(1) of this Annex except for Number 8 where the following applies:

**8 Annual energy consumption:**

- **Border:** 3 pt - colour: Cyan 100% - round corners: 3,5 mm.
- **Value:** Calibri bold 32 pt, 100% black.
- **Second line:** Calibri regular 14 pt, 100% black.

(3) For wine storage appliances, the design of the label shall be the following:

Whereby:

(a) The label shall be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.

(b) The background of the label shall be white.

(c) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

❶ **EU label border stroke:** 5 pt - colour: Cyan 100% – round corners: 3,5 mm.

❷ **EU logo - colours:** X-80-00-00 and 00-00-X-00.

❸ **Energy label:** colour: X-00-00-00.

**Pictogram as depicted:** EU logo + energy label: width: 92 mm, height: 17 mm.

❹ **Sub-logos border:** 1 pt - colour: Cyan 100% - length: 92,5 mm.

❺ **A-G scale**

- **Arrow:** height: 7 mm, gap: 0,75 mm - colours:

Highest class: X-00-X-00,

Second class: 70-00-X-00,

Third class: 30-00-X-00,

Fourth class: 00-00-X-00,

Fifth class: 00-30-X-00,

Sixth class: 00-70-X-00,

Last class(es): 00-X-X-00.

- **Text:** Calibri bold 19 pt, capitals and white; '+' symbols: Calibri bold 13 pt, capitals, white, aligned on a single row.

❻ **Energy efficiency class**

- **Arrow:** width: 26 mm, height: 14 mm, 100% black;

- **Text:** Calibri bold 29 pt, capitals, white; '+' symbols: Calibri bold 18 pt, capitals, white, aligned on a single row.

❼ **Energy**

- **Text:** Calibri regular 11 pt, capitals, black.

❽ **Annual energy consumption:**

- **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 30 pt, 100% black.

- **Second line:** Calibri regular 14 pt, 100% black.

❾ **Rated capacity in number of standard wine bottles:**

- **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 28 pt, 100% black.

Calibri regular 15 pt, 100% black.

**10 Airborne acoustical noise emissions:**

- **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 25 pt, 100% black.

Calibri regular 17 pt, 100% black.

**11 Supplier's name or trademark**

**12 Supplier's model identifier**

**13** The suppliers' name or trade mark and model identifier should fit in a space of 90 × 15 mm

**14 Numbering of the Regulation:** Text: Calibri bold 11 pt.

## ANNEX III

### Product fiche

1. The information in the product fiche shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
- (b) supplier's model identifier as defined in Annex I, point (t);
- (c) category of the household refrigerating appliance model in accordance with point 1 of Annex VIII;
- (d) energy efficiency class of the model in accordance with Annex IX;
- (e) where the model has been awarded an 'EU Ecolabel award' under Regulation (EC) No 66/2010, this information may be included;
- (f) annual energy consumption ( $AE_c$ ) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 3(2) of Annex VIII. It shall be described as: 'Energy consumption "XYZ" kWh per year, based on standard test results for 24 hours. Actual energy consumption will depend on how the appliance is used and where it is located';
- (g) storage volume of each compartment and applicable star rating in accordance with point 1(1)(VI) of Annex II, if any;
- (h) the design temperature of 'other compartments' within the meaning of point (n) of Annex I. For wine storage compartments, the coldest storage temperature, either pre-set in the compartment or capable of being set by an end-user and capable of being maintained continuously according to the manufacturer's instructions, shall be given;
- (i) the mention 'frost-free' for the relevant compartment(s), as defined in point (b) of Annex I;
- (j) 'power cut safe "X" h' defined as 'temperature rise time';
- (k) 'freezing capacity' in kg/24 h;
- (l) 'climate class' in accordance with point 1, Table 3 of Annex VIII, and expressed as: 'Climate class: W [climate class]. This appliance is intended to be used at an ambient temperature between "X" [lowest temperature] °C and "X" [highest temperature] °C';
- (m) airborne acoustical noise emissions expressed in dB(A) re 1 pW, rounded to the nearest integer;
- (n) if the model is intended to be a built-in appliance, an indication to this effect;
- (o) for wine storage appliances, the following information: 'This appliance is intended to be used exclusively for the storage of wine'. This point shall not apply to household refrigerating appliances that are not specifically designed for wine storage but may nevertheless be used for this purpose, nor to household refrigerating appliances that have a wine storage compartment combined with any other compartment type.

2. One fiche may cover a number of refrigerating appliances models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.

## ANNEX IV

### Technical documentation

1. The technical documentation referred to in Article 3(c) shall include:

- (a) the name and address of the supplier;
- (b) a general description of the refrigerating appliance model, sufficient for it to be unequivocally and easily identified;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) identification and signature of the person empowered to bind the supplier;
- (f) technical parameters for measurements, established in accordance with Annex VIII:
  - (i) overall dimensions;
  - (ii) overall space required in use;
  - (iii) total gross volumes(s);
  - (iv) storage volume(s) and total storage volume(s);
  - (v) star rating(s) of the frozen-food storage compartment(s);
  - (vi) defrosting type;
  - (vii) storage temperature;
  - (viii) energy consumption;
  - (ix) temperature rise time;
  - (x) freezing capacity;
  - (xi) power consumption;
  - (xii) wine storage compartment humidity;
  - (xiii) airborne acoustical noise emissions;
- (g) the results of calculations performed in accordance with Annex VIII.

2. Where the information included in the technical documentation file for a particular household refrigerating appliance model has been obtained by calculation on the basis of design, or extrapolation from other equivalent refrigerating appliances, or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent household refrigerating appliance models where the information was obtained on the same basis.

## ANNEX V

### Information to be provided in the cases where end-users cannot be expected to see the product displayed

1. The information referred to in Article 4(b) shall be provided in the following order:
  - (a) the energy efficiency class of the model as defined in Annex IX;
  - (b) the annual energy consumption in kWh per year, rounded up to the nearest integer and calculated in accordance with point 3(2) of Annex VIII;
  - (c) the storage volume of each compartment and applicable star rating in accordance with point 1(1) VI of Annex II, if any;
  - (d) the 'climate class' in accordance with point 1, Table 3 of Annex VIII;
  - (e) airborne acoustical noise emissions expressed in dB(A) re1 pW, rounded to the nearest integer;
  - (f) if the model is intended to be built-in, an indication to this effect;
  - (g) for wine storage appliances the following information: 'This appliance is intended to be used exclusively for the storage of wine'. This point shall not apply to household refrigerating appliances that are not specifically designed for wine storage but may nevertheless be used for this purpose, nor to household refrigerating appliances that have a wine storage compartment combined with any other compartment type.
2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex III.
3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.

## ANNEX VI

### Measurements

1. For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements shall be made using a reliable, accurate and reproducible measurement procedure that takes into account the generally recognised state-of-the-art measurement methods, including methods set out in documents the reference numbers of which have been published for that purpose in the Official Journal of the European Union.

#### 2. GENERAL CONDITIONS FOR TESTING

The following general conditions for testing apply:

- (1) if anti-condensation heaters that can be switched on and off by the end-user are provided, they shall be switched on and - if adjustable - set at maximum heating;
- (2) if 'through-the-door devices' (such as ice or chilled water/drinks dispensers) which can be switched on and off by the end-user are provided, they shall be switched on during the energy consumption measurement but not operated;
- (3) for multi-use appliances and compartments, the storage temperature during the measurement of energy consumption shall be the nominal temperature of the coldest compartment type as claimed for continuous normal use according to the manufacturer's instructions;
- (4) the energy consumption of a household refrigerating appliance shall be determined in the coldest configuration, according to the manufacturer's instructions for continuous normal use for any 'other compartment' as defined in Annex VIII, Table 5.

#### 3. TECHNICAL PARAMETERS

The following parameters shall be established:

- (a) 'overall dimensions', which are measured to the nearest millimetre;
- (b) 'overall space required in use', which is measured to the nearest millimetre;
- (c) 'total gross volume(s)', which is measured to the nearest whole number of cubic decimetres or litres;
- (d) 'storage volume(s) and total storage volume(s)', which is measured to the nearest whole number of cubic decimetres or of litres;
- (e) 'defrosting type';
- (f) 'storage temperature';
- (g) 'energy consumption' which is expressed in kilowatt hours per 24 hours (kWh/24h), to three decimal places;
- (h) 'temperature rise time';
- (i) 'freezing capacity';
- (j) 'wine storage compartment humidity', which is expressed as a percentage rounded to the nearest integer; and
- (k) 'airborne acoustical noise emissions'.

## ANNEX VII<sup>4</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Party authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household refrigerating appliance models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household refrigerating appliance models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (7) The Contracting Party authorities shall provide all relevant information to the authorities

<sup>4</sup> Annex VII is replaced in accordance with Article 2 and Annex II of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

The Contracting Party authorities shall use the measurement and calculation methods set out in Annexes VI and VIII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 1**  
**Verification tolerances**

Parameters	Verification tolerances
Gross volume	The determined value shall not be less than the declared value by more than 3 % or 1 litre, whichever is the greater value.
Storage volume	The determined value shall not be less than the declared value by more than 3 % or 1 litre, whichever is the greater value. Where the volumes of the cellar compartment and the fresh food storage compartment can be adjusted, relative to one another, by the user, the volume shall be tested when the cellar compartment is adjusted to its minimum volume.
Freezing capacity	The determined value shall not be less than the declared value by more than 10 %.
Energy consumption	The determined value shall not exceed the declared value ( $E_{24h}$ ) by more than 10 %.
Humidity of wine storage appliances	The determined value for the relative humidity observed in testing shall not exceed the declared range by more than 10 % in any direction.
Airborne acoustical noise emissions	The determined value shall meet the declared value.

## ANNEX VIII

### Classification of household refrigerating appliances, method for calculating the equivalent volume and the energy efficiency index

#### 1. CLASSIFICATION OF HOUSEHOLD REFRIGERATING APPLIANCES

Household refrigerating appliances are classified into categories as listed in Table 1.

Each category is defined by the specific compartment composition as specified in Table 2 and is independent of the number of doors and/or drawers.

**Table 1**  
**Household refrigerating appliances categories**

<b>Category</b>	<b>Designation</b>
1	Refrigerator with one or more fresh-food storage compartments
2	Refrigerator-cellar, Cellar and Wine storage appliances
3	Refrigerator-chiller and Refrigerator with a 0-star compartment
4	Refrigerator with a one-star compartment
5	Refrigerator with a two-star compartment
6	Refrigerator with a three-star compartment
7	Refrigerator-freezer
8	Upright freezer
9	Chest freezer
10	Multi-use and other refrigerating appliances

Household refrigerating appliances that cannot be classified in categories 1 to 9 because of compartment temperature are classified in category 10.

**Table 2**  
**Household refrigerating appliance classification and relevant compartment composition**

Nominal temperature (for the EEL) (°C)	Design T	+ 12	Wine storage	+ 12	Cellar	+ 5	Fresh food storage	0	Chill	0	0-star/ice making	- 6	- 12	- 18	- 18	Category (number)
Compartment types	Other															
Appliance category	Compartments composition															
REFRIGERATOR WITH ONE OR MORE FRESH-FOOD STORAGE COMPARTMENTS	N	N	N	N	N	Y	N	N	N	N	N	N	N	N	N	1
REFRIGERATOR-CELLAR, CELLAR and WINE STORAGE APPLIANCE	O	O	O	O	O	Y	N	N	N	N	N	N	N	N	N	2
	O	O	O	O	O	Y	N	N	N	N	N	N	N	N	3	
	O	O	O	O	O	Y	N	N	N	N	N	N	N	N		
REFRIGERATOR-CHILLER and REFRIGERATOR WITH A 0-STAR COMPARTMENT	O	O	O	O	O	Y	Y	O	O	Y	N	N	N	N	N	4
REFRIGERATOR WITH A ONE-STAR COMPARTMENT	O	O	O	O	O	Y	Y	O	O	O	Y	Y	N	N	N	5
REFRIGERATOR WITH A TWO-STAR COMPARTMENT	O	O	O	O	O	Y	Y	O	O	O	O	O	Y	N	N	6
REFRIGERATOR WITH A THREE-STAR COMPARTMENT	O	O	O	O	O	Y	Y	O	O	O	O	O	O	Y	N	7
REFRIGERATOR-FREEZER	N	N	N	N	N	N	N	N	N	N	N	N	O	(Y) <sup>(*)</sup>	Y	8
UPRIGHT FREEZER	N	N	N	N	N	N	N	N	N	N	N	N	O	N	Y	9
CHEST FREEZER	N	N	N	N	N	N	N	N	N	N	N	N	O	O	Y	9
MULTI-USE AND OTHER APPLIANCES	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	10

Notes: Y = the compartment is present; N = the compartment is not present; O = the presence of the compartment is optional;

(\*) also includes three-star frozen-food cabinets.

Household refrigerating appliances are classified in one or more climate classes as specified in Table 3.

**Table 3**  
**Climate classes**

Class	Symbol	Ambient average temperature °C
Extended temperate	SN	+ 10 to + 32
Temperate	N	+ 16 to + 32
Subtropical	ST	+ 16 to + 38
Tropical	T	+ 16 to + 43

The refrigerating appliance shall be capable of maintaining the required storage temperatures in the different compartments simultaneously and within the permitted temperature deviations (during the defrost cycle) as specified in Table 4 for the different types of household refrigerating appliances and for the appropriate climate classes.

Multi-use appliances and compartments shall be capable of maintaining the required storage temperatures of the different compartment types where these temperatures can be set by the end-user according to the manufacturer's instructions.

**Table 4**  
**Storage temperatures**

Storage temperatures (°C)							
Other compartment	Wine storage compartment	Cellar compartment	Fresh-food storage compartment	Chill compartment	One-star compartment	Two-star compartment/section	Food freezer and three-star compartment/cabinet
$t_{om}$	$t_{wma}$	$t_{cm}$	$t_{1m'}$ $t_{2m'}$ $t_{3m'}$ $t_{ma}$	$t_{cc}$	$t^*$	$t^{**}$	$t^{***}$
$> + 14$	$+ 5 \leq$ $t_{wma} \leq + 20$	$+ 8 \leq$ $t_{cm} \leq + 14$	$0 \leq t_{1m'}$ $t_{2m'}$ $t_{3m'} \leq + 8;$ $t_{ma} \leq + 4$	$- 2 \leq t_{cc} \leq + 3$	$\leq - 6$	$\leq - 12$ <sup>(e)</sup>	$\leq - 18$ <sup>(e)</sup>

Notes:

- $t_{om}$ : storage temperature of the other compartment.
- $t_{wma}$ : storage temperature of the wine storage compartment with a variation of 0.5 K.
- $t_{cm}$ : storage temperature of the cellar compartment.
- $t_{1m'}$ ,  $t_{2m'}$ ,  $t_{3m'}$ : storage temperatures of the fresh-food compartment.
- $t_{ma}$ : average storage temperature of the fresh-food compartment.
- $t_{cc}$ : instantaneous storage temperature of the chill compartment.
- $t^*$ ,  $t^{**}$ ,  $t^{***}$ : maximum temperatures of the frozen-food storage compartments.
- storage temperature for the ice-making compartment and for the '0-star' compartment is below 0 °C.

(<sup>a</sup>) for frost-free household refrigerating appliances during the defrost cycle, a temperature deviation of no more than 3 K during a period of 4 hours or 20% of the duration of the operating cycle, whichever is the shorter, is allowed.

## 2. CALCULATION OF THE EQUIVALENT VOLUME

The equivalent volume of a household refrigerating appliance is the sum of the equivalent volumes of all compartments. It is calculated in litres and rounded to the nearest integer as:

$$V_{eq} = \left[ \sum_{c=1}^{c=n} V_c \times \frac{(25 - T_c)}{20} \times FF_c \right] \times CC \times BI$$

where:

- n is the number of compartments,
- $V_c$  is the storage volume of the compartment(s),
- $T_c$  is the nominal temperature of the compartment(s) as set out in Table 2,
- $\frac{25 - T_c}{20}$  is the thermodynamic factor as set in Table 5,
- $FF_c$ , CC and BI are volume correction factors as set out in Table 6.

The thermodynamic correction factor  $\frac{25 - T_c}{20}$  is the temperature difference between the nominal temperature of a compartment  $T_c$  (defined in Table 2) and the ambient temperature under standard test conditions at + 25 °C, expressed as a ratio of the same difference for a fresh-food compartment at + 5 °C.

The thermodynamic factors for the compartments described in Annex I, points (g) to (n), are set out in Table 5.

**Table 5**  
**Thermodynamic factors for refrigerating compartments**

Compartment	Nominal temperature	$(25 - T_c)/20$
<b>Other compartment</b>	<b>Design temperature</b>	$\frac{25 - T_c}{20}$
Cellar compartment/Wine storage compartment	+ 12 °C	0.65
Fresh-food storage compartment	+ 5 °C	1.00
Chill compartment	0 °C	1.25
Ice-making compartment and 0-star compartment	0 °C	1.25
One-star compartment	- 6 °C	1.55
Two-star compartment	- 12 °C	1.85
Three-star compartment	- 18 °C	2.15
Food freezer compartment (four-star compartment)	- 18 °C	2.15

Notes:

- (i) for multi-use compartments, the thermodynamic factor is determined by the nominal temperature as given in Table 2 of the coldest compartment type capable of being set by the end-user and maintained continuously according to the manufacturer's instructions;
- (ii) for any two-star section (within a freezer) the thermodynamic factor is determined at  $T_c = -12\text{ °C}$ ;
- (iii) for other compartments the thermodynamic factor is determined by the coldest design temperature capable of being set by the end-user and maintained continuously according to the manufacturer's instructions.

**Table 6**  
**Value of the correction factors**

Correction factor	Value	Conditions
FF (frost-free)	1.2	For frost-free frozen-food storage compartments
	1	Otherwise
CC (climate class)	1.2	For T class (tropical) appliances
	1.1	For ST class (subtropical) appliances
	1	Otherwise
BI (built-in)	1.2	For built-in appliances under 58 cm in width
	1	Otherwise

Notes:

- (i) FF is the volume correction factor for frost-free compartments;
- (ii) CC is the volume correction factor for a given climate class. If a refrigerating appliance is classified in more than one climate class, the climate class with the highest correction factor is used for the calculation of the equivalent volume;
- (iii) BI is the volume correction factor for built-in appliances.

### 3. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the Energy Efficiency Index (EEI) of a household refrigerating appliance model, the annual energy consumption of the household refrigerating appliance is compared to its standard annual energy consumption.

(1) The Energy Efficiency Index (EEI) is calculated and rounded to the first decimal place, as:

$$EEI = \frac{AE_c}{SAE_c} \times 100$$

where:

$AE_c$  = annual energy consumption of the household refrigerating appliance

$SAE_c$  = standard annual energy consumption of the household refrigerating appliance.

(2) The annual energy consumption ( $AE_C$ ) is calculated in kWh/year and rounded to two decimal places, as:

$$AE_C = E_{24h} \times 365$$

where:

$E_{24h}$  is the energy consumption of the household refrigerating appliance in kWh/24h and rounded to three decimal places.

(3) The standard annual energy consumption ( $SAE_C$ ) is calculated in kWh/year and rounded to two decimal places, as:

$$SAE_C = V_{eq} \times M + N + CH$$

where:

$V_{eq}$  is the equivalent volume of the household refrigerating appliance

CH is equal to 50 kWh/year for household refrigerating appliances with a chill compartment with a storage volume of at least 15 litres

the M and N values are given in Table 7 for each household refrigerating appliance category.

**Table 7**  
**M and N values by household refrigerating appliance category**

Category	M	N
1	0.233	245
2	0.233	245
3	0.233	245
4	0.643	191
5	0.450	245
6	0.777	303
7	0.777	303
8	0.539	315
9	0.472	286
10	(*)	(*)

(\*) Note: for Category 10 household refrigerating appliances the M and N values depend on the temperature and star rating of the compartment with the lowest storage temperature capable of being set by the end-user and maintained continuously according to the manufacturer's instructions. When only an 'other compartment' as defined in Table 2 and Annex I, point (n), is present, the M and N values for Category 1 are used. Appliances with three-star compartments or food-freezer compartments are considered to be refrigerator-freezers.

## ANNEX IX

### Energy efficiency classes

The energy efficiency class of a household refrigerating appliance shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1 from 20 December 2011 until 30 June 2014 and Table 2 from 1 July 2014.

The Energy Efficiency Index of a household refrigerating appliance shall be determined in accordance with point 3 of Annex VIII.

**Table 1**  
**Energy efficiency classes until 30 June 2014**

Energy Efficiency Class	Energy Efficiency Index
<b>A+++ (most efficient)</b>	EEI < 22
<b>A++</b>	$22 \leq \text{EEI} < 33$
<b>A+</b>	$33 \leq \text{EEI} < 44$
<b>A</b>	$44 \leq \text{EEI} < 55$
<b>B</b>	$55 \leq \text{EEI} < 75$
<b>C</b>	$75 \leq \text{EEI} < 95$
<b>D</b>	$95 \leq \text{EEI} < 110$
<b>E</b>	$110 \leq \text{EEI} < 125$
<b>F</b>	$125 \leq \text{EEI} < 150$
<b>G (least efficient)</b>	EEI $\geq$ 150

**Table 2**  
**Energy efficiency classes from 1 July 2014**

Energy Efficiency Class	Energy Efficiency Index
<b>A+++ (most efficient)</b>	EEI < 22
<b>A++</b>	$22 \leq \text{EEI} < 33$
<b>A+</b>	$33 \leq \text{EEI} < 42$
<b>A</b>	$42 \leq \text{EEI} < 55$
<b>B</b>	$55 \leq \text{EEI} < 75$
<b>C</b>	$75 \leq \text{EEI} < 95$
<b>D</b>	$95 \leq \text{EEI} < 110$
<b>E</b>	$110 \leq \text{EEI} < 125$
<b>F</b>	$125 \leq \text{EEI} < 150$
<b>G (least efficient)</b>	EEI $\geq$ 150

## ANNEX X<sup>5</sup>

### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

- (a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;
- (b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;
- (c) “tactile screen” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;
- (d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 3 of Annex II. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

- (a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;
- (b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and
- (c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

- (a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
- (b) the image shall link to the label;
- (c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
- (d) the label shall be displayed by pop up, new tab, new page or inset screen display;
- (e) for magnification of the label on tactile screens, the device conventions for tactile mag-

<sup>5</sup> Annex X is added in accordance with Article 2(3) and Annex II of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

nification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.'

## **Delegated Regulation (EU) 1059/2010 of 28 September 2010 supplementing Directive 2010/30/EU with regard to energy labelling of household dishwashers**

Incorporated and adapted by Ministerial Council Decision 2011/03/MC-EnC of 6 October 2011 on adopting certain Delegated Regulations on energy related products, and amended by Ministerial Council Decision 2018/03/MC-EnC of 29 November 2018 adapting and implementing Regulation (EU) 2017/1369 setting a framework for energy labelling, and certain Delegated Regulations on energy-related products.

*The adaptations made by Ministerial Council Decisions 2011/03/MC-EnC and 2018/03/MC-EnC are highlighted in **bold and blue**.*

Whereas:

- (1) Directive 2010/30/EU requires the Commission to adopt delegated acts as regards the labelling of energy-related products representing significant potential for energy savings and having a wide disparity in performance levels with equivalent functionality.
- (2) Provisions on the energy labelling of household dishwashers were established by Commission Directive 97/17/EC of 16 April 1997 implementing Council Directive 92/75/EEC with regard to energy labelling of household dishwashers.
- (3) The electricity used by household dishwashers accounts for a significant share of total household electricity demand in the Union. In addition to the energy efficiency improvements already achieved, the scope for further reducing the energy consumption of household dishwashers is substantial.
- (4) Directive 97/17/EC should be repealed and new provisions should be laid down by this Regulation in order to ensure that the energy label provides dynamic incentives for suppliers to further improve the energy efficiency of household dishwashers and to accelerate the market transformation towards energy-efficient technologies.
- (5) The information provided on the label should be obtained through reliable, accurate and reproducible measurement procedures, which take into account the recognised state-of-the-art measurement methods including, where available, harmonised standards adopted by the European standardisation bodies, as listed in Annex I to Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations and of rules on Information Society services.
- (6) This Regulation should specify a uniform design and content for the label for household dishwashers.
- (7) In addition, this Regulation should specify requirements as to the technical documentation and the fiche for household dishwashers.
- (8) Moreover, this Regulation should specify requirements as to the information to be provided for any form of distance selling, advertisements and technical promotional materials for household dishwashers.
- (9) It is appropriate to provide for a review of the provisions of this Regulation taking into account technological progress.
- (10) In order to facilitate the transition from Directive 97/17/EC to this Regulation, it is appropriate to provide that household dishwashers labelled in accordance with this Regulation are to be considered

compliant with Directive 97/17/EC.

(11) Directive 97/17/EC should therefore be repealed.

### **Article 1**

#### **Subject matter and scope**

This Regulation establishes requirements for the labelling of and the provision of supplementary product information on electric mains-operated household dishwashers and electric mains-operated dishwashers that can also be powered by batteries, including those sold for non-household use and built-in household dishwashers.

### **Article 2**

#### **Definitions**

In addition to the definitions laid down in Article 2 of Directive 2010/30/EU, the following definitions shall apply for the purpose of this Regulation:

- (1) "household dishwasher" means a machine which cleans, rinses, and dries dishware, glassware, cutlery and cooking utensils by chemical, mechanical, thermal, and electric means and which is designed to be used principally for non-professional purposes;
- (2) "built-in household dishwasher" means a household dishwasher intended to be installed in a cabinet, a prepared recess in a wall or a similar location, requiring furniture finishing;
- (3) "place settings" means a defined set of crockery, glass and cutlery for use by one person;
- (4) "rated capacity" means the maximum number of place settings together with the serving pieces, as stated by the supplier, which can be treated in a household dishwasher on the programme selected, when loaded in accordance with the supplier's instructions;
- (5) "programme" means a series of operations that are pre-defined and are declared as suitable by the supplier for specified levels of soil or type of load, or both, and together form a complete cycle;
- (6) "programme time" means the time that elapses from the initiation of the programme until the completion of the programme, excluding any end-user-programmed delay;
- (7) "cycle" means a complete cleaning, rinsing, and drying process, as defined for the selected programme;
- (8) "off-mode" means a condition where the household dishwasher is switched off using appliance controls or switches accessible to and intended for operation by the end-user during normal use to attain the lowest power consumption that may persist for an indefinite time while the household dishwasher is connected to a power source and used in accordance with the supplier's instructions; where there is no control or switch accessible to the end-user, "off-mode" means the condition reached after the household dishwasher reverts to a steady-state power consumption on its own;
- (9) "left-on mode" means the lowest power consumption mode that may persist for an indefinite time after completion of the programme and unloading of the household dishwasher without any further intervention by the end-user;

(10) “equivalent household dishwasher” means a model of household dishwasher placed on the market with the same rated capacity, technical and performance characteristics, energy and water consumption and airborne acoustical noise emissions as another model of household dishwasher placed on the market under a different commercial code number by the same supplier;

(11) “end-user” means a consumer buying or expected to buy a household dishwasher;

(12) “point of sale” means a location where household dishwashers are displayed or offered for sale, hire or hire-purchase.

### **Article 3**

#### **Responsibilities of suppliers**

Suppliers shall ensure that:

(a) each household dishwasher is supplied with a printed label in the format and containing information as set out in Annex I;

(b) a product fiche, as set out in Annex II, is made available;

(c) the technical documentation as set out in Annex III is made available on request to the authorities of the **Contracting Parties** and to the **Secretariat**;

(d) any advertisement for a specific model of household dishwasher contains the energy efficiency class, if the advertisement discloses energy-related or price information;

(e) any technical promotional material concerning a specific model of household dishwasher which describes its specific technical parameters includes the energy efficiency class of that model;

**(f) an electronic label in the format and containing the information set out in Annex I is made available to dealers for each household dishwasher model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household dishwasher models;**

**(g) an electronic product fiche as set out in Annex II is made available to dealers for each household dishwasher model placed on the market from 1 January 2020 with a new model identifier. It may also be made available to dealers for other household dishwasher models.<sup>1</sup>**

### **Article 4**

#### **Responsibilities of dealers**

Dealers shall ensure that:

(a) each household dishwasher, at the point of sale, bears the label provided by suppliers in accordance with Article 3(a) on the outside of the front or top of the household dishwasher, in such a way as to be clearly visible;

**(b) household dishwashers offered for sale, hire or hire-purchase where the end-user cannot**

<sup>1</sup> Article 3, points (f) and (g) are added in accordance with Article 1(1) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

**be expected to see the household dishwasher displayed, are marketed with the information provided by suppliers in accordance with Annex IV. Where the offer is made through the internet and an electronic label and an electronic product fiche have been made available in accordance with Article 3(f) and 3(g) the provisions of Annex VIII shall apply instead;<sup>2</sup>**

(c) any advertisement for a specific model of household dishwasher contains a reference to its energy efficiency class, if the advertisement discloses energy-related or price information;

(d) any technical promotional material concerning a specific model of household dishwasher which describes its specific technical parameters includes a reference to the energy efficiency class of that model.

### **Article 5**

#### **Measurement methods**

The information to be provided pursuant to Articles 3 and 4 shall be obtained by reliable, accurate and reproducible measurement methods, which take into account the recognised state-of-the-art measurement methods.

### **Article 6**

#### **Verification procedure for market surveillance purposes**

**Contracting Parties** shall apply the procedure laid down in Annex V when assessing the conformity of the declared energy efficiency class, the annual energy consumption, annual water consumption, drying efficiency index, programme time, power consumption in off-mode and left-on mode, duration of the left-on mode and airborne acoustical noise emissions.

### **Article 7**

#### **Repeal**

<...>

---

<sup>2</sup> Article 4, point (b) is replaced in accordance with Article 1(2) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

### **Article 9**

#### **Transitional provisions**

1. Articles 3(d), (e), 4(b), (c) and (d) shall not apply to printed advertisement and printed technical promotional material published before **30 April 2013**.
2. Household dishwashers placed on the market before **31 December 2012** shall comply with the provisions set out in Directive 97/17/EC.
3. <...>

### **Article 10**

#### **Entry into force and application**

**This Decision [2011/03/MC-EnC] enters into force upon its adoption <...><sup>3</sup>**

It shall apply from **31 December 2012**. However, Articles 3(d), (e), 4(b), (c) and (d) shall apply from 30 April 2013.

This Regulation shall be binding in its entirety and directly applicable in all Contracting Parties.

#### **Article 2(5) of Decision 2011/03/MC-EnC**

**The Secretariat shall monitor and review the implementation of [this] Delegated Regulation <...> and shall submit a progress report to the Permanent High Level Group by 1 October 2013.**

---

<sup>3</sup> The text displayed here corresponds to Article 3(1) of Decision 2011/03/MC-EnC.

# ANNEX I Label

## 1. LABEL

(1) The following information shall be included in the label:

I. supplier's name or trade mark;

II. supplier's model identifier, where 'model identifier' means the code, usually alphanumeric, which distinguishes a specific household dishwasher model from other models with the same trade mark or supplier's name;

III. the energy efficiency class determined in accordance with point 1 of Annex VI; the head of the arrow containing the energy efficiency class of the household dishwasher shall be placed at the same height as the head of the arrow of the relevant energy efficiency class;

IV. annual energy consumption ( $AE_c$ ) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 1(b) of Annex VII;

V. annual water consumption ( $AW_c$ ) in litres per year, rounded up to the nearest integer and calculated in accordance with point 3 of Annex VII;

VI. the drying efficiency class determined in accordance with point 2 of Annex VI;

VII. rated capacity in standard place settings, for the standard cleaning cycle;

VIII. airborne acoustical noise emissions expressed in dB(A) re 1 pW and rounded to the nearest integer.

(2) The design of the label shall be in accordance with point 2. By way of derogation, where a model has been granted an 'EU Ecolabel' under Regulation (EC) No 66/2010 of the European Parliament and of the Council, a copy of the EU Ecolabel may be added.

## 2. LABEL DESIGN

The design of the label shall be as in the figure below.

Whereby

(a) The label shall be at least 110 mm wide and 220 mm high. Where the label is printed in a larger format, its content must nevertheless remain proportionate to the specifications above.

(b) The background shall be white.

(c) Colours shall be CMYK - cyan, magenta, yellow and black, following this example: 00-70-X-00: 0% cyan, 70% magenta, 100% yellow, 0% black.

(d) The label shall fulfil all of the following requirements (numbers refer to the figure above):

- 1 **Border stroke:** 5 pt - colour: Cyan 100% - round corners: 3,5 mm.
- 2 **EU logo - colours:** X-80-00-00 and 00-00-X-00.
- 3 **Energy logo: colour:** X-00-00-00. Pictogram as depicted; EU logo and energy logo (combined): width: 92 mm, height: 17 mm.
- 4 **Sub-logos border:** 1 pt - colour: Cyan 100% - length: 92,5 mm.
- 5 **A-G scale**
  - **Arrow:** height: 7 mm, gap: 0,75 mm - colours:
    - Highest class: X-00-X-00,
    - Second class: 70-00-X-00,
    - Third class: 30-00-X-00,
    - Fourth class: 00-00-X-00,
    - Fifth class: 00-30-X-00,
    - Sixth class: 00-70-X-00,
    - Last class: 00-X-X-00.
  - **Text:** Calibri bold 18 pt, capitals and white; '+' symbols: Calibri bold 12 pt, capitals, white, aligned on a single row.
- 6 **Energy efficiency class**
  - **Arrow:** width: 26 mm, height: 14 mm, 100% black.
  - **Text:** Calibri bold 29 pt, capitals and white; '+' symbols: Calibri bold 18 pt, capitals, white, aligned on a single row.
- 7 **Energy**
  - **Text:** Calibri regular 11 pt, capitals, 100% black.
- 8 **Annual energy consumption**
  - **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.
  - **Value:** Calibri bold 37 pt, 100% black.
  - **Second line:** Calibri regular 17 pt, 100% black.
- 9 **Annual water consumption:**
  - **Pictogram** as depicted
  - **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 24 pt, 100% black; and Calibri regular 16 pt, 100% black.

**10 Drying efficiency class:**

- **Pictogram** as depicted

- **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri regular 16 pt, horizontal scale 75%, 100% black; and Calibri bold 22 pt, horizontal scale 75%, 100% black.

**11 Rated capacity:**

- **Pictogram** as depicted

- **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 24 pt, 100% black; and Calibri regular 16 pt, 100% black.

**12 Noise emissions:**

- **Pictogram** as depicted

- **Border:** 2 pt - colour: Cyan 100% - round corners: 3,5 mm.

- **Value:** Calibri bold 24 pt, 100% black; and Calibri regular 16 pt, 100% black.

**13 Supplier's name or trade mark**

**14 Supplier's model identifier**

**15** The supplier's name or trademark and model identifier should fit in a space of 92 × 15 mm.

**16 Numbering of the Regulation:** Calibri bold 9 pt, 100% black.

## ANNEX II

### Product fiche

1. The information in the product fiche of the household dishwasher shall be provided in the following order and shall be included in the product brochure or other literature provided with the product:

- (a) supplier's name or trade mark;
- (b) supplier's model identifier, meaning the code, usually alphanumeric, which distinguishes a specific household dishwasher model from other models with the same trade mark or supplier's name;
- (c) rated capacity, in standard place settings, for the standard cleaning cycle;
- (d) energy efficiency class, in accordance with point 1 of Annex VI;
- (e) where the household dishwasher has been awarded an 'EU Ecolabel' under Regulation (EC) No 66/2010, this information may be included;
- (f) annual energy consumption ( $AE_c$ ) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 1(b) of Annex VII. It shall be described as 'Energy consumption "X" kWh per year, based on 280 standard cleaning cycles using cold water fill and the consumption of the low power modes. Actual energy consumption will depend on how the appliance is used.';
- (g) the energy consumption ( $E_c$ ) of the standard cleaning cycle;
- (h) the power consumption in off-mode and left-on mode ( $P_o$  and  $P_l$ );
- (i) annual water consumption ( $AW_c$ ), in litres per year, rounded up to the nearest integer and calculated in accordance with point 3 of Annex VII; it shall be described as: 'Water consumption "X" litres per year, based on 280 standard cleaning cycles. Actual water consumption will depend on how the appliance is used.';
- (j) drying efficiency class determined in accordance with point 2 of Annex VI expressed as 'Drying efficiency class "X" on a scale from G (least efficient) to A (most efficient)'. Where this information is provided in a table, this may be expressed by other means provided it is clear that the scale is from G (least efficient) to A (most efficient);
- (k) indication that the 'standard programme' is the standard cleaning cycle to which the information in the label and the fiche relates, that this programme is suitable to clean normally soiled tableware, and that it is the most efficient programme in terms of combined energy and water consumption;
- (l) programme time for the standard cleaning cycle, in minutes and rounded to the nearest integer;
- (m) the duration of the left-on mode ( $T_l$ ) if the household dishwasher is equipped with a power management system;
- (n) airborne acoustical noise emissions expressed in dB(A) re 1 pW and rounded to the nearest integer;
- (o) if the household dishwasher is intended to be built-in, an indication to this effect.

2. One fiche may cover a number of household dishwasher models supplied by the same supplier.

3. The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in point 1 not already displayed on the label shall also be provided.

### **ANNEX III**

#### **Technical documentation**

1. The technical documentation referred to in Article 3(c) shall include:

- (a) the name and address of the supplier;
- (b) a general description of the dishwasher model, sufficient for it to be unequivocally and easily identified;
- (c) where appropriate, the references of the harmonised standards applied;
- (d) where appropriate, the other technical standards and specifications used;
- (e) identification and signature of the person empowered to bind the supplier;
- (f) technical parameters for measurements as follows:
  - (i) energy consumption;
  - (ii) water consumption;
  - (iii) programme time;
  - (iv) drying efficiency;
  - (v) power consumption in 'off-mode';
  - (vi) power consumption in 'left-on mode';
  - (vii) 'left-on mode' duration;
  - (viii) airborne acoustical noise emissions;
- (g) the results of calculations performed in accordance with Annex VII.

2. Where the information included in the technical documentation file for a particular household dishwasher model has been obtained by calculation on the basis of design, or extrapolation from other equivalent household dishwashers, or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent household dishwasher models where the information was obtained on the same basis.

## ANNEX IV

### Information to be provided in the cases where end-users cannot be expected to see the product displayed

1. The information referred to in Article 4(b) shall be provided in the following order:
  - (a) the energy efficiency class, as defined in point 1 of Annex VI;
  - (b) the rated capacity in standard place settings for the standard cleaning cycle;
  - (c) the annual energy consumption ( $AE_c$ ) in kWh per year, rounded up to the nearest integer and calculated in accordance with point 1(b) of Annex VII;
  - (d) the annual water consumption ( $AW_c$ ) in litres per year, rounded up to the nearest integer and calculated in accordance with point 3 of Annex VII;
  - (e) the drying efficiency class in accordance with point 2 of Annex VI;
  - (f) airborne acoustical noise emissions in dB(A) re 1 pW and rounded to the nearest integer;
  - (g) if the model is intended to be built-in, an indication to this effect.
2. Where other information contained in the product fiche is also provided, it shall be in the form and order specified in Annex II.
3. The size and font in which all the information referred in this Annex is printed or shown shall be legible.

## ANNEX V<sup>4</sup>

### Product compliance verification by market surveillance authorities

The verification tolerances set out in this Annex relate only to the verification of the measured parameters by Contracting Party authorities and shall not be used by the supplier as an allowed tolerance to establish the values in the technical documentation. The values and classes on the label or in the product fiche shall not be more favourable for the supplier than the values reported in the technical documentation.

When verifying the compliance of a product model with the requirements laid down in this Delegated Regulation, for the requirements referred to in this Annex, the authorities of the Contracting Parties shall apply the following procedure:

- (1) The Contracting Parties authorities shall verify one single unit of the model.
- (2) The model shall be considered to comply with the applicable requirements if:
  - (a) the values given in the technical documentation pursuant to Article 5(b) of Directive 2010/30/EU, as incorporated and adapted by the Ministerial Council Decision 2010/02/MC-EnC (declared values), and, where applicable, the values used to calculate these values, are not more favourable for the supplier than the corresponding values given in the test reports pursuant to point (iii) of the abovementioned Article; and
  - (b) the values published on the label and in the product fiche are not more favourable for the supplier than the declared values, and the indicated energy efficiency class is not more favourable for the supplier than the class determined by the declared values; and
  - (c) when the Contracting Party authorities test the unit of the model, the determined values (the values of the relevant parameters as measured in testing and the values calculated from these measurements) comply with the respective verification tolerances as given in Table 1.
- (3) If the results referred to in points 2(a) or (b) are not achieved, the model and all models that have been listed as equivalent household dishwasher models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (4) If the result referred to in point 2(c) is not achieved, the Contracting Party authorities shall select three additional units of the same model for testing. As an alternative, the three additional units selected may be of one or more different models that have been listed as equivalent models in the supplier's technical documentation.
- (5) The model shall be considered to comply with the applicable requirements if, for these three units, the arithmetical mean of the determined values complies with the respective tolerances given in Table 1.
- (6) If the result referred to in point 5 is not achieved, the model and all models that have been listed as equivalent household dishwasher models in the supplier's technical documentation shall be considered not to comply with this Delegated Regulation.
- (7) The Contracting Party authorities shall provide all relevant information to the authorities

<sup>4</sup> Annex V is replaced in accordance with Article 1 and Annex I of Delegated Regulation (EU) 2017/254, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

of the other Contracting Parties and to the Secretariat without delay after a decision being taken on the non-compliance of the model according to points 3 and 6.

Contracting Parties' authorities shall use measurement procedures which take into account the generally recognised, state-of-the-art, reliable, accurate and reproducible measurement methods, including methods set out in documents whose reference numbers have been published for that purpose in a dedicated section of the website of the Energy Community. The Contracting Party authorities shall use the measurement and calculation methods set out in Annex VII.

The Contracting Party authorities shall only apply the verification tolerances that are set out in Table 1 and shall only use the procedure described in points 1 to 7 for the requirements referred to in this Annex. No other tolerances, such as those set out in harmonised standards or in any other measurement method, shall be applied.

**Table 1**  
Verification tolerances

Parameters	Verification tolerances
Annual energy consumption ( $AE_c$ )	The determined value shall not exceed the declared value of $AE_c$ by more than 10 %.
Water consumption ( $W_t$ )	The determined value shall not exceed the declared value of $W_t$ by more than 10 %.
Drying efficiency index ( $I_o$ )	The determined value shall not be less than the declared value of $I_o$ by more than 19 %.
Energy consumption ( $E_c$ )	The determined value shall not exceed the declared value of $E_c$ by more than 10 %. Where three additional units need to be selected, the arithmetic mean of the determined values of these three units shall not exceed the declared value of $E_c$ by more than 6 %.
Programme time ( $T_t$ )	The determined value shall not exceed the declared values $T_t$ by more than 10 %.
Power consumption in off mode and left-on mode ( $P_o$ and $P_l$ )	The determined value of power consumption $P_o$ and $P_l$ of more than 1,00 W shall not exceed the declared values of $P_o$ and $P_l$ by more than 10 %. The determined value of power consumption $P_o$ and $P_l$ of less than or equal to 1,00 W shall not exceed the declared value of $P_o$ and $P_l$ by more than 0,10 W.
Duration of left-on mode ( $T_l$ )	The determined value shall not exceed the declared value of $T_l$ by more than 10 %.
Airborne acoustical noise emissions	The determined value shall meet the declared value.

## ANNEX VI

### Energy efficiency classes and drying efficiency classes

#### 1. ENERGY EFFICIENCY CLASSES

The energy efficiency class of a household dishwasher shall be determined on the basis of its Energy Efficiency Index (EEI) as set out in Table 1.

The Energy Efficiency Index (EEI) of a household dishwasher shall be calculated in accordance with point 1 of Annex VII.

Table 1  
Energy efficiency classes

Energy Efficiency Class	Energy Efficiency Index
<b>A+++ (most efficient)</b>	$EEI < 50$
<b>A++</b>	$50 \leq EEI < 56$
<b>A+</b>	$56 \leq EEI < 63$
<b>A</b>	$63 \leq EEI < 71$
<b>B</b>	$71 \leq EEI < 80$
<b>C</b>	$80 \leq EEI < 90$
<b>D (least efficient)</b>	$EEI \geq 90$

#### 2. DRYING EFFICIENCY CLASSES

The drying efficiency class of a household dishwasher shall be determined on the basis of its Drying Efficiency Index ( $I_D$ ) as set out in Table 2.

The Drying Efficiency Index ( $I_D$ ) shall be calculated in accordance with point 2 of Annex VII.

Table 2  
Drying efficiency classes

Drying Efficiency Class	Drying Efficiency Index
<b>A</b>	$I_D > 1.08$
<b>B</b>	$1.08 \geq I_D > 0.86$
<b>C</b>	$0.86 \geq I_D > 0.69$
<b>D</b>	$0.69 \geq I_D > 0.55$
<b>E</b>	$0.55 \geq I_D > 0.44$
<b>F</b>	$0.44 \geq I_D > 0.33$
<b>G (least efficient)</b>	$0.33 \geq I_D$

## ANNEX VII

### Method for calculating the energy efficiency index, the drying efficiency index and water consumption

#### 1. CALCULATION OF THE ENERGY EFFICIENCY INDEX

For the calculation of the Energy Efficiency Index (EEI) of a household dishwasher model, the annual energy consumption of the household dishwasher is compared to its standard annual energy consumption.

(a) The Energy Efficiency Index (EEI) is calculated as follows and rounded to one decimal place:

$$EEI = \frac{AE_C}{SAE_C} \times 100$$

where:

$AE_C$  = annual energy consumption of the household dishwasher;

$SAE_C$  = standard annual energy consumption of the household dishwasher.

(b) The annual energy consumption ( $AE_C$ ) is calculated in kWh/year as follows and rounded to two decimal places:

(i)

$$AE_C = E_t \times 280 + \frac{\left[ P_o \times \frac{525\,600 - (T_t \times 280)}{2} + P_l \times \frac{525\,600 - (T_t \times 280)}{2} \right]}{60 \times 1\,000}$$

where:

$E_t$  = energy consumption for the standard cycle, in kWh and rounded to three decimal places;

$P_l$  = power in 'left-on mode' for the standard cleaning cycle, in W and rounded to two decimal places;

$P_o$  = power in 'off-mode' for the standard cleaning cycle, in W and rounded to two decimal places;

$T_t$  = programme time for the standard cleaning cycle, in minutes and rounded to the nearest minute;

280 = total number of standard cleaning cycles per year;

(ii) Where the household dishwasher is equipped with a power management system, with the household dishwasher reverting automatically to 'off-mode' after the end of the programme,  $AE_C$  is calculated taking into consideration the effective duration of 'left-on mode', according to the following formula:

$$AE_C = E_t \times 280 + \frac{\{(P_l \times T_t \times 280) + P_o \times [525\,600 - (T_t \times 280) - (T_t \times 280)]\}}{60 \times 1\,000}$$

where:

$T_I$  = measured time in 'left-on mode' for the standard cleaning cycle, in minutes and rounded to the nearest minute;

280 = total number of standard cleaning cycles per year.

(c) The standard annual energy consumption ( $SAE_C$ ) is calculated in kWh/year as follows and rounded to two decimal places:

(i) for household dishwashers with rated capacity  $ps \geq 10$  and width  $> 50$  cm:

$$SAE_C = 7,0 \times ps + 378$$

(ii) for household dishwashers with rated capacity  $ps \leq 9$  and household dishwashers with rated capacity  $9 < ps \leq 11$  and width  $\leq 50$  cm:

$$SAE_C = 25,2 \times ps + 126$$

where:

$ps$  = number of place settings.

## 2. CALCULATION OF THE DRYING EFFICIENCY INDEX

For the calculation of the Drying Efficiency Index ( $I_D$ ) of a household dishwasher model, the drying efficiency of the household dishwasher is compared to the drying efficiency of a reference dishwasher, where the reference dishwasher shall have the characteristics indicated in the generally recognised state-of-the-art measurement methods, including methods set out in documents, the reference numbers of which have been published for that purpose in the Official Journal of the European Union.

(a) The Drying Efficiency Index ( $I_D$ ) is calculated as follows and rounded to two decimal places:

$$\ln I_D = \frac{1}{n} \times \sum_{i=1}^n \ln \left( \frac{D_{T,i}}{D_{R,i}} \right)$$

$$I_D = \exp(\ln I_D)$$

where:

$D_{T,i}$  = drying efficiency of the household dishwasher under test for one test cycle (i);

$D_{R,i}$  = drying efficiency of the reference dishwasher for one test cycle (i);

$n$  = number of test cycles,  $n \geq 5$ .

(b) The drying efficiency ( $D$ ) is the average of the wet score of each load item after completion of a standard cleaning cycle. The wet score is calculated as shown in Table 1:

Table 1

Number of water traces ( $W_T$ ) or wet streak ( $W_S$ )	Total wet area ( $A_w$ ) in $\text{mm}^2$	Wet score
$W_T = 0$ and $W_S = 0$	Not applicable	2 (most efficient)
$1 < W_T \leq 2$ or $W_S = 1$	$A_w < 50$	1
$2 < W_T$ or $W_S = 2$ or $W_S = 1$ and $W_T = 1$	$A_w > 50$	0 (least efficient)

### 3. CALCULATION OF THE ANNUAL WATER CONSUMPTION

The annual water consumption ( $AW_C$ ) of a household dishwasher is calculated, in litres and rounded up to the nearest integer, as:

$$AW_C = W_t \times 280$$

where:

$W_t$  = water consumption for the standard cleaning cycle, in litres and rounded to one decimal place.

## ANNEX VIII<sup>5</sup>

### Information to be provided in the case of sale, hire or hire-purchase through the internet

(1) For the purpose of points 2 to 5 of this Annex the following definitions shall apply:

(a) “display mechanism” means any screen, including tactile screen, or other visual technology used for displaying internet content to users;

(b) “nested display” means visual interface where an image or data set is accessed by a mouse click, mouse roll-over or tactile screen expansion of another image or data set;

(c) “tactile screenf” means a screen responding to touch, such as that of a tablet computer, slate computer or a smartphone;

(d) “alternative text” means text provided as an alternative to a graphic allowing information to be presented in non-graphical form where display devices cannot render the graphic or as an aid to accessibility such as input to voice synthesis applications.

(2) The appropriate label made available by suppliers in accordance with Article 3(f) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2 of Annex I. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If nested display is applied, the label shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the image.

(3) The image used for accessing the label in the case of nested display shall:

(a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label;

(b) indicate on the arrow the energy efficiency class of the product in white in a font size equivalent to that of the price; and

(c) have one of the following two formats:

(4) In the case of nested display, the sequence of display of the label shall be as follows:

(a) the image referred to in point 3 of this Annex shall be shown on the display mechanism in proximity to the price of the product;

(b) the image shall link to the label;

(c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;

(d) the label shall be displayed by pop up, new tab, new page or inset screen display;

(e) for magnification of the label on tactile screens, the device conventions for tactile mag-

<sup>5</sup> Annex VIII is added in accordance with Article 1(3) of Delegated Regulation (EU) 518/2014, as incorporated and adapted by Ministerial Council Decision 2018/03/MC-EnC

nification shall apply;

(f) the label shall cease to be displayed by means of a close option or other standard closing mechanism;

(g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.

(5) The appropriate product fiche made available by suppliers in accordance with Article 3(g) shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product fiche is clearly visible and legible. The product fiche may be displayed using a nested display, in which case the link used for accessing the fiche shall clearly and legibly indicate "Product fiche". If nested display is used, the product fiche shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

## Directive 96/60/EC of 19 September 1996 implementing Directive 92/75/EEC with regard to energy labelling of household combined washer-driers

Incorporated and adapted by Ministerial Council Decision 2010/02/MC-EnC of 24 September 2010 amending Decision 2009/05/MC-EnC of 18 December 2009 on the implementation of certain Directives on Energy Efficiency.

*The adaptations made by Ministerial Council Decision 2010/02/MC-EnC are highlighted in **bold and blue**.*

Whereas electricity use by combined washer-driers accounts for a significant part of total Community energy demand; whereas the scope for reduced energy use by these appliances is substantial;

Whereas a better washing performance often requires a higher consumption of water and energy; whereas information on the washing performance of an appliance is helpful in evaluating the information on its energy and water consumption; whereas this will help consumers make a choice of appliance which is consistent with the rational use of energy;

Whereas the Community, confirming its interest in an international standardization system capable of producing standards that are actually used by all partners in international trade and of meeting the requirements of Community policy, invites the European standards organizations to continue their cooperation with international standards organizations;

Whereas the European Committee for Standardization (CEN) and the European Committee for Electrotechnical Standardization (Cenelec) are the bodies recognized as competent to adopt harmonized standards in accordance with the general guidelines for cooperation between the Commission and these two bodies signed on 13 November 1984; whereas, within the meaning of this Directive, a harmonized standard is a technical specification (European standard or harmonization document) adopted by Cenelec, on the basis of a remit (mandate) from the Commission in accordance with the provisions of Council Directive 83/189/EEC of 28 March 1983 laying down a procedure for the provision of information in the field of technical standards and regulations, as last amended by Commission Decision 96/139/EEC, and on the basis of those general guidelines;

Whereas the measures provided for in this Directive are in accordance with the opinion of the committee set up under Article 10 of Directive 92/75/EEC.

### Article 1

1. This Directive shall apply to electric mains operated household combined washer-driers. Appliances that can also use other energy sources are excluded.
2. The information required by this Directive shall be measured in accordance with harmonized standards, the reference numbers of which have been published in the Official Journal of the European Communities and for which **Contracting Parties** have published the reference numbers of the national standards transposing those harmonized standards. Throughout this Directive any provisions requiring the giving of information relating to noise shall apply only where that information is required pursuant to Article 3 of Council Directive 86/594/EEC. This information, where required, shall be measured in accordance with that Directive.

3. The harmonized standards referred to in paragraph 2 shall be drawn up under mandate from the Commission in accordance with Directive 83/189/EEC.

4. In this Directive, except where the context otherwise requires, expressions used have the same meaning as in Directive 92/75/EEC.

### **Article 2**

1. The technical documentation referred to in Article 2 (3) of Directive 92/75/EEC shall include:

- the name and address of the supplier,
- a general description of the model, sufficient for it to be uniquely identified,
- information, including drawings as relevant, on the main design features of the model and in particular items which appreciably affect its energy consumption,
- reports of relevant measurement tests carried out on the model under the test procedures of the harmonized standards referred to in Article 1 (2) of this Directive,
- operating instructions, if any.

2. The label referred to in Article 2 (1) of Directive 92/75/EEC shall be as specified in Annex I to this Directive. The label shall be placed on the outside of the front or top of the appliance, in such a way as to be clearly visible and not obscured.

3. The content and format of the fiche referred to in Article 2 (1) of Directive 92/75/EEC shall be as specified in Annex II to this Directive.

4. In the circumstances covered by Article 5 of Directive 92/75/EEC, and where the offer for sale, hire or hire purchase is provided by means of a printed communication, such as a mail order catalogue, then that printed communication shall include all the information specified in Annex III to this Directive.

5. The energy efficiency class of an appliance, and its washing performance class, shall be as determined in accordance with Annex IV.

### **Article 3**

**Contracting Parties** shall take all necessary measures to ensure that all suppliers and dealers established in their territory fulfil their obligations under this Directive.

### **Article 4**

**1. The Contracting Parties shall implement this Directive by 31 December 2011.**

However, **Contracting Parties** shall, until **30 June 2012**, permit:

- the placing on the market, the commercialization and/or the display of products and
- the distribution of printed communications referred to in Article 2 (4) which do not conform with this Directive.

When **Contracting Parties** adopt these provisions, these shall contain a reference to this Directive or shall be accompanied by such reference at the time of their official publication. The procedure for such reference shall be adopted by **Contracting Parties**.

2. **Contracting Parties** shall communicate to the **Secretariat** the text of the provisions of national law which they adopt in the field covered by this Directive.

### **Article 5 and 6<sup>1</sup>**

**This Decision [2010/02/MC-EnC] enters into force upon its adoption and is addressed to the Contracting Parties.**

### **Article 2(5) of Decision 2010/02/MC-EnC**

**The Secretariat shall monitor and review the implementation of [this] Directive <...> and shall submit a progress report to the Permanent High Level Group by 30 June 2012.**

*This Directive will be repealed and new provisions laid down by Delegated Regulation, upon proposal by European Commission and adoption by Ministerial Council of the Energy Community*

---

<sup>1</sup> The text displayed here corresponds to Article 3 of Decision 2010/02/MC-EnC.

## ANNEX I The label

### Label design

1. The label shall be the appropriate language version, chosen from the following illustration

<b>Energy</b>		<b>Washer-drier</b>	
Manufacturer		<b>g o g o</b>	I
Model		<b>ABC 123</b>	II
<b>More efficient</b>			
<b>A</b>			
<b>B</b>		<b>B</b>	III
<b>C</b>			
<b>D</b>			
<b>E</b>			
<b>F</b>			IV
<b>G</b>			
<b>Less efficient</b>			
Energy consumption kWh <small>(to wash and dry a full capacity wash load at 60 °C)</small>		<b>X.YZ</b>	V
Washing (only) kWh <small>Actual energy consumption will depend on how the appliance is used</small>		<b>X.YZ</b>	VI
Washing performance <small>A: higher G: lower</small>		<b>A B C D E F G</b>	VII
Spin speed (rpm)		1 100	VIII
Capacity (cotton) kg	Washing	<b>y.z</b>	IX
	Drying	<b>y.z</b>	X
Water consumption (total) l		<b>yx</b>	XI
<b>Noise</b> (dB(A) re 1 pW)	Washing	<b>xyz</b>	XII

	Drying	<b>xyz</b>	
Further information is contained in product brochures			
<small>Norm EN 50229 Washer-drier Label Directive No 96/60/EC</small>			

Notes concerning the label

2. The following notes define the information to be included:

**Note:**

I. Supplier's name or trade mark.

II. Supplier's model identifier.

III. The energy efficiency class of the model, determined in accordance with Annex IV. This indicator letter shall be placed at the same level as the relevant arrow.

IV. Without prejudice to any requirements under the Community Eco-label scheme, where a model has been granted a 'Community Eco-label' pursuant to Council Regulation (EEC) No 880/9<sup>1</sup>, a copy of the Eco-label may be added here. The 'washer-drier label design guide' referred to below, explains how the Eco-label may be included in the label.

V. Energy consumption in kWh per complete operating (washing, spinning and drying) cycle using standard 60° C cotton cycle, and 'dry cotton' drying cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).

VI. Energy consumption in kWh per washing (washing and spinning only) cycle using standard 60° C cotton cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).

VII. Washing performance class determined in accordance with Annex IV.

VIII. Maximum spin speed attained for standard 60° C cotton cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).

IX. Capacity (in kg) of appliance for standard 60° C cotton cycle (without drying), determined in accordance with the harmonized standards referred to in Article 1 (2).

X. Capacity (in kg) of appliance for 'dry cotton' (drying) cycle, determined in accordance with the harmonized standards referred to in Article 1 (2).

XI. Water consumption, in litres, per complete operating (washing, spinning and drying) cycle using standard 60° C cotton washing cycle and 'dry cotton' drying cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).

XII. Where applicable, noise during washing, spinning and drying cycles using standard 60° C cotton washing cycle and 'dry cotton' drying cycle, determined in accordance with Council Directive 86/594/EEC<sup>2</sup>.

Note:

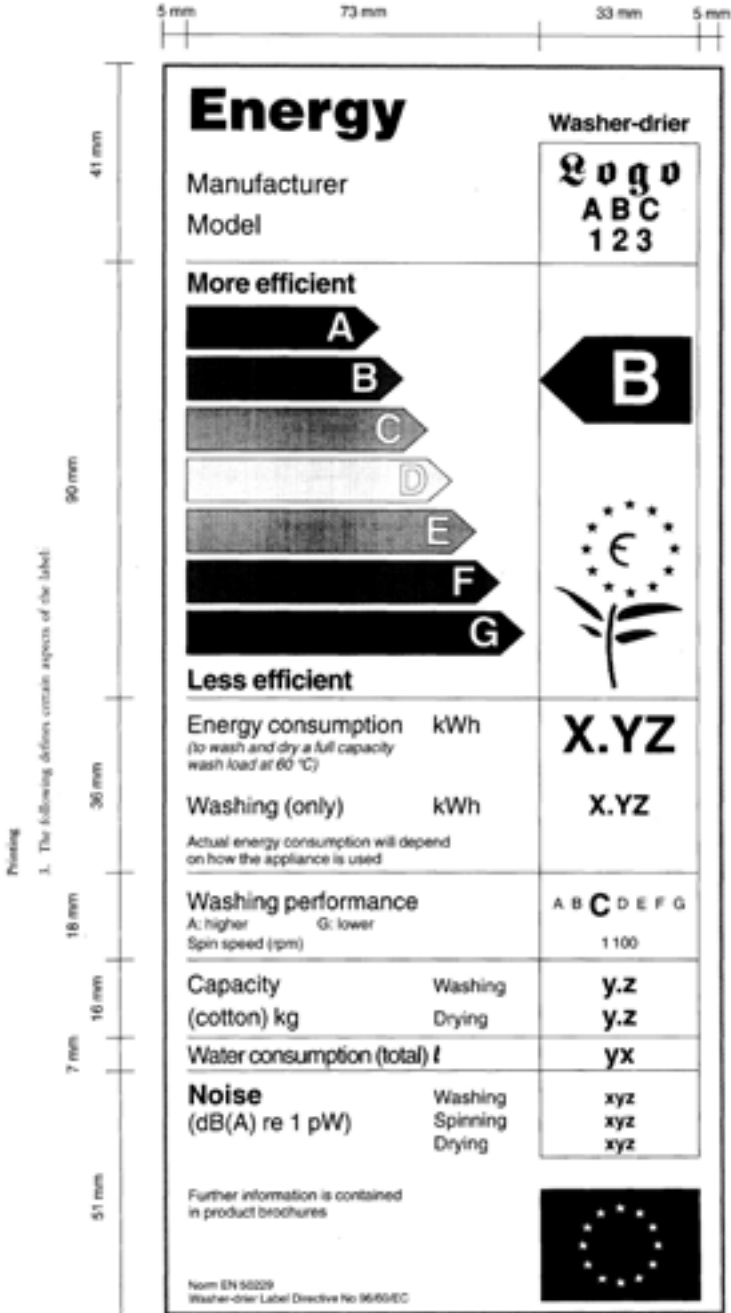

The equivalent terms in other languages to those given above are set out in Annex V.

<sup>1</sup> OJ No L99, 11.4.1992, p. 1.

<sup>2</sup> OJ No L 344, 6.12.1986, p. 24. The relevant noise measurement standards are EN 60704-2-4 for washing and spinning, and EN 60704-2-6 for drying and EN 60704-3.

**Printing**

3. The following defines certain aspects of the label:

Colours used:

CMYK cyan, magenta, yellow, black.

Ex. 07XO: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.

Arrows

- A: XOXO

- B: 7OXO

- C: 3OXO

- D: OOXO

- E: 03XO

- F: 07XO

- G: OXXO

Outline colour X070

All text is in black. The background is white.

Complete printing information is contained in a 'Washer-drier energy label design guide', which is for information only, obtainable from:

The Secretary of the Committee on energy labelling and standard product information for household appliances,

Directorate-General Energy XVII,

European Commission,

Rue de la Loi/Wetstraat 200,

B-1049 Brussels.

## **ANNEX II**

### **The fiche**

The fiche shall contain the following information. The information may be given in the form of a table covering a number of models supplied by the same supplier. The information shall be given in the order specified below unless it is contained in a more general description of the appliance:

1. Supplier's trade mark.
2. Supplier's model identifier.
3. The energy efficiency class of the model determined in accordance with Annex IV. Expressed as 'Energy efficiency class ... on a scale of A (more efficient) to G (less efficient)'. Where this information is provided in a table this may be expressed by other means provides it is clear that the scale is from A (more efficient) to G (less efficient).
4. Where the information is provided in a table, and where some of the appliances listed in the table

have been granted a 'Community Eco-label' pursuant to Regulation (EEC) No 880/92, this information may be included here. In this case the row heading shall state 'Community Eco-label', and the entry shall consist of a copy of the Eco-label mark. This provision is without prejudice to any requirements under the EU Eco-label scheme.

5. Energy consumption for washing, spinning, and drying in kWh per complete operating cycle as defined in Annex I note V.

6. Energy consumption for washing and spinning only, in kWh per washing cycle as defined in Annex I note VI.

7. Washing performance class determined in accordance with Annex IV. Expressed as 'Washing performance class ... on a scale of A (higher) to G (lower)'. This may be expressed by other means provided it is clear that the scale is from A (higher) to G (lower).

8. Water extraction efficiency for a standard 60° C cotton washing cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2). Expressed as 'Water remaining after spin ... % (as a proportion of dry weight of wash)'.

9. Maximum spin speed attained as defined in Annex I note VIII.

10. Washing capacity of appliance for a standard 60° C cotton washing cycle, as defined in Annex I note IX.

11. Drying capacity of appliance for a standard 'dry cotton' drying cycle, as defined in Annex I note X.

12. Water consumption for washing, spinning and drying, in litres per complete operating cycle as defined in Annex I note XI.

13. Water consumption for washing and spinning only, in litres, per standard 60°C cotton washing (and spinning) cycle determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).

14. Washing and drying time. Programme time for complete operating cycle (60° C cotton washing and 'dry cotton' drying), for rated washing capacity, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2).

15. Suppliers may include information under points 5 to 14 above in respect of other wash and/or drying cycles.

16. The consumption of energy and water equal to 200 times the consumption expressed in points 5 (energy) and 12 (water). This shall be expressed as 'estimated annual consumption for a four-person household, always using the drier (200 cycles)'.

17. The consumption of energy and water equal to 200 times the consumption expressed in points 6 (energy) and 13 (water). This shall be expressed as 'estimated annual consuming for four-person household, never using the drier (200 cycles)'.

18. Where applicable, noise during washing, spinning and drying cycles using standard 60° C cotton washing cycle and 'dry cotton' drying cycle, in accordance with Directive 86/594/EEC.

The information on the label may be given in the form of a representation of the label in colour or in black and white.

Note:

The equivalent terms in other languages to those given above are set out in Annex V.

### **ANNEX III**

#### **Mail order and other distance selling**

Mail order catalogues and other printed communications referred to in Article 2 (4) shall contain the following information, given in the order specified:

1. Energy efficiency class (Annex 11 point 3)
2. Energy consumption (washing, spinning and drying) (Annex 11 point 5)
3. Energy consumption (washing and spinning only) (Annex 11 point 6)
4. Washing performance class (Annex 11 point 7)
5. Water extraction efficiency (Annex 11 point 8)
6. Maximum spin speed (Annex 11 point 9)
7. Capacity (washing) (Annex 11 point 10)
8. Capacity (drying) (Annex 11 point 11)
9. Water consumption (washing, spinning and drying) (Annex 11 point 12)
10. Water consumption (washing and spinning only) (Annex 11 point 13)
11. Estimated annual consumption for a four-person household, always using the drier (200 cycles) (Annex 11 point 16)
12. Estimated annual consumption for a four-person household, never using the drier (200 cycles) (Annex 11 point 17)
13. Noise, where applicable (Annex 11 point 18)

Where other information contained in the fiche is provided, it shall be in the form specified in Annex 11 and shall be included in the above table in the order required for the fiche.

Note:

The equivalent terms in other languages to those given above are set out in Annex V.

## ANNEX IV

### Energy efficiency class

The energy efficiency class of an appliance shall be determined in accordance with Table 1:

**Table 1**

Energy Efficiency class	Energy consumption 'C' in kWh per kg complete operating (washing, spinning and drying) cycle using standard 60°C cotton cycle, and 'dry cotton' drying cycle, determined in accordance with the test procedures of the harmonized standards referred to in Article 1 (2)
A	$C \leq 0.68$
B	$0.68 < C \leq 0.81$
C	$0.81 < C \leq 0.93$
D	$0.93 < C \leq 1.05$
E	$1.05 < C \leq 1.17$
F	$1.17 < C \leq 1.29$
G	$1.29 < C$

The washing performance class of an appliance shall be determined in accordance with Table 2:

**Table 2**

Washing performance class	Washing standard index 'P' as defined in the harmonized standards referred in Article 1 (2), using a standard 60°C cotton cycle
A	$P > 1.03$
B	$1.03 \geq P > 1.00$
C	$1.00 \geq P > 0.97$
D	$0.97 \geq P > 0.94$
E	$0.94 \geq P > 0.91$
F	$0.91 \geq P > 0.88$
G	$0.88 \geq P$

---

## **PART II**

ACQUIS COMMUNAUTAIRE

STATISTICS

## REGULATION (EC) 1099/2008 of 22 October 2008 on energy statistics

Incorporated and adapted by Ministerial Council Decision 2012/02/MC-EnC of 18 October 2012 concerning the implementation of the rules of energy statistics in the Energy Community and amended by Decision 2013/02/MC-EnC of 24 October 2013 on implementation of Regulation (EU) 147/2013 on statistics and the Decision 2015/02/MC-EnC of 16 October 2015 on implementation of Regulation (EU) 431/2014 and amending Regulation (EC) 1099/2008 on Energy Statistics.

*The adaptations made by Ministerial Council Decision 2012/02/MC-EnC are highlighted in **blue and bold**.*

Whereas:

(1) The Community needs to have precise and timely data on energy quantities, their forms, sources, generation, supply, transformation and consumption, for the purpose of monitoring the impact and consequences of its policy work on energy.

(2) Energy statistics have traditionally been focused on energy supply and on fossil energies. In the coming years, greater focus is needed on increased knowledge and monitoring of final energy consumption, renewable energy and nuclear energy.

(3) The availability of accurate, up-to-date information on energy is essential for assessing the impact of energy consumption on the environment, in particular in relation to the emission of greenhouse gasses. This information is required by Decision No 280/2004/EC of the European Parliament and of the Council of 11 February 2004 concerning a mechanism for monitoring Community greenhouse gas emissions and for implementing the Kyoto Protocol.

(4) Directive 2001/77/EC of the European Parliament and of the Council of 27 September 2001 on the promotion of electricity produced from renewable energy sources in the internal electricity market and Directive 2004/8/EC of the European Parliament and of the Council of 11 February 2004 on the promotion of cogeneration based on a useful heat demand in the internal energy market require Member States to report quantitative energy data. In order to monitor progress towards the achievement of the objectives set in those Directives, detailed, up-to-date energy data are required.

(5) Directive 2002/91/EC of the European Parliament and of the Council of 16 December 2002 on the energy performance of buildings, Directive 2006/32/EC of the European Parliament and of the Council of 5 April 2006 on energy end-use efficiency and energy services and Directive 2005/32/EC of the European Parliament and of the Council of 6 July 2005 establishing a framework for the setting of ecodesign requirements for energy-using products require Member States to report quantitative energy consumption data. To monitor progress towards the achievement of the objectives set in those Directives, detailed, up-to-date energy data, as well as a better interface between these energy data and related statistical surveys such as the population and housing censuses and transportation data, are required.

(6) The Green Papers of the Commission of 22 June 2005 on Energy Efficiency and of 8 March 2006 on a European Strategy for Sustainable, Competitive and Secure Energy discuss EU energy policies for which the availability of EU energy statistics are required, including for the purpose of establishing a European Energy Market Observatory.

(7) The establishment of a public domain energy forecast model, as called for by the European Par-

liament in its Resolution of 14 December 2006 on a European Strategy for Sustainable, Competitive and Secure Energy requires detailed, up-to-date energy data.

(8) In the coming years, greater attention should be paid to the security of supply of the most important fuels and more timely and more accurate data at EU level is needed to anticipate and coordinate EU solutions to possible supply crises.

(9) The liberalisation of the energy market and its growing complexity make it increasingly difficult to obtain reliable, timely energy data in the absence, in particular, of a legal basis concerning the provision of such data.

(10) In order for the energy statistics system to assist political decision-making by the European Union and its Member States and promote public debate which includes citizens, it must afford guarantees of comparability, transparency, flexibility and ability to evolve. Thus, in the near future, statistics on nuclear energy should be incorporated and relevant data concerning renewable energy should be developed more. Similarly, with regard to energy efficiency, the availability of detailed statistics on habitat and transport would be extremely useful.

(11) The production of Community statistics is governed by the rules set out in Council Regulation (EC) No 322/97 of 17 February 1997 on Community Statistics.

(12) Since the objective of this Regulation, namely establishing a common framework for the production, transmission, evaluation and dissemination of comparable energy statistics in the Community cannot be sufficiently achieved by the Member States and can therefore be better achieved at Community level, the Community may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Regulation does not go beyond what is necessary to achieve that objective.

(13) In the production and dissemination of Community statistics under this Regulation, the national and Community statistical authorities should take account of the principles set out in the European Statistics Code of Practice, which was adopted on 24 February 2005 by the Statistical Programme Committee, established by Council Decision 89/382/EEC, Euratom and attached to the Recommendation of the Commission on the independence, integrity and accountability of the national and Community statistical authorities.

(14) The measures necessary for the implementation of this Regulation should be adopted in accordance with Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission.

(15) In particular, power should be conferred on the Commission to modify the list of data sources, the national statistics and the applicable clarifications or definitions as well as the transmission arrangements and to establish and modify the annual nuclear statistics, once incorporated, to modify the renewable energy statistics, once incorporated, and to establish and modify the final energy consumption statistics. Since those measures are of general scope and are designed to amend non-essential elements of this Regulation, *inter alia*, by supplementing it with new non-essential elements, they must be adopted in accordance with the regulatory procedure with scrutiny provided for in Article 5(a) of Decision 1999/468/EC.

(16) It is necessary to provide that the Commission may grant exemptions or derogations to Member States from those aspects of the energy data collection that would lead to an excessive burden on respondents. The exemptions or derogations should be granted only upon receipt of a proper justification which indicates the present situation and the excessive burden transparently. The period for

which they remain in force should be limited to the shortest time necessary.

(17) The measures provided for in this Regulation are in accordance with the opinion of the Statistical Programme Committee.

### **Article 1**

#### **Subject matter and scope**

1. This Regulation establishes a common framework for the production, transmission, evaluation and dissemination of comparable energy statistics in the Community.
2. This Regulation shall apply to statistical data concerning energy products and their aggregates in the Community.

### **Article 2**

#### **Definitions**

For the purpose of this Regulation, the following definitions shall apply:

- (a) "Community statistics" mean Community statistics as defined in the first indent of Article 2 of Regulation (EC) No 322/97;
- (b) "production of statistics" means production of statistics as defined in the second indent of Article 2 of Regulation (EC) No 322/97;
- (c) "Commission (Eurostat)" means the Community authority as defined in the fourth indent of Article 2 of Regulation (EC) No 322/97;
- (d) "energy products" mean combustible fuels, heat, renewable energy, electricity, or any other form of energy;
- (e) "aggregates" mean data aggregated at national level on the treatment or use of energy products, namely production, trade, stocks, transformation, consumption, and structural characteristics of the energy system such as installed capacities for electricity generation or production capacities for oil products;
- (f) "quality of data" means the following aspects of statistical quality: relevance, accuracy, timeliness and punctuality, accessibility and clarity, comparability, coherence and completeness.

### **Article 3**

#### **Data sources**

1. While applying the principles of maintaining a reduced burden on respondents and of administrative simplification, Member States<sup>1</sup> shall compile data concerning energy products and their aggregates in the Community from the following sources:

- (a) specific statistical surveys addressed to the primary and transformed energy producers and trad-

<sup>1</sup> Decision 2012/02/MC-EnC incorporating this Regulation is addressed to Contracting Parties.

ers, distributors and transporters, importers and exporters of energy products;

(b) other statistical surveys addressed to final energy users in the sectors of manufacturing industry, transport, and other sectors, including households;

(c) other statistical estimation procedures or other sources, including administrative sources, such as regulators of the electricity and gas markets.

2. Member States shall lay down the detailed rules concerning the reporting of the data needed for the national statistics as specified in Article 4 by undertakings and other sources.

3. The list of data sources may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

#### **Article 4**

##### **Aggregates, energy products and the transmission frequency of national statistics**

1. The national statistics to be reported shall be as set out in the Annexes. They shall be transmitted with the following frequencies:

(a) annual, for the energy statistics in Annex B;

(b) monthly, for the energy statistics in Annex C;

(c) short-term monthly, for the energy statistics in Annex D.

2. Applicable clarifications or definitions of the technical terms used are provided in the individual Annexes and also in Annex A (Clarifications of terminology).

3. The data to be forwarded and the applicable clarifications or definitions may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

#### **Article 5**

##### **Transmission and dissemination**

1. Member States shall transmit to the Commission (Eurostat) the national statistics referred to in Article 4.

2. The arrangements for their transmission, including the applicable time limits, derogations and exemptions therefrom, shall be as set out in the Annexes.

3. The arrangements for the transmission of the national statistics may be modified in accordance with the regulatory procedure with scrutiny referred in Article 11(2).

4. At the duly justified request of a Member States, additional exemptions or derogations may be granted by the Commission in accordance with the regulatory procedure referred to in Article 11(3), for those parts of the national statistics for which the collection would lead to an excessive burden on respondents.

5. The Commission (Eurostat) shall disseminate yearly energy statistics by 31 January of the second year following the reported period.

## **Article 6**

### **Quality assessment and reports**

1. Member States shall ensure the quality of the data transmitted.
2. Every reasonable effort shall be undertaken to ensure coherence between energy data declared in accordance with Annex B and data declared in accordance with Commission Decision 2005/166/EC of 10 February 2005 laying down the rules for implementing Decision No 280/2004/EC of the European Parliament and of the Council concerning a mechanism for monitoring Community greenhouse gas emissions and for implementing the Kyoto Protocol.
3. For the purposes of this Regulation, the following quality assessment dimensions shall apply to the data to be transmitted:
  - (a) "relevance" shall refer to the degree to which statistics meet current and potential needs of the users;
  - (b) "accuracy" shall refer to the closeness of estimates to the unknown true values;
  - (c) "timeliness" shall refer to the delay between the availability of the information and the event or phenomenon it describes;
  - (d) "punctuality" shall refer to the delay between the date of the release of the data and the target date when it should have been delivered;
  - (e) "accessibility" and "clarity" shall refer to the conditions and modalities by which users can obtain, use and interpret data;
  - (f) "comparability" shall refer to the measurement of the impact of differences in applied statistical concepts and measurement tools and procedures where statistics are compared between geographical areas, sectoral domains or over time;
  - (g) "coherence" shall refer to the adequacy of the data to be reliably combined in different ways and for various uses.
4. Every five years, Member States shall provide the Commission (Eurostat) with a report on the quality of the data transmitted as well as on any methodological changes that have been made.
5. Within six months of receipt of a request from the Commission (Eurostat), and in order to allow it to assess the quality of the data transmitted, Member States shall send to the Commission (Eurostat) a report containing any relevant information concerning the implementation of this Regulation.

## **Article 7**

### **Time reference and frequency**

Member States shall compile all data specified in this Regulation from the beginning of the calendar year following the adoption of this Regulation, and shall transmit them from then onwards with the frequencies laid down in Article 4(1).

## **Article 8**

### **Annual nuclear statistics**

The Commission (Eurostat) shall, in cooperation with the nuclear energy sector in the EU, define a set of annual nuclear statistics which shall be reported and disseminated from 2009 onwards, that year being the first reported period, without prejudice to confidentiality, where it is necessary, and avoiding any duplication of data collection, while at the same time keeping production costs low and the reporting burden reasonable.

The set of annual nuclear statistics shall be established and may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

## **Article 9**

### **Renewable energy statistics and final energy consumption statistics**

1. With a view to improving the quality of renewable energy and final energy consumption statistics, the Commission (Eurostat), in collaboration with the Member States, shall make sure that these statistics are comparable, transparent, detailed and flexible by:

(a) reviewing the methodology used to generate renewable energy statistics in order to make available additional, pertinent, detailed statistics on each renewable energy source, annually and in a cost-effective manner. The Commission (Eurostat) shall present and disseminate the statistics generated from 2010 (reference year) onwards;

(b) reviewing and determining the methodology used at national and Community level to generate final energy consumption statistics (sources, variables, quality, costs) based on the current situation, existing studies and feasibility pilot studies, as well as cost-benefit analyses yet to be conducted, and evaluating the findings of the pilot studies and cost-benefit analyses with a view to establishing breakdown keys for final energies by sector and main energy uses and gradually integrating the resulting elements into the statistics from 2012 (reference year) onwards.

2. The set of renewable energy statistics may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

3. The set of final energy consumption statistics shall be established and may be modified in accordance with the regulatory procedure with scrutiny referred to in Article 11(2).

## **Article 10**

### **Implementing measures**

1. The following measures necessary for implementation of this Regulation, designed to amend non-essential elements of this Regulation, *inter alia*, by supplementing it, shall be adopted in accordance with the regulatory procedure with scrutiny referred to in Article 11(2):

(a) modifications to the list of data sources (Article 3(3));

(b) modifications to the national statistics and to the applicable clarifications or definitions (Article 4(3));

- (c) modifications to the transmission arrangements (Article 5(3));
  - (d) establishment of and modifications to the annual nuclear statistics (Article 8(2));
  - (e) modifications to the renewable energy statistics (Article 9(2));
  - (f) establishment of and modifications to the final energy consumption statistics (Article 9(3)).
2. Additional exemptions or derogations (Article 5(4)) shall be granted in accordance with the regulatory procedure referred to in Article 11(3).
3. Consideration is to be given to the principle that additional costs and the reporting burden remain within reasonable limits.

**Article 11**  
**Committee**

<...>

**Article 12**  
**Entry into force and Addressees<sup>2</sup>**

**This Decision [2012/02/MC-EnC] enters into force upon its adoption and is addressed to the Contracting Parties.**

**Article 1 of Decision 2012/02/MC-EnC**

**Each Contracting Party shall implement Regulation (EC) 1099/2008 of 22 October 2008 on energy statistics <...> not later than 31 December 2013.**

**Article 1 of Decision 2013/02/MC-EnC**

**Each Contracting Part shall implement Commission Regulation (EU) No 147/2013 of 13 February 2013 amending Regulation (EC) No 1099/2008 of the European Parliament and of the Council on energy statistics, as regards the implementation of updates for the monthly and annual energy statistics not later than 31 December 2013.**

**Article 1 of Decision 2015/02/MC-EnC**

**Each Contracting Party shall implement Commission Regulation (EU) No 431/2014 of 24 April 2014 amending Regulation (EC) No 1099/2008 of the European Parliament and of the Council on energy statistics, as regards the implementation of annual statistics on energy consumption in households, not later than 31 December 2016.**

---

<sup>2</sup> The text displayed here corresponds to Article 4 of Decision 2012/02/MC-EnC.

## ANNEX A

### CLARIFICATIONS OF TERMINOLOGY

This Annex supplies explanations or definitions of terms that are used in the other Annexes.

#### 1. GEOGRAPHICAL NOTES

For statistical reporting purposes only, the following geographical definitions apply:

- Australia excludes the overseas territories,
- Denmark excludes the Faeroe Islands and Greenland,
- France includes Monaco and excludes the French overseas territories Guadeloupe, Martinique, Guyane, Reunion, St.-Pierre and Miquelon, New Caledonia, French Polynesia, Wallis and Futuna, Mayotte,
- Italy includes San Marino and the Vatican,
- Japan includes Okinawa,
- The Netherlands excludes Suriname and the Netherlands Antilles,
- Portugal includes the Açores and Madeira,
- Spain includes the Canary Islands, the Balearic Islands, and Ceuta and Melilla,
- Switzerland does not include Liechtenstein,
- United States includes the 50 States, the District of Columbia, the US Virgin Islands, Puerto Rico and Guam.

#### 2. AGGREGATES

Producers are classified according to the purpose of production:

- Main activity producer: enterprises, both privately or publicly owned, which generate electricity and/or heat for sale to third parties, as their principal activity,
- Autoproducers: enterprises, both privately or publicly owned, which generate electricity and/or heat wholly or partly for their own use as an activity which supports their primary activity.

Note: the Commission may further clarify terminology by adding relevant NACE references in accordance with the regulatory procedure with scrutiny referred to in Article 11(2) after a revision of the NACE classification has entered into force.

##### 2.1. Supply and Transformation Sectors

###### Production/Indigenous Production

Quantities of fuels extracted or produced, calculated after any operation for removal of inert matter. Production includes the quantities consumed by the producer in the production process (e.g. for heating or operation of equipment and auxiliaries) as well as supplies to other producers of energy for transformation or other uses.

Indigenous means: production from resources within the concerned state.

## Imports/Exports

For geographical definitions see 'Geographical Notes' section.

Unless specified differently, 'imports' refer to ultimate origin (the country in which the energy product was produced) for use in the country and 'exports' to the ultimate country of consumption of the produced energy product.

Amounts are considered as imported or exported when they have crossed the political boundaries of the country, whether customs clearance has taken place or not.

Where no origin or destination can be reported 'Other' may be used.

Statistical differences may arise if only total import and export are available on the above basis, while the geographical breakdown is based on a different survey, source or concept. In this case, differences shall be included under 'Other'.

## International Marine Bunkers

Quantities of fuels delivered to ships of all flags that are engaged in international navigation. The international navigation may take place at sea, on inland lakes and waterways, and in coastal waters. Excluded is:

- consumption by ships engaged in domestic navigation. The domestic/ international split should be determined on the basis of port of departure and port of arrival, and not by the flag or nationality of the ship
- consumption by fishing vessels
- consumption by military forces.

## Stock Changes

The difference between the opening stock level and closing stock level for stocks held on national territory.

## Gross Consumption (calculated)

Calculated value, defined as:

= Indigenous production + From other sources + Imports – Exports – International marine bunkers + Stock changes

## Gross Consumption (observed)

The quantity actually recorded in surveys of end-use sectors.

## Statistical Differences

Calculated value, defined as:

= Calculated gross consumption – Observed gross consumption.

Includes changes in stocks at final consumers when this cannot be specified as part of the 'Stock changes'.

Reasons for any major differences should be stated.

## Main Activity Producer Electricity Plants

Fuel quantities used to produce electricity.

Fuels used by plants containing at least one CHP unit are to be reported under Main Activity Producer CHP Plants.

#### Main Activity Producer Combined Heat and Power (CHP) Plants

Quantities of fuels used to produce electricity and heat.

#### Main Activity Producer Heat Plants

Quantities of fuels used to produce heat.

#### Autoproducer Electricity Plants

Quantities of fuels used to produce electricity.

Fuels used by plants containing at least one CHP unit are to be reported under Autoproducer CHP Plants.

#### Autoproducer Combined Heat and Power (CHP) Plants

Quantities of fuels that correspond to the quantity of electricity produced and heat sold.

#### Autoproducer Heat Plants

Quantities of fuels that correspond to the quantity of heat sold.

#### Patent Fuel Plants

Quantities used to produce fuels.

Quantities used for heating and operation of equipment should not be declared here, but declared as consumption in the Energy sector.

#### Coke Ovens

Quantities used in coke ovens.

Quantities used for heating and operation of equipment should not be declared here, but declared as consumption in the Energy sector.

#### BKB/PB plants

Quantities of lignite used to produce brown coal briquettes (BKB) or of peat to produce peat briquettes (PB).

Quantities used for heating and operation of equipment should not be declared here, but declared as consumption in the Energy sector.

#### Gas Works

Quantities used to produce gas in gas works and coal gasification plants.

Quantities used as a fuel for heating and operation of equipment should not be included here, but declared as consumption in the Energy sector.

#### Blast furnace

Quantities of coking coal and/or bituminous coal (generally referred to as PCI) and coke oven coke transformed in blast furnaces.

Quantities used as a fuel for heating and operation of blast furnaces (e.g.: blast furnaces gas) should not be included here, but declared as consumption in the Energy sector.

#### Coal Liquefaction

Quantities of fuel used to produce synthetic oil.

#### Petroleum refineries

Quantities used to produce petroleum products.

Quantities used as a fuel for heating and operation of equipment should not be declared here, but declared as consumption in the Energy sector.

#### Not Elsewhere Specified – Transformation

Quantities used for transformation activities not included elsewhere. If used, what is included under this heading should be explained in the report.

## 2.2. Energy sector and final consumption

### Total Energy Sector

Quantities consumed by the energy industry to support the extraction (mining, oil and gas production) or plant operations of transformation activities. This corresponds to NACE Divisions 05, 06, 08.92, 07.21, 09.1, 19 and 35.

Excludes quantities of fuels transformed into another energy form (which should be reported under the Transformation sector) or used in support of the operation of oil, gas and coal slurry pipelines (which should be reported in the Transport Sector).

Includes the manufacture of chemical materials for atomic fission and fusion and the products of these processes.

### Electricity, CHP and Heat Plants

Quantities consumed as energy at electricity plants, combined heat and power plants (CHP) and heat plants.

### Coal Mines

Quantities consumed as energy to support the extraction and preparation of coal within the coal mining industry.

Coal burned in pithead power stations should be reported in the Transformation Sector.

### Patent fuel plants

Quantities consumed as energy at patent fuel plants.

### Coke Ovens

Quantities consumed as energy at coking plants.

### BKB/PB plants

Quantities used as energy in BKP/PB plants.

### Gas Works/gasification works

Quantities consumed as energy at gas works and coal gasification plants.

### Blast Furnaces

Quantities consumed as energy at blast furnaces.

### Coal Liquefaction

Quantities consumed as energy at coal liquefaction plants.

### Petroleum Refineries

Quantities consumed as energy at petroleum refineries.

### Oil and Gas extraction

Quantities consumed as fuel in the oil and gas extraction process and in natural gas processing plants.

Excludes pipeline losses (to be reported as distribution losses) and energy quantities used to operate pipelines (to be reported in the Transport sector).

#### Total Final Consumption

Defined (calculated) as:

= Total non-energy use + Final Energy Consumption (Industry + Transport + Other sectors)

It excludes deliveries for transformation, use by the energy producing industries, and distribution losses.

#### Non-Energy Use

Energy products used as raw materials in the different sectors; that is, not consumed as a fuel or transformed into another fuel.

### 2.3. Energy end-use Specification

#### Final Energy Consumption

Total energy consumption in industry, transport and other sectors.

#### Industry Sector

This refers to fuel quantities consumed by the industrial undertaking in support of its primary activities.

For heat only or CHP plants, only quantities of fuels consumed for the production of heat used by the plant itself are applicable. Quantities of fuels consumed for the production of heat that is sold, and for the production of electricity, should be reported under the appropriate Transformation sector.

Iron and Steel: NACE Divisions 24.1, 24.2, 24.3, 24.51 and 24.52.

#### Chemical (including Petrochemical)

Chemical and petrochemical industries; NACE Divisions 20 and 21.

#### Non-Ferrous Metals

Non-ferrous metals industries; NACE Divisions 24.4, 24.53 and 24.54.

#### Non-Metallic Minerals

Glass, ceramic, cement and other building materials industries; NACE Division 23.

#### Transport Equipment

Industries related to the equipment used for transport; NACE Divisions 29 and 30.

#### Machinery

Fabricated metal products, machinery and equipment other than transport equipment; NACE Divisions 25, 26, 27 and 28.

#### Mining and Quarrying

NACE Divisions 07 (except 07.21), 08 (except 08.92) and 09.9; it excludes energy producing industries.

Food, Beverages and Tobacco: NACE Divisions 10, 11 and 12.

Pulp, Paper and Printing

Includes production of recorded media; NACE Divisions 17 and 18.

Wood and Wood Products (other than pulp and paper): NACE Division 16.

Construction: NACE Division 41, 42 and 43.

Textile and Leather; NACE Divisions 13, 14 and 15.

Not Elsewhere Specified – Industry

Consumption in sectors which is not covered above.

Transport Sector

Energy used in all transport activities irrespective of the economic sector in which the activity occurs; NACE Divisions 49, 50 and 51.

Transport Sector – Rail

All consumption for use in rail traffic, including industrial railways; NACE Divisions 49.1 and 49.2.

Transport Sector – Domestic Navigation

Quantities delivered to vessels of all flags not engaged in international navigation (see International marine bunkers). The domestic/international split should be determined on the basis of port of departure and port of arrival and not by the flag or nationality of the ship. NACE Division 50.

Transport Sector – Road

Quantities used in road vehicles.

Includes fuel used by agricultural vehicles on highways and lubricants for use in road vehicles.

Excludes energy used in stationary engines (see Other sector), for non-highway use in tractors (see Agriculture), military use in road vehicles (see Other sector – Not elsewhere specified), bitumen used in road surfacing and energy used in engines at construction sites (see Industry sub-sector Construction). NACE Divisions 49.3 and 49.4.

Transport Sector – Pipeline Transport

Quantities used as energy in the support and operation of pipelines transporting gases, liquids, slurries and other commodities; NACE Division 49.5.

Includes energy used for pump stations and maintenance of the pipeline.

Excludes energy used for the pipeline distribution of natural or manufactured gas, hot water or steam from the distributor to final users (to be reported in the energy sector), energy used for the final distribution of water to household, industrial, commercial and other users (to be included in Commercial and Public Services) and losses occurring during this transport between distributor and final users (to be reported as distribution losses).

Transport Sector – International Aviation

Quantities of aviation fuels delivered to aircraft for international aviation. The domestic/international split should be determined on the basis of departure and landing locations and not by the nationality of the airline. Part of NACE Division 51.

Excludes fuels used by airlines for their road vehicles (to be reported in the transport sector – Not

elsewhere specified) and military use of aviation fuels (to be reported in the Other sectors – Not elsewhere specified).

#### Transport Sector – Domestic Aviation

Quantities of aviation fuels delivered to aircraft for domestic aviation – commercial, private, agricultural, etc. Part of NACE Division 51.

Includes fuel used for purposes other than flying, e.g. bench testing of engines. The domestic/international split should be determined on the basis of departure and landing locations and not by the nationality of the airline.

Excludes fuels used by airlines for their road vehicles (to be reported in the transport sector – Not elsewhere specified) and military use of aviation fuels (to be reported in the Other sector – Not elsewhere specified).

#### Transport Sector – Not Elsewhere Specified

Quantities used for transport activities not included elsewhere.

Includes fuels used by airlines for their road vehicles and fuels used in ports for ships' unloaders, various types of cranes.

To be declared is what is included under this heading.

#### Other Sectors

Sectors not specifically mentioned or not belonging to energy, industry or transport.

#### Other Sectors – Commercial and Public Services

Fuels consumed by business and offices in the public and private sectors.

NACE Divisions 33, 36, 37, 38, 39, 45, 46, 47, 52, 53, 55, 56, 58, 59, 60, 61, 62, 63, 64, 65, 66, 68, 69, 70, 71, 72, 73, 74, 75, 77, 78, 79, 80, 81, 82, 84, 85, 86, 87, 88, 90, 91, 92, 93, 94, 95, 96 and 99.

#### Other Sectors – Residential

To be declared are fuels consumed by all households including 'households with employed persons'. NACE Divisions 97 and 98.

The following specific definitions apply for this sector:

##### Household sector:

Household means a person living alone or a group of people who live together in the same private dwelling and sharing expenditures including the joint provision of the essentials of living. The household sector, also known as the residential (or domestic) sector is therefore, a collective pool of all households in a country.

Collective residences which can be permanent (e.g. prisons) or temporary (e.g. hospitals) should be excluded as these are covered in consumption in the service sector. Energy used in all transport activities should be reported in the transport sector and not in the household sector.

Energy consumption associated with significant economic activities of households should also be excluded from the total household energy consumption. These activities include agricultural economic activities on small farms and other economic activities carried out in a household's residence and should be reported in the corresponding sector.

**Space heating:**

This energy service refers to the use of energy to provide heat in an interior area of a dwelling.

**Space cooling:**

This energy service is referred to the use of energy for cooling in a dwelling by a refrigeration system and/or unit.

Fans, blowers and other appliances not connected to a refrigeration unit are excluded from this section, but should be covered in the lighting and electrical appliances section.

**Water heating:**

This energy service is referred to the use of energy to heat water for hot running water, bathing, cleaning and other non-cooking applications.

Swimming pool heating is excluded, but should be covered in the other end uses section.

**Cooking:**

This energy service is referred to the use of energy to prepare meals.

Appliances for auxiliary cooking (microwave ovens, kettles, coffee makers, etc.) are excluded; they should be covered in the the lighting and electrical appliances section

**Lighting and electrical appliances (electricity only):**

Use of electricity for lighting and any other electrical appliances in a dwelling not considered within other end uses.

**Other end uses:**

Any other energy consumption in households such as use of energy for the outdoor and any other activities not included into the five energy end- uses mentioned above (e.g. lawn mowers, swimming pool heating, outdoor heaters, outdoor barbecues, saunas etc.).

**Other Sectors – Agriculture/Forestry**

Fuels consumed by users classified as agriculture, hunting and forestry; NACE Divisions 01 and 02.

**Other Sectors – Fishing**

Fuels delivered for inland, coastal and deep-sea fishing. Fishing should cover fuels delivered to ships of all flags that have refuelled in the country (include international fishing) and energy used in the fishing industry. NACE Division 03.

**Other Sectors – Not Elsewhere Specified**

These are activities not included elsewhere. This category includes military fuel use for all mobile and stationary consumption (e.g. ships, aircraft, road and energy used in living quarters), regardless of whether the fuel delivered is for the military of that country or for the military of another country. If used, what is included under this heading should be explained in the report.

### 3. *OTHER TERMS*

The meaning of the following abbreviations applies:

- TML: tetramethyl lead,
- TEL: tetraethyl lead,
- SBP: special boiling point,
- LPG: liquified petroleum gas,
- NGL: natural gas liquids,
- LNG: liquefied natural gas,
- CNG: compressed natural gas.

## ANNEX B

### ANNUAL ENERGY STATISTICS

This Annex describes the scope, units, reported period, frequency, deadline and transmission modalities for the annual collection of energy statistics.

Annex A applies for explanations of terms for which a specific explanation is not supplied in this Annex.

#### 1. SOLID FOSSIL FUELS AND MANUFACTURED GASES

##### 1.1. Applicable energy products

Unless otherwise specified this data collection applies to all of the following energy products:

1. Anthracite

High rank coal used for industrial and residential applications. It has generally less than 10% volatile matter and a high carbon content (about 90% fixed carbon). Its gross calorific value is greater than 24 000 kJ/kg on an ash-free but moist basis.

2. Coking Coal

Bituminous coal with a quality that allows the production of a coke suitable to support a blast furnace charge. Its gross calorific value is greater than 24 000 kJ/kg on an ash-free but moist basis.

3. Other Bituminous Coal (Steam coal)

Coal used for steam raising purposes and includes all bituminous coal that is not included under coking coal nor anthracite. It is characterised by higher volatile matter than anthracite (more than 10%) and lower carbon content (less than 90% fixed carbon). Its gross calorific value is greater than 24 000 kJ/kg on an ash-free but moist basis. If bituminous coal is used in coke ovens it should be reported as coking coal.

4. Sub-Bituminous Coal

Refers to non-agglomerating coal with a gross calorific value between 20 000 kJ/kg and 24 000 kJ/kg containing more than 31% volatile matter on a dry mineral matter free basis.

5. Lignite

Non-agglomerating coal with a gross calorific value less than 20 000 kJ/kg and greater than 31% volatile matter on a dry mineral matter free basis.

6. Patent Fuel

A composition fuel manufactured from hard coal fines with the addition of a binding agent. The amount of patent fuel produced may, therefore, be slightly higher than the actual amount of coal consumed in the transformation process.

7. Coke Oven Coke

The solid product obtained from carbonisation of coal, principally coking coal, at high temperature, it is low in moisture and volatile matter. Coke oven coke is used mainly in the iron and steel industry acting as energy source and chemical agent. Coke breeze and foundry

coke are included in this category.

Semi-coke (a solid product obtained from carbonisation of coal at low temperature) should be included in this category. Semi-coke is used as a domestic fuel or by the transformation plant itself. This heading also includes coke, coke breeze and semi-coke made from lignite.

#### 8. Gas Coke

By-product of hard coal used for production of town gas in gas works. Gas Coke is used for heating purposes.

#### 9. Coal Tar

A result of the destructive distillation of bituminous coal. Coal tar is the liquid by-product of the distillation of coal to make coke in the coke oven process or it is produced from brown coal ('low-temperature tar'). Coal tar can be further distilled into different organic products (e.g. benzene, toluene, naphthalene), which normally would be reported as a feedstock to the petrochemical industry.

#### 10. BKB (Brown Coal Briquettes)

BKB is a composition fuel manufactured from lignite or sub-bituminous coal, produced by briquetting under high pressure without the addition of a binding agent, including dried lignite fines and dust.

#### 11. Gas Works Gas

Covers all types of gases produced in public utility or private plants, whose main purpose is manufacture, transport and distribution of gas. It includes gas produced by carbonisation (including gas produced by coke ovens and transferred to gas works gas), by total gasification with or without enrichment with oil products (LPG, residual fuel oil, etc.), and by reforming and simple mixing of gases and/or air, reported under the rows 'From Other Sources'. Under the transformation sector identify amounts of gas works gas transferred to blended natural gas which will be distributed and consumed through the natural gas grid.

The production of other coal gases (i.e. coke oven gas, blast furnace gas and oxygen steel furnace gas) should be reported in the columns concerning such gases, and not as production of gas works gas. The coal gases transferred to gas works plants should then be reported (in their own column) in the transformation sector in the gas works plants row. The total amount of gas works gas resulting from transfers of other coal gases should appear in the production line for gas works gas.

#### 12. Coke Oven Gas

Obtained as a by-product of the manufacture of coke oven coke for the production of iron and steel.

#### 13. Blast Furnace Gas

Produced during the combustion of coke in blast furnaces in the iron and steel industry. It is recovered and used as a fuel partly within the plant and partly in other steel industry processes or in power stations equipped to burn it. The quantity of fuel should be reported on a gross calorific value basis.

#### 14. Other recovered gases

By-product of the production of steel in an oxygen furnace, recovered on leaving the fur-

nace. The gases are also known as converter gas, LD gas or BOS gas. The quantity of recuperated fuel should be reported on a gross calorific value basis. Also covers non-specified manufactured gases not mentioned above, such as combustible gases of solid carbonaceous origin recovered from manufacturing and chemical processes not elsewhere defined.

#### 15. Peat

A combustible soft, porous or compressed, sedimentary deposit of plant origin with high water content (up to 90% in the raw state), easily cut, of light to dark brown colour. Peat used for non-energy purposes is not included.

This definition is without prejudice to the definition of renewable energy sources in Directive 2009/28/EC and to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories.

#### 16. Peat Products

Products such as peat briquettes derived directly or indirectly from sod peat and milled peat.

#### 17. Oil shale and oil sands

Oil shale and oil sands are sedimentary rock which contains organic matter in the form of kerogen. Kerogen is a waxy hydrocarbon-rich material regarded as a precursor of petroleum. Oil shale may be burned directly or processed by heating to extract shale oil. Shale oil and other products derived from liquefaction should be reported on the Annual oil questionnaire in Other hydrocarbons.

## 1.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.

Annex A applies for explanations of terms for which a specific explanation is not supplied in this annex.

### 1.2.1. Supply and Transformation Sectors

#### 1. Production

##### 1.1. Of which: underground

Applicable only for anthracite, coking coal, other bituminous coal, subbituminous coal and lignite.

##### 1.2. Of which: surface

Applicable only for anthracite, coking coal, other bituminous coal, subbituminous coal and lignite.

#### 2. From Other Sources

This consists of two components:

- recovered slurries, middlings and other low-grade coal products, which cannot be classified according to type of coal. This includes coal recovered from waste piles and other waste receptacles,
- supplies of fuel of which production is covered in other fuel energy balances, but for which consumption will occur in the coal energy balance.

## 2.1. Of which: from oil products

Not applicable for anthracite, coking coal, other bituminous coal, subbituminous coal, lignite, peat, peat products and oil shale and oil sands.

E.g.: petroleum coke addition to coking coal for coke ovens

## 2.2. Of which: from natural gas

Not applicable for anthracite, coking coal, other bituminous coal, subbituminous coal, lignite, peat, peat products and oil shale and oil sands.

E.g.: natural gas addition to gas works gas for direct final consumption

## 2.3. Of which: from renewables

Not applicable for anthracite, coking coal, other bituminous coal, subbituminous coal, lignite, peat, peat products and oil shale and oil sands.

E.g.: industrial waste as binding agent in the manufacturing of patent fuel

## 3. Imports

## 4. Exports

## 5. International Marine Bunkers

## 6. Stock changes

A stock build is shown as a negative number and a stock draw is shown as a positive number.

## 7. Gross consumption

## 8. Statistical differences

## 9. Total transformation Sector

Quantities of fuels used for the primary or secondary conversion of energy (e.g. coal to electricity, coke oven gas to electricity) or used for the transformation to derived energy products (e.g.: coking coal to coke).

## 9.1. Of which: Main Activity Producer Electricity Plants

## 9.2. Of which: Main Activity Producer CHP Plants

## 9.3. Of which: Main Activity Producer Heat Plants

## 9.4. Of which: Autoproducer Electricity plants

## 9.5. Of which: Autoproducer CHP plants

## 9.6. Of which: Autoproducer Heat plants

## 9.7. Of which: Patent Fuel Plants

## 9.8. Of which: Coke Ovens

## 9.9. Of which: BKB/PB Plants

## 9.10. Of which: Gas Works

## 9.11. Of which: Blast Furnaces

Quantities of coking coal and/or bituminous coal (generally referred to as PCI) and coke oven coke transformed in blast furnaces. Amounts used as a fuel for heating and operation of blast furnaces (e.g.: blast furnaces gas) should not be included in the transformation sector, but reported as consumption in the energy sector.

## 9.12. Of which: Coal Liquefaction

Shale oil and other products derived from liquefaction should be reported as per Chapter 4 of this annex.

## 9.13. Of which: For Blended Natural Gas

Quantities of coal gases blended with natural gas.

## 9.14. Of which: Not Elsewhere Specified – Transformation

*1.2.2. Energy Sector*

## 1. Total Energy Sector

## 1.1. Of which: Electricity, CHP and Heat plants

## 1.2. Of which: Coal Mines

## 1.3. Of which: Patent Fuel Plants

## 1.4. Of which: Coke Ovens

## 1.5. Of which: BKB/PB Plants

## 1.6. Of which: Gas Works

## 1.7. Of which: Blast Furnaces

## 1.8. Of which: Petroleum Refineries

## 1.9. Of which: Coal Liquefaction

## 1.10. Of which: Not Elsewhere Specified – Energy

## 2. Distribution losses

Losses occurred due to transport and distribution, as well as flaring of manufactured gases.

## 3. Total Final Consumption

## 4. Total Non-energy use

## 4.1. Of which: Industry, Transformation and Energy Sectors

Non-energy use in all industry, transformation and energy sub- sectors, e.g. coal used to make methanol or ammonia.

## 4.1.1. From 4.1, of which: in the petrochemical sector

Non-energy use e.g. coal use as feedstocks to produce fertiliser and as feedstocks for other petrochemical products.

## 4.2. Of which: Transport Sector

Non-energy use in all Transport sub-sectors.

## 4.3. Of which: Other Sectors

Non-energy use in Commercial and Public Services, Residential, Agriculture and Not Elsewhere Specified Other.

*1.2.3. Energy end-use specification*

## 1. Final Energy Consumption

- 2. Industry Sector
  - 2.1. Of which: Iron and Steel
  - 2.2. Of which: Chemical and Petrochemical
  - 2.3. Of which: Non-Ferrous Metals
  - 2.4. Of which: Non-Metallic Minerals
  - 2.5. Of which: Transport Equipment
  - 2.6. Of which: Machinery
  - 2.7. Of which: Mining and Quarrying
  - 2.8. Of which: Food, Beverages and Tobacco
  - 2.9. Of which: Pulp, Paper and printing
  - 2.10. Of which: Wood and Wood Products
  - 2.11. Of which: Construction
  - 2.12. Of which: Textile and Leather
  - 2.13. Of which: Not Elsewhere Specified – Industry
- 3. Transport Sector
  - 3.1. Of which: Rail
  - 3.2. Of which: Domestic Navigation
  - 3.3. Of which: Not Elsewhere Specified – Transport
- 4. Other Sectors
  - 4.1. Of which: Commercial and Public Services
  - 4.2. Of which: Residential
    - 4.2.1. Residential, of which: Space heating
    - 4.2.2. Residential, of which: Space cooling
    - 4.2.3. Residential, of which: Water heating
    - 4.2.4. Residential, of which: Cooking
    - 4.2.5. Residential, of which: Other end uses
  - 4.3. Of which: Agriculture/Forestry
  - 4.4. Of which: Fishing
  - 4.5. Of which: Not Elsewhere Specified – Other

#### 1.2.4. Imports and exports

Imports by country of origin, and exports by country of destination.

Applicable to anthracite, coking coal, other bituminous coal, sub-bituminous coal, lignite, patent fuel, coke oven coke, coal tar, bkb, peat, peat products and oil shale and oil sands.

### 1.3. Calorific values

Applicable for anthracite, coking coal, other bituminous coal, sub-bituminous coal, lignite, pat-

ent fuel, coke oven coke, gas coke, coal tar, bkb, peat, peat products, oil shale and oil sands.

Both gross and net calorific values are to be declared for the following main aggregates:

1. Production
2. Imports
3. Exports
4. Used in coke ovens
5. Used in blast furnaces
6. Used in Main Activity Producer Electricity, CHP and Heat Plants
7. Used in Industry
8. For Other Uses

#### 1.4. Units of measurement

1. Energy quantities

10<sup>3</sup> tonnes

Exception: for gases (gas works gas, coke oven gas, blast furnace gas, other recovered gases) the measurement is directly in energy content and the unit to be used is therefore TJ (based on gross calorific values).

2. Calorific values

MJ/tonne

#### 1.5. Derogations and exemptions

Not applicable.

## 2. NATURAL GAS

### 2.1. Applicable energy products

This data collection applies to natural gas, which comprises gases occurring in underground deposits, whether liquefied or gaseous, consisting mainly of methane.

It includes both 'non-associated' gas originating from fields producing hydrocarbons only in gaseous form, and 'associated' gas produced in association with crude oil as well as methane recovered from coal mines (colliery gas) or from coal seams (coal seam gas).

It does not include gases created by anaerobic digestion of biomass (e.g. municipal or sewage gas) nor gas works gas.

### 2.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.

#### 2.2.1. Supply and Transformation Sectors

To be declared are quantities expressed in both volume and energy units, and including the gross and net calorific values, for the following aggregates:

#### 1. Indigenous Production

All dry marketable production within national boundaries, including offshore production. Production is measured after purification and extraction of NGLs and sulphur.

Excludes extraction losses and quantities reinjected, vented or flared.

Includes quantities used within the natural gas industry; in gas extraction, pipeline systems and processing plants.

##### 1.1. Of which: Associated Gas

Natural gas produced in association with crude oil.

##### 1.2. Of which: Non-Associated Gas

Natural gas originating from fields producing hydrocarbons only in gaseous form.

##### 1.3. Of which: Colliery Gas

Methane produced at coal mines or from coal seams, piped to the surface and consumed at collieries or transmitted by pipeline to consumers.

#### 2. From Other Sources

Fuel which are blended with natural gas, and consumed as a blend.

##### 2.1. Of which: from oil products

LPG for upgrading the quality e.g. heat content

##### 2.2. Of which: from coal

manufactured gas for blending with natural gas

##### 2.3. Of which: from renewables

biogas for blending with natural gas

#### 3. Imports

#### 4. Exports

#### 5. International Marine Bunkers

#### 6. Stock changes

A stock build is shown as a negative number and a stock draw is shown as a positive number.

#### 7. Gross consumption

#### 8. Statistical differences

The requirement of declaring calorific values is not applicable here.

#### 9. Recoverable gas: opening and closing stocks

Quantities of gas available for delivery during any input-output cycle. This refers to recoverable natural gas stored in special storage facilities (depleted gas and/or oil field, aquifer, salt cavity, mixed caverns, or other) as well as liquefied natural gas storage. Cushion gas should be excluded.

The requirement of declaring calorific values is not applicable here.

#### 10. Gas Vented

The volume of gas released into the air on the production site or at the gas processing plant.

The requirement of declaring calorific values is not applicable here.

#### 11. Gas Flared

The volume of gas burned in flares on the production site or at the gas processing plant.

The requirement of declaring calorific values is not applicable here.

#### 12. Total transformation Sector

Quantities of fuels used for the primary or secondary conversion of energy (e.g. natural gas to electricity) or used for the transformation to derived energy products (e.g. natural gas to methanol).

##### 12.1. Of which: Main Activity Producer Electricity Plants

##### 12.2. Of which: Autoproducer Electricity plants

##### 12.3. Of which: Main Activity Producer CHP Plants

##### 12.4. Of which: Autoproducer CHP plants

##### 12.5. Of which: Main Activity Producer Heat Plants

##### 12.6. Of which: Autoproducer Heat plants

##### 12.7. Of which: Gas Works

##### 12.8. Of which: Coke Ovens

##### 12.9. Of which: Blast Furnaces

##### 12.10. Of which: Gas to liquids

Quantities of natural gas used as feedstock for the conversion to liquids e.g. the quantities of fuel entering the methanol production process for transformation into methanol.

##### 12.11. Of which: Non specified – Transformation

### 2.2.2. Energy Sector

#### 1. Total Energy Sector

##### 1.1. Of which: Coal Mines

##### 1.2. Of which: Oil and Gas extraction

##### 1.3. Of which: Inputs to oil refineries

##### 1.4. Of which: Coke Ovens

##### 1.5. Of which: Blast Furnaces

##### 1.6. Of which: Gas Works

##### 1.7. Of which: Electricity, CHP and Heat Plants

##### 1.8. Of which: Liquefaction (LNG) or Gasification

##### 1.9. Of which: Gas to Liquids

##### 1.10. Of which: Not Elsewhere Specified – Energy

#### 2. Losses of distribution and transport

### 2.2.3. Energy end-use specification

Consumption of natural gas needs to be reported for both energy use and (wherever applicable) non-energy use separately, for all of the following aggregates:

#### 1. Total Final Consumption

Final energy consumption and non-energy use to be declared separately under this heading.

#### 2. Transport Sector

##### 2.1. Of which: Transport by road

Includes both CNG and biogas.

##### 2.1.1. Of which: Biogas fraction in Transport by Road

##### 2.2. Of which: Pipeline transport

##### 2.3. Of which: Not Elsewhere Specified – Transport

#### 3. Industry Sector

##### 3.1. Of which: Iron and Steel

##### 3.2. Of which: Chemical and Petrochemical

##### 3.3. Of which: Non-Ferrous Metals

##### 3.4. Of which: Non-Metallic Minerals

##### 3.5. Of which: Transport Equipment

##### 3.6. Of which: Machinery

##### 3.7. Of which: Mining and Quarrying

##### 3.8. Of which: Food, Beverages and Tobacco

##### 3.9. Of which: Pulp, Paper and printing

##### 3.10. Of which: Wood and Wood Products

##### 3.11. Of which: Construction

##### 3.12. Of which: Textile and Leather

##### 3.13. Of which: Not Elsewhere Specified – Industry

#### 4. Other Sectors

##### 4.1. Of which: Commercial and Public Services

##### 4.2. Of which: Residential

##### 4.2.1. Residential, of which: Space heating

##### 4.2.2. Residential, of which: Space cooling

##### 4.2.3. Residential, of which: Water heating

##### 4.2.4. Residential, of which: Cooking

##### 4.2.5. Residential, of which: Other end uses

##### 4.3. Of which: Agriculture/Forestry

##### 4.4. Of which: Fishing

##### 4.5. Of which: Not Elsewhere Specified – Other

#### 2.2.4. Imports and exports

To be declared are both the quantities of the total natural gas and of the LNG part of it, per country of origin for imports and per country of destination for exports.

#### 2.2.5. Gas Storage Capacities

##### 1. Name

Name of the site of the storage facility.

##### 2. Type

Type of storage, such as depleted gas field, salt cavern, etc.

##### 3. Working Capacity

Total gas storage capacity, minus the cushion gas. The cushion gas is the total volume of gas required as a permanent inventory to maintain adequate underground storage reservoir pressures and deliverability rates throughout the output cycle.

##### 4. Peak Output

Maximum rate at which gas can be withdrawn from the concerned storage; this corresponds to the maximum withdrawal capacity.

### 2.3. Units of measurement

#### 1. Energy quantities

Unless indicated differently, quantities of natural gas are declared by its energy content, i.e. in TJ, based on the gross calorific value. Where physical quantities are required, the unit is in  $10^6$  m<sup>3</sup> assuming reference gas conditions (15 °C, 101,325 kPa).

#### 2. Calorific values

kJ/m<sup>3</sup>, assuming reference gas conditions (15 °C, 101,325 kPa).

#### 3. Storage working capacity

$10^6$  m<sup>3</sup>, assuming reference gas conditions (15 °C, 101,325 kPa).

#### 4. Peak output

$10^6$  m<sup>3</sup> /day, assuming reference gas conditions (15 °C, 101,325 kPa).

### 2.4. Derogations and exemptions

Not applicable.

## 3. ELECTRICITY AND HEAT

### 3.1. Applicable energy products

This chapter covers heat and electricity.

### 3.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous para-

graph unless otherwise specified.

Annex A applies for explanations of terms for which a specific explanation is not supplied in this chapter. The definitions and units mentioned in Chapters 1, 2, 4 and 5 apply to energy products belonging to solid fuels and manufactured gases, natural gas, oil and petroleum products, and renewable energy and energy from waste.

### 3.2.1. Supply and Transformation Sectors

The following specific definitions apply to aggregates for electricity and heat in this chapter:

- Gross Electricity Production: the sum of the electrical energy production by all the generating sets concerned (including pumped storage) measured at the output terminals of the main generators.
- Gross Heat Production: the total heat produced by the installation and includes the heat used by the installation's auxiliaries which use a hot fluid (space heating, liquid fuel heating etc.) and losses in the installation/network heat exchanges, as well as heat from chemical processes used as a primary energy form.
- Net Electricity Production: the gross electricity production less the electrical energy absorbed by the generating auxiliaries and the losses in the main generator transformers.
- Net Heat Production: the heat supplied to the distribution system as determined from measurements of the outgoing and return flows.

The aggregates mentioned in the next table must be declared separately for main activity producer plants and for autoproducer plants. Within these two types of plants, both gross and net electricity and heat production must be declared for electricity only, for CHP and for heat only plants separately wherever applicable, for the following aggregates:

1. Total production
  - 1.1. Of which: Nuclear
  - 1.2. Of which: Hydro
    - 1.2.1. Of which: part of hydro produced from pumped storage
  - 1.3. Of which: Geothermal
  - 1.4. Of which: Solar
  - 1.5. Of which: Tide, wave, ocean
  - 1.6. Of which: Wind
  - 1.7. Of which: Combustible fuels
 

Fuels capable of igniting or burning, i.e. reacting with oxygen to produce a significant rise in temperature and combusted directly for the production of electricity and/or heat.
  - 1.8. Of which: Heat Pumps
 

Heat output from heat pumps only where the heat is sold to third parties (i.e. in cases where production occurs in the Transformation Sector).
  - 1.9. Of which: Electric Boilers
 

Quantities of heat from electric boilers where the output is sold to third parties.

## 1.10. Of which: Heat from Chemical Processes

Heat originating from processes without input energy, such as a chemical reaction.

Excludes waste heat originating from energy driven processes, which should be reported as heat produced from the corresponding fuel.

## 1.11. Of which: Other Sources (please specify)

The aggregates mentioned in the next table must be declared as totals, for electricity and heat separately, wherever applicable. For the three first aggregates in the next table, quantities should be calculated from and be compatible with the values declared according to the previous table.

## 1. Total Gross Production

## 2. Own Use by Plant

## 3. Total Net Production

## 4. Imports

See also explanation under 5 'Exports'.

## 5. Exports

Amounts of electricity are considered as imported or exported when they have crossed the political boundaries of the country, whether customs clearance has taken place or not. If electricity is transited through a country, the amount should be reported as both an import and an export.

## 6. Used for Heat Pumps

## 7. Used for Electric Powered Steam Boilers

## 8. Used for Pumped Storage

## 9. Used for Electricity Production

## 10. Energy Supplied

For electricity: the sum of the net electrical energy production supplied by all power stations within the country, reduced by the amount used simultaneously for heat pumps, electrically powered steam boilers, pumping and reduced or increased by exports to or imports from abroad.

For heat: the sum of the net heat production for sale by all plants within a country, reduced by heat used for electricity production and reduced or increased by exports or imports from abroad.

## 11. Transmission and Distribution Losses

All losses due to transport and distribution of electrical energy and heat.

For electricity, includes losses in transformers which are not considered as integral parts of the power plants.

## 12. Total Consumption (calculated)

## 13. Statistical Difference

## 14. Total Consumption (observed)

The electricity produced, the heat sold and the fuel quantities used including their corresponding total energy from the combustibles listed in the next table must be declared separately for main

activity producer plants and for autoproducer plants. Within these two types of plants, this electricity and heat production must be declared for electricity (only) plants, for CHP and for heat (only) plants separately wherever applicable:

1. Solid fuels and manufactured gases:
  - 1.1. Anthracite
  - 1.2. Coking Coal
  - 1.3. Other Bituminous Coal
  - 1.4. Sub-Bituminous Coal
  - 1.5. Lignite
  - 1.6. Peat
  - 1.7. Patent Fuel
  - 1.8. Coke Oven Coke
  - 1.9. Gas Coke
  - 1.10. Coal Tar
  - 1.11. BKB (Brown Coal Briquettes)
  - 1.12. Gas Works Gas
  - 1.13. Coke Oven Gas
  - 1.14. Blast Furnace Gas
  - 1.15. Other recovered Gases
  - 1.16. Peat products
  - 1.17. Oil shale and oil sands
2. Oil and Petroleum Products:
  - 2.1. Crude Oil
  - 2.2. NGL
  - 2.3. Refinery Gas
  - 2.4. LPG
  - 2.5. Naphtha
  - 2.6. Kerosene Type Jet Fuel
  - 2.7. Other Kerosene
  - 2.8. Gas/Diesel (Distillate Fuel Oil)
  - 2.9. Heavy Fuel Oil
  - 2.10. Bitumen (Including Orimulsion)
  - 2.11. Petroleum Coke
  - 2.12. Other Oil Products
3. Natural Gas
4. Renewable Energy and Energy from Waste
  - 4.1. Industrial Waste (Non-Renewable)

- 4.2. Municipal Waste (Renewable)
- 4.3. Municipal Waste (Non-Renewable)
- 4.4. Solid biofuels
- 4.5. Biogases
- 4.6. Biodiesels
- 4.7. Other Liquid Biofuels

### 3.2.2. *Electricity and heat consumption in the Energy Sector*

#### 1. Total Energy Sector

Excludes own use by plant, used for pumped storage, heat pumps and electric boilers.

- 1.1. Of which: Coal Mines
- 1.2. Of which: Oil and Gas Extraction
- 1.3. Of which: Patent Fuel Plants
- 1.4. Of which: Coke Ovens
- 1.5. Of which: BKB/PB Plants
- 1.6. Of which: Gas Works
- 1.7. Of which: Blast Furnaces
- 1.8. Of which: Petroleum Refineries
- 1.9. Of which: Nuclear Industry
- 1.10. Of which: Coal Liquefaction Plants
- 1.11. Of which: Liquefaction (LNG)/Regasification Plants
- 1.12. Of which: Gasification Plants (biogas)
- 1.13. Of which: Gas-to-Liquids
- 1.14. Of which: Charcoal Production Plants
- 1.15. Of which: Not Elsewhere Specified – Energy

### 3.2.3. *Energy end-use specification*

#### 1. Industry Sector

- 1.1. Of which: Iron and Steel
- 1.2. Of which: Chemical and Petrochemical
- 1.3. Of which: Non-Ferrous Metals
- 1.4. Of which: Non-Metallic Minerals
- 1.5. Of which: Transport Equipment
- 1.6. Of which: Machinery
- 1.7. Of which: Mining and Quarrying
- 1.8. Of which: Food, Beverages and Tobacco

- 1.9. Of which: Pulp, Paper and printing
- 1.10. Of which: Wood and Wood Products
- 1.11. Of which: Construction
- 1.12. Of which: Textile and Leather
- 1.13. Of which: Not Elsewhere Specified – Industry
- 2. Transport Sector
  - 2.1. Of which: Rail
  - 2.2. Of which: Pipeline transport
  - 2.3. Of which: Road
  - 2.4. Of which: Not Elsewhere Specified – Transport
- 3. Residential Sector
  - 3.1. Residential, of which: Space heating
  - 3.2. Residential, of which: Space cooling
  - 3.3. Residential, of which: Water heating
  - 3.4. Residential, of which: Cooking
  - 3.5. Residential, of which: Lighting and electrical appliances
    - This applies only to electricity.
  - 3.6. Residential, of which: Other end uses
- 4. Commercial and Public Services
- 5. Agriculture/Forestry
- 6. Fishing
- 7. Not Elsewhere Specified – Other

#### 3.2.4. Imports and exports

Imports and exports of energy quantities of electricity and heat by country.

#### 3.2.5. Net production of electricity generation and net heat production from autoproducers

Net production of electricity and net generation of heat from autoproducers of electricity generation and heat production are to be declared, for CHP plants, for electricity (only) plants and for heat (only) plants separately, in the following plants or activities:

- 1. Total Energy Sector
  - 1.1. Of which: Coal Mines
  - 1.2. Of which: Oil and Gas Extraction
  - 1.3. Of which: Patent Fuel Plants
  - 1.4. Of which: Coke Ovens
  - 1.5. Of which: BKB/PB Plants
  - 1.6. Of which: Gas Works

- 1.7. Of which: Blast Furnaces
- 1.8. Of which: Petroleum Refineries
- 1.9. Of which: Coal Liquefaction Plants
- 1.10. Of which: Liquefaction (LNG)/Regasification Plants
- 1.11. Of which: Gasification Plants (biogas)
- 1.12. Of which: Gas-to-Liquids
- 1.13. Of which: Charcoal Production Plants
- 1.14. Of which: Not Elsewhere Specified – Energy
2. Transport Sector
  - 2.1. Of which: Rail
  - 2.2. Of which: Pipeline transport
  - 2.3. Of which: Road
  - 2.4. Of which: Not Elsewhere Specified – Transport
3. All other sectors: identical to the aggregate list as per '3.2.3 Energy end-use specification'.

### 3.3. Structural data on electricity and heat generation

#### 3.3.1. Net Maximum Electrical Capacity And Peak Load

The capacity should be reported at 31 December of the relevant reported year.

Includes electrical capacity of both electricity (only) and CHP plants.

The Net Maximum Electrical Capacity is the sum of the net maximum capacities of all stations taken individually throughout a given period of operation. The period of operation assumed for present purposes is continuous running: in practice 15 hours or more per day. The net maximum capacity is the maximum power assumed to be solely active power that can be supplied, continuously, with all plant running, at the point of outlet to the network. The Peak Load is defined as the highest value of the power absorbed or supplied by a network or combination of networks within the country.

The Net Maximum Electrical Capacity must be declared for both main activity producers and auto-producers:

1. Total
2. Nuclear
3. Hydro
  - 3.1. Of which: mixed plants
  - 3.2. Of which: pure pumped storage
4. Geothermal
5. Solar photovoltaic
6. Solar thermal
7. Tide, wave, ocean
8. Wind
9. Combustible fuels

- 9.1. Of which: Steam
- 9.2. Of which: Internal combustion
- 9.3. Of which: Gas turbine
- 9.4. Of which: Combined cycle
- 9.5. Of which: Other

To be specified if declared.

The following information about the peak load must be declared for the network:

- 10. Peak load
- 11. Available capacity at time of peak
- 12. Date and time of peak load occurrence

### 3.3.2. *Net Maximum Electrical Capacity Of Combustible Fuels*

Net maximum electrical capacity of combustible fuels must be declared for both main activity producers and autoproducers, and separately for each type of single-fired or multi-fired plant mentioned in the next table. Indications on which type of fuel is used as primary and alternate fuels must be added for all cases of multi-fired plants.

- 1. Single Fuel Fired:
  - 1.1. Fired with Coal or coal products
    - Includes coke oven gas, blast furnace and oxygen steel furnace gas capacity.
  - 1.2. Fired with Liquids fuels
    - Includes refinery gas capacity.
  - 1.3. Fired with Natural gas
    - Includes gas works gas capacity.
  - 1.4. Fired with Peat
  - 1.5. Fired with Combustible renewables and wastes
- 2. Multi-Fired, Solids And Liquids
- 3. Multi-Fired, Solids And Natural Gas
- 4. Multi-Fired, Liquids And Natural Gas
- 5. Multi-Fired, Solids Liquids And Natural Gas

Multi-fired systems include only units which can burn more than one fuel type on a continuous basis. Stations which have separate units using different fuels should be divided into the appropriate single-fuel categories.

### 3.4. Data on nuclear energy

The following data concerning the civil use of nuclear energy must be declared:

- 1. Enrichment capacity
  - The annual separative work capacity of operational enrichment plants (isotopic separation of Uranium).

## 2. Production capacity of fresh fuel elements

The annual production capacity of fuel fabrication plants. MOX fuel fabrication plants are excluded.

## 3. Production capacity of MOX fuel fabrication plants

The annual production capacity of MOX fuel fabrication plants. MOX fuel contains a mixture of Plutonium and Uranium (Mixed Oxide).

## 4. Production of fresh fuel elements

Production of finished fresh fuel elements in nuclear fuel fabrication plants. Rods or other partial products are not included. Fabrication plants producing MOX fuel are also excluded.

## 5. Production of MOX fuel elements

Production of finished fresh fuel elements in MOX fuel fabrication plants. Rods or other partial products are not included.

## 6. Production of nuclear heat

The total amount of heat generated by nuclear reactors for the production of electricity or for other useful applications of heat.

## 7. Annual average burnup of definitively discharged irradiated fuel elements

Calculated average of the burnup of the fuel elements which have been definitively discharged from the nuclear reactors during the concerned reference year. Excludes fuel elements which are temporarily discharged and are likely to be reloaded again later.

## 8. Production of Uranium and Plutonium in reprocessing plants

Uranium and Plutonium produced during the reference year in reprocessing plants.

## 9. Capacity (Uranium and Plutonium) of reprocessing plants

Annual reprocessing capacity of Uranium and Plutonium.

### 3.5. Units of measurement

#### 1. Energy quantities

Electricity: GWh

Heat: TJ

Solid fuels and manufactured gases: the units of measurement in Chapter 1 of this annex apply.

Natural gas: the units of measurement in chapter 2 of this annex apply.

Oil and petroleum products: the units of measurement in chapter 4 of this annex apply.

Renewables and waste: the units of measurement in chapter 5 of this annex apply.

Uranium and Plutonium: tHM (tons of heavy metal).

#### 2. Capacity

Electrical generation capacity: MWe

Heat generation capacity: MWt

Enrichment capacity (isotopic separation of Uranium): tSWU (tons of Separative Work Units).

Production capacity of nuclear fuel elements: tHM (tons of heavy metal).

### 3.6. Derogations and exemptions

France has a derogation for reporting the aggregates relating to heat. That derogation shall lapse as soon as France is able to forward this report and, at all events, no more than 4 years after the date of entry into force of this Regulation.

## 4. OIL AND PETROLEUM PRODUCTS

### 4.1. Applicable energy products

Unless otherwise specified this data collection applies to all of the following energy products:

#### 1. Crude Oil

Crude oil is a mineral oil of natural origin comprising a mixture of hydrocarbons and associated impurities, such as sulphur. It exists in the liquid phase under normal surface temperature and pressure and its physical characteristics (density, viscosity, etc.) are highly variable. This category includes field or lease condensate recovered from associated and non-associated gas where it is commingled with the commercial crude oil stream.

#### 2. NGL

NGL are liquid or liquefied hydrocarbons recovered from natural gas in separation facilities or gas processing plants. Natural gas liquids include ethane, propane, butane (normal and iso-), (iso) pentane and pentanes plus (sometimes referred to as natural gasoline or plant condensate).

#### 3. Refinery Feedstocks

A refinery feedstock is a processed oil destined for further processing (e.g. straight run fuel oil or vacuum gas oil) excluding blending. With further processing, it will be transformed into one or more components and/or finished products. This definition also covers returns from the petrochemical industry to the refining industry (e.g. pyrolysis gasoline, C4 fractions, gasoil and fuel oil fractions).

#### 4. Additives/Oxygenates

Additives are non-hydrocarbon compounds added to or blended with a product to modify fuel properties (octane, cetane, cold properties, etc.):

- oxygenates, such as alcohols (methanol, ethanol), ethers (such as MTBE (methyl tertiary butyl ether), ETBE (ethyl tertiary butyl ether), TAME (tertiary amyl methyl ether));
- esters (e.g. rapeseed oil or dimethylester, etc.);
- chemical compounds (such as TML, TEL and detergents).

Note: Quantities of additives/oxygenates (alcohols, ethers, esters and other chemical compounds) reported in this category should relate to the quantities destined for blending with fuels or for fuel use.

#### 4.1. Of Which: Biofuels

Biogasoline and Biodiesels. The definitions of Chapter 5, Renewable Energy and Energy from Waste, apply.

Quantities of liquid biofuels reported in this category relate to the biofuel and not to the total volume of liquids into which the biofuels are blended.

Excludes all trade of biofuels which have not been blended with transport fuels (i.e. in their pure form); these should be reported as per Chapter 5. The biofuels traded as part of transport fuels should be reported in the appropriate product indicating the biofuel portion.

#### 5. Other Hydro-carbons

Synthetic crude oil from tar sands, shale oil, etc., liquids from coal liquefaction, (see Chapter 1), output of liquids from natural gas conversion into gasoline (see Chapter 2), hydrogen and emulsified oils (e.g. Orimulsion).

Excludes oil shale production, for which Chapter 1 applies.

The production of shale oil (secondary product) is to be reported as 'From other sources' in the 'Other hydrocarbons category'.

#### 6. Refinery Gas (not liquefied)

Refinery gas includes a mixture of non-condensable gases mainly consisting of hydrogen, methane, ethane and olefins obtained during distillation of crude oil or treatment of oil products (e.g. cracking) in refineries. This also includes gases which are returned from the petrochemical industry.

#### 7. Ethane

A naturally gaseous straight-chain hydrocarbon, (C<sub>2</sub>H<sub>6</sub>) extracted from natural gas and refinery gas streams.

#### 8. LPG

LPG are light paraffinic hydrocarbons derived from the refinery processes, crude oil stabilisation and natural gas processing plants. They consist mainly of propane (C<sub>3</sub>H<sub>8</sub>) and butane (C<sub>4</sub>H<sub>10</sub>) or a combination of the two. They could also include propylene, butylene, isopropylene and isobutylene. LPG are normally liquefied under pressure for transportation and storage.

#### 9. Naphtha

Naphtha is a feedstock destined for either the petrochemical industry (e.g. ethylene manufacture or aromatics production) or for gasoline production by reforming or isomerisation within the refinery.

Naphtha comprises material in the 30 °C and 210 °C distillation range or part of this range.

#### 10. Motor Gasoline

Motor gasoline consists of a mixture of light hydrocarbons distilling between 35 °C and 215 °C. It is used as a fuel for land based spark ignition engines. Motor gasoline may include additives, oxygenates and octane enhancers, including lead compounds such as TEL and TML.

Includes motor gasoline blending components (excluding additives/oxygenates), e.g. alkylates, isomerate, reformat, cracked gasoline destined for use as finished motor gasoline.

##### 10.1. Of which: Biogasoline

The definitions of Chapter 5, Renewable Energy and Energy from Waste, apply.

#### 11. Aviation Gasoline

Motor spirit prepared especially for aviation piston engines, with an octane number suited to the engine, a freezing point of  $-60\text{ }^{\circ}\text{C}$  and a distillation range usually within the limits of  $30\text{ }^{\circ}\text{C}$  and  $180\text{ }^{\circ}\text{C}$ .

#### 12. Gasoline Type Jet Fuel (Naphtha Type Jet Fuel or JP4)

This includes all light hydrocarbon oils for use in aviation turbine power units, distilling between  $100\text{ }^{\circ}\text{C}$  and  $250\text{ }^{\circ}\text{C}$ . They are obtained by blending kerosenes and gasoline or naphthas in such a way that the aromatic content does not exceed 25% in volume, and the vapour pressure is between 13,7kPa and 20,6kPa.

#### 13. Kerosene Type Jet Fuel

Distillate used for aviation turbine power units. It has the same distillation characteristics between  $150\text{ }^{\circ}\text{C}$  and  $300\text{ }^{\circ}\text{C}$  (generally not above  $250\text{ }^{\circ}\text{C}$ ) and flash point as kerosene. In addition, it has particular specifications (such as freezing point) which are established by the International Air Transport Association (IATA).

Includes kerosene blending components.

##### 13.1. Bio jet kerosene

Liquid biofuels derived from biomass and blended with or replacing jet kerosene.

#### 14. Other Kerosene

Refined petroleum distillate used in sectors other than aircraft transport. It distils between  $150\text{ }^{\circ}\text{C}$  and  $300\text{ }^{\circ}\text{C}$ .

#### 15. Gas/Diesel Oil (Distillate Fuel Oil)

Gas/diesel oil is primarily a medium distillate distilling between  $180\text{ }^{\circ}\text{C}$  and  $380\text{ }^{\circ}\text{C}$ . Includes blending components. Several grades are available depending on uses:

##### 15.1. Of which: Road Diesel

On-road diesel oil for diesel compression ignition (cars, trucks, etc.), usually of low sulphur content;

##### 15.1.1. From 15.1, of which: Biodiesels

The definitions of Chapter 5, Renewable Energy and Energy from Waste, apply.

##### 15.2. Of which: Heating and Other Gasoil

Light heating oil for industrial and commercial uses, marine diesel and diesel used in rail traffic, other gas oil including heavy gas oils which distil between  $380\text{ }^{\circ}\text{C}$  and  $540\text{ }^{\circ}\text{C}$  and which are used as petrochemical feedstocks.

#### 16. Fuel Oil

All residual (heavy) fuel oils (including those obtained by blending). Kinematic viscosity is above 10 cSt at  $80\text{ }^{\circ}\text{C}$ . The flash point is always above  $50\text{ }^{\circ}\text{C}$  and density is always more than 0,90 kg/l.

##### 16.1. Of which: Low Sulphur Content

Heavy fuel oil with sulphur content lower than 1%.

##### 16.2. Of which: High Sulphur Content

Heavy fuel oil with sulphur content of 1% or higher.

## 17. White Spirit And SBP

Refined distillate intermediates with a distillation in the naphtha/kerosene range. They are sub-divided as:

- Industrial Spirit (SBP): Light oils distilling between 30 °C and 200 °C. There are 7 or 8 grades of industrial spirit, depending on the position of the cut in the distillation range. The grades are defined according to the temperature difference between the 5% volume and 90% volume distillation points (which is not more than 60 °C).
- White Spirit: Industrial spirit with a flash point above 30 °C. The distillation range of white spirit is 135 °C to 200 °C.

## 18. Lubricants

Hydrocarbons produced from distillate by product; they are mainly used to reduce friction between bearing surfaces.

Includes all finished grades of lubricating oil, from spindle oil to cylinder oil, and those used in greases, motor oils and all grades of lubricating oil base stocks.

## 19. Bitumen

Solid, semi-solid or viscous hydrocarbon with a colloidal structure, being brown to black in colour, obtained as a residue in the distillation of crude oil, by vacuum distillation of oil residues from atmospheric distillation. Bitumen is often referred to as asphalt and is primarily used for construction of roads and for roofing material.

Includes fluidised and cut back bitumen.

## 20. Paraffin Waxes

These are saturated aliphatic hydrocarbons. These waxes are residues extracted when de-waxing lubricant oils. They have a crystalline structure which is more-or-less fine according to the grade. Their main characteristics are as follows: they are colourless, odourless and translucent, with a melting point above 45 °C.

## 21. Petroleum Coke

Black solid by-product, obtained mainly by cracking and carbonising petroleum derived feedstock, vacuum bottoms, tar and pitches in processes such as delayed coking or fluid coking. It consists mainly of carbon (90 to 95%) and has a low ash content. It is used as a feedstock in coke ovens for the steel industry, for heating purposes, for electrode manufacture and for production of chemicals. The two most important qualities are 'green coke' and 'calcinated coke'.

Includes 'catalyst coke' deposited on the catalyst during refining processes; this coke is not recoverable and is usually burned as refinery fuel.

## 22. Other Products

All products not specifically mentioned above, for example: tar and sulphur. Includes aromatics (e.g. BTX or benzene, toluene and xylene) and olefins (e.g. propylene) produced within refineries.

## 4.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.

### 4.2.1. Supply of crude oil, NGL, refinery feedstocks, additives and other hydrocarbons

The following table applies to crude oil, natural gas liquids, refinery feedstocks, additives/oxygenates (and its bio part) and other hydrocarbons:

#### 1. Indigenous Production

Not applicable for refinery feedstocks and for biofuels.

#### 2. From Other Sources. Additives, Biofuels and Other hydrocarbons, the production of which has already been covered in other fuel balances.

Not applicable for crude oil, NGL and refinery feedstocks.

#### 2.1. Of which: from Coal

Includes liquids produced from coal liquefaction plants, liquid output from coke ovens.

#### 2.2. Of which: from Natural Gas

The manufacture of synthetic gasoline may require natural gas as feedstock. The amount of gas for methanol manufacture is declared according to Chapter 2, while the receipts of methanol are declared here.

#### 2.3. Of which: from Renewables

Includes biofuels which are for blending with transport fuels.

Production is declared as per Chapter 5, while amounts for blending are declared here.

#### 3. Backflows From Petrochemical Sector

Finished or semi-finished products which are returned from final consumers to refineries for processing, blending or sale. They are usually by-products of petrochemical manufacturing.

Only applicable for refinery feedstocks.

#### 4. Products Transferred

Imported petroleum products which are reclassified as feedstocks for further processing in the refinery, without delivery to final consumers.

Only applicable for refinery feedstocks.

#### 5. Imports and exports

Includes quantities of crude oil and products imported or exported under processing agreements (i.e. refining on account). Crude oil and NGLs should be reported as coming from the country of ultimate origin; refinery feedstocks and finished products should be reported as coming from the country of last consignment.

Includes any gas liquids (e.g. LPG) extracted during the regasification of imported liquefied natural gas and petroleum products imported or exported directly by the petrochemical industry.

Note: All trade of biofuels which have not been blended with transport fuels (i.e. in their pure form) should be reported in the Renewables Questionnaire.

Re-exports of oil imported for processing within bonded areas should be included as an export of product from the processing country to the final destination.

6. Direct Use

Crude oil, NGL, Additives and Oxygenates (and the part which are biofuels), and other hydrocarbons used directly without being processed in petroleum refineries.

Includes crude oil burned for electricity generation.

7. Stock changes

A stock build is shown as a negative number and a stock draw is shown as a positive number.

8. Calculated Refinery Intake

Total amount of product calculated to have entered the refinery process. It is defined as:

= Indigenous production + From other sources + Backflows from industry + Products transferred + Imports – Exports – Direct use + Stock changes

9. Statistical differences

Defined as the calculated refinery intake minus the observed one.

10. Observed Refinery Intake

Amounts measured as input to refineries

11. Refinery Losses

The difference between Refinery intake (observed) and Gross refinery output. Losses may occur during the distillation processes due to evaporation. Reported losses are positive. There may be volumetric gains but no gains in mass.

12. Opening and Closing Total Stocks On National Territory

All stocks on national territory, including stocks held by governments, by major consumers or by stockholding organisations, stocks held on board incoming ocean vessels, stocks held in bonded areas and stocks held for others, whether under bilateral government agreement or not. Opening and closing refers to the first and to the last day of the reporting period respectively.

13. Net Calorific Value

Production, imports and exports, and overall average.

#### 4.2.2. *Supply of oil products*

The following table applies to finished products (refinery gas, ethane, LPG, naphtha, motor gasoline as well as its part of biogasoline, aviation gasoline, gasoline type jet fuel, kerosene type jet fuel as well as its bio part, other kerosene, gas/diesel oil, low and high sulphur fuel oil, white spirit and SBP, lubricants, bitumen, paraffin waxes, petroleum coke and other products). Crude oil and NGL used for direct burn should be included in deliveries of finished products and interproduct transfers.

1. Primary Product Receipts

Includes quantities of indigenous or imported crude oil (including condensate) and indigenous NGL used directly without being processed in a petroleum refinery and quantities of Backflows from the Petrochemical industry which, although not primary fuel, are used

directly.

## 2. Gross Refinery Output

Production of finished products at a refinery or blending plant.

Excludes refinery losses, but includes Refinery fuel.

## 3. Recycled Products

Finished products which pass a second time through the marketing network, after having been once delivered to final consumers (e.g. used lubricants which are reprocessed). These quantities should be distinguished from petrochemical Backflows.

## 4. Refinery Fuel

Petroleum products consumed in support of the operation of a refinery.

Excludes products used by oil companies outside the refining process, e.g. bunkers or oil tankers.

Includes fuels used for the production at the refineries of electricity and heat sold.

### 4.1. Of which: used for electricity generation

Amounts used to generate electricity in plants at refineries.

### 4.2. Of which: used for CHP production

Amounts used in CHP plants at refineries.

### 4.3. Of which: used for heat generation

Amounts used to generate heat at refineries.

## 5. Imports and Exports

## 6. International Marine Bunkers

## 7. Interproduct Transfers

Quantities reclassified either because their specification has changed or because they are blended into another product.

A negative entry for one product is compensated by a positive entry (or several entries) for one or several products and *vice versa*; the total net effect should be zero.

## 8. Products Transferred

Imported petroleum products which are reclassified as feedstocks for further processing in the refinery, without delivery to final consumers.

## 9. Stock Changes

A stock build is shown as a negative number and a stock draw is shown as a positive number.

## 10. Calculated Gross Inland Deliveries

This is defined as:

= Primary product receipts + Gross refinery output + Recycled products – Refinery fuel + Imports – Exports – International marine bunkers + Interproduct transfers – Products transferred + Stock changes

## 11. Statistical Difference

Defined as the calculated gross inland delivery minus the observed one.

## 12. Observed Gross Inland Deliveries

The observed delivery of finished petroleum products from primary sources (e.g. refineries, blending plants, etc.) to the inland market.

This figure may differ from the calculated figure due, for example, to differences in coverage and/or differences of definition in different reporting systems.

### 12.1. Of which: Gross Deliveries To The Petrochemical Sector

Quantities of fuels delivered to the Petrochemical sector.

### 12.2. Of which: Energy Use In The Petrochemical Sector

Quantities of oil used as fuel for petrochemical processes such as steam cracking.

### 12.3. of which: Non-Energy Use In The Petrochemical Sector

Quantities of oil used in the petrochemical sector for the purpose of producing ethylene, propylene, butylene, synthesis gas, aromatics, butadiene and other hydrocarbon-based raw materials in processes such as steam cracking, aromatics plants and steam reforming. Excludes amounts of oil used for fuel purposes.

## 13. Backflows From Petrochemical Sector To Refineries

## 14. Opening and Closing Stock Levels

All stocks on national territory, including stocks held by governments, by major consumers or by stockholding organisations, stocks held on board incoming ocean vessels, stocks held in bonded areas and stocks held for others, whether under bilateral government agreement or not. Opening and closing refers to the first and to the last day of the reporting period respectively.

## 15. Stock Changes At Public Utilities

Changes in stocks which are held by public utilities and not included in the Stock levels and Stock changes reported elsewhere. A stock build is shown as a negative number and a stock draw is shown as a positive number.

Includes Crude oil and NGL used for direct burn, if applicable.

## 16. Net Calorific Value Of Gross Inland Deliveries

### 4.2.3. *Gross inland deliveries by sector*

In the now following tables, the following aggregates apply for crude oil, natural gas liquids, refinery gas, ethane, LPG, naphtha, total motor gasoline and its bio part, aviation gasoline, gasoline type jet fuel, total kerosene type jet fuel and its bio part, other kerosene, gas/diesel oil (and its fractions of road diesel, heating and other gas oil, biodiesels and Non- bio gas/diesel oil), total fuel oil (including its fractions of low and of high sulfur content), white spirit and SBP, lubricants, bitumen, paraffin waxes, petroleum coke, other oil products.

Both the quantities involved for energy use and non-energy use and their total sum need to be declared.

### 1. Total transformation Sector

Total quantities of fuels used for the primary or secondary conversion of energy.

#### 1.1. Of which: Main Activity Producer Electricity Plants

- 1.2. Of which: Autoproducer Electricity plants
- 1.3. Of which: Main Activity Producer CHP Plants
- 1.4. Of which: Autoproducer CHP plants
- 1.5. Of which: Main Activity Producer Heat Plants
- 1.6. Of which: Autoproducer Heat plants
- 1.7. Of which: Gas Works/Gasification Plants
- 1.8. Of which: Blended Natural Gas
- 1.9. Of which: Coke Ovens
- 1.10. Of which: Blast Furnaces
- 1.11. Of which: Petrochemical Industry
- 1.12. Of which: Patent Fuel Plants
- 1.13. Of which: Not Elsewhere Specified – Transformation

## 2. Total Energy Sector

Total quantity used as energy in the energy sector

- 2.1. Of which: Coal Mines
  - 2.2. Of which: Oil and Gas Extraction
  - 2.3. Of which: Coke Ovens
  - 2.4. Of which: Blast Furnaces
  - 2.5. Of which: Gas Works
  - 2.6. Of which: Power Plants
- Electricity, CHP and heat plants.
- 2.7. Of which: Not Elsewhere Specified – Energy

## 3. Distribution losses

Losses occurred outside the refinery due to transport and distribution.

Includes pipeline losses.

## 4. Final Energy Consumption

### 5. Industry Sector

- 5.1. Of which: Iron and Steel
- 5.2. Of which: Chemical and Petrochemical
- 5.3. Of which: Non-Ferrous Metals
- 5.4. Of which: Non-Metallic Minerals
- 5.5. Of which: Transport Equipment
- 5.6. Of which: Machinery
- 5.7. Of which: Mining and Quarrying
- 5.8. Of which: Food, Beverages and Tobacco
- 5.9. Of which: Pulp, Paper and printing

- 5.10. Of which: Wood and Wood Products
- 5.11. Of which: Construction
- 5.12. Of which: Textile and Leather
- 5.13. Of which: Not Elsewhere Specified – Industry
- 6. Transport Sector
  - 6.1. Of which: International Aviation
  - 6.2. Of which: Domestic Aviation
  - 6.3. Of which: Road
  - 6.4. Of which: Rail
  - 6.5. Of which: Domestic Navigation
  - 6.6. Of which: Pipeline Transport
  - 6.7. Of which: Not Elsewhere Specified – Transport
- 7. Other Sectors
  - 7.1. Of which: Commercial and Public Services
  - 7.2. Of which: Residential
    - 7.2.1. Residential, of which: Space heating
    - 7.2.2. Residential, of which: Space cooling
    - 7.2.3. Residential, of which: Water heating
    - 7.2.4. Residential, of which: Cooking
    - 7.2.5. Residential, of which: Other end uses
  - 7.3. Of which: Agriculture/Forestry
  - 7.4. Of which: Fishing
  - 7.5. Of which: Not Elsewhere Specified – Other
- 8. Total Non-Energy Use

Quantities used as raw materials in the different sectors and not consumed as a fuel or transformed into another fuel. These quantities are included into the aggregates listed above.

- 8.1. Of which: Transformation Sector
- 8.2. Of which: Energy Sector
- 8.3. Of which: Transport Sector
- 8.4. Of which: Industry Sector
  - 8.4.1 Industry Sector of which: Chemical (incl. Petrochemical)
- 8.5. Of which: Other Sectors

#### 4.2.4. Imports and exports

Imports by country of origin, and exports by country of destination. See also notes under point 4.2.1, aggregate 5.

### 4.3. Units of measurement

1. Energy quantities
  - 10<sup>3</sup> tonnes
2. Calorific values
  - MJ/tonne

### 4.4. Derogations and exemptions

Cyprus is exempted from reporting the aggregates defined in Section 4.2.3 under point 7 (Other Sectors) and point 8 (Total Non-Energy Use); only the total values shall be applicable.

## 5. RENEWABLE ENERGY AND ENERGY FROM WASTE

### 5.1. Applicable energy products

Unless otherwise specified this data collection applies to all of the following energy products:

1. Hydro power
  - Potential and kinetic energy of water converted into electricity in hydroelectric plants. Pumped storage must be included. Production must be reported for plant sizes of < 1 MW, 1 to < 10 MW, ≥ 10 MW and from pumped storage.
2. Geothermal
  - Energy available as heat emitted from within the earth's crust, usually in the form of hot water or steam. This energy production is the difference between the enthalpy of the fluid produced in the production borehole and that of the fluid eventually disposed of. It is exploited at suitable sites:
    - for electricity generation using dry steam or high enthalpy brine after flashing
    - directly as heat for district heating, agriculture etc.
3. Solar Energy
  - Solar radiation exploited for hot water production and electricity generation. This energy production is the heat available to the heat transfer medium, i.e. the incident solar energy less the optical and collectors losses. Passive solar energy for the direct heating, cooling and lighting of dwellings or other buildings is not included.
  - 3.1. Of which: Solar Photovoltaic
    - Sunlight converted into electricity by the use of solar cells usually made of semi-conducting material which exposed to light will generate electricity.
  - 3.2. Of which: Solar Thermal
    - Heat from solar radiation; can consist of:
      - (a) solar thermal-electric plants, or
      - (b) equipment for the production of domestic hot water or for the seasonal heating of swimming pools (e.g. flat plate collectors, mainly of the thermosyphon type).
4. Tide, Wave, Ocean

Mechanical energy derived from tidal movement, wave motion or ocean current and exploited for electricity generation.

5. Wind

Kinetic energy of wind exploited for electricity generation in wind turbines.

6. Industrial Waste (non- renewable)

Report wastes of industrial non-renewable origin (solids or liquids) combusted directly for the production of electricity and/or heat. The quantity of fuel used should be reported on a net calorific value basis. Renewable industrial waste should be reported in the Solid Biomass, Biogas and/or Liquid Biofuels categories.

7. Municipal Waste:

Wastes produced by households, hospitals and the tertiary sector incinerated at specific installations, on a net calorific value basis.

7.1. Of which: Renewable

The portion of municipal waste which is of biological origin.

7.2. Of which: Non-Renewable

The portion of municipal waste which is of non- biological origin.

8. Solid Biofuels:

Covers organic, non-fossil material of biological origin which may be used as fuel for heat production or electricity generation. It comprises:

8.1. Of which: Charcoal

The solid residue of the destructive distillation and pyrolysis of wood and other vegetal material.

9. Biogas:

A gas composed principally of methane and carbon dioxide produced by anaerobic digestion of biomass.

10. Liquid Biofuels

The quantities of liquid biofuels reported in this category should relate to the quantities of biofuel and not to the total volume of liquids into which the biofuels are blended. For the particular case of imports and exports of liquid biofuels, only trade of quantities that have not been blended with transport fuels is concerned (i.e. in their pure form); trade of liquids biofuels blended to transport fuels should be reported in the oil data in Chapter 4.

The following liquid biofuels are concerned:

10.1. Of which: Biogasoline

This category includes bioethanol (ethanol produced from biomass and/or the biodegradable fraction of waste), biomethanol (methanol produced from biomass and/or the biodegradable fraction of waste), bioETBE (ethyl-tertio-butyl- ether produced on the basis of bioethanol; the percentage by volume of bioETBE that is calculated as biofuel is 47%) and bioMTBE (methyl-tertio- butyl-ether produced on the basis of biomethanol: the percentage by volume of bioMTBE that is calculated as biofuel is 36%).

10.1.1. Biogasoline of which: Bioethanol

Ethanol produced from biomass and/or the biodegradable fraction of waste

#### 10.2. Of which: Biodiesels

This category includes biodiesel (a methyl-ester produced from vegetable or animal oil, of diesel quality), biodimethylether (dimethylether produced from biomass), Fischer Tropsch (Fischer Tropsch produced from biomass), cold extracted bio-oil (oil produced from oil seed through mechanical processing only) and all other liquid biofuels which are added to, blended with or used straight as transport diesel.

#### 10.3. Bio jet kerosene

Liquid biofuels derived from biomass and blended with or replacing Jet kerosene.

#### 10.4. Other liquid biofuels

Liquid biofuels, used directly as fuel, not included in biogasoline nor biodiesels.

## 5.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.

### 5.2.1. *Gross Electricity and Heat Production*

Electricity and heat produced from the energy products mentioned in Section 5.1 (except charcoal, biogasoline and bio jet kerosene) must be declared, wherever applicable, separately:

- for main activity producer plants and for autoproducer plants;
- for electricity-only producing plants, for heat-only producing plants, and for combined heat and power (CHP) plants.

This requirement excludes charcoal. For the liquid biofuels, it excludes the biogasoline and the bio jet kerosene. For the hydro, declarations must be subdivided in plants with electrical output up 1 MW, between 1 and 10 MW, and above 10 MW.

### 5.2.2. *Supply and Transformation Sectors*

Quantities of energy products that are mentioned in Section 5.1 (except for hydro power, solar photovoltaic energy, energy from tides, waves and oceans and wind energy) and used in the Supply and Transformation Sectors must be declared for the following aggregates:

1. Production
2. Imports
3. Exports
4. Stock changes

A stock build is shown as a negative number and a stock draw is shown as a positive number.

5. Gross consumption
6. Statistical differences
7. Total transformation Sector

Quantities of renewables and wastes used for the conversion of primary forms of energy to secondary (e.g. landfill gases to electricity) or used for the transformation to derived energy products (e.g.: biogas used for blended natural gas).

7.1. Of which: Main Activity Producer Electricity Plants

7.2. Of which: Main Activity Producer CHP Plants

7.3. Of which: Main Activity Producer Heat Plants

7.4. Of which: Autoproducer Electricity plants

7.5. Of which: Autoproducer CHP plants

7.6. Of which: Autoproducer Heat plants

7.7. Of which: Patent Fuel Plants

Quantities of renewables and wastes used to produce patent fuel. Renewables and wastes used for heating and operation of equipment must be reported as consumption in the Energy sector.

7.8. Of which: BKB/PB Plants

Quantities of renewables and wastes used to produce BKB. Renewables and wastes used for heating and operation of equipment must be reported as consumption in the Energy sector.

7.9. Of which: Gas Works Gas

Quantities of renewables and wastes used to produce gas works gas. Renewables and wastes used for heating and operation of equipment must be reported as consumption in the Energy sector.

7.10. Of which: blast furnaces

Quantities of renewable energy (e.g. charcoal) transformed in blast furnaces.

Renewable energy used for heating and operations of equipment should not be reported here, but reported as consumption in the Energy sector.

7.11. Of which: Natural gas blending plants

Quantities of biogases blended with natural gas which are injected to the natural gas network.

7.12. Of which: blending with Motor gasoline/Diesel/Kerosene

Quantities of liquid biofuels which are not delivered to the final consumption but are used with other petroleum products reported in the oil questionnaire.

7.13. Of which: Charcoal production plants

Quantities of wood used for the production of Charcoal.

7.14. Of which: Not Elsewhere Specified – Transformation

### 5.2.3. Energy Sector

Quantities of energy products that are mentioned in Section 5.1 (except for hydro power, solar photovoltaic energy, energy from tides, waves and oceans and wind energy) and used in the energy sector or for final consumption must be declared for the following aggregates:

1. Total Energy Sector

Renewable energies and wastes consumed by the energy industry to support the transformation activity. For example renewable energies and wastes used for heating, lighting or operating pumps/ compressors.

Quantities of renewable energies and wastes transformed into another energy form should be reported under the Transformation sector.

- 1.1. Of which: Gasification plants
- 1.2. Of which: Public Electric, CHP & Heat plants
- 1.3. Of which: Coal Mines
- 1.4. Of which: Patent Fuel Plants
- 1.5. Of which: Coke Ovens
- 1.6. Of which: Petroleum Refineries
- 1.7. Of which: BKB/PB Plants
- 1.8. Of which: Gas Works Gas
- 1.9. Of which: Blast Furnaces
- 1.10. Of which: Charcoal production plants
- 1.11. Of which: Not Elsewhere Specified
2. Distribution Losses

All losses occurred due to transport and distribution.

#### 5.2.4. Energy end-use

Quantities of energy products that are mentioned in Section 5.1 (except for hydro power, solar photovoltaic energy, energy from tides, waves and oceans and wind energy) must be declared for the following aggregates:

1. Final Energy Consumption
2. Industry Sector
  - 2.1. Of which: Iron and Steel
  - 2.2. Of which: Chemical and Petrochemical
  - 2.3. Of which: Non-Ferrous Metals
  - 2.4. Of which: Non-Metallic Minerals
  - 2.5. Of which: Transport Equipment
  - 2.6. Of which: Machinery
  - 2.7. Of which: Mining and Quarrying
  - 2.8. Of which: Food, Beverages and Tobacco
  - 2.9. Of which: Pulp, Paper and printing
  - 2.10. Of which: Wood and Wood Products
  - 2.11. Of which: Construction
  - 2.12. Of which: Textile and Leather

- 2.13. Of which: Not Elsewhere Specified – Industry
- 3. Transport Sector
  - 3.1. Of which: Rail
  - 3.2. Of which: Road
  - 3.3. Of which: Domestic Navigation
  - 3.4. Of which: Not Elsewhere Specified – Transport
- 4. Other Sectors
  - 4.1. Of which: Commercial and Public Services
  - 4.2. Of which: Residential
    - 4.2.1. Residential, of which: Space heating
    - 4.2.2. Residential, of which: Space cooling
    - 4.2.3. Residential, of which: Water heating
    - 4.2.4. Residential, of which: Cooking
    - 4.2.5. Residential, of which: Other end uses
  - 4.3. Of which: Agriculture/Forestry
  - 4.4. Of which: Fishing
  - 4.5. Of which: Not Elsewhere Specified – Other

#### 5.2.5. *Technical Characteristics of Installations*

The following electricity generation capacities are to be declared as applicable at the end of the reported year:

1. Hydro power
  - Capacity must be reported for plant sizes of < 1 MW, 1 to < 10 MW,  $\geq$  10 MW, for mixed plants and for pure pumped storage, as well as for all sizes combined. Detailed plant sizes should be reported net of pumped storage.
2. Geothermal
3. Solar Photovoltaic
4. Solar Thermal
5. Tide, Wave, Ocean
6. Wind
7. Industrial Waste (non-renewable)
8. Municipal Waste
9. Solid biofuels
10. Biogases
11. Biodiesels
12. Other liquid Biofuels

The total surface installed of solar collectors is to be declared.

The following biofuel production capacities are to be declared:

1. Biogasoline
2. Biodiesels
3. Bio jet kerosene
4. Other Liquid Biofuels

#### 5.2.6. *Imports and exports*

Imports by country of origin, and exports by country of destination are to be declared for the following products:

1. Biogasoline
  - 1.1. Of which: Bioethanol
2. Bio jet kerosene
3. Biodiesels
4. Other Liquid Biofuels
5. Wood pellets

#### 5.2.7. *Production of solid biofuels and biogases*

The production of the following products is to be declared:

1. Solid biofuels (excluding charcoal)
  - 1.1. Of which: fuelwood, wood residues and by-products
    - 1.1.1. From fuelwood, wood residues and by-products, of which: wood pellets
  - 1.2. Of which: black liquor
  - 1.3. Of which: bagasse
  - 1.4. Of which: animal waste
  - 1.5. Of which: other vegetal materials and residues
2. Biogases from anaerobic fermentation
  - 2.1. Of which: landfill gas
  - 2.2. Of which: sewage sludge gas
  - 2.3. Of which: other biogases from anaerobic fermentation
3. Biogases from thermal proceses

### 5.3. **Calorific values**

Average net calorific values are to be declared for the following products:

1. Biogasoline
2. Bioethanol
3. Biodiesel
4. Bio jet kerosene

5. Other liquid biofuels
6. Charcoal

#### 5.4. Units of measurement

1. Electricity generation: MWh
2. Heat production: TJ
3. Renewable energy products
  - Biogasoline, biodiesels and other liquid biofuels: tonnes
  - Charcoal: 1 000 tonnes
  - All others: TJ (on the basis of net calorific values).
4. Solar collectors surface: 1 000 m<sup>2</sup>
5. Plants capacity
  - Biofuels: tonnes/year All others: MWe
6. Calorific values: kJ/kg (net calorific value).

#### 5.5. Derogations and exemptions

Not applicable.

### 6. APPLICABLE PROVISIONS

The following provisions apply for the data collection as described in all preceding chapters:

1. Reported period:
  - A calendar year (1 January to 31 December).
2. Frequency
  - Annual.
3. Deadline for transmission of data
  - 30 November of the year following the reported period.
4. Transmission format and method
  - The transmission format shall conform to an appropriate interchange standard specified by Eurostat.
  - Data shall be transmitted or uploaded by electronic means to the single entry point for data at Eurostat.

## ANNEX C

### MONTHLY ENERGY STATISTICS

This Annex describes the scope, units, reported period, frequency, deadline and transmission modalities for the monthly collection of energy statistics.

Annex A applies for explanations of terms for which a specific explanation is not supplied in this Annex.

#### 1. SOLID FUELS

##### 1.1. Applicable energy products

Unless otherwise specified this data collection applies to all of the following energy products:

1. Hard coal

Hard coal refers to coal of gross calorific value equal to or greater than 20 000 kJ/kg on an ash-free but moist basis and with a mean random reflectance of vitrinite of at least 0,6 percent.

2. Lignite

Non-agglomerating coal with a gross calorific value less than 20 000 kJ/kg and greater than 31% volatile matter on a dry mineral matter free basis.

3. Peat

A combustible soft, porous or compressed, fossil sedimentary deposit of plant origin with high water content (up to 90 percent in the raw state), easily cut, and of light to dark brown colour. Peat used for non-energy purposes should not included here. Milled peat is included here.

4. Patent fuel

A composition fuel manufactured from hard coal fines with the addition of a binding agent.

5. BKB (brown coal briquettes)

BKB is a composition fuel manufactured from lignite or sub-bituminous coal, produced by briquetting under high pressure without the addition of a binding agent, including dried lignite fines and dust.

6. Coke

The solid product obtained from carbonisation of coal, principally coking coal, at high temperature, it is low in moisture and volatile matter. Coke oven coke is used mainly in the iron and steel industry acting as energy source and chemical agent. Coke breeze and foundry coke are included in this category. Semi-coke (a solid product obtained from carbonisation of coal at low temperature) should be included in this category. Semi-coke is used as a domestic fuel or by the transformation plant itself. This heading also includes coke, coke breeze, gas coke and semi-coke made from lignite.

## 1.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.

Annex A applies for explanations of terms for which a specific explanation is not supplied in this Annex.

### 1.2.1. Supply Sector

The following aggregates apply to hard coal, lignite and peat:

1. Production
2. Recovered products (applies to hard coal only)  
Slurries and waste-heap shale recovered by mines.

3. Total imports

4. Total exports

5. Stocks:

- Beginning of period
- End of period
- Stock changes

These are the quantities held by mines and importers.

Excludes consumer stocks (e.g. those held in power stations and coking plants) except stocks held by consumers who import directly.

A stock build is shown as a negative number and a stock draw is shown as a positive number.

6. Calculated Inland Deliveries.

Total amount of product calculated to have been delivered for inland consumption. It is defined as:

= Production + recovered products + Imports - Exports + Stock changes

7. Statistical difference.

Equals to calculated minus observed inland deliveries.

Applies to hard coal only.

8. Observed Internal Deliveries.

Quantities delivered to the internal market. Equal to the total of the deliveries to the different types of consumers. A difference may occur between the calculated and observed deliveries.

Applies to hard coal only.

8.1. Of which: deliveries to main activity producer power stations

8.2. Of which: deliveries to coking plants

8.3. Of which: deliveries to Patent fuel plants

Quantities used for transformation in patent fuels plants (pithead and independent).

8.4. Of which: deliveries to total industry

## 8.5. Of which: other deliveries (services, households, etc.)

Quantities of fuel to households (including colliery coal supplied to workers in mines and associated plants) and services (administrations, shops, etc.) and also to sectors not elsewhere specified.

The following aggregates apply to coke, patent fuels and brown coal briquettes:

## 1. Production

## 2. Total imports

## 3. Total exports

## 4. Stocks:

- Beginning of period

- End of period

- Stock changes

Quantities held in coking plants (coke) and patent fuel plants (patent fuels).

Excludes consumers' stocks excepted stocks held by consumers which import directly.

A stock build is shown as a negative number and a stock draw is shown as a positive number.

## 5. Calculated Inland Deliveries

Total amount of product calculated to have been delivered for inland consumption. It is defined as:

= Production + Imports - Exports + Stock changes

## 6. Deliveries to Iron &amp; steel industry (applies to coke only)

## 1.2.2. Imports

Imports by country of origin and exports by country of destination are to be declared for hard coal.

## 1.3. Units of measurement

All product quantities are expressed in 10<sup>3</sup> tonnes.

## 1.4. Derogations and exemptions

Not applicable.

**2. ELECTRICITY****2.1. Applicable energy products**

This chapter covers electrical energy.

**2.2. List of aggregates**

The following list of aggregates shall be declared.

## 2.2.1. Production Sector

For the following aggregates both gross and net quantities must be declared:

1. Total electricity production
  - 1.1. Of which: Nuclear
  - 1.2. Of which: Hydro
    - 1.2.1. From 1.2, of which: part of hydro produced from pumped storage
  - 1.3. Of which: Geothermal
  - 1.4. Of which: Conventional thermal
  - 1.5. Of which: Wind

Also the following quantities of electrical energy must be declared:

2. Imports
  - 2.1. Of which: intra-EU imports
3. Exports
  - 3.1. Of which: extra-EU exports
4. Used for pumped storage
5. Used for the internal market

This is calculated as:

$$= \text{Total net production} + \text{Imports} - \text{Exports} - \text{Used for pumped storage}$$

For the fuel consumption in main activity producer plants the following aggregates apply (refer to Annex B for the definition of lignite and Annex C for the definition of hard coal):

6. Total fuel consumption in main activity producer plants
 

Total quantity of fuel consumed for the purpose of producing electricity and also for the production of heat to be sold to third parties exclusively.

  - 6.1. Of which: Hard coal
  - 6.2. Of which: Lignite
  - 6.3. Of which: Petroleum products
  - 6.4. Of which: Natural gas
  - 6.5. Of which: Derived gas (these are manufactured gases)
  - 6.6. Of which: Other fuels

#### 2.2.2. *Fuel stocks in main activity producers*

By main activity producers are meant public utilities generating electricity by using fuels. The following closing stocks (stocks at the end of the reported month) must be declared:

1. Hard coal
2. Lignite
3. Petroleum products

### 2.3. Units of measurement

1. Energy quantities

Electricity: GWh

Hard coal, lignite and petroleum products: both in  $10^3$  tonnes and in TJ on the basis of the net calorific value.

Natural gas and derived gases: TJ on the basis of the gross calorific value.

Other fuels: TJ on the basis of the net calorific value.

Nuclear heat: TJ.

## 2. Stocks

*10<sup>3</sup> tonnes*

### 2.4. Derogations and exemptions

Not applicable.

## 3. OIL AND PETROLEUM PRODUCTS

### 3.1. Applicable energy products

Unless otherwise specified this data collection applies to all of the following energy products, for which the definitions in Annex B Chapter 4 apply: crude oil, NGL, refinery feedstocks, other hydro-carbons, refinery gas (not liquefied), ethane, LPG, naphtha, motor gasoline, aviation gasoline, gasoline type jet fuel (naphtha type jet fuel or JP4), kerosene type jet fuel, other kerosene, gas/diesel oil (distillate fuel oil), transport diesel, heating and other gasoil, fuel oil (both low and high sulphur content), white spirit and SBP, lubricants, bitumen, paraffin waxes and petroleum coke.

Where applicable, motor gasoline must be declared in two categories namely biogasoline and non-biogasoline; jet kerosene must be declared in two categories namely bio jet kerosene and non-bio jet kerosene; gas/ diesel oil must be declared in four categories namely road diesel, heating and other gas oil, biodiesels and non-bio gas/diesel oil.

'Other Products' include both the quantities that correspond to the definition in Annex B Chapter 4) and in addition the quantities of white spirit and SBP, lubricants, bitumen and paraffin waxes; these products must not be declared separately.

### 3.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.

#### 3.2.1. Supply Sector

The following table applies only to crude oil, NGL, refinery feedstocks, additives/oxygenates, biofuels and other hydrocarbons only:

##### 1. Indigenous Production

Not applicable for refinery feedstocks.

##### 2. From Other Sources

Additives, Biofuels and Other hydrocarbons, the production of which has already been cov-

ered in other fuel balances.

Not applicable for crude oil, NGL and refinery feedstocks.

### 3. Backflows From Petrochemical Sector

Finished or semi-finished products which are returned from final consumers to refineries for processing, blending or sale. They are usually by-products of petrochemical manufacturing.

Only applicable for refinery feedstocks.

### 4. Products Transferred

Imported petroleum products which are reclassified as feedstocks for further processing in the refinery, without delivery to final consumers.

Only applicable for refinery feedstocks.

### 5. Imports and exports

Includes quantities of crude oil and products imported or exported under processing agreements (i.e. refining on account). Crude oil and NGLs should be reported as coming from the country of ultimate origin; refinery feedstocks and finished products should be reported as coming from the country of last consignment.

Includes any gas liquids (e.g. LPG) extracted during the regasification of imported liquefied natural gas and petroleum products imported or exported directly by the petrochemical industry.

Note: All trade of biofuels which have not been blended with transport fuels (i.e. in their pure form) should be reported in the Renewables Questionnaire.

### 6. Direct Use

Crude oil, NGL and Other hydrocarbons used directly without being processed in petroleum refineries.

Includes crude oil burned for electricity generation.

### 7. Stock changes

A stock build is shown as a positive number and a stock draw is shown as a negative number.

### 8. Calculated Refinery Intake

Total amount of product calculated to have entered the refinery process. It is defined as:

= Indigenous production + From other sources + Backflows from industry + Products transferred + Imports - Exports - Direct use - Stock changes

### 9. Statistical differences

Defined as the calculated refinery intake minus the observed one.

### 10. Observed Refinery Intake

Amounts measured as input to refineries

### 11. Refinery Losses

The difference between Refinery intake (observed) and Gross refinery output. Losses may occur during the distillation processes due to evaporation. Reported losses are positive. There may be volumetric gains but no gains in mass.

The following table does not apply to refinery feedstocks nor to additives/ oxygenates:

### 1. Primary Product Receipts

Includes quantities of indigenous or imported crude oil (including condensate) and indigenous NGL used directly without being processed in a petroleum refinery and quantities of Backflows from the Petrochemical industry which, although not primary fuel, are used directly.

### 2. Gross Refinery Output

Production of finished products at a refinery or blending plant.

Excludes refinery losses, but includes Refinery fuel.

### 3. Recycled Products

Finished products which pass a second time through the marketing network, after having been once delivered to final consumers (e.g. used lubricants which are reprocessed). These quantities should be distinguished from petrochemical Backflows.

### 4. Refinery Fuel

Petroleum products consumed in support of the operation of a refinery.

Excludes products used by oil companies outside the refining process, e.g. bunkers or oil tankers.

Includes fuels used for the production at the refineries of electricity and heat sold.

### 5. Imports and Exports

### 6. International Marine Bunkers

### 7. Interproduct Transfers

Quantities reclassified either because their specification has changed or because they are blended into another product.

A negative entry for one product is compensated by a positive entry (or several entries) for one or several products and vice versa; the total net effect should be zero.

### 8. Products Transferred

Imported petroleum products which are reclassified as feedstocks for further processing in the refinery, without delivery to final consumers.

### 9. Stock Changes

A stock build is shown as a positive number and a stock draw is shown as a negative number.

### 10. Calculated Gross Inland Deliveries

This is defined as:

$$= \text{Primary product receipts} + \text{Gross refinery output} + \text{Recycled products} - \text{Refinery fuel} + \text{Imports} - \text{Exports} - \text{International marine bunkers} + \text{Interproduct transfers} - \text{Products transferred} - \text{Stock changes}$$

### 11. Statistical Difference

Defined as the calculated gross inland delivery minus the observed one.

### 12. Observed Gross Inland Deliveries

The observed delivery of finished petroleum products from primary sources (e.g. refineries, blending plants, etc.) to the inland market.

This figure may differ from the calculated figure due, for example, to differences in coverage and/or differences of definition in different reporting systems.

- 12.1. Of which: Deliveries to International Civil Aviation
- 12.2. Of which: Deliveries to main activity producer power plants
- 12.3. Of which: Deliveries of Automotive LPG
- 12.4. Of which: Deliveries (gross) to Petrochemical sector
13. Backflows from Petrochemical sector to refineries
14. Total net inland deliveries

### 3.2.2. Stocks

The following opening and closing stocks must be declared for all energy products including for additives/oxygenates but except for refinery gas:

#### 1. Stocks on national territory

Stocks in the following locations: refinery tanks, bulk terminals, pipeline tankage, barges and coastal tankers (when port of departure and destination are in the same country), tankers in a port of a member country (if their cargo is to be discharged at the port), inland ship bunkers. Exclude stocks of oil held in pipelines, in rail tanks cars, in truck tanks cars, in sea-going ships' bunkers, in service stations, in retail stores and in bunkers at sea.

#### 2. Stocks held for other countries under bilateral government agreements

Stocks on national territory which belong to another country and to which the access is guaranteed by an agreement between the respective governments.

#### 3. Stocks with known foreign destination

Stocks not included in point 2 on national territory which belong to and are destined for another country. These stocks may be located inside or outside bonded areas.

#### 4. Other stocks held in bonded areas

Includes stocks not included in point 2 nor 3 irrespective of whether they have received customs clearance or not.

#### 5. Stocks held by major consumers

Include stocks which are subject to government control. This definition does not include other consumer stocks.

#### 6. Stocks held on board incoming ocean vessels in port or at mooring

Stocks irrespective of whether they have been cleared by customs or not. This category excludes stocks on board vessels at high seas.

Includes oil in coastal tankers if both their port of departure and destination are in the same country. In the case of incoming vessels with more than one port of unloading, only report the amount to be unloaded in the reporting country.

#### 7. Stocks held by government on national territory

Includes non-military stocks held within the national territory by government, which are government owned or controlled and held exclusively for emergency purposes.

Excludes stocks held by state oil companies or electric utilities or stocks held directly by oil companies on behalf of governments.

8. Stocks held by stock holding organisation on national territory

Stocks held by both public and private corporations established to maintain stocks exclusively for emergency purposes.

Excludes mandatory stocks held by private companies.

9. All other stocks held on national territory

All other stocks satisfying the conditions described in point 1 above.

10. Stocks held abroad under bilateral government agreements

Stocks belonging to the reporting country but held in another country, to which access is guaranteed by an agreement between the respective governments.

10.1. Of which: Government stocks

10.2. Of which: Holding organisation's stocks

10.3. Of which: Other stocks

11. Stocks held abroad designated definitely for import stocks

Stocks not included in category 10 which belonging to the reporting state but which are held in another state and awaiting import there.

12. Other stocks in bonded areas

Other stocks in the national territory not included in the above categories.

13. Pipeline fill

Oil (crude oil and petroleum products) contained in pipelines, necessary to maintain the flow in the pipelines.

In addition, a breakdown of quantities per corresponding country must be declared for:

- closing stocks held for other countries under official agreement, by beneficiary,
- closing stocks held for other countries under official agreement, of which held as stock tickets, by beneficiary,
- closing stocks with known foreign destination, by beneficiary,
- closing stocks held abroad under official agreement, by location,
- closing stocks held abroad under official agreement, of which held as stock tickets, by location,
- closing stocks held abroad designated definitely for import into the declarer's country, by location.

By opening stocks are meant the stocks on the last day of the month preceding the reported one.

By closing stocks are meant the stocks on the last day of the reported month.

### 3.2.3. Imports and exports

Imports by country of origin, and exports by country of destination.

## 3.3. Units of measurement

Energy quantities: 10<sup>3</sup> tonnes

### 3.4. Geographical notes

For statistical reporting purposes only, the clarifications of Annex A Chapter 1 apply with the following specific exceptions:

1. Denmark includes the Faeroe Islands and Greenland.
2. Switzerland includes Liechtenstein.

### 3.5. Derogations and exemptions

Not applicable.

## 4. NATURAL GAS

### 4.1. Applicable energy products

Natural gas is defined in Annex B Chapter 2.

### 4.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.

#### 4.2.1. Supply Sector

##### 1. Indigenous Production

All dry marketable production within national boundaries, including offshore production. Production is measured after purification and extraction of NGLs and sulphur.

Excludes extraction losses and quantities reinjected, vented or flared.

Includes quantities used within the natural gas industry; in gas extraction, pipeline systems and processing plants.

##### 2. Imports

##### 3. Exports

##### 4. Stock changes

A stock build is shown as a positive number and a stock draw is shown as a negative number.

##### 5. Calculated Gross Inland Deliveries

This is defined as:

= Indigenous Production + Imports - Exports - Stock Change

##### 6. Statistical Difference

Defined as the calculated gross inland delivery minus the observed one.

##### 7. Observed Gross Inland Deliveries

Includes gas used by the gas industry for heating and operation of their equipment (i.e. consumption in gas extraction, in the pipeline system and in processing plants) and losses in distribution.

##### 8. Opening and closing levels of stocks held on national territory

Quantities stored in special storage facilities (depleted gas and/or oil field, aquifer, salt cavity,

mixed caverns or other) as well as liquefied natural gas storage. By opening stocks are meant the stocks on the last day of the month preceding the reported one. By closing stocks are meant the stocks on the last day of the reported month.

9. Own use and losses of the natural gas industry

Own used quantities by the gas industry for heating and operation of its equipment (i.e. consumption in gas extraction, in the pipeline system and in processing plants).

Includes losses in distribution.

#### 4.2.2. Imports and exports

Contrary to the definitions in Annexe A, imports and exports are to be declared by neighbouring country in this case.

### 4.3. Units of measurement

Quantities must be declared in two units:

- in physical quantity, in  $10^6 \text{ m}^3$  assuming reference gas conditions (15 °C, 101,325 kPa),
- in energy content, i.e. in TJ, based on the gross calorific value.

### 4.4. Derogations and exemptions

Not applicable.

## 5. APPLICABLE PROVISIONS

The following provisions apply for the data collection as described in all preceding chapters:

1. Reported period:

A calendar month.

2. Frequency

Monthly.

3. Deadline for transmission of data

All data described under Section 3 (oil and petroleum products) and under Section 4 (natural gas): within 55 days following the reported month.

All other data: within three months following the reported month.

4. Transmission format and method

The transmission format shall conform to an appropriate interchange standard specified by Eurostat.

Data shall be transmitted or uploaded by electronic means to the single entry point for data at Eurostat.

## ANNEX D

### SHORT TERM MONTHLY STATISTICS

This Annex describes the scope, units, reported period, frequency, deadline and transmission modalities for the short-term monthly collection of statistical data.

Annex A applies for explanations of terms for which a specific explanation is not supplied in this Annex.

#### 1. NATURAL GAS

##### 1.1. Applicable energy products

This chapter covers natural gas only. Natural gas is defined in chapter 2 of Annex B.

##### 1.2. List of aggregates

The following list of aggregates shall be declared.

1. Production
2. Imports
3. Exports
4. Stock change

A stock build is shown as a negative number and a stock draw is shown as a positive number.

5. Supply

This is calculated as:

$$= \text{Production} + \text{Imports} - \text{Exports} + \text{Stock change}$$

6. Stocks at the end of month

##### 1.3. Units of measurement

Quantities of natural gas must be declared in TJ, based on the gross calorific value.

##### 1.4. Other applicable provisions

1. Reported period:

A calendar month.

2. Frequency

Monthly.

3. Deadline for transmission of data

Within one month following the reported month.

4. Transmission format and method

The transmission format shall conform to an appropriate interchange standard specified by

Eurostat.

Data shall be transmitted or uploaded by electronic means to the single entry point for data at Eurostat.

### **1.5. Derogations and exemptions**

Germany has a derogation from this data collection until 30 September 2014.

## **2. ELECTRICITY**

### **2.1. Applicable energy products**

This chapter covers electricity only.

### **2.2. List of aggregates**

The following list of aggregates shall be declared.

1. Total electricity production
  - Total gross quantity of electricity generated.
  - Includes own consumption of power plants.
2. Imports
3. Exports
4. Gross electricity Supply
  - This is calculated as:
    - = Total electricity production + Imports - Exports

### **2.3. Units of measurement**

Energy quantities must be expressed in GWh

### **2.4. Other applicable provisions**

1. Reported period:
  - A calendar month.
2. Frequency
  - Monthly.
3. Deadline for transmission of data
  - Within one month following the reported month.
4. Transmission format and method
  - The transmission format shall conform to an appropriate interchange standard specified by Eurostat.
  - Data shall be transmitted or uploaded by electronic means to the single entry point for data at Eurostat.

## 2.5. Derogations and exemptions

Germany is exempted from this data collection.

## 3. OIL AND PETROLEUM PRODUCTS

This data collection is commonly known as the 'JODI Questionnaire'.

### 3.1. Applicable energy products

Unless otherwise specified, this data collection applies to all of the following energy products, for which the definitions in Chapter 4 of Annex B apply: crude oil, LPG, gasoline (which is the sum of motor gasoline and aviation gasoline), kerosene (which is the sum of kerosene type jet fuel and other kerosene), gas/diesel oil and fuel oil (both low and high sulphur content).

In addition, this data collection also applies to 'total oil', by which is meant the sum of all these products except crude oil, and must also include other petroleum products such as refinery gas, ethane, naphtha, petroleum coke, white spirit and SBP, paraffin waxes, bitumen, lubricants and others.

### 3.2. List of aggregates

The following list of aggregates shall be declared for all energy products listed in the previous paragraph unless otherwise specified.

#### 3.2.1. Supply Sector

The following table applies only to crude oil:

1. Production
2. Imports
3. Exports
4. Closing Stock
5. Stock change

A stock build is shown as a positive number and a stock draw is shown as a negative number.

6. Refinery Intake

Observed refinery throughput.

The following table applies to crude oil, LPG, gasoline, kerosene, gas/ diesel oil, fuel oil and total oil:

1. Refinery Output
2. Imports
3. Exports
4. Closing Stock
5. Stock change

A stock build is shown as a positive number and a stock draw is shown as a negative number.

6. Demand

Deliveries or sales to the inland market (domestic consumption) plus Refinery Fuel plus International Marine and Aviation Bunkers. Demand for Total Oil includes Crude.

### **3.3. Units of measurement**

Energy quantities: 10<sup>3</sup> tonnes

### **3.4. Other applicable provisions**

1. Reported period:

A calendar month.

2. Frequency

Monthly.

3. Deadline for transmission of data

Within 25 days following the reported month.

4. Transmission format and method

The transmission format shall conform to an appropriate interchange standard specified by Eurostat.

Data shall be transmitted or uploaded by electronic means to the single entry point for data at Eurostat.

### **3.5. Derogations and exemptions**

Not applicable.

## REGULATION (EU) 2016/1952 of 26 October 2016 on European statistics on natural gas and electricity prices and repealing Directive 2008/92/EC

Incorporated and adapted by Ministerial Council Decision 2018/1/MC-EnC of 3 January 2018 on adopting Regulation (EU) 2016/1952 of 26 October 2016 on European statistics on natural gas and electricity prices and repealing Directive 2008/92/EC

*The adaptations made by Ministerial Council Decision 2018/1/MC-EnC are highlighted in **bold and blue***

Whereas:

- (1) Competitiveness, sustainability and energy security are the overarching goals of a resilient energy union with a forward-looking climate change policy.
- (2) High-quality, comparable, up-to-date, reliable and harmonised data on natural gas and electricity prices charged to final customers are needed in order to draft energy union policy and monitor the Member States' energy markets.
- (3) This Regulation aims to provide for a common framework for European statistics to underpin energy policies in particular towards the creation of a fully integrated internal energy market for customers. Greater transparency on energy costs and prices, as well as on the level of public support, should be made available to improve market integration. This Regulation does not entail any harmonisation of the structure of prices or charges across Member States.
- (4) To date, Directive 2008/92/EC of the European Parliament and of the Council has provided a common framework for producing, transmitting and disseminating comparable statistics on the natural gas and electricity prices charged to industrial customers in the Union.
- (5) The collection of data on natural gas and electricity prices charged to final customers in the household sector has so far been carried out on the basis of a voluntary agreement.
- (6) The growing complexity of the internal energy market makes it increasingly difficult to obtain reliable and up-to-date price data on natural gas and electricity in the absence of legally binding obligations to provide such data, in particular on the household sector.
- (7) In order to guarantee the reporting of high-quality price data for the household sector and for the non-household sector, the collection of both types of data should be covered by a legislative act.
- (8) In most Member States, data on transmission systems are available from energy regulators. However, a much larger number of data compilers are involved in distribution costs and the reporting of data is considered to be more difficult in some Member States. Given the significance of distribution costs and the need for transparency on this matter, the collection of data on natural gas and electricity prices should follow the established practices within the European Statistical System.
- (9) The system of consumption bands used by the Commission (Eurostat) in its price publications should ensure transparency of the market and broad dissemination of non-confidential price data, and should enable the calculation of European aggregates.
- (10) Regulation (EC) No 223/2009 of the European Parliament and of the Council is the reference framework for European statistics. That Regulation provides for statistics to be collected in accordance

with the principles of impartiality, transparency, reliability, objectivity, professional independence and cost-effectiveness, while protecting statistical confidentiality.

(11) Contracting Parties should compile the data on natural gas and electricity prices by using the most appropriate sources and methods to provide the required information.

(12) Data on prices charged to final customers of natural gas and electricity should enable comparisons with the prices of other energy commodities.

(13) Information on the collection of data on prices and on the quality of data should be provided as part of standard reporting procedure.

(14) Detailed data on the breakdown of consumption bands and their respective market shares are an essential part of natural gas and electricity price statistics.

(15) Price analysis can be carried out only if high-quality official statistics are available from Contracting Parties regarding the different components and sub-components of natural gas and electricity prices. A revised methodology for generating a detailed breakdown of the various components and sub-components of the prices of natural gas and electricity charged to final customers will make it possible to analyse the impact of different aspects on the final prices.

(16) The data provided to the Commission (Eurostat) on prices and conditions of sale to final customers, and the breakdown of the number of final customers by consumption in each consumption band, should contain all the information necessary to enable the Commission to decide on appropriate measures or proposals in relation to energy policy.

(17) A good understanding of the taxes, fees, levies and charges in each Member State is essential for ensuring price transparency. The importance of a breakdown of the data on network costs, taxes, fees, levies and charges has been identified.

(18) Contracting Parties in which there is low consumption of natural gas as a proportion of the final energy consumption of households should be exempt from the obligation to provide data on natural gas prices for final household customers.

(19) To improve data reliability, the Commission (Eurostat), together with the Member States, should assess and, if required, improve the methodology for collecting and processing data in a precise manner, in accordance with the governance framework for statistics. Therefore, quality reports should be prepared regularly and assessments of the quality of price data should be carried out regularly.

(20) Based on a reasoned request from a Member State, the Commission should be entitled to grant derogations to that Member State in relation to specific obligations for which the application of this Regulation to the national statistical system of that Member State requires major adaptations or is likely to lead to a significant additional burden on respondents.

(21) In order to ensure uniform conditions for the implementation of this Regulation, implementing powers should be conferred on the Commission as regards the format of and arrangements for the transmission of data, technical quality assurance requirements regarding the content of standard quality reports, and the granting of derogations. Those powers should be exercised in accordance with Regulation (EU) No 182/2011 of the European Parliament and of the Council.

(22) Since the objective of this Regulation, namely the establishment of a common legal framework for the systematic production of European statistics on natural gas and electricity prices, cannot be sufficiently achieved by the Contracting Parties but can rather, by reason of its scale and effects, be

better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Regulation does not go beyond what is necessary to achieve that objective.

(23) Directive 2008/92/EC should therefore be repealed.

(24) The European Statistical System Committee has been consulted,

### **Article 1**

#### **Subject matter**

This Regulation establishes a common framework for the development, production and dissemination of comparable European statistics on natural gas and electricity prices for household and final non-household customers in the Union.

### **Article 2**

#### **Definitions**

For the purposes of this Regulation, the following definitions apply:

(1) 'autoproducers', 'final energy consumption' and 'household' have the same meaning as that attributed to those terms in Annex A to Regulation (EC) No 1099/2008 of the European Parliament and of the Council;

(2) 'transmission', 'distribution', 'customer', 'final customer', 'household customer', 'non-household customer' and 'supply' have the same meaning as that attributed to those terms in Article 2 of Directive 2009/72/EC of the European Parliament and of the Council, when used in relation to electricity;

(3) 'transmission', 'distribution', 'supply', 'customer', 'household customer', 'non-household customer' and 'final customer' have the same meaning as that attributed to those terms in Article 2 of Directive 2009/73/EC of the European Parliament and of the Council, when used in relation to natural gas;

(4) 'network component' means the combination of transmission and distribution network costs as set out in point 6 of Annex I and in point 5 of Annex II.

### **Article 3**

#### **Data sources**

Contracting Parties shall compile data on natural gas and electricity prices, and their components and sub-components concerning network costs, taxes, fees, levies and charges, and on consumption volumes, in accordance with Annexes I and II. One or more of the following sources shall be used, after taking into account the principles of reducing burden on respondents and of administrative simplification:

- (a) statistical surveys;
- (b) administrative sources;
- (c) other sources applying statistical estimation methods.

#### **Article 4**

##### **Coverage**

1. **Contracting Parties** shall ensure that the data collection and compilation in accordance with Annexes I and II provide comprehensible and comparable high-quality data that are representative of their respective natural gas and electricity prices and consumption.
2. **Contracting Parties** shall not be obliged to transmit data on natural gas prices for household customers if the consumption of natural gas in the household sector accounts for less than 1,5% of national final energy consumption in the household sector.
3. At least every three years, **Energy Community Secretariat** shall review which Contracting Parties are not obliged to transmit data pursuant to paragraph 2.

#### **Article 5**

##### **Data transmission**

1. **Contracting Parties** shall provide to the Commission (Eurostat) the data as set out in Annexes I and II.
2. The Commission shall adopt implementing acts establishing the format and arrangements for the transmission of the data as set out in Annexes I and II. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 10(2).
3. **Contracting Parties** shall provide statistics to the Commission (Eurostat) within three months of the end of the relevant reference period.

#### **Article 6**

##### **Reference periods and transmission frequency**

1. The reference periods for the data specified in Annexes I and II shall be annual (January to December) or biannual (January to June and July to December). The first reference periods shall start in 2017.
2. The transmission frequency shall be:
  - (a) annual (for the period from January to December) for data referred to in points 6(a) and 7 of Annex I and points 5(a) and 6 of Annex II;
  - (b) biannual (for the periods from January to June and from July to December) for data referred to in point 6(b) of Annex I and point 5(b) of Annex II.

## **Article 7**

### **Quality assurance**

1. **Contracting Parties** shall ensure the quality of the data provided in accordance with this Regulation. To that end, the standard quality criteria laid down in Article 12(1) of Regulation (EC) No 223/2009 apply.
2. **Contracting Parties** shall inform the Commission (Eurostat), without delay, of any methodological or other changes that might have a significant impact on natural gas and electricity price statistics, and in any event no later than one month after that change occurs.
3. Every three years, **Contracting Parties** shall provide the Commission (Eurostat) with a standard quality report on the data in accordance with the quality criteria laid down in Article 12(1) of Regulation (EC) No 223/2009. Those reports shall include information on the scope and collection of the data, the calculation criteria, the methodology and data sources used, and any changes thereto.
4. The Commission (Eurostat) shall assess the quality of the data provided and shall use that assessment and an analysis of the quality reports referred to in paragraph 3 in order to prepare and publish a report on the quality of European statistics covered by this Regulation.
5. The Commission shall adopt implementing acts establishing technical quality assurance requirements regarding the content of the quality reports referred to in paragraph 3 of this Article. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 10(2).

## **Article 8**

### **Dissemination**

The Commission (Eurostat) shall disseminate natural gas and electricity price statistics no later than five months after the end of each reference period.

## **Article 9**

### **Derogations**

1. Derogations may be granted by the **Energy Community Secretariat** by means of implementing acts in relation to specific obligations for which the application of this Regulation to the national statistical system of a **Contracting Party** requires major adaptations or is likely to lead to a significant additional burden on respondents. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 10(2).
2. For the purposes of paragraph 1, the **Contracting Party** concerned shall submit a duly reasoned request to the **Energy Community Secretariat** by 8 August 2017.
3. Derogations granted pursuant to paragraph 1 shall remain in force for the shortest period of time possible and in any event for no longer than three years.

4. A **Contracting Party** that has been granted a derogation pursuant to paragraph 1 shall apply the relevant provisions of Directive 2008/92/EC for the duration of the derogation.

#### **Article 10**

##### **Committee procedure**

1. The Commission shall be assisted by the European Statistical System Committee established by Regulation (EC) No 223/2009. That Committee shall be a committee within the meaning of Regulation (EU) No 182/2011.

2. Where reference is made to this paragraph, Article 5 of Regulation (EU) No 182/2011 shall apply.

#### **Article 11**

##### **Repeal of Directive 2008/92/EC**

1. Directive 2008/92/EC is repealed with effect from 1 March 2017.

2. Notwithstanding paragraph 1 of this Article, Directive 2008/92/EC shall continue to apply under the conditions provided for in Article 9 of this Regulation.

3. References to the repealed Directive shall be construed as references to this Regulation.

#### **Article 12**

##### **Entry into force**

**This Decision enters into force on the day of its adoption and is addressed to the Contracting Parties.**

**Each Contracting Party shall, not later than 1 March 2018, bring into force the laws, regulations and administrative provisions necessary to comply with Regulation (EU) 2016/1952 of 26 October 2016 on European statistics on natural gas and electricity prices and repealing Directive 2008/92/EC.**

## ANNEX I

### NATURAL GAS PRICES

This Annex sets out the methodology for the collection and compilation of statistical data on natural gas prices for household and final non-household customers.

#### 1. Prices

Prices shall be those charged to household and final non-household customers buying natural gas for their own use that is distributed through mains.

#### 2. Natural gas

Natural gas shall include natural gas and other gaseous fuels blended with natural gas in the transmission and distribution network, such as biogas. Other gaseous fuels that are distributed through dedicated networks without being blended with natural gas (e.g. gas works gas, coke oven gas, blast furnace gas and biogas) shall be excluded.

#### 3. Reporting units

The data shall include all household and final non-household customers of natural gas, but shall exclude customers who use natural gas only for:

- electricity generation in power plants or in combined heat and power (CHP) plants; or
- non-energy purposes (e.g. for use in the chemicals industry).

#### 4. Units of measurement

Prices shall be the national average prices charged to household and final non-household customers.

Prices shall be expressed in national currency per gigajoule (GJ). The unit of energy used shall be measured on the basis of the gross calorific value (GCV).

Prices shall be weighted according to the market share of natural gas supply undertakings in each consumption band. If it is not possible to calculate weighted average prices, arithmetic average prices may be provided. In either case, the data shall cover a representative share of the national market.

#### 5. Consumption bands

Prices shall be based on a system of standard annual natural gas consumption bands.

(a) For household customers, the following bands shall be applied:

Consumption band	Annual natural gas consumption (GJ)	
	Minimum	Maximum
Band D1		< 20
Band D2	≥ 20	< 200
Band D3	≥ 200	

(b) For final non-household customers, the following bands shall be applied:

Consumption band	Annual natural gas consumption (GJ)	
	Minimum	Maximum
Band I1		< 1 000
Band I2	≥ 1 000	< 10 000
Band I3	≥ 10 000	< 100 000
Band I4	≥ 100 000	< 1 000 000
Band I5	≥ 1 000 000	< 4 000 000
Band I6	≥ 4 000 000	

## 6. Level of detail

Prices shall include all charges payable: network charges plus energy consumed, minus any rebates or premiums, plus any other charges (e.g. meter rental, standing charges). Initial connection charges shall be excluded.

Detailed data shall be transmitted as specified below.

### (a) Level of detail required for components and sub-components

Prices shall be subdivided into three main components and into separate sub-components.

The final customer price for natural gas by consumption band is the sum of the three main components: the energy and supply component, the network component (transmission and distribution) and the component comprising taxes, fees, levies and charges.

Component and sub-component	Description
Energy and supply	This component shall include the commodity price for natural gas paid by the supplier or the price of natural gas at the point of entry into the transmission system, including, if applicable, the following end-user costs: storage costs plus costs relating to the sale of natural gas to final customers.
Network	The network price shall include the following end-user costs: transmission and distribution tariffs, transmission and distribution losses, network costs, after-sale service costs, system service costs and meter rental and metering costs.
Sub-component	The network component shall be subdivided into end-user transmission and distribution network costs, as follows:
	1. Average relative share of transmission costs for household customers and average relative share of transmission costs for final non-household customers, expressed as a percentage of total network costs.
	2. Average relative share of distribution costs for household customers and average relative share of distribution costs for final non-household customers, expressed as a percentage of total network costs.

Taxes, fees, levies and charges	This component is the sum of all the sub-components (taxes, fees, levies and charges) listed below.
Sub-component	The following sub-components shall be transmitted as individual items for each consumption band defined in point 5.
	1. Value added tax as defined in Council Directive 2006/112/EC.
	2. Taxes, fees, levies or charges relating to the promotion of renewable energy sources, energy efficiency and CHP generation.
	3. Taxes, fees, levies or charges relating to strategic stockpiles, capacity payments and energy security; taxes on natural gas distribution; stranded costs and levies on financing energy regulatory authorities or market and system operators.
	4. Taxes, fees, levies or charges relating to air quality and for other environmental purposes; taxes on emissions of CO <sub>2</sub> or other greenhouse gases.
	5. All other taxes, fees, levies or charges not covered by any of the previous four categories: support for district heating; local or regional fiscal charges; island compensation; concession fees relating to licences and fees for the occupation of land and public or private property by networks or other devices.

#### (b) Level of detail based on taxation

Prices shall be broken down into the following three levels:

Level	Description
Prices excluding all taxes, fees, levies and charges	This price level shall include only the energy and supply component and the network component.
Prices excluding value added tax (VAT) and other recoverable taxes	This price level shall include the energy and supply component, the network component and taxes, fees, levies and charges considered as non-recoverable for final non-household customers. For household customers this price level shall include the energy and network components and taxes, fees, levies and charges but excludes VAT.
Prices including all taxes	This price level shall include the energy and supply component, the network component, and all recoverable and non-recoverable taxes, fees, levies and charges, including VAT.

#### 7. Consumption volumes

Contracting Parties shall transmit information on the relative share of natural gas in each consumption band based on the total volume to which the prices refer.

The annual consumption volumes for each consumption band shall be transmitted once per year, together with the price data for the second semester.

The data shall not be older than two years.

## ANNEX II

### ELECTRICITY PRICES

This Annex sets out the methodology for the collection and compilation of statistical data on electricity prices for household and final non-household customers.

#### 1. Prices

Prices shall be those charged to household and final non-household customers buying electricity for their own use.

#### 2. Reporting units

The data shall include all household and final non-household customers of electricity, but electricity generated and subsequently consumed by autoproducers shall be excluded from the reporting obligation.

#### 3. Units of measurement

Prices shall be the national average prices charged to household and final non-household customers. Prices shall be expressed in national currency per kilowatt-hour (kWh).

Prices shall be weighted according to the market share of electricity supply undertakings in each consumption band. If it is not possible to calculate weighted average prices, arithmetic average prices may be provided. In either case, the data shall cover a representative share of the national market.

#### 4. Consumption bands

Prices shall be based on a system of standard annual electricity consumption bands.

(a) For household customers, the following bands shall be applied:

Consumption band	Annual electricity consumption (kWh)	
	Minimum	Maximum
Band DA		< 1 000
Band DB	≥ 1 000	< 2 500
Band DC	≥ 2 500	< 5 000
Band DD	≥ 5 000	< 15 000
Band DE	≥ 15 000	

(b) For final non-household customers, the following bands shall be applied:

Consumption band	Annual electricity consumption (MWh)	
	Minimum	Maximum
Band IA		< 20
Band IB	≥ 20	< 500
Band IC	≥ 500	< 2 000
Band ID	≥ 2 000	< 20 000
Band IE	≥ 20 000	< 70 000
Band IF	≥ 70 000	< 150 000
Band IG	≥ 150 000	

## 5. Level of detail

Prices shall include all charges payable: network charges plus energy consumed, minus any rebates or premiums, plus any other charges (e.g. meter rental, standing charges). Initial connection charges shall be excluded.

Detailed data shall be transmitted as specified below.

### (a) Level of detail required for components and sub-components

Prices shall be subdivided into three main components and into separate sub-components.

The final customer price for electricity by consumption band is the sum of the three main components: the energy and supply component, the network component (transmission and distribution) and the component comprising taxes, fees, levies and charges.

Component and sub-component	Description
Energy and supply	This component shall include the following end-user costs: generation, aggregation, balancing energy, supplied energy costs, customer services, after-sales management and other supply costs.
Network	The network price shall include the following end-user costs: transmission and distribution tariffs, transmission and distribution losses, network costs, after-sale service costs, system service costs, and meter rental and metering costs.
Sub-component	<p>The network component shall be subdivided into end-user transmission and distribution network costs, as follows:</p> <ol style="list-style-type: none"> <li>1. Average relative share of transmission costs for household customers and average relative share of transmission costs for final non-household customers, expressed as a percentage of total network costs.</li> <li>2. Average relative share of distribution costs for household customers and average relative share of distribution costs for final non-household customers, expressed as a percentage of total network costs.</li> </ol>

Taxes, fees, levies and charges	This component is the sum of all the sub-components (taxes, fees, levies and charges) listed below.
Sub-component	The following sub-components shall be transmitted as individual items for each consumption band defined in point 4.
	1. Value added tax as defined in Directive 2006/112/EC.
	2. Taxes, fees, levies or charges relating to the promotion of renewable energy sources, energy efficiency and CHP generation.
	3. Taxes, fees, levies or charges relating to capacity payments, energy security and generation adequacy; taxes on coal industry restructuring; taxes on electricity distribution; stranded costs and levies on financing energy regulatory authorities or market and system operators.
	4. Taxes, fees, levies or charges relating to air quality and for other environmental purposes; taxes on emissions of CO <sub>2</sub> or other greenhouse gases.
	5. Taxes, fees, levies or charges relating to the nuclear sector, including nuclear decommissioning, inspections and fees for nuclear installations.
	6. All other taxes, fees, levies or charges not covered by any of the previous five categories: support for district heating; local or regional fiscal charges; island compensation; concession fees relating to licences and fees for the occupation of land and public or private property by networks or other devices.

### (b) Level of detail based on taxation

Prices shall be broken down into the following three levels:

Level	Description
Prices excluding all taxes, fees, levies and charges	This price level shall include only the energy and supply component and the network component.
Prices excluding value added tax (VAT) and other recoverable taxes	This price level shall include the energy and supply component, the network component and taxes, fees, levies and charges considered as non-recoverable for final non-household customers. For household customers this price level shall include the energy and the network components and taxes, fees, levies and charges but excludes VAT.
Prices including all taxes	This price level shall include the energy and supply component, the network component, and all recoverable and non-recoverable taxes, fees, levies and charges, including VAT.

## 6. Consumption volumes

Contracting Parties shall transmit information on the relative share of electricity in each consumption band based on the total volume to which the prices refer.

The annual consumption volumes for each consumption band shall be transmitted once per year,

together with the price data for the second semester.

The data shall not be older than two years.

## IMPLEMENTING REGULATION (EU) 2019/803 of 17 May 2019 concerning the technical requirements regarding the content of quality reports on European statistics on natural gas and electricity prices pursuant to Regulation (EU) 2016/1952

Incorporated and adapted by Decision 2020/03/MC-EnC adapting and implementing the Commission Implementing Regulation (EU) 2019/803 of 17 May 2019 concerning the technical requirements regarding the content of quality reports on European statistics on natural gas and electricity prices pursuant to Regulation (EU) 2016/1952 of the European Parliament and of the Council

*The adaptations made by Ministerial Council Decision 2020/03/MC-EnC are highlighted in **bold and blue**.*

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EU) 2016/1952 of the European Parliament and of the Council of 26 October 2016 on European statistics on natural gas and electricity prices and in particular Article 7(5) thereof, **as adopted and adapted by Decision 2018/01/MC-EnC of the Ministerial Council of the Energy Community and in particular Article 7(5) thereof.**

Whereas:

(1) Regulation (EU) 2016/1952 sets out the framework for producing comparable European statistics on natural gas and electricity prices.

(2) In accordance with Article 7(3) of Regulation (EU) 2016/1952, every 3 years, **Contracting Parties** are to provide the Commission (Eurostat) with standard quality reports on the data in accordance with the quality criteria laid down in Article 12(1) of Regulation (EC) No 223/2009 of the European Parliament and of the Council. Those reports are to include information on the scope and collection of the data, the calculation criteria, the methodology and data sources used, and any changes thereto.

(3) In accordance with Article 7(4) of Regulation (EU) 2016/1952, the Commission (Eurostat) is to assess the quality of the data submitted and is to use that assessment and an analysis of the quality reports in order to prepare and publish a report on the quality of European statistics covered by the Regulation (EU) 2016/1952.

(4) Following the entry into force of Regulation (EU) 2016/1952, the Commission (Eurostat) worked closely with **Contracting Parties** to assess the relevant technical quality assurance requirements regarding the content and the appropriate timing of the quality reports.

(5) The measures provided for in this Regulation are in accordance with the opinion of the European Statistical System Committee.

### Article 1

(1) The technical quality assurance requirements regarding the content of the quality reports on the

data on natural gas and electricity prices are set out in the Annex.

(2) **Contracting Parties** shall submit the first quality reports **by 15 June 2022**.

(3) Each quality report shall cover the full years elapsed since the date of the previous quality report. However, the first quality reports shall cover reference years **2019 to 2021**.

### ***Article 2***

The quality reports shall be provided through the single entry point provided by the Commission (Eurostat) in order to enable the Commission (Eurostat) to receive those quality reports by electronic means.

### ***Article 3***

**This Decision shall enter into force on the day of its adoption.**

**It is addressed to the Contracting Parties.**

## ANNEX

### TECHNICAL QUALITY ASSURANCE REQUIREMENTS REGARDING THE CONTENT OF THE QUALITY REPORTS OF EUROPEAN STATISTICS ON NATURAL GAS AND ELECTRICITY PRICES

*The quality reports shall include information on all the quality criteria laid down in Article 12(1) of Regulation (EC) No 223/2009.*

#### 1. RELEVANCE

**Contracting Parties** shall provide the following information in the quality reports:

- (a) a description of users, their respective needs and a justification of these needs;
- (b) procedures used to measure user satisfaction and produce the results;
- (c) the extent to which the required statistics are available.

#### 2. ACCURACY

The quality reports shall contain:

- (a) an accuracy assessment which summarises the various dataset components;
- (b) a description of the sampling errors;
- (c) a description of any other errors.

#### 3. TIMELINESS AND PUNCTUALITY

**Contracting Parties** shall report on:

- (a) the length of time between the event or phenomenon they describe and the data availability (timeliness);
- (b) the length of time between the target date for data delivery and the actual data delivery date (punctuality);
- (c) the number of iterations needed in order to have fully validated data (validation iterations).

#### 4. ACCESSIBILITY AND CLARITY

**Contracting Parties** shall report on the conditions and means by which users can:

- (a) obtain and use the data (including, but not limited to news releases, publications, online databases, micro data access);
- (b) interpret the data such as providing documentation on methodology and quality management.

## 5. COMPARABILITY

**Contracting Parties** shall report on the extent to which statistics are comparable:

- (a) between geographical areas;
- (b) over time.

## 6. COHERENCE

**Contracting Parties** shall report on the extent to which statistics are:

- (a) reconcilable with data obtained through other sources (cross domain coherence);
- (b) consistent within a given dataset (internal coherence).

**Contracting Parties shall also report on the following additional quality aspects:**

### 1. QUALITY MANAGEMENT

**Contracting Parties** shall report on the systems and frameworks in place to manage the quality of statistical products and processes. They shall also report on their assessment of the quality of the data.

### 2. DATA REVISION

**Contracting Parties** shall explain why validated data have been revised. The reasons may include information of new source of data available, new methods or other relevant information. The report shall also include the date, the size and the magnitude of the revisions.

***In accordance with Article 7(3) of Regulation (EU) 2016/1952, those reports shall include information on the scope and collection of the data, the calculation criteria, the methodology and data sources used, and any changes made.***

### 1. STATISTICAL PRESENTATION

**Contracting Parties** shall provide the following description of the disseminated data which can be displayed to users as tables, graphs or maps:

- (a) data description;
- (b) classification system;
- (c) sector coverage;
- (d) statistical concepts and definitions;
- (e) statistical unit;
- (f) statistical population;
- (g) reference area (geographical scope);
- (h) time coverage (length of time for which data are available);
- (i) reference period (period covered by the report);

(j) unit of measure.

## 2. STATISTICAL PROCESSING

The quality reports shall cover a description of all procedures used to collect, validate and compile the data and to derive new information.

## 3. RELEASE POLICY

The quality reports shall report on the rules for disseminating the data at national level.

## 4. FREQUENCY OF DISSEMINATION

The reports shall also indicate the frequency with which the data is disseminated at national level.

***In line with the statistical principles laid down in points (e) and (f) of Article 2(1) of Regulation (EC) No 223/2009, Contracting Parties shall report on:***

### 1. CONFIDENTIALITY

The quality reports shall contain information on the legislative measures or other formal procedures, which prevent any unauthorised disclosure of data that could directly or indirectly cause a person or economic entity to be identified. They will also outline the rules applied to ensure statistical confidentiality and prevent unauthorised disclosure.

### 2. COST AND BURDEN

The quality reports shall contain information on the cost and burden associated with the collection and production of the statistical product.

## **PART II**

ACQUIS COMMUNAUTAIRE

CLIMATE

## **RECOMMENDATION of the Ministerial Council of the Energy Community 2017/R/01/MC-EnC on preparing for the development of integrated national energy and climate plans by the Contracting Parties of the Energy Community**

### THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY

Having regard to the Treaty establishing the Energy Community (“the Treaty”), and in particular Articles 2, 25 and 79 thereof,

Whereas:

(1) Article 2 of the Treaty defines as key objectives in relation to Network Energy the creation of a stable regulatory and market framework and of a single regulatory space for trade, the enhancement of security of supply, the improvement of the environmental situation and related energy efficiency, and the development of energy from renewable sources;

(2) The creation of an Energy Union is a central part of the strategic agenda of the EU set by the European Council in June 2014. On 25 February 2015, the European Commission adopted a Communication on “A Framework Strategy for a Resilient Energy Union with a Forward-Looking Climate Change Policy”<sup>1</sup>. The European Council agreed on 19 March 2015 to “building an Energy Union with a forward-looking climate policy on the basis of the Commission’s framework strategy”;

(3) On 18 November 2015, the European Commission adopted a Communication on the State of the Energy Union stating that integrated national energy and climate plans, addressing all five key dimensions of the Energy Union, are crucial tools for the implementation of the Energy Union Strategy and for the development of more strategic energy and climate policy planning. As part of the State of the Energy Union, the European Commission issued a Guidance to EU Member States on integrated national energy and climate plans<sup>2</sup>, which provides the basis for EU Member States to start developing national plans for the period 2021 to 2030 and sets out the main pillars of the governance process;

(4) On 30 November 2016, the European Commission adopted a Proposal for a Regulation of the European Parliament and of the Council on the Governance of the Energy Union<sup>3</sup>;

(5) The development of integrated national energy and climate plans by the Contracting Parties would support the attainment of the long-term energy and climate policy objectives, reduce the administrative burden and enhance transparency while promoting investor certainty in the region;

(6) The framework for regional cooperation established by the Energy Community and the assistance offered by its institutions and bodies is essential to prepare the successful development of integrated national energy and climate plans.

<sup>1</sup> COM(2015) 80 final

<sup>2</sup> COM(2015) 572 final

<sup>3</sup> COM(2016) 759 final

HEREBY RECOMMENDS:

### ***Article 1***

#### **Integrated National Energy and Climate Plans**

1. The Contracting Parties should prepare the analytical, institutional and regulatory preconditions for the development and adoption of integrated national energy and climate plans ('national plans') for the period from 2021 to 2030.
2. National plans should address the five dimensions of the Energy Union set out in the European Commission's Communication of 25 February 2015 in an integrated way which recognises the interactions between the different dimensions. They should also set out the direction of national energy and climate objectives and policies in a way that is coherent with the commitments made by Contracting Parties under the Paris Agreement as well as with other possible long-term energy and climate targets for 2030 applicable to Contracting Parties.
3. National plans should define objectives for each dimension of the Energy Union. For each objective, the plans should include a description of the policies and measures planned for meeting these objectives. This should also include an assessment of how these policies interact with each other to ensure policy coherence and avoid overlapping regulation. National plans should contain a separate section on projections as an analytical basis of the plan, including reference and policy scenarios assessing the relevant impacts of the policies and measures proposed.
4. National plans should aim at streamlining existing sectorial planning and reporting tools applicable to Contracting Parties.
5. National plans should facilitate greater cooperation and coherence among Contracting Parties' and with respect to EU Member States' approaches on climate and energy policies.
6. Contracting Parties should ensure comprehensive public participation in the preparation of national plans and inform the Secretariat accordingly.
7. The Secretariat should assist the Contracting Parties' efforts related to the preparation of their National Plans. It should report to the Ministerial Council on the progress annually.

### ***Article 2***

#### **Energy and Climate Committee**

1. The Climate Action Group should discuss and elaborate integrated energy and climate policies and the national plans pursuant to Article 1. To this purpose, the Group should be renamed the Energy and Climate Committee .
2. In the framework of the Energy and Climate Committee, the Contracting Parties, the Secretariat and the European Commission should identify the main elements and appropriate procedures for the development of national plans and progress reports. In doing so, the Energy and Climate Committee is invited to take into consideration this Recommendation and the relevant elements of the Guidance to EU Member States on such plans, communicated by the European Commission on 18 November

2015 as Annex 2 of the 2015 State of the Energy Union, for which adaptations might be necessary.

3. The European Commission should regularly inform the Contracting Parties and the Secretariat on the developments at EU level on future legislation related to integrated national energy and climate plans.

### **Article 3**

#### **Regional Cooperation**

1. National plans should complement and where possible reinforce each other, using national strengths to address regional challenges in the most secure and cost-effective way. Contracting Parties should identify areas suitable for joint or coordinated planning and consult with each other early on in the preparation process. Particular attention should be paid to ensuring a coordinated approach concerning the development of new energy resources and infrastructures.
2. Coordination of national policies should also prevent adverse incentives, allow for exploiting synergies and mitigate inconsistencies between national policies of Contracting Parties. National Plans should therefore contain an assessment of how the envisaged objectives and policies in the plans will impact on other Contracting Parties and how cooperation across policy areas and sub-sectors should be strengthened.
3. The Secretariat should actively engage in the process and support cooperation activities described above, including through the Energy and Climate Committee. In particular, the Secretariat should facilitate timely consultation between Contracting Parties on the draft national plans.

### **Article 4**

#### **Progress Reports**

1. Progress Reports on the implementation of national plans should be submitted by Contracting Parties to the Secretariat every two years and where appropriate on an annual basis, with a view to align the timescales for domestic, EU and international reporting. Those reports should facilitate the monitoring and the implementation of commitments taken under the United Nations Framework Convention on Climate Change (UNFCCC) and Paris Agreement.
2. The Secretariat should report to the Ministerial Council every two years on the implementation of national plans by Contracting Parties.

### **Article 5**

#### **Process and Timeline**

1. The preparation of national plans should be an iterative and dynamic process that should start in 2018 and should be finalised as soon as possible, taking into account future developments of the Energy Community acquis.
2. In view of the submission of the final national plans by Contracting Parties, the Secretariat should

issue recommendations on draft national plans.

**Article 6**  
**Entry into Effect**

This Recommendation shall enter into effect upon its adoption by the Ministerial Council.

**Article 7**  
**Scope**

This Recommendation is addressed to the Contracting Parties and institutions of the Treaty. It does not intend to create any legally binding effects on EU Member States and does not intend to contradict nor prejudice any existing or future EU legislation on the subject matter.

Done by written procedure on 3 January 2018

## **RECOMMENDATION of the Ministerial Council of the Energy Community R/2016/02/MC-EnC on preparing for the implementation of Regulation (EU) 525/2013 on a mechanism for monitoring and reporting greenhouse gas emissions**

THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY

Having regard to the Treaty establishing the Energy Community (“the Treaty”), and in particular Articles 2, 25 and 79 thereof,

Having regard to the proposal from the European Commission,<sup>1</sup>

Whereas:

- 1) Article 2 of the Treaty defines the improvement of the environmental situation related to Network Energy in the Contracting Parties as one of its key objectives;
- 2) The energy sector is one of the most potent contributors to the emissions of greenhouse gases and therefore there are strong links between energy and climate policy;
- 3) The implementation of Regulation (EU) No 525/2013 on a mechanism for monitoring and reporting greenhouse gas emissions<sup>2</sup> by the Contracting Parties may facilitate them to better monitor and report on their emissions of greenhouse gases and their progress towards their energy and climate targets;
- 4) The framework for regional cooperation established by the Energy Community and the assistance offered by its institutions and bodies can be essential in preparing the successful implementation of Regulation (EU) No 525/2013;
- 5) For its full and legally binding incorporation in the Energy Community, Regulation (EU) No 525/2013 will need to be further adapted under Article 24 of the Treaty;
- 6) The Environmental Task Force, at its meeting of 14 September 2016 discussed and endorsed the present Recommendation;
- 7) The Permanent High Level Group, at its meetings of 22 June 2016 and 13 October 2016 discussed and endorsed the present Recommendation,

---

<sup>1</sup> C(2016) 5854 final, 19.9.2016.

<sup>2</sup> OJ L 165, 18.6.2013, p. 13.

HEREBY RECOMMENDS:

**Article 1**

1. The Contracting Parties should prepare the legal and institutional preconditions for the implementation of the core elements of Regulation (EU) No 525/2013 in their jurisdictions.
2. The Secretariat should assist the Contracting Parties' efforts in this respect. It should report to the Ministerial Council on the progress annually.

**Article 2**

1. In the framework of the Environmental Task Force, the Contracting Parties, the Secretariat and the European Commission should identify the provisions of Regulation (EU) No 525/2013 suitable for incorporation in the Energy Community, the necessary adaptations as well as appropriate deadlines.
2. The European Commission should regularly inform the Contracting Parties and the Secretariat on possible amendments to Regulation (EU) No 525/2013.

**Article 3**

Subject to a proposal by the European Commission, the Ministerial Council will decide on the adoption of a decision incorporating suitable provisions of Regulation (EU) No 525/2013.

**Article 4**

This Recommendation shall enter into force upon its adoption by the Ministerial Council.

**Article 5**

This Recommendation is addressed to the Contracting Parties and institutions of the Treaty.

Done in Sarajevo, on 14 October 2016

## **GENERAL POLICY GUIDELINES of 29 November 2018 on the 2030 Targets for the Contracting Parties of the Energy Community**

### **INTRODUCTION**

In 2014, a target of reducing by at least 40% green-house gas emissions compared to 1990 by 2030 was agreed in the European Union. In June 2018, the European Parliament and the Council reached a political agreement for an energy efficiency target of at least 32.5% by 2030 and a renewable energy target of at least 32% by 2030. These targets will be formally adopted and enter into force in the European Union later this year or early 2019.

The 2017 Ministerial Council of the Energy Community emphasized the need of setting targets for 2030 on energy efficiency, renewable energy and greenhouse gas emission reduction. This is in line with Contracting Parties' respective obligations in the EU accession process as well as considering the commitments taken by countries in the framework of the UNFCCC and the Paris Agreement.

As a preliminary step within the target setting process, a study commissioned by the Secretariat on an EU-convergent approach for the calculation of the 2030 targets and its findings were examined by the Energy and Climate Committee and its Technical Working Group. Discussions also indicated that further work at technical level would be needed for the development of a methodology that adequately reflects a similar and adequate EU ambition level.

The Energy and Climate Committee stressed the timeliness and significance of a political consensus on the 2030 target setting, for which the General Policy Guidelines below were developed.

### **THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY**

Having regard to Article 47(a) of the Treaty establishing the Energy Community ("the Treaty") and item VI of the Procedural Act 2006/01/MC-EnC on the Adoption of the Internal Rules of Procedure of the Ministerial Council of the Energy Community,

Recognising the need to provide an effective response to the threat of climate change,

Taking into account that the Contracting Parties of the Energy Community support the call for enhanced action on climate change provided by the Paris Agreement,

Acknowledging that the energy sector is one of the main contributors to the emissions of greenhouse gases, and given the strong links between energy policy and climate,

Taking note that during the first meeting of the Energy and Climate Committee, held in Vienna on 5 September 2017, it was acknowledged that stable national energy and climate plans up to 2030 should be accompanied by three overall targets, namely for the increase of renewable energy in overall energy consumption, increased energy efficiency and reduction of greenhouse gas emissions,

Recalling the December 2017 Ministerial Council Conclusions which underlined the need of 2030 targets in the Energy Community for renewable energy, energy efficiency and greenhouse gas emission reduction, and which welcomed the declaration of the European Commission to work on appropriate proposals to the Energy Community to incorporate suitable provisions of future EU legislation related

to these, once such legislation is adopted in the European Union,

Recalling the Ministerial Council Recommendation 2016/02/MC-EnC on preparing for the implementation of Regulation (EU) 525/2013 on a mechanism for monitoring and reporting greenhouse gas emissions and Recommendation 2018/01/MC-EnC on preparing for the development of integrated national energy and climate plans by the Contracting Parties of the Energy Community,

Acknowledging the importance for the Energy Community of the political consensus at the EU level on the EU's 2030 targets through the revision of the Energy Efficiency Directive, the Renewable Energy Directive, and the agreement on the Effort Sharing Regulation,

## **THE MINISTERIAL COUNCIL ADOPTS**

General Policy Guidelines on 2030 Targets for the Contracting Parties of the Energy Community

The present General Policy Guidelines represent the political consensus reached in the Ministerial Council on the 2030 targets for the Contracting Parties of the Energy Community.

Three distinct 2030 energy and climate targets should be established: a target for energy efficiency, a target for the contribution of renewable energy sources, and a greenhouse gas emission reduction target. These targets should be in line with the EU targets for 2030, represent an equal ambition for the Contracting Parties and take into account relevant socio-economic differences, technological developments and the Paris Agreement on Climate Change. They should be expressed in targets for all Contracting Parties as a whole and/or individual targets for each Contracting Party, as appropriate. Contracting Parties should use the political consensus reached in these General Policy Guidelines in the preparation of their national energy and climate plans.

The Ministerial Council of the Energy Community is looking forward to the inclusion of the 2030 targets for the Contracting Parties in the Energy Community legal framework through the adaptation of the new Energy Efficiency Directive, Renewable Energy Directive and Governance Regulation once they are in force in the EU, as indicated in an annex.

For the Ministerial Council

Presidency

## ANNEX I

**The following indicative timetable outlines the next steps:**

<b>Dates</b>	<b>Step</b>
29 November 2018	Approval of General Policy Guidelines at the Ministerial Council
November 2018 -May 2019	Energy and Climate Committee and its Technical Working Group continue to work on a methodology and definition of 2030 targets that adequately reflects a similar EU ambition level
May - July 2019	Drafting adaptations of the Energy Efficiency Directive, Renewable Energy Directive and Governance Regulation
November 2019	Approval of adapted Energy Efficiency Directive, Renewable Energy Directive and Governance Regulation with 2030 targets for Contracting Parties

## **PART II**

ACQUIS COMMUNAUTAIRE

CYBERSECURITY

## **PROCEDURAL ACT of the Ministerial Council of the Energy Community 2018/02/MC-EnC on the establishment of an Energy Community Coordination Group for Cyber-Security and Critical Infrastructure**

THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY,

Having regard to the Treaty Establishing the Energy Community, and in particular Articles 86 and 87 thereof,

Having regard to Articles 2 and 3 of the Treaty Establishing the Energy Community calling for the enhancement of the security of supply of the single regulatory space in the Energy Community, and access for all Contracting Parties to a stable and continuous energy supply that is essential for economic development and social stability;

Whereas due to the proliferation of information and communication technologies in the energy sector, cyber-security matters have become an intrinsic part of a number of existing Energy Community acquis, that deal with the security of supply or safe operation of energy systems,

Whereas the stabilization and association agreements of the European Union and its Member States with Albania, Bosnia and Herzegovina, former Yugoslav Republic of Macedonia, Kosovo\*<sup>1</sup>, Montenegro, and association agreements with Georgia, Moldova and Ukraine require these Contracting Parties adopt a series of European Union legislation on cybersecurity matters and protection of critical infrastructure, including in the energy sectors,

Whereas there are certain critical infrastructures in the Energy Community, the disruption or destruction of which would have significant cross-border impacts or cross-sectoral effects resulting from interdependencies between interconnected infrastructures and systems, which require the setting-up of a coordination mechanism at Energy Community level,

Whereas timely and effective response to incidents relies on the existence of previously established and, to the extent possible, well-rehearsed cooperation procedures and mechanisms having clearly defined the roles and responsibilities of the key actors at national and Energy Community level,

Whereas an effective organizational framework for a high level of security of information systems and critical infrastructures requires taking an all-hazard approach where man-made, technological threats and natural disasters need all to be taken into account in the protection process,

Whereas a Community approach will encourage private sector involvement in overseeing and managing risks, business continuity planning and post-disaster recovery,

---

<sup>1</sup> This designation is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo.

Whereas existing sectoral measures at national level require coordinated regional action through Community mechanisms, with a view to enhancing effectiveness, avoid duplication of, or contradiction between, different acts or measures,

Whereas cyber-security calls for a group of experts to advise the Energy Community, the national institutions as well as to coordinate incident and crisis management measures,

Whereas such a group should be composed of all relevant stakeholders and should cover electricity, gas and oil sectors, encompassing generation, distribution, transmission and supply,

Upon proposal of the Secretariat,

HAS ADOPTED THIS PROCEDURAL ACT:

### **Article 1**

1. To promote a high level of security of network and information systems and of critical infrastructures within the Energy Community, a coordination group for cyber-security and critical infrastructure ("CyberCG") is hereby established.
2. Each Party shall designate and notify to the Energy Community Secretariat one or more national competent authorities as well as a single point of contact for the security of network and information systems and of critical infrastructures ('competent authority' and 'single point of contact'), covering at least the sectors referred to in referred to in point 2. e) of the Annex.
3. Each Party shall designate and notify to the Energy Community Secretariat one or more national computer security incident response teams ('CSIRTs').
4. The CyberCG shall
  - (a) perform its tasks as described in the Annex to the present Procedural Act;
  - (b) liaise with a network of CSIRTs as described in the Annex to the present Procedural Act;
  - (c) liaise with security liaison officer for each critical infrastructure in Contracting Parties.
5. The activities of the CyberCG shall be governed by Terms of Reference stipulated in the Annex to this Procedural Act.
6. This article is without prejudice to the actions taken by the Parties to safeguard their essential State functions, in particular to safeguard national security, including actions protecting information the disclosure of which Parties consider contrary to the essential interests of their security, and to maintain law and order, in particular to allow for the investigation, detection and prosecution of criminal offences.

**Article 2**

This Procedural Act shall enter into force on the day of its adoption and is addressed to the Parties to the Energy Community.

Done in Skopje, on 29 November 2018

## ANNEX

### Terms of Reference of the Energy Community cyber-security and critical infrastructure cooperation group (CyberCG)

This document describes the organizational structure, activities and the responsibilities of all parties concerned within the coordination group for cyber-security and critical infrastructure (“CyberCG”).

#### 1. General

The CyberCG aims to support and facilitate strategic cooperation and the exchange of information within the Energy Community and to develop trust and confidence, and with a view to achieving a high common level of security of network and information systems and of critical infrastructures in the Energy Community.

#### 2. Definition of Terms

For the purposes of the present Annex, the following definitions apply:

a) ‘network and information system’ means: (a) an electronic communications network within the meaning of point (a) of Article 2 of Directive 2002/21/EC; (b) any device or group of interconnected or related devices, one or more of which, pursuant to a program, perform automatic processing of digital data; or (c) digital data stored, processed, retrieved or transmitted by elements covered under points (a) and (b) for the purposes of their operation, use, protection and maintenance;

b) ‘security of network and information systems’ means the ability of network and information systems to resist, at a given level of confidence, any action that compromises the availability, authenticity, integrity or confidentiality of stored or transmitted or processed data or the related services offered by, or accessible via, those network and information systems;

c) ‘national strategy on the security of network and information systems’ means a framework providing strategic objectives and priorities on the security of network and information systems at national level in accordance with requirements of Article 7 of Directive 2016/1148/EU;

d) ‘operator of essential services’ means a public or private entity which provides an energy service that (i) is essential for the maintenance of critical societal and/or economic activities, (ii) the provision of that service depends on network and information systems, (iii) and an incident would have significant disruptive effects on the provision of that service, in accordance with the criteria laid down in Article 5(2) of Directive 2016/1148/EU;

e) ‘energy services’ comprise (i) electricity generation, supply, market operation, distribution, transmission, and storage, (ii) natural gas production, supply, market operation, transmission, distribution, storage and LNG, (iii) oil production, refining and treatment facilities, market operation, storage and transmission, (iv) monitoring and control of pollution and emissions from energy combustion and (v) digital services and electronic communication services, in case and to the extent that the latter provide services to operators of essential services of the energy sectors, and/or that provide services that are essential to the functioning of the energy sector”;

- f) ‘critical infrastructure’ means an asset, system or network or part thereof within the energy sector or interdependent with the energy services referred to in point e), located in Contracting Parties which is essential for the maintenance of vital societal functions, health, safety, security, economic or social well-being of people, the disruption or destruction of which would have a significant impact in a Contracting Party as a result of the failure to maintain those functions;
- g) ‘Energy Community critical infrastructure’ means critical infrastructure located in Contracting Parties the disruption or destruction of which would have a significant impact on at least two Contracting Parties and/or Member States. The significance of the impact shall be assessed in terms of cross-cutting criteria. This includes effects resulting from cross-sector dependencies on other types of infrastructure;
- h) ‘owners/operators of critical infrastructures’ means those entities responsible for investments in, and/or day-to-day operation of, a particular asset, system or part thereof designated as a critical infrastructure in the relevant Contracting Parties. For the avoidance of doubt, the definition of an operator of critical infrastructure encompasses and is broader than that of an operator of essential services, as it covers also critical infrastructures that do not depend on information network and systems;
- i) ‘incident’ means any event having an actual adverse effect on the security of network and information systems within the meaning of Directive 2016/1148/EU or any event causing a disruption or destruction of critical infrastructure installations within the meaning of Directive 2008/114/EC;
- j) ‘incident handling’ means all procedures supporting the detection, analysis and containment of an incident and the response thereto, as provided under Directive 2016/1148/EU and related implementing acts;
- k) ‘risk’ means any reasonably identifiable circumstance or event having a potential adverse effect on the security of network and information systems, as provided under Directive 2016/1148/EU and related implementing acts, or having the potential of causing a disruption or destruction of critical infrastructure installations as provided under Directive 2008/114/EC, including cyber-attacks, natural disasters, terrorist attacks or any other sources of attack.
- l) ‘risk analysis’ means consideration of relevant threat scenarios, in order to assess the vulnerability and the potential impact of disruption or destruction of critical infrastructure or network and information systems,;
- m) ‘protection’ means all activities aimed at ensuring the functionality, continuity and integrity of critical infrastructures in order to deter, mitigate and neutralize a threat, risk or vulnerability;
- n) ‘standard’ means a standard within the meaning of point (1) of Article 2 of Regulation No 1025/2012/EU;
- o) ‘specification’ means a technical specification within the meaning of point (4) of Article 2 of Regulation No 1025/2012/EU.

### 3. Composition

3.1. The CyberCG consists of representatives of the Parties (competent authorities and single point of contacts), the CSIRTs network, security liaison officers, the Secretariat, the European Commission, and the European Union Agency for Network and Information Security (“ENISA”).

3.2. Representatives of Observer and Participant countries may participate in the CyberCG.

3.3. Where appropriate, the CyberCG may invite representatives of the relevant stakeholders to participate in its work.

3.4. The Secretariat shall provide assistance and logistical support to the CyberCG.

#### 4. Single points of contact

4.1. The single points of contact exercises a liaison function to ensure cross-border cooperation of Parties' authorities and with the relevant authorities in other Parties, with the CyberCG and the CSIRTs network. Tasks of the single point of contact may be assigned to the competent authority.

4.2. Single points of contact notify and report to the CyberCG, the CSIRTs network and the Secretariat, by 15 January 2019, and every year thereafter, on provisions of national law and measures in the fields covered by point 2. e) of this Annex, including but not limited to:

a) adoption of a national strategy on the security of network and information systems covering at least the sectors point 2. e) of this Annex, in compliance with requirements set forth in Article 7 of Directive 2016/1148/EU, and adoption of security strategies or equivalent instruments on the protection of critical infrastructures from other risks, not covered by national strategy on the security of network and information systems, in compliance with requirements laid down in Directive 2008/114/EC;

b) on the identification of operators of essential services for sectors and services referred to in point 2.e) of this Annex, in compliance with requirements of Articles 5 and 6 of Directive 2016/1148/EU; on security and incident notification requirements that those operators of essential services shall implement, in compliance with requirements laid down in Article 14 of Directive 2016/1148/EU; as well as on enforcement powers and means given to competent authorities in this respect, in compliance with requirements laid down in Article 15 of Directive 2016/1148/EU;

c) on security requirements and incident notification obligations that entities operating organized energy trading and balancing services' platforms as referred to in point 2. e) of this Annex implement, in compliance with requirements laid down in Directive 2016/1148/EU; or in compliance with security requirements equivalent to those laid down in Directive 2014/65/EU on markets in financial instruments, supplemented by any implementing acts, or equivalent to those laid down in Regulation 600/2014/EU, as supplemented by any implementing acts, as well as national provisions on enforcement powers and means given to competent authorities in this respect;

d) on security requirements and incident notification obligations that digital service providers referred to in point 2. e) of this Annex implement, in compliance with requirements laid down in Article 16 of Directive 2016/1148/EU; as well as national provisions on enforcement powers and means given to competent authorities in this respect, in compliance with requirements laid down in Article 17 of Directive 2016/1148/EU;

e) on security requirements and incident notification obligations that electronic communications operators referred to in point 2. e) of this Annex implement, in compliance with requirements laid down in Articles 13a and 13b of Directive 2002/21/EC,; as well as national provisions on enforcement powers and means given to competent authorities in this respect, in compliance with requirements laid down in Articles 13a and 13b of Directive 2002/21/EC;

f) on the identification of critical infrastructures located on the territory of the concerned Contracting Party, on security measures and operational plans that are implemented to ensure a level of security

and protection of critical infrastructures for sectors and services referred to in point 2. e) of this Annex, in compliance with requirements equivalent to those laid down in Article 5 and Annex II of Directive 2008/114/EC, for risks and incidents that are not covered by the above-mentioned from b) to e), as well as on enforcement powers and means given to competent authorities in this respect.

## 5. Tasks

5.1. The CyberCG covers the following tasks:

- a) providing strategic guidance for the activities of the CSIRTs established and the CSIRTs network;
- b) exchanging best practice on the exchange of information related to incident notification within the meaning of or equivalent to provisions in Article 14(3) and (5) and Article 16(3) and (6) of Directive 2016/1148 EU, and/or to the identification of critical infrastructures in the Contracting Parties for at least the sectors referred to in point 2. e) of this Annex;
- c) exchanging best practice between Parties and other stakeholders involved;
- d) assisting Contracting Parties in building capacity to ensure the security of network and information systems, and in securing critical infrastructures;
- e) discussing capabilities and preparedness of the Contracting Parties, and evaluating national strategies on the security of network and information systems and the effectiveness of CSIRTs, and of critical infrastructures protection and identifying best practice;
- f) exchanging information and best practice on awareness-raising and training;
- g) exchanging information and best practice on research and development relating to the security of network and information systems and to the protection of critical infrastructures;
- h) where relevant, exchanging experiences on matters concerning the security of network and information systems and of critical infrastructures, with relevant Energy Community institutions, in particular the Secretariat and the Energy Community Security of Supply Coordination Group;
- i) discussing the standards and specifications with relevant stakeholders and with relevant organizations where appropriate;
- j) collecting best practice information on risks and incidents;
- k) examining, on an annual basis, the reports submitted;
- l) discussing the work undertaken with regard to exercises relating to the security of network and information systems and of critical infrastructures, education programmes and training;
- m) exchanging best practice with regard to the identification of operators of essential services by the Contracting Parties, identification of critical infrastructures, including in relation to cross-border dependencies, and cross-sectoral dependencies regarding risks and incidents, where appropriate with the assistance of the Energy Community Security of Supply Coordination Group, building on the best practice of ENISA;
- n) engaging in discussions with the Contracting Party, or Contracting Parties and Member States on whose territory a potential critical infrastructure is located, and with the other Contracting Parties and Member States which may be significantly affected by the potential critical infrastructure, providing guidance for the identification of critical infrastructures or of operator of essential service and where necessary facilitating agreements between the concerned Contracting Parties and Member States on

common security and protection measures;

o) discussing modalities for reporting notifications of incidents;

p) developing common methodological guidelines for carrying out risk analyses in respect of Energy Community critical infrastructures. The CyberCG shall support, through the relevant Contracting Party's competent authority/single point of contact, the owners/operators of critical infrastructures by providing access to available best practices and methodologies as well as support training and the exchange of information on new technical developments related to critical infrastructure protection;

q) promoting convergent implementation of security requirements of network and information systems and of critical infrastructures, without imposing or discriminating in favour of the use of a particular type of technology,

r) encouraging the use of European or internationally accepted standards and specifications relevant to the security of network and information systems.

5.2. The CyberCG shall carry out its tasks on the basis of biennial work programmes. The work programme shall outline actions to be undertaken to implement the CyberCG's objectives and tasks.

5.3. The CyberCG shall take part in the meetings and activities of the SoS CG, where appropriate.

5.4. The CyberCG shall prepare a report assessing the experience gained with the strategic cooperation by October 2019, and every year thereafter, and submit it to the Secretariat, so that the latter uses it for the preparation of its implementation report for the Ministerial Council.

## 6. Chairs

The Cyber-CG shall nominate and appoint a Chairperson and two Vice Chairpersons for a period of two years.

## 7. Meetings of the Cyber-CG

7.1. The Cyber-CG will meet when considered necessary upon a motion of the Chairperson, the Chairperson of Energy Community Security of Supply Coordination Group, the Secretariat, or ENISA. The Cyber-CG will normally meet twice a year.

7.2. A draft agenda will be distributed at least two weeks before each meeting. Draft conclusions will be distributed within two weeks after the meeting for approval by the members.

7.3. The Secretariat will prepare and organize workshops, when considered useful, following the conclusions of the Cyber-CG.

## 8. Computer security incident response teams (CSIRTs)

8.1. CSIRTs designated by Contracting Parties covering at least the sectors referred to in point 2. e) of this Annex, responsible for risk and incident handling in accordance with a well-defined process. CSIRTs could also be established within the competent authority.

8.2. CSIRTs should have access to an appropriate, secure, and resilient communication and information infrastructure at national level in accordance with requirements of Directive 2016/1148.

8.3. Contracting Parties shall inform the Secretariat and the CyberCG about the remit, as well as the main

elements of the incident-handling process, of their CSIRTs.

8.4. Contracting Parties may request the assistance of the CyberCG in developing national CSIRTs.

## 9. CSIRTs Network

9.1. In order to promote swift and effective operational cooperation in cases of risks or incidents to information and communications networks and systems, a network of the national CSIRTs is established.

9.2. The CSIRTs Network shall be composed of representatives of the Contracting Parties CSIRTs. The Secretariat shall participate in the CSIRTs network.

9.3. The CSIRTs network shall have the following tasks:

- a) exchanging information on CSIRTs' services, operations and cooperation capabilities;
- b) at the request of a representative of a CSIRT from a Contracting Party potentially affected by an incident, exchanging and discussing non-commercially sensitive information related to that incident and associated risks; however, any Contracting Party's CSIRT may refuse to contribute to that discussion if there is a risk of prejudice to the investigation of the incident;
- c) exchanging and making available on a voluntary basis non-confidential information concerning individual incidents;
- d) at the request of a representative of a Contracting Party's CSIRT, discussing and, where possible, identifying a coordinated response to an incident that has been identified within the jurisdiction of that same Contracting Party;
- e) providing Contracting Parties with support in addressing cross-border incidents on the basis of mutual assistance, including under Chapter IV, Title IV of the Energy Community Treaty
- f) discussing, exploring and identifying further forms of operational cooperation, including in relation to: (i) categories of risks and incidents; (ii) early warnings; (iii) mutual assistance; (iv) principles and modalities for coordination, when Contracting Parties respond to cross-border risks and incidents;
- g) informing the CyberCG of its activities and of the further forms of operational cooperation discussed pursuant to point (f), and requesting guidance in that regard;
- h) discussing lessons learnt from exercises relating to the security of network and information systems, including from experience shared by ENISA;
- i) at the request of an individual CSIRT, discussing the capabilities and preparedness of that CSIRT;
- j) issuing guidelines in order to facilitate the convergence of operational practices and operational cooperation;
- k) developing a blueprint for cooperation at Energy Community level in case of incidents or crisis affecting one or more Contracting Parties to such an extent that an intervention at Energy Community level is required.

9.4. The CSIRTs network produces an annual report assessing the experience gained with the operational cooperation, including conclusions and recommendations. That report shall be submitted to the CyberCG.

9.5. The CyberCG and the Secretariat shall actively support the cooperation among the CSIRTs. The CSIRTs shall build on best practice of ENISA in performing its tasks and duties, and where appropriate

and possible may seek assistance from ENISA.

## 10. Closed-CSIRT network

10.1. Within the CSIRT network, a closed-CSIRT network is established to treat such a threat and risk landscape and incidents that are considered as classified information by the Contracting Parties concerned. The closed-CSIRT network is composed of a representative from each Contracting Party which shall have an appropriate level of security vetting and clearance equivalent to that of handling classified information at European Union level.

10.2. The closed-CSIRT network shall make use of specific certified communication means that provide a secure way to communicate the classified information. The same applies to non-written information exchanged during meetings of the closed-CSIRT network.

## 11. Security liaison officer for critical infrastructures

11.1. Contracting Parties should designate one security liaison officer for security issues for each critical infrastructure. The security liaison officer functions as the point of contact between the owner/operator of the Energy Community critical infrastructure, the relevant Contracting Party's competent authority/single point of contact and the Cyber-CG.

11.2. Contracting Parties shall inform the Energy Community Secretariat and the Cooperation Group about the remit, as well as the main elements of the incident- handling process, of their security liaison officers.

## 12. Competent authorities, single point of contacts, CSIRTs and security liaison officers

12.1. Competent authorities, single points of contact, CSIRTs and security liaison officers should have adequate resources to carry out, in an effective and efficient manner, the tasks assigned to them.

12.2. Competent authorities, single points of contact, CSIRTs and security liaison officers, whenever appropriate and in accordance with national law, consult and cooperate with the relevant national law enforcement authorities and national data protection authorities.

## 13. Cooperation with ENISA (European Union Agency for Network and Information Security)

By 1 July 2019, the CyberCG shall explore possibilities and options for Contracting Parties and the Secretariat to engage as observer with ENISA on issues related to cybersecurity in Network Energy, and participate in the international activities organized by ENISA.

---

## **PART III**

### MEASURES AND PROCEDURAL ACTS BY ENERGY COMMUNITY INSTITUTIONS

## **RULES OF PROCEDURE of 16 October 2015 of the Ministerial Council of the Energy Community**

Procedural Act 2006/01/MC-EnC of 17 November 2006 on adoption of internal Rules of Procedures of Ministerial Council of Energy Community as amended by Procedural Acts 2013/01/MC-EnC of 24 October 2013 and 2015/02/MC-EnC of 15 October 2015 amending Procedural Act of the Ministerial Council 2006/01/MC-EnC of 17 November 2006

### **I. GENERAL**

1. These rules establish the internal procedures for operation of the Ministerial Council (the “Council”) as an institution under the Treaty establishing Energy Community (the “Treaty”).
2. In case of any contradiction between these rules and the Treaty, the rules of the Treaty shall be applied.

### **II. MEMBERS, PARTICIPANTS, OBSERVERS**

1. The Council shall consist of representatives of the Parties to the Treaty. Each Party to the Treaty, with the exception of the European Community, shall have one representative at the Council; the European Community shall have two representatives determined pursuant to its internal decision. Parties should in principle be represented in the Council at ministerial level or equivalent.
2. In accordance with Article 95 of the Treaty, one non-voting representative of each Participant may participate in the Council meetings.
3. In accordance with Article 96 of the Treaty, Observers may attend the meetings of the Council.
4. The Presidency and the Vice-Presidency may agree to invite representatives of other institutions to attend a relevant meeting on an *ad hoc* basis.
5. Where the Presidency and the Vice-Presidency agreed to invite other bodies, including representatives of Civil Society Organizations and participants in the meetings of the Parliamentary Plenum, the President shall inform the Parties at least three weeks before the meeting. The Parties decide on the invitation by simple majority by submitting their views to the Secretariat within five working days from receiving this information. Tacit agreement is assumed where no reaction is received by the Secretariat within this deadline.

### **III. PRESIDENCY**

1. The Presidency of the Council shall be held in turn by each Contracting Party<sup>1</sup> in alphabetical order, following the names of the Parties as indicated in the Treaty, starting with the former Yugoslav Republic of Macedonia.
2. The Presidency shall chair the Ministerial Council. It will be assisted by one representative of the

---

<sup>1</sup> A Contracting Party is any Party, for which the Treaty is into force, excluding the European Community.

European Community and one representative of the incoming Presidency as Vice-Presidency.

3. Should the Presidency be not in a position to perform its duties for a particular meeting, the latter will be chaired by the Vice-President who represents the European Community.

#### **IV. PREPARATION OF THE MEETINGS**

1. The Council shall meet at least once per year. In urgent circumstances, agreed between the Presidency and the Vice-Presidents, the Presidency may convene the Council also outside the regular meetings.

2. The place of Council meetings shall be decided upon by the Presidency after consultations with the Vice-Presidency and the Energy Community Secretariat (the Secretariat). Normally, this decision shall be made at least two months prior to the relevant meeting.

3. The date of the meetings shall be agreed between the Presidency, the Vice-Presidency and the Energy Community Secretariat (the Secretariat). In principle, the dates shall be agreed at least two months prior to the relevant meeting.

4. The draft agenda of the meetings shall be agreed by the Presidency and the Vice-Presidency. It shall be distributed at least two weeks prior to the relevant meeting. Should there be documents related to any agenda item, these should be distributed to the representatives specified in section II paragraphs 1 to 3 together with the agenda.

5. Without prejudice to the decision making process under Title VI of the Energy Community Treaty, the Permanent High Level Group may identify Measures for adoption by the Ministerial Council without further discussion. The identified Measures shall be included in the draft agenda of the next Ministerial Council as "A" items. The draft Agenda shall specify the Title and Chapter of the Treaty under which the draft Measure identified as an "A" item will be presented for voting in the Ministerial Council. This does not exclude the possibility for any Party to have statements included in the conclusions.

6. The Secretariat is responsible for the preparation of the meetings. It will inform the Presidency and the Vice-Presidency periodically and upon request about the preparation process and follow their requests and guidance in this relation.

7. Should this be found necessary, the Presidency and the Vice-Presidency may propose that a particular committee/commission is established. The decision of the Council shall take the form of a Procedural Act and include concrete list of participants as well as the scope of work, which should be performed, together with relevant deadlines.

#### **V. MEETINGS OF THE COUNCIL – PROCEDURAL RULES**

1. The meetings of the Council shall not be public unless the Council decides otherwise.

2. Any member of the Council or any other attendee of the meeting may be accompanied by officials who assist them. The names and functions of those officials shall be notified in advance to the Secretariat. As a principle, these officials should not be more than three for any Party to the Treaty, and not more than two for any other participant in the meeting. However, the Presidency may further

advise on the maximum number of representatives per delegation.

3. The Council may take decisions only if two thirds of the Parties are represented. Abstentions in a vote from the Parties present shall not count as votes cast.
4. As provided in Article 80 of the Treaty, each Party shall have one vote.
5. The Agenda for the meeting shall be approved at its beginning. In urgent circumstances, new items may be included also during the meeting subject to the agreement of the President and Vice-Presidency.
6. Re-opening discussion on Measures included in the draft agenda of the next Ministerial Council as "A" items requires simple majority.
7. The Participants may participate in the discussions but they do not take part in voting.
8. The observers may make statements upon permission or invited by the Presidency. The Observers do not have voting rights.
9. Conclusions of each meeting shall be drawn up with the assistance of the Secretariat. These shall be signed by the Presidency and distributed to the members and the attendees. In case it is not possible to finalize the conclusions by the end of the relevant meeting, the Presidency shall assure that they are drafted and distributed within 7 days after its end<sup>2</sup>. Further, any member of the Council might request corrections within 7 days upon receipt of the draft. The Presidency shall arrange that the final version is distributed within 7 days upon the expiry of the deadline for comments.
10. Any vote shall be explicitly described in the Conclusions.
11. The conclusions cannot in any way restrict the scope or effects of legal acts or the Treaty. No statements or conclusions which contradict binding legal provisions shall be made. Conclusions cannot form part of legal acts nor have any normative effect.

## VI. ACTS OF THE COUNCIL – PROCEDURAL ASPECTS

1. To ensure that the objectives set out in the Treaty are attained, the Council provides general policy guidelines, takes Measures and adopt Procedural Acts.

### 1. General Policy Guidelines

2. The Council shall provide general policy guidelines, when requested or upon its own initiative.
3. The general policy guidelines shall reflect the political consensus of the Parties on strategic issues of mutual interest in line with the Treaty objectives.
4. The issue or amendment of general policy guidelines may be requested by any member of the Council. The request shall be in writing and shall contain sufficient information explaining the necessity of adoption of the proposed guidelines by the Council.
5. The written request shall be submitted by the requesting member of the Council to the Presidency with copy to the Vice-Presidency. The Presidency notifies all members of the Council within seven days after the request has been received.

---

<sup>2</sup> All days are calendar days.

6. The Presidency, in consultation with the Vice-Presidency, shall organize the preparation of a draft position of the Council, which shall be presented for discussion at the next Council meeting. The draft position shall be sent to the Members of the Council at least 30 days before the meeting.

7. General policy guidelines might be adopted *ad hoc* on the ground of consensus of all members of the Council.

## 2. Measures

8. Unless otherwise specified in these rules or in a separate decision of the Council, the adoption of Measures (Decisions and Recommendations) shall follow the same procedure.

9. Any proposal for a Measure from the European Commission, from the relevant Party or from the Secretariat shall be made in writing at least 60 days before the meeting of the Council at which it shall be discussed.

10. The proposal shall be sent to the Presidency with copy to all the members of the Council and to the Secretariat. It shall be accompanied by relevant explanatory notes. Where necessary, position of the Regulatory Board shall be requested by the Party or the institution, which makes the relevant proposal for a Measure.

11. During the meeting of the Council at which the proposal for a Measure shall be discussed, the Presidency shall identify the required quorum in accordance with the Treaty. The Presidency shall do so prior to the discussion of the proposal. The quorum availability will be respectively reflected in a protocol.

12. Measures under Title II of the Treaty – extension of the *acquis communautaire* – shall be taken by a majority of the votes cast only on the ground of a proposal from the European Commission, which may alter or withdraw its proposal at any time before the final adoption of the Measure.

13. Measures under Title III of the Treaty – Mechanism for operation of Network Energy Markets – shall be taken by a two third majority of the votes cast, including a positive vote of the European Community, upon a proposal from a Party or the Secretariat, which also shall take account of a position of the Regulatory Board.

14. Measures under Title IV – The Creation of a Single Energy Market – may be taken on a proposal from a Party only by unanimity. The European Commission on its own initiative or upon request of any party may request a position of the Regulatory Board.

## 3. Procedural Acts

15. The Council adopts Procedural Acts in cases envisaged in the Treaty and in accordance with the required majority. During the meeting of the Council at which the proposal for a Procedural Act shall be discussed, the Presidency shall identify the required quorum in accordance with the Treaty. The Presidency shall do so prior to the discussion of the proposal. The quorum availability will be respectively reflected in a protocol.

16. Unless otherwise envisaged by the Treaty, any member of the Council may propose adoption of a Procedural Act.

17. The preparation of draft Procedural Acts is coordinated by the Presidency in consultation with the Vice-Presidency. The Presidency may ask the Party, which has initiated the preparation of a Procedural Act, and/or the Secretariat to assist in the process of this preparation.

18. Draft Procedural Acts, related to organizational, budgetary and transparency issues, shall be distributed at least 30 days before the meeting at which they will be discussed.

19. Procedural Act related to the appointment of the Director of the Secretariat, provided for in Article 69 of the Treaty, shall be proposed by the European Commission. The draft shall be distributed at least 30 days before the meeting at which it will be discussed.

20. Procedural Act on budgetary matters, provided for in Article 73 and 74 of the Treaty, shall be proposed by the European Commission at least 30 days before the meeting at which it will be discussed.

21. Procedural Act conferring powers on the Regulatory Board, provided for in Article 47(c) of the Treaty, may be proposed by any member of the Council or by the Secretariat, at least 30 days before the meeting at which the relevant proposal shall be discussed. In case the opinion of the Regulatory Board is requested through the Presidency, it shall be part of explanatory documents to be submitted with the proposal for that act.

#### **4. Work Programme**

22. The Council shall adopt a work programme for the next two years. A proposal for the work programme is prepared by the Secretariat and sent to the Council Members upon agreement by the President and Vice-President.

#### **5. Rules For Decision-Making by Correspondence**

23. The Council may, in the intervals between the meetings of the Council, take decisions by correspondence. The Presidency, upon the proposal by a Party for a decision to be taken by correspondence or upon its own initiative shall decide, after consulting and in agreement with the Vice-Presidency, whether the matter warrants the taking of the decision by correspondence.

24. When it is decided that a decision should be taken by correspondence, the Presidency shall instruct the Secretariat to dispatch a letter or telefacsimile to each Party containing the proposed decision together with such information as the Presidency, after consultation and in agreement with the Vice-Presidency, considers necessary to an informed decision. The Presidency, after consultation and in agreement with the Vice-Presidency, shall also specify whether and, if so, under which conditions, amendments to the proposal may be made by the Parties.

25. Presidency, after consultation and in agreement with the Vice-Presidency, shall determine the date and hour by which responses must be received, which shall in no case be earlier than 10 calendar days from the date of transmission of the letter or facsimile referred to above. In exceptional circumstances, upon request or at its own discretion, may the Presidency, after consultation and in agreement with the Vice-Presidency, extend the time limit for the receipt of responses. Any Party who has not replied in writing (including telefacsimile) within the given time limit is regarded as abstaining from the vote.

26. The votes cast by correspondence shall be reviewed by at least three persons, including a representative of the Presidency, the European Commission and the Secretariat. Once a decision is adopted, it shall be promptly circulated by the Secretariat to all Parties and Participants, together with the information on the votes cast in favor of the decision. It shall be formally signed by the Presidency at the earliest meeting of the PHLG.

27. This procedure may be used for adoption of Measures or other decisions following agreement of the President and Vice-Presidents.

## **VII. RULINGS ON DISPUTE SETTLEMENT AND IMPLEMENTATION OF DECISIONS**

1. Any Party to the Treaty, the Secretariat or the Regulatory Board may bring to the Council's attention circumstances which suggest that a Party failed to comply with a Treaty obligation or failed to implement a Decision addressed to it within the required period.

2. A Party's, Secretariat's or Regulatory Board's communication to the ministerial Council pursuant to the preceding paragraph shall take the form of a reasoned request. The request shall therefore be based on concrete factual findings and backed up by sufficient analysis. The request also shall contain a proposal for a Council's decision.

3. The request shall be made at least 30 days before the meeting of the Council.

4. The notification shall be sent to the Presidency and the Vice-Presidency. Prior to including the item on the Council's agenda, the Presidency, in consultation with the Vice-Presidency, may request additional information from the Party or the institution which has made the notification.

5. The Presidency shall inform the Party, which is subject to the claim, within 7 days after receiving it, by sending the relevant materials, and ask it to present its views in writing.

6. During the meeting of the Council at which the request or other issue under Title VII of the Treaty is discussed, the Presidency shall identify the required quorum in accordance with the Treaty. The Presidency shall do so prior to the discussion of the proposal. The quorum availability will be respectively reflected in a protocol.

## **VIII. INTERPRETATION OF THE TREATY**

1. The Council may give guidance to the interpretation of the Treaty upon request by any Party or any of the institutions established by the Treaty.

2. The request for interpretation shall be submitted to the Presidency and copied to the Vice-Presidency.

3. The Presidency shall ask the European Commission and the Secretariat for a reasoned opinion regarding the interpretative issue specified in the request.

4. Unless otherwise decided, any guidance on interpretation of the Treaty, given by the Council, shall be immediately enforceable and is binding on the Parties and the institutions under the Treaty.

## IX. DISCLOSURE OF DOCUMENTS

1. The draft agenda and the relevant materials shall be distributed to all the members of the Council, to the Participants and to the Observers. Material of interest to them will also be distributed to the representatives of any other institutions, which are invited to take part in the relevant meeting. Any of the Presidency and the Vice-Presidency may request that the draft agenda and the relevant materials are distributed to other institutions.
2. Unless otherwise decided, the finalized documents of the meetings (agenda, conclusions, etc.) shall be made public via the website of the Secretariat.

## X. FINAL PROVISIONS

1. The Participants, Observers and other attendees are expected to follow any requirements for confidentiality, which are valid to the Parties. Such requirements are reflected in the conclusions of the relevant meeting.
2. All acts of the Ministerial Council shall be signed by the Presidency.
3. The Rules have been adopted by the Council on the ground of Article 49 of the Treaty. In accordance with that provision, any amendments to these Rules shall be adopted by a Procedural Act.
4. If application of these Rules to a specific situation is unclear or ambiguous, the Presidency in consultation and agreement with the Vice-Presidency shall interpret the Rules to resolve the situation.
5. The Council meetings shall be conducted in a businesslike manner.
6. At the latest one year from the entry of these Rules into force, based on the practical experience with their application, the Secretariat may propose eventual amendments to these Rules it deems useful or necessary. Where a Party wishes to propose such amendment, it is encouraged to consult it first with the Secretariat.

The Rules become effective on 16 October 2015, which is the day of their adoption by the Energy Community Ministerial Council.

## **RULES OF PROCEDURE of 16 October 2015 of the Permanent High Level Group of the Energy Community**

Procedural Act 2006/01/PHLG-EnC of 17 October 2006 on adoption of internal Rules of Procedure of the Permanent High Level Group of Energy Community as amended by Procedural Acts 2013/01/PHLG-EnC of 23 October 2013 and 2015/01/PHLG-EnC of 16 October 2015 amending Procedural Act of the Permanent High Level Group of 17 October 2006

### **I. GENERAL**

1. These rules establish the internal procedures for operation of the Permanent High Level Group (called "PHLG") as an institution under the Treaty establishing the Energy Community.
2. In case of any contradiction between these rules and the Treaty establishing the Energy Community (the "Treaty"), the rules of the Treaty shall be applied.

### **II. MEMBERS – PARTICIPANTS - OBSERVERS**

1. (i) The PHLG shall consist of representatives of the Parties to the Treaty. Each Contracting Party to the Treaty shall have one representative at the PHLG; the European Community shall have two representatives upon its internal decision.
- (ii) The members of the PHLG shall be senior officials in the ministry in charge of energy. The act of appointment shall provide evidence that the member is mandated to express the position of the respective Party in a manner binding on that Party and has the obligation as well as all necessary powers to coordinate positions internally before expressing them at the meetings of the PHLG.
2. The members of the PHLG shall express the positions of the relevant Parties. In case a member of the PHLG cannot attend its meeting, he/she might be represented by another person at the appropriate level.
3. In accordance with Article 54 of the Treaty, one non-voting representative of each Participant may participate in the meetings.
4. In accordance with Article 96 of the Treaty, Observers may attend the meetings of the PHLG. Each Observer may have one representative.
5. The Presidency and the Vice-Presidency may agree to invite any other bodies to attend a relevant meeting on *ad hoc* basis.
6. Where the Presidency and the Vice-Presidency agreed to invite other bodies as observers, including representatives of Civil Society Organizations and participants in the meetings of the Parliamentary Plenum, the President shall inform the Parties at least three weeks before the meeting. The Parties decide on the invitation by simple majority by submitting their views to the Secretariat within five working days from receiving this information. Tacit agreement is assumed where no reaction is received by the Secretariat within this deadline.

### III. PRESIDENCY

1. The Contracting Party holding the Presidency of the Ministerial Council shall also hold the Presidency of the PHLG.
2. The Presidency shall chair the PHLG meetings with the operational support of the European Commission.<sup>1</sup>
3. The Presidency shall be assisted by one representative of the European Community and one representative of the incoming Presidency as Vice-Presidency.
4. Should the Presidency be not in a position to perform its duties for a particular meeting, the latter will be chaired by the Vice-Presidency who represents the European Community.

### IV. PREPARATION OF THE MEETINGS

1. The PHLG shall meet on regular basis at least once every six months. In urgent circumstances, agreed between the Presidency and the Vice –Presidency, the Presidency shall convene PHLG also outside the regular meetings.
2. The Presidency shall convene the PHLG in a place decided upon by the Presidency after consultation with the Vice-Presidency. In principle, following the requirements of most cost effective approach, the meetings of the PHLG shall take place in Vienna, Austria. Any proposal for a meeting in other place shall consider the relevant financial, administrative and organizational aspects.
3. The date of the meetings shall be agreed between the Presidency, the Vice-Presidency and the Energy Community Secretariat (“the Secretariat”). In principle, the dates shall be agreed at least two months prior to the relevant meeting.
4. The draft agenda of the meetings shall be agreed by the Presidency and the Vice-Presidency. It shall be distributed at least two weeks prior to the relevant meeting. Should there be documents, related to any agenda item, these should be distributed to the representatives specified in Section II, Paras. 1 to 4 together with the agenda.
5. The Secretariat is responsible for the preparation of the meetings. It will inform the Presidency and the Vice-Presidents periodically and upon request about the preparation process and follow their requests and guidance in this relation.
6. Should this be found necessary, the Presidency and the Vice-Presidents may propose that a committee/commission under the authority of the PHLG is established. The decision of the PHLG shall take a form of a Procedural Act and shall include concrete list of participants as well as the scope of work, which should be performed, together with relevant deadlines.

---

<sup>1</sup> See Article 4 of the Treaty, page 13.

## V. MEETINGS OF THE PHLG – PROCEDURAL RULES

1. The PHLG meetings shall be conducted in a business-like manner.
2. The meetings of the PHLG shall not be public unless the PHLG decides otherwise.
3. Any member of the PHLG or any other attendee of the meeting may be accompanied by experts who assist them. The names and functions of those experts shall be notified in advance to the Secretariat. As a principle, these experts should not be more than three for any Party to the Treaty, and not more than two for any other participant in the meeting. However, the Presidency may further advise on the maximum number of representatives per delegation.
4. PHLG may act only, if two third of the Parties are represented. Abstentions in a vote from the Parties present shall not count as votes cast.
5. The PHLG shall act in accordance with the voting rules required by the Treaty, depending on the agenda item. The Presidency shall identify the necessary majority before the vote on the ground of the substance of the agenda item.
6. As provided in Article 80 of the Treaty, each Party shall have one vote.
7. The Agenda for the meeting shall be approved in its beginning. In urgent circumstances, new items may be included also during the meeting subject to the agreement of the Presidency and Vice-Presidency.
8. The Participants may participate in the discussions, but they do not take part in voting (cf II.3).
9. The Observers may make statements upon permission or when invited by the Presidency. The Observers do not have voting rights.
10. At the end of each meeting, conclusions shall be drafted and discussed. They shall be distributed to the members and attendees by the Secretariat, The conclusions are final if, within five working days from their distribution, no change requests are submitted to the Secretariat. If a member or attendee requests amendments to a particular item in the conclusions, the items concerned shall be put on the agenda of and discussed at the next meeting. Items of the conclusions for which no changes have been requested within five working days shall be considered adopted. They are to be made publicly available by the Secretariat.
11. The Secretariat shall distribute draft conclusions for each Permanent High Level Group meeting one week ahead of the meeting to the Parties, Participants and Observers on the basis of the draft agenda and the documents received.
12. Any vote shall be explicitly described in the Conclusions.
13. The conclusions cannot in any way restrict the scope or effects of legal acts or the Treaty. No statements or conclusions which contradict binding legal provisions shall be made. Conclusions cannot form part of legal acts nor have any normative effect. Without prejudice to the decision making process under Title VI of the Energy Community Treaty, the Permanent High Level Group may identify Measures for adoption by the Ministerial Council without further discussion. This does not exclude the possibility for any Party to have statements included in the conclusions of the PHLG.

## VI. ACTS OF THE PHLG – PROCEDURAL ASPECTS

### 1. General

1. The PHLG may take Measures (Decisions and Recommendations), if so empowered by the Ministerial Council, and adopt Procedural Acts.
2. The PHLG adopts Procedural Acts, not involving the conferral of tasks, powers or obligations on other institutions of the Energy Community, upon proposal of the Parties or the Secretariat.

### 2. Measures

3. Unless otherwise specified in these rules or in a separate decision of the PHLG or the Ministerial Council, the adoption of Decisions and Recommendations shall follow the same procedure.
4. Any proposal for a Measure from the European Commission, from the relevant Party or from the Secretariat shall be made in writing at least 30 days before the meeting of the PHLG when it shall be discussed.
5. The proposal shall be sent to the Presidency with copy to all the members of the PHLG and the Secretariat. It shall be accompanied by relevant explanatory notes. Where necessary in accordance with its competences, position of the Regulatory Board shall be requested by the Party or the institution, which makes the relevant proposal for a measure.
6. Measures under Title II of the Treaty – extension of the *acquis communautaire* – shall be taken by a majority of the votes cast only on the ground of a proposal from the European Commission, which may alter or withdraw its proposal at any time before the final adoption of the measure.
7. Measures under Title III of the Treaty – Mechanism for operation of Network Energy Markets – shall be taken by a two third majority of the votes cast, including a positive vote of the European Community, upon a proposal from a Party or the Secretariat, which shall also take account of a position of the Regulatory Board.
8. Measures under Title IV – The Creation of a Single Energy Market – may be taken on a proposal from a Party only by unanimity. The European Commission on its own request or upon request of any Party, might request a position of the Regulatory Board.

### 3. Rules for Decision-Making by Correspondence

9. The PHLG may, in the intervals between the meetings of the PHLG, take decisions by correspondence. The Presidency, upon the proposal by a Party for a decision to be taken by correspondence or upon its own initiative shall decide, after consulting and in agreement with the Vice-Presidents, whether the matter warrants the taking of the decision by correspondence.
10. When it is decided that a decision should be taken by correspondence, the Presidency shall instruct the Secretariat to dispatch a letter or telefacsimile to each Party containing the proposed decision together with such information as the Presidency, after consultation and in agreement with the

Vice-Presidency, considers necessary to an informed decision. The Presidency, after consultation and in agreement with the Vice-Presidency, shall also specify whether and, if so, under which conditions, amendments to the proposal may be made by the Parties.

11. Presidency, after consultation and in agreement with the Vice-Presidents, shall determine the date and hour by which responses must be received, which shall in no case be earlier than 10 calendar days from the date of transmission of the letter or facsimile referred to above. In exceptional circumstances, upon request or at its own discretion, may the Presidency, after consultation and in agreement with the Vice-Presidency, extend the time limit for the receipt of responses. Any Party, that has not replied in writing (including telefacsimile) within the given time limit, is regarded as abstaining from the vote.

12. The votes cast by correspondence shall be reviewed by at least three persons, including a representative of the Presidency, the European Commission and the Secretariat. Once a decision is adopted, it shall be promptly circulated by the Secretariat to all Parties and Participants, together with the information on the votes cast in favor of the decision. It shall be formally signed by the Presidency at the earliest meeting of the PHLG.

13. This procedure may be used for adoption of Measures or other decisions following agreement of the President and Vice-Presidency.

#### **4. Procedural Acts**

14. Procedural Acts shall regulate organizational and other issues, envisaged in the Treaty and also referred to in these Rules. They shall be binding.

15. Any member of the PHLG may propose adoption of a Procedural Act and submit the draft of the act itself.

16. When the PHLG has agreed on the necessity for a Procedural Act, it may ask the Presidency to organize its preparation in consultation with the Vice-Presidency.

17. The Presidency may ask the Party, which has initiated the preparation of a procedural act, and/or the Secretariat to assist in the process of this preparation.

18. The drafts of Procedural Acts with the relevant materials shall be distributed at least 30 days before the meeting at which they will be discussed.

#### **VII. DISCLOSURE OF DOCUMENTS**

1. The draft agenda and the relevant materials shall be distributed to all the members of the PHLG, to the Participants and to the Observers. Material of interest to them will also be distributed to the representatives of any other institutions, which are invited to take part in the relevant meeting. Any of the Presidency and the Vice-Presidency may request that the draft agenda and the relevant materials are distributed to other institutions.

2. Unless otherwise decided, the finalized documents of the meetings (agenda, conclusions) shall be made public via the website of the Secretariat.

## VIII. FINAL PROVISIONS

1. All acts of the PHLG shall be signed by the Presidency.
2. The Rules have been adopted by the PHLG on the ground of Article 55 of the Treaty.
3. If application of these Rules to a specific situation is unclear or ambiguous, the Presidency in consultation and agreement with the Vice-Presidency shall interpret the Rules to resolve the situation.
4. At the latest one year from the entry of these Rules into force, based on the practical experience with their application, the Secretariat may propose eventual amendments to these Rules it deems useful or necessary. Where a Party wishes to propose such amendment, it is encouraged to consult it first with the Secretariat.
5. In accordance with Article 55 of the Treaty, any amendments to these Rules shall be adopted by a Procedural Act.

The Rules become effective on 15 October 2015, which is the day of their adoption by the PHLG.

## **RULES OF PROCEDURE of 24 April 2019 of the Energy Community Regulatory Board**

Procedural Act 2007/01/ECRB-EnC of 1 March 2007 on adoption of internal Rules of Procedure of the Energy Community Regulatory Board as amended by Procedural Acts 2009/01/ECRB-EnC of 25 February 2009, 2011/01/ECRB-EnC of 15 December 2011, 2012/01/ECRB-EnC of 28 March 2012, 2013/02/ECRB-EnC of 11 December 2013, 2015/01/ECRB-EnC of 8 April 2015, 2017/01/ECRB-EnC of 21 December 2017 and 2019/01/ECRB-EnC of 24 April 2019 on the amendment of the internal Rules of Procedure of the Energy Community Regulatory Board.

### **Article 1**

#### **Purpose**

1.1 The Rules regulate the organization of the Energy Community Regulatory Board and establish the procedures of its meetings.

1.2 The Energy Community Regulatory Board (hereinafter: “ECRB” or “Board”) shall discharge the tasks entrusted to it by Article 58 of the Energy Community Treaty.

1.3 The ECRB, upon request of the Ministerial Council, the PHLG and the European Commission, or on its own initiative and in accordance with the objectives of the Energy Community Treaty, shall undertake the function of advising on statutory, technical and regulatory rules in the region to the Energy Community Treaty Institutions.

1.4 The ECRB shall provide advice to the Ministerial Council and the PHLG with regard to monitoring and assessing the operation of the regional energy networks and network energy market and issue recommendations to the Parties when so entrusted by the Treaty or the Ministerial Council.

1.5 The ECRB shall facilitate consultation, co-operation and co-ordination amongst regulatory authorities towards a consistent application of the *acquis communautaire*. The ECRB makes recommendations and reports with respect to the functioning of the energy markets.

1.6 The ECRB may decide, in accordance with the procedure laid down in 4.7 hereunder, to issue a request to the Ministerial Council pursuant to the provisions of Articles 90 and 92 of the Treaty.

### **Article 2**

#### **Members**

2.1 In accordance with Article 59 of the Treaty, the ECRB is composed of one representative of the energy regulator of each Contracting Party and a representative of the European Commission representing the European Union (hereinafter: “Members” of the ECRB). The representative of the Regulatory Authority of the Contracting Parties shall be at the level of Head of the Energy Regulatory Authority or his nominated representative.

2.2 The European Commission is assisted by one regulator of each Energy Community Participant

country (hereinafter: "Participants" of the ECRB) and one representative of the Agency for the Cooperation of Energy Regulators (hereinafter: "ACER"). The representative of the Regulatory Authority of the Participants shall be at the level of the Head of the Energy Regulatory Authority or his nominated representative. The representative of ACER shall be at the level of the Director or his nominated representative.

2.3 Members of the ECRB shall abide by a Code of Ethics, which shall be adopted by the ECRB as a Procedural Act. The Code of Ethics shall set forth the criteria by which a representative to the ECRB, including the President of the ECRB may be removed or recalled.

2.4 The Members of the ECRB shall act in good faith and resolve to adhere to these Internal Rules of procedure.

### **Article 3**

#### **President and Vice President**

##### Duties

3.1 The President of the ECRB carries out the tasks entrusted to her/him by the provisions below. The President shall fulfill a unifying role and ensure by his/her authority that all Members and Participants work with a common purpose towards the discharge of the tasks entrusted to the ECRB under the Treaty.

3.2 The President shall not represent his/her Institution but this task shall be undertaken by a suitable representative of the Contracting Party Regulatory Authority and this representative will exercise the Contracting Party Regulatory Authority vote.

3.3 In addition to exercising the powers conferred upon him/her elsewhere in these rules, the President, after consulting the Vice-President, shall declare the opening and closing of each ECRB meeting, shall direct the discussion, shall ensure the observance of these Rules, shall accord the right to speak and announce decisions. The President may also call a speaker to order if his or her remarks are not relevant to the subject under discussion.

3.4 The European Commission shall act as Vice-President. The Vice-President shall also fulfill a unifying role and ensure, by his/her authority that all the Members and Participants work with a common purpose towards the discharge of the tasks entrusted to the ECRB under the Treaty.

3.5 The Vice-President assists the President in accordance with the provisions set out below. In the event of absence, impediment or incapacity of the President, the Vice-President is empowered to replace and exercise the responsibilities of the President.

##### Election

3.6 The President is elected by the ECRB members by secret ballot and by a two third majority of the votes cast, provided presence of at minimum two thirds of its Members

3.7 The nomination procedure shall be initiated by a Vice Presidency's written call for applications addressed to the ECRB member, entailing a nomination period of at least two weeks.

3.7.1 The Head and / or Commissioners of Contracting Parties Regulatory Authorities are eligible for the ECRB Presidency.

3.7.2 In case no nominees from the Contracting Parties Regulatory Authorities' candidate or are proposed, the Vice-Presidency shall open a second application round entailing a nomination period of at least two weeks. In this case, also the Head and / or Commissioners of Energy Community Participant countries are eligible for the ECRB Presidency.

3.7.3 In case an ECRB President cannot be elected based on 3.7.1 and 3.7.2, the term of the existing President can be prolonged for up to six month. In this case the Vice Presidency shall initiate another nomination procedure in line with 3.7.

3.8 Any candidature or any proposal for candidature shall be put forward to the Vice President of the ECRB.

3.9 The Vice President brings the candidacies to the attention of the members of the ECRB.

3.10 The President's term of office is two years and may be terminated upon decision of the ECRB or resignation. A President of the ECRB may not assume the Presidency more than two terms consecutively.

3.11 In the event of resignation, incapacity or recall of the President during his or her term of office, a new President shall be appointed in accordance with the above mentioned procedure, as soon as possible.

3.12 A decision of the ECRB as referred to in 3.10 requires presence of at minimum two thirds of its Members and two third majority of the votes cast. The decision of the ECRB must be duly justified and published.

#### **Article 4**

#### **Decision making process**

4.1 The Board acts within the mandate set forth in Article 58 of the Energy Community Treaty and takes Measures if so empowered by the Ministerial Council.

4.2 Each Member shall have one vote. Abstentions to voting from Members present shall not count as votes cast.

4.3 The Board may act in accordance with the provisions of Articles 4.4, 4.5 and 4.6 only if two thirds of Members are present.

4.4 Under Title II of the Energy Community Treaty, the Board shall act on a proposal from the European Commission, and each Contracting party shall have one vote.

4.4.1 The European Commission may alter or withdraw its proposal at any time during the procedure leading to its adoption.

4.4.2 The Board shall act by a majority of the votes cast.

4.5 Under Title III of the Energy Community Treaty the Board shall act on a proposal from a Party or the

Secretariat. The Parties and the Secretariat are encouraged to consult their proposal with the European Commission four weeks before the meeting upon which the proposal shall be presented. The Board shall act by a two third majority of the votes cast, including a positive vote of the European Union.

4.6 Under Title IV of the Energy Community Treaty the Board shall act on a proposal from a Party. The Party or Parties interested in putting forward a proposal are encouraged to consult with the European Commission three weeks before the proposal is tabled to the Board for consideration. The Board shall act with unanimity.

4.7 The ECRB may decide by unanimity excluding any Party concerned, to issue the request pursuant to paragraph 4.1.

4.8 Proposals are submitted to the President and the Vice President of the ECRB.

4.9 The vote(s) against a proposal for a Measure that was adopted by the Board shall be, upon request by the outvoted Member, recorded in the minutes and the conclusions of ECRB, together with the proposal as adopted, according to Article 58 of the Energy Community Treaty.

4.10 The outcome of any votes has to be recorded in the minutes of the ECRB meetings.

4.11 The communication of opinions of Members and Participants is possible by electronic correspondence in case of urgent matters but excluding Measures. The President may seek agreement to a position or opinion by electronic procedure. In such cases, the President shall ensure that each Member is aware that an agreement or opinion is sought by electronic procedure and shall set out a clear deadline for comments.

## **Article 5**

### **Meetings**

5.1 If a Contracting Party, Participant or Observer has established one regulator for gas and one regulator for electricity, presence shall be determined taking into account the agenda.

5.2 The ECRB Section shall establish a register of Members and Participants and shall record attendance at all official meetings.

5.3 Notwithstanding Article 71 of the Treaty, the Energy Community Secretariat shall be represented by the Head of the ECRB Section of the Secretariat unless excused by the President.

5.4 The Observers' regulatory authorities may attend ECRB meetings without participating in the discussions and without voting rights, in accordance with the Energy Community Treaty, Title IX, Article 96. The President in agreement with the Vice-President may invite an Observer to make a statement. The President in agreement with the Vice President may also decide that Observers be absent for specific points of the agenda due to confidentiality concerns. This will be specified as far as possible when the agenda is circulated.

5.5 The ECRB will be convened in principle four times a year and, extraordinarily when appropriate.

5.6 At its last meeting of a calendar year, the ECRB decides the dates of its meetings in the next calendar year. These are published on the Energy Community website.

5.7 The ECRB meetings shall be convened by either the President or the Vice President.

5.8 An extraordinary meeting of the ECRB may be convened by the President or Vice-President. An extraordinary meeting shall also be called at the request of at least of one fifth of the Members, within one month of the receipt of the request by the ECRB Section.

5.9 Upon endorsement of the draft agenda by the President and Vice-President, the ECRB Section circulates the proposed agenda to those entitled to attend the respective meeting of the ECRB. The draft agenda shall indicate the subjects to be considered clearly.

5.10 The agenda shall be circulated to those entitled to attend the respective meeting of the ECRB at least two weeks ahead of the meeting. In case of urgency the President may deviate from this rule.

5.11 All meeting related documents shall be made available in the Energy Community website's ECRB members' area at least two weeks ahead of the meeting. In case of urgency the President may deviate from this rule. In any case, documents related to agenda items scheduled for ECRB approval shall be submitted to the ECRB 10 (ten) days before the ECRB the latest.

5.12 With the President's permission, Members may be accompanied by experts.

### **Article 6**

#### **Organization of work**

6.1 The ECRB shall adopt an annual work program in accordance with the procedure laid down in Article 11.2. The work program shall be published on the Energy Community web site.

6.2 At the beginning of every calendar year, the ECRB shall adopt an annual report of summarizing its activities over the preceding year, prepared by the ECRB Section.

6.3 Both documents referred to in 6.1 and 6.2 will be transmitted to the Ministerial Council.

### **Article 7**

#### **Working Groups**

##### **Organisation**

7.1 The ECRB may set up working groups composed of Members, Participants and ACER and chaired by a Member, a Participant, or ACER, and mandates them to study specific subjects. The mandate may provide that the composition of the working groups will be flexible in order to involve other relevant authorities when necessary. The mandate shall be time limited and shall further specify in which way the working group will report back to the Board and how it will be assisted by the ECRB Section. The Members, Participants and ACER representatives involved in the working groups shall nominate their representatives and notify the Chair in a timely fashion prior to the start of the relevant working group.

7.2 The decision to establish a group and its terms of reference is taken by simple majority of the votes cast, including a positive vote of the Vice-President.

7.3 Unless decided otherwise by the ECRB for a specific working group, Observers' representatives shall be allowed to participate in the working groups and be invited by the chairmen of the working groups.

### Chairwomen / -men

7.4 Meetings of the Working Groups shall be convened by their Chairs. In addition to exercising the powers conferred upon him/her elsewhere in these rules, the Chair shall declare the opening and closing of each Working Group meeting, shall direct the discussion, shall ensure the observance of these Rules, shall accord the right to speak and announce decisions. The Chair may also call a speaker to order if his or her remarks are not relevant to the subject under discussion.

7.5 The Working Group Chairs are elected by the ECRB for a period of two years, which may be extended. Proposals for candidature shall be put forward to the President and Vice President of the ECRB including proof of support by the Head of the candidate's authority. The nomination procedure shall be initiated by a President's and Vice President's written call for applications addressed to the ECRB member, entailing a nomination period of at least two weeks. The President brings the candidacies to the attention of the members of the ECRB in agreement with the Vice President.

7.6 The Working Group Chairs' term can be terminated upon a decision of the ECRB pursuant to Article 7.7. In the case of resignation of the Chairperson during its term, a new Chairperson will be appointed under the same terms for a period of up to two years, which may be extended.

7.7 The election of Working Group Chairs by the ECRB requires the presence of two thirds of Members and simple majority of the votes cast.

7.7.1 If in the first voting round out of more than two candidates none reaches a simple majority of votes, a run-off ballot shall be executed between the two candidates who obtained the highest number of votes. In case the percentage of votes of one of those two applicants equals to the percentage a third candidate received in the first voting round, the latter shall also participate in the run-off ballot.

7.7.2 The procedure laid down in item 7.7.1 shall be repeated until any of the candidates reaches a simple majority of votes.

7.7.3 Candidates are entitled to withdraw their application at any stage of the voting procedure.

7.7.4 The rules laid down in item 7.7.1 shall not prevent ECRB to unanimously decide on the successful candidate in case the procedure pursuant to item 7.7.1 does not succeed to allocate a simple majority of votes to any of the applicants.

### Deputy Chairwomen / -men

7.9 Each Working Group shall designate a deputy to the Chair. In the event of absence, impediment or incapacity of the Working Group Chair, the Deputy Chair shall be empowered to replace and exercise the responsibilities of the Working Group Chair. The Deputy Chair shall coordinate with the relevant Working Group Chair before executing her/his tasks.

7.10 The Deputy Chair is appointed by the Working Group members.

7.11 The term of the Deputy Chair is limited to the term of the relevant Working Group Chair and may be extended.

7.12 Articles 7.6 and 7.7 apply to the Working Group Deputy Chairs.

7.13 Working Groups can refrain from designating a Deputy Chair in case co- Working Group Chairpersons are appointed.

### **Article 8**

#### **Communications and Exchange of Information**

8.1 Every Member, ACER representative, Participant and Observer shall appoint a communications officer. His/her task will consist of facilitating the relevant information exchange between his/her organisation and the other Members and the ECRB Section. This information is related to the work carried out by the ECRB or its working groups.

8.2 Members and Participants shall endeavour to keep the other national and regional energy regulators of their States informed about activities of the ECRB and, where necessary, make all appropriate arrangements to be in a position to speak as the competent energy regulator in the event that other national or regional regulators have an interest in the matter discussed.

### **Article 9**

#### **Conclusions and Minutes**

9.1 Conclusions that record decisions taken shall be adopted at the following meeting by consensus.

9.2 The minutes of each meeting shall be drawn up by the ECRB Section. Opinions may be recorded in the minutes, when requested. The draft minutes shall ideally be sent to Members, Participants and ACER representatives within 15 working days after the meeting and shall be submitted to the next meeting of the ECRB or the working group for approval. Any comments on meetings' draft conclusions shall be submitted by the (ECRB or the relevant working group) members prior to the next meeting in writing to the ECRB President and Vice President, respectively the Chairman in case of working groups, and the ECRB Section.

9.3 The minutes shall include

- The scope of the agenda item (for discussion/information/approval);
- The related document(s);
- A brief reference to the core discussion points raised by members;
- The decision(s) taken and action points following including responsibilities and the timeline for completion;
- A summary table of the main conclusion(s).

The final minutes shall normally not exceed a maximum number of 5 (five) pages excluding annexes. External annexes, such as presentations, may be separately attached to the minutes.

9.4 The minutes of the ECRB and its working groups shall be treated confidentially and not be published. A summary table of the main conclusion(s) of the Board meetings shall be published on the Energy Community website.

9.5 The agenda of the ECRB meeting and its working groups established by ECRB shall not be considered confidential unless a specific decision is made and shall be published on the Energy Community web- site as soon as possible after a meeting.

9.6 Where the European Commission or a Contracting Party informs the ECRB that the advice request-

ed or the question raised is of a confidential nature, Members, Participants, ACER representatives, Observers and any other person involved shall not disclose that information unless allowed by the Party raising the issue. The President may decide in such cases that only Members, Participants and ACER representatives may be present at meetings.

9.7 The ECRB can adopt its rules on confidentiality.

### **Article 10**

#### **Public Consultation and Transparency**

10.1 The ECRB will use appropriate processes to consult consumers, market participants, system operators, market operators and interested parties which may include, *inter alia*: public hearings and roundtables, industry and the Energy Community Fora, the European Fora (including the European Electricity Regulatory Forum - "Florence Forum", the European Gas Regulatory Forum - "Madrid Forum" and the European Citizen Forum - "London Forum") and written and internet consultations.

10.2 The ECRB may publish on the ECRB web site consultative documents, statements of agreed principles, press releases, consultation procedures, summaries of responses to consultations and other documents which assist interested parties to understand the work of the ECRB. Comments shall be invited either individually or jointly to be addressed to the ECRB in written form, preferably by email. Comments received in response to consultation documents shall be published on the ECRB web site, unless a respondent explicitly requests that their submission is not made available to others on confidentiality grounds.

10.3 The ECRB may decide to meet interested parties to discuss matters of common interests. As appropriate, the President or the Vice-President may represent the ECRB at such a meeting or Members may be nominated to do so. The President or the Vice-President, where appropriate, will communicate the official position of the ECRB. The President may, on his own initiative, describe the work or explain the views of the ECRB to the press or other interested parties, in response to enquiries or otherwise in cases of urgency. Where a Member refers in public to the views or position of the ECRB it must do so in an accurate manner.

10.4 Presentations made on behalf of the ECRB at public events (conferences, workshops et al) shall only present formally approved and publically available positions of the ECRB in ECRB documents, conclusions or similar.

### **Article 11**

#### **ECRB Section of the Secretariat**

11.1 There shall be specific staff of the Energy Community Secretariat devoted to the support of the ECRB ("ECRB Section"). The ECRB Section shall report to the Energy Community Secretariat Director with regard to management and employment issues. The Head of the ECRB Section shall direct the staff as to their substantive activities, in line with the ECRB work program.

1.2 The ECRB Section shall prepare the minutes of the meetings, assist the ECRB and the working groups in their functions and execute all other functions assigned to it by the Board, *inter alia*:

- Drawing up the ECRB annual work program for consideration and adoption by the ECRB upon agreement by the President and Vice-President;
- Preparing and presenting to the ECRB for adoption an annual review of the progress achieved;
- Preparing the agenda for the ECRB meetings to be submitted for agreement to the President and Vice President;

11.3 The ECRB Section acts as coordinator for consultations required to take forward the work of the ECRB or its working groups and assist the President and Vice-President in their public relations activities and representation functions.

11.4 The permanent or seconded staff of the ECRB Section is appointed by the Energy Community Secretariat Director pursuant to paragraph 22 of the procedural act of the Energy Community Ministerial Council on the Rules of Recruitment and working conditions of the staff of the Secretariat of the Energy Community. Specifically, the staff of the ECRB Section will operate as much time as needed in Athens in order to ensure the smooth and effective operation of the meetings of the Regulatory Board, which take place in Athens according to the Treaty establishing the Energy Community (Article 62).

### **Article 12**

#### **Accountability and links**

12.1 The ECRB shall submit an Annual Report to the Ministerial Council.

12.2 The ECRB may participate or designate its representative in other European or international committees or groups when that is necessary for the work of ECRB.

### **Article 13**

#### **Publication and modification of the Rules of Procedure**

13.1 The Regulatory Board Internal Rules of Procedures shall be made available on the ECRB website.

13.2 When necessary the ECRB shall agree on interpretation of the Rules of Procedure. These decisions require two thirds majority of Members voting, including a positive vote of the European Union.

13.3 Based on practical experience with these Rules, the President or Vice-President or any Member of the ECRB may propose to the Board any useful and necessary amendments to these Rules. In accordance with Article 60 of the Treaty, any amendments to these Rules are adopted by a Procedural Act of the ECRB, which shall act by two-third majority of the votes cast, including a positive vote of the European Union.

## ***Article 14***

### **Transitional and final provisions**

14.1 These Internal Rules for Procedure come into force immediately upon adoption.

14.2 To the extent possible, the work agreed and done with the Council of European Energy Regulators South East Europe Working Group shall be continued by the Energy Community Regulatory Board.

14.3 Rules of procedures on the implementation of the tasks in Article 58(b) of the Treaty shall be adopted by the ECRB.

## **RULES OF PROCEDURE of 16 October 2015 on dispute settlement under the Treaty**

Procedural Act 2008/01/MC-EnC on Rules of Procedure for dispute settlement under Treaty as amended by Procedural Act 2015/04/MC-EnC of 16 October 2015 on amending Procedural Act 2008/01/MC-EnC of 27 June 2008 on Rules of Procedure for dispute settlement under the Treaty

THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY,

Having regard to the Treaty Establishing the Energy Community, and in particular Articles 90 to 94 as well as Articles 47(c), 86, 87, 82 and 83 thereof,

Having regard to the proposal by the Secretariat,

Whereas it is of crucial importance that the provisions of the Treaty, including the Decisions adopted thereunder, are properly implemented in the national legal orders of the Parties and correctly applied by their authorities,

Whereas each Party to the Treaty is responsible for the timely implementation and correct application of Energy Community law within its own legal system,

Whereas the Treaty establishes a system of dispute settlement within the Energy Community by decision of the Ministerial Council,

Whereas the procedure leading up to such a decision may be initiated by a Party, the Secretariat or the Regulatory Board,

Whereas the Treaty gives private bodies the right to approach the Secretariat with complaints,

Whereas a Party concerned has the right to make observations in response to the request or complaint,

Whereas the Ministerial Council may decide on the existence of a breach by a Party of its obligations,

Whereas the Ministerial Council may further decide on the existence of a serious and persistent breach and on possible sanctions resulting therefrom,

Whereas the Treaty provisions establish a framework which requires more detailed procedural rules for practical implementation,

Whereas the institutions of the Energy Community shall interpret any term or other concept used in the Energy Community Treaty that is derived from European Community law in conformity with the case-law of the Court of Justice of the European Union, including its General Court,

Upon review as envisaged by Article 47 of this Procedural Act,

Whereas the Ministerial Council already on 29 June 2007 concluded that a formal process at a level below the Ministerial would have to be considered for the issue of non-implementation of Treaty commitments by Parties to the Treaty,

Whereas the European Commission in 2011 demanded “more effective implementation and enforcement” in the Energy Community<sup>1</sup>; the European Parliament in 2013 requested “adapting [the Energy Community’s] decision-making to future challenges, including by setting up legal control

<sup>1</sup> Commission Communication: The EU Energy Policy: Engaging with Partners beyond Our Borders, 7.9.2011, COM(2011) 539 final.

mechanisms to deal with deficient *acquis* implementation”<sup>2</sup>; and the European Council in 2014 called for the Energy Community to “be reinforced so as to ensure the application of the *acquis* in those countries”<sup>3</sup>,

Whereas the High Level Reflection Group mandated by the Ministerial Council concluded that “Weak enforcement mechanism constitute one of the major obstacles to implementation of the *acquis communautaire* in the Contracting Parties”<sup>4</sup> and considered that “a refurbishment of the institutional architecture is necessary, in particular to enable the enforcement of the far-reaching commitments the Parties accepted under the Treaty”<sup>5</sup>,

Whereas the Permanent High Level Group, at its meetings on 15 October 2015 endorsed the present Procedural Act, as amended,

HAS ADOPTED THIS PROCEDURAL ACT:

### **Article 1**

#### **Purpose**

These rules specify the procedure to be followed in cases of failure by a Party (hereinafter “the Party concerned”) to comply with a Treaty obligation or to implement a Decision or Procedural Act addressed to it within the required period (hereinafter “Energy Community law”) as established by Articles 90 to 93 of the Treaty (hereinafter “dispute settlement procedure”, Titles II-IV), as well as a cooperation mechanism between national authorities or courts and the Secretariat in cases concerning the interpretation or application of Energy Community law without prejudice to Article 94 of the Treaty (Title I).

### **Title I**

## **COOPERATION BETWEEN NATIONAL AUTHORITIES OF THE CONTRACTING PARTIES AND THE SECRETARIAT**

### **Article 2**

#### **Cooperation between national authorities of the Contracting Parties and the Secretariat**

(1) Where a question concerning the interpretation or application of Energy Community law is raised in proceedings before a national authority of a Contracting Party, such authority, upon request of a party to the procedure before it or on its own motion, notifies the Secretariat in writing at the earliest stage possible in the procedure. The Secretariat shall ensure the confidentiality of all information received.

<sup>2</sup> European Parliament Resolution of 23 October 2013 on the European Neighborhood Policy: towards a strengthening of the partnership, (2013/2621(RSP).

<sup>3</sup> European Council Conclusions of 27 June 2014, EUCO 79/14.

<sup>4</sup> An Energy Community for the Future, p. 19.

<sup>5</sup> An Energy Community for the Future, p. 19.

(2) Contracting Parties shall ensure that, where a question concerning the interpretation or application of Energy Community law is raised in proceedings before a national court, such court, upon request of a party to the procedure before it or on its own motion, may notify the Secretariat in writing at the earliest stage possible in the procedure. The Secretariat shall ensure the confidentiality of all information received.

(3) Where the coherent interpretation or application of Energy Community law so requires, the Secretariat shall submit its opinion to the national authority or court of the Contracting Party in writing within the timelines set by national procedural rules, but not later than within four weeks. It may consult the Advisory Committee before submitting an opinion. The Secretariat's opinion must be in conformity with the case-law of the Court of Justice of the European Union.

(4) In its final decision or judgment, the national authority or court of the Contracting Party takes into account of the opinion submitted by the Secretariat.

(5) The Secretariat shall submit to the Ministerial Council an annual report on the application and interpretation of Energy Community law by national authorities of the Contracting Parties.

## **Title II**

### **PROCEDURES UNDER ARTICLES 90 TO 93**

#### **Article 3**

##### **Failure to comply**

(1) A Party fails to comply with its obligations under the Treaty if any of its measures (actions or omissions) are incompatible with a provision or a principle of Energy Community law.

(2) Failure by a Party to comply with Energy Community law may consist of any measure by the public authorities of the Party (central, regional or local as well as legislative, administrative or judicative), including undertakings within the meaning of Article 19 of the Treaty, to which the measure is attributable.

#### **Article 4**

##### **Burden of proof**

The burden of proving the allegation of non-compliance by a Party with Energy Community law and to place before the Ministerial Council the information needed to enable it to determine whether the obligation has not been fulfilled shall rest on the initiator of the proceedings. Where, however, the Party invokes an exemption to a rule or general principle of Energy Community law, it is incumbent upon the Party concerned to prove that the requirements for such exemption are fulfilled.

### **Article 5**

#### **Dispute settlement procedures and private disputes**

Dispute settlement procedures must relate to a violation by a Party of Energy Community law and may not concern disputes between private parties.

### **Article 6**

#### **Case register**

- (1) The Secretariat keeps a case register at its premises under the control of the Legal Counsel.
- (2) Each dispute settlement procedure case shall be assigned an official case number. Incoming and outgoing documents shall be registered under this number in the case file. If several pending cases concern the same subject matter, they may be consolidated and processed under the same case number.
- (3) The representatives of the Energy Community institutions and their staff shall not disclose information acquired or exchanged by them pursuant to this Procedural Act and of the kind covered by Energy Community Staff Regulation 3.5. a), unless the present Rules permit such disclosure.

### **Article 7**

#### **Access to the case file**

- (1) At their request, Parties, Participants and Observers to the Treaty, the complainant as well as private or public bodies with a legitimate interest (hereinafter "interested parties") shall have access to the case file, subject to an eventual request by complainants to confidential treatment.
- (2) In cases of doubt, the Director of the Secretariat shall take a decision on the existence of a legitimate interest of private or public bodies requesting access to the case file.
- (3) The Secretariat shall adopt a Procedural Act<sup>6</sup> laying down specific rules on access to the case file.

### **Article 8**

#### **Procedural documents**

- (1) The language of the procedure is English. Any procedural documents expressed in another language shall be accompanied by a translation into English.
- (2) All procedural documents shall bear a date, the case number and the name and the address of the sender.
- (3) The original of every procedural document shall be signed by a person authorised to represent the sender by law, by its constitution or by authorisation.
- (4) If a procedural document does not comply with the requirements set out in paragraphs 1 to 3, the Secretariat shall prescribe a reasonable period within which the sender is to comply with them.

---

<sup>6</sup> Procedural Act 2018/06/ECS-EnC of 10 December 2018 on Rules on access to the case file

## **Article 9**

### **Costs**

Costs incurred by all parties to or persons participating in the procedure are not recoverable.

## **Article 10**

### **Time-limits**

(1) Unless otherwise indicated, time-limits established by these Rules and time-limits prescribed by the competent institutions shall be binding.

(2) Time-limits shall be prescribed so as to specify the precise date on which the required action is to take place rather than expressing periods in days, weeks, months etc. Where that day is a Saturday, Sunday or an official holiday, the deadline shall be extended until the end of the first following working day.

(3) Time-limits may be extended by the institution that prescribed it upon a reasoned application.

(4) Communication by telefax and email shall be deemed sufficient for the purposes of compliance with the time-limits.

## **Title III**

### **THE COURSE OF DISPUTE SETTLEMENT PROCEEDINGS**

#### **Chapter I - Preliminary Procedure**

## **Article 11**

### ***Scope and purpose***

(1) When initiating a dispute settlement procedure within the meaning of Article 11, the Secretariat shall carry out the preliminary procedure set out in this Title. A Party or the Regulatory Board shall initiate dispute settlement procedures either by notification to the Secretariat or directly by submitting a reasoned request to the Ministerial Council in accordance with Article 29 below.

(2) The purpose of the preliminary procedure is to establish the factual and legal background of cases of alleged non-compliance, and to give the Party concerned ample opportunity to be heard. In this respect, the preliminary procedure shall enable the Party concerned to comply of its own accord with the requirements of the Treaty or, if appropriate, to justify its position.

(3) Where the Secretariat initiates a dispute settlement procedure on the grounds that a Party has failed to fulfil its obligation to notify measures transposing a Decision addressed to it within the deadline specified in that Decision, the Secretariat shall submit a reasoned request to the Ministerial Council without preliminary procedure.

### **Article 12**

#### **Initiation of a dispute settlement procedure by the Secretariat**

(1) A dispute settlement procedure may be initiated by the Secretariat by way of an opening letter in accordance with Article 13 below.

(2) The Secretariat initiates procedures in response to alleged non-compliance arising from either a complaint by a private body, a notification by a Party or by the Regulatory Board or by its own initiative. Within the Secretariat, the Legal Counsel shall coordinate the procedure.

(3) The decision to initiate a dispute settlement procedure shall be made publicly available on the Energy Community website, stating the date of sending out the opening letter, the Party concerned and a brief summary of the subject matter.

### **Article 13**

#### **Opening letter**

(1) If the Secretariat considers that a possible non-compliance of which it has become aware or issues raised in a complaint warrant the opening of a dispute settlement procedure, it addresses an opening letter to the Party concerned, requesting it to submit its observations within a specified time period. This period shall normally be two months.

(2) The Party concerned is requested to adopt a position on the points of fact and of law raised in the opening letter.

### **Article 14**

#### **Reasoned opinion**

(1) In the light of the reply or absence of a reply from the Party concerned, the Secretariat may address a reasoned opinion to that Party. The reasoned opinion must contain a coherent and detailed statement of the reasons which led the Secretariat to conclude that the Party concerned failed to fulfil its obligations under the Treaty.

(2) The reasoned opinion shall call on the Party concerned to comply with the law within a specified time period. This period shall normally be two months.

### **Article 15**

#### **Submission to the Ministerial Council**

In the light of the reply or absence of a reply from the Party concerned, the Secretariat may bring the matter to the attention of the Ministerial Council by way of a reasoned request in accordance with Article 29 below.

**Article 16****Request for information**

- (1) The Secretariat may, by simple request, require any authority of the Party concerned to provide all necessary information at any stage of the preliminary procedure.
- (2) The Secretariat may also request information from other natural or legal persons.
- (3) The Secretariat may ask national authorities of Contracting Parties to conduct inspections of undertakings and associations of undertakings in line with the respective authorities' competences under national law.

**Article 17****Interested parties**

- (1) Interested parties may submit written observations to the Secretariat at any stage of the preliminary procedure.
- (2) Private and public bodies other than Parties, Participants and Observers shall substantiate the required legitimate interest.
- (3) Any written observations received shall be immediately forwarded to the Party concerned and shall be attached to the reasoned request referred to the Ministerial Council.

**Article 18****Urgency**

- (1) In cases of urgency due to the risk of serious and irreparable damage to an objective of the Treaty, the Secretariat may, on the basis of a *prima facie* finding of non-compliance, refer a reasoned request directly to the next possible meeting of the Permanent High Level Group.
- (2) The Permanent High Level Group may take appropriate and proportionate interim measures upon request by the Secretariat. The Permanent High Level Group shall review the existence of urgency.
- (3) For the application of this article, the Permanent High Level Group shall adopt guidelines determining the criteria for urgency, the procedure for adoption as well as the scope and limits of interim measures.

**Article 19****Suspension and discontinuance of the procedure**

- (1) The Secretariat may, at any point of the preliminary procedure, decide to suspend or discontinue the procedure, in particular where the Party brings the state of non-compliance with Energy Community law to an end or where it makes credible commitments as to its intention to amend its legislation, administrative or judicial practice. Such decision may also be taken where the Party con-

cerned successfully refutes factual assumptions or convincingly counters the legal arguments made by the initiator.

(2) To achieve the results described in paragraph 1, the Secretariat may enter into informal bilateral discussions with the Party concerned. A short report on the results achieved shall be submitted by the initiator to the Ministerial Council upon closure of the file and be included to the case file.

(3) The Secretariat may reopen the procedure where there has been a material change in any of the facts on which the decision was based, where the Party concerned acts contrary to its commitments or where the decision was based on incomplete, incorrect or misleading information provided by that Party.

## **Chapter II - The role of private bodies**

### ***Article 20***

#### **Right to approach the Secretariat**

(1) Private bodies may lodge a complaint with the Secretariat against a Party arising from any measure the complainant considers incompatible with Energy Community law.

(2) The notion of private body encompasses all natural and legal persons as well as companies, firms or associations having no legal personality.

### ***Article 21***

#### **Subject matter**

(1) A complaint has to relate to a failure to comply with Energy Community law by a Party as defined above in Article 3.

(2) A complaint against an EU Member State will be passed on to the European Commission. The Secretariat will inform the complainant and the Permanent High Level Group of the transfer to the European Commission. Such transfer shall be without prejudice to the obligations arising from Title III and IV of the Treaty.

### ***Article 22***

#### **Form of the complaint**

(1) A complaint shall be made to the Secretariat in writing, by letter, fax or e-mail.

(2) Complainants should send supporting documentary evidence, if available, and copies of relevant correspondence with the national authorities of the Party.

**Article 23****Acknowledgment of receipt**

- (1) Following registration by the Secretariat and assignment of a case number, an acknowledgement will immediately be sent to the complainant.
- (2) The complainant shall be asked to indicate whether he/she wishes their complaint to be treated in a confidential or non-confidential manner. The Secretariat will abide by the choice a complainant has made regarding confidentiality, i.e. disclosure of his/her identity, in its communication with the authorities of the Party concerned, other interested parties or the general public. Where a complainant has not indicated his/her choice, the Secretariat shall presume that the complainant has opted for non-confidential treatment.
- (3) The Secretariat will keep the complainant informed of the course of the procedure.

**Article 24****Information of the Party concerned**

In its opening letter, the Secretariat shall inform the Party concerned that it is acting on the complaint.

**Article 25****Request for information**

The Secretariat may, by simple request, require the complainant to provide all necessary information at any stage of the preliminary procedure.

**Article 26****Reaction by the Secretariat**

- (1) If the Secretariat takes the view that the subject matter of the complaint gives rise to a breach of Energy Community law, it shall initiate a preliminary procedure by way of an opening letter within six months upon registration of the complaint, with the aim to either resolve the dispute or to submit a reasoned request to the Ministerial Council.
- (2) If the Secretariat takes the view that the subject matter of the complaint does not give rise to a breach of Energy Community law, it shall notify the complainant the reasons for not pursuing the case further. The complainant may bring its case to the Permanent High Level Group. The latter may request the Secretariat to initiate a preliminary procedure.

**Article 27**

**Withdrawal of the complaint**

Withdrawal of the complaint shall not affect the right of the Secretariat to pursue the procedure further.

**Article 28**

**Notification by a Party or by the Regulatory Board**

Articles 22 to 27 shall apply by analogy to cases where the Secretariat initiates a preliminary procedure upon notification by a Party or the Regulatory Board.

**Title IV**

**PROCEDURE BEFORE THE MINISTERIAL COUNCIL**

**Chapter I - Breaches by a Party of its obligations (Article 91 of the Treaty)**

**Article 29**

**Reasoned request**

(1) A reasoned request for a decision of the Ministerial Council pursuant to Article 90 of the Treaty may be submitted by the Secretariat either upon complaint, upon notification by a Party or the Regulatory Board, or on its own initiative. In these cases, the reasoned request shall be preceded by a preliminary procedure in accordance with the provisions laid down in Title III, save as otherwise provided for in these Rules of Procedure.

(2) A reasoned request may also be submitted by a Party or the Regulatory Board directly. In that case, the Party or the Regulatory Board may ask the Secretariat for factual information and legal advice before submitting the reasoned request.

(3) The reasoned request shall be based on concrete factual findings and backed up by sufficient legal analysis. The reasoned request including annexes shall be sent to the Party concerned, to the Presidency and the Vice-Presidency as well as to the President of the Advisory Committee. A copy of the reasoned request shall be sent to the Secretariat in case the latter is not the initiator.

(4) The reasoned request shall contain a proposal for the decision to be taken by the Ministerial Council pursuant to Article 91 of the Treaty.

(5) The reasoned request shall be published on the Energy Community's website providing for confidentiality of the complainant, where applicable.

**Article 30****Scope of the decision**

(1) The Ministerial Council decides on the proposal made in the submitted reasoned request. It applies Energy Community law including these Rules.

(2) In its decision, the Ministerial Council shall either establish the existence of a breach by a Party of its obligations arising from Energy Community law according to the proposal or dismiss the request entirely or partially.

**Article 31****Reply by the Party concerned**

(1) Within two months following receipt of a copy of the reasoned request, the Party concerned may reply in writing to the Secretariat.

(2) The Secretariat shall notify all Parties and Participants, the Regulatory Board, the Advisory Committee as well as persons and bodies participating in the preliminary procedure of the reasoned request as well as any reply to it. Within two months of this notification, they shall be entitled to submit written observations to the Secretariat. The Regulatory Board and the Secretariat may submit written observations where they are not the initiator of the case.

**Article 32****Advisory Committee**

(1) Before taking the decision pursuant to Article 91 of the Treaty, the Presidency and the Vice-Presidency shall ask an Advisory Committee for its opinion on the reasoned request, taking into account any reply by the Party concerned. The Ministerial Council shall not be bound by the opinion of the Advisory Committee.

(2) The Advisory Committee shall be independent from the authorities of the Parties and the institutions established under the Treaty. It shall be bound by Energy Community law, including these Rules, and in particular Article 94 of the Treaty.

(3) The Advisory Committee shall be composed of five members appointed by the Ministerial Council by unanimity for a renewable term of four years, including one member representing the European Union. Members shall be chosen from persons whose independence is beyond doubt and who possess the qualifications required for appointment to the highest judicial offices in the respective Party.

(4) The procedure before the Advisory Committee shall not last longer than five months upon being tasked in accordance with paragraph 1 of this Article. Based on the reasoned request and taking into account a reply by the Party concerned as well as the written observations received and after having conducted a public hearing, the Advisory Committee of the Energy Community shall adopt an opinion on the reasoned request.

(5) The Advisory Committee shall adopt its opinion by majority of its members. The opinion shall

propose to uphold or dismiss the reasoned requests entirely or partially. The President of the Advisory Committee shall forward it to the President of the Permanent High Level Group the Party concerned and the Secretariat within five working days upon its adoption.

(6) The Advisory Committee shall adopt its internal rules of procedure. The members of the Advisory Committee shall elect among themselves a President for the period of two years.

### ***Article 33***

#### **Proceedings of the Permanent High Level Group**

(1) The President of the Permanent High Level Group shall circulate the opinion of the Advisory Committee to the members of the Permanent High Level Group. The opinion of the Advisory Committee shall be made publicly available on the Energy Community website not later than three days upon its adoption.

(2) At the next meeting after the adoption of the Advisory Committee's opinion, the Permanent High Level Group shall hear both parties to the dispute as well as the President of the Advisory Committee. The Permanent High Level Group shall include the reasoned request on the agenda of the next meeting of the Ministerial Council. If it agrees with the reasoned request, it may include it as an "A" item on the agenda of the Ministerial Council in line with its Rules of Procedure.

### ***Article 34***

#### **Decision by the Ministerial Council**

(1) At its meeting, or, as the case may be, by correspondence, the Ministerial Council takes its decision in accordance with Article 30(2).

(2) The decision by the Ministerial Council shall be taken in accordance with the rules laid down in Article 91(1) of the Treaty.

(3) The decision shall be signed by the Presidency. It shall be sent to the Party concerned, the submitter of the reasoned request and the Secretariat. The Advisory Committee's opinion shall be appended to the Ministerial Council's decision.

### ***Article 35***

#### **Decision in the absence of a reply**

Where the Party concerned, after having been duly informed, fails to reply in its defence on time, a decision shall be taken based on the facts submitted in the reasoned request alone.

**Article 36****Publication of the decision**

The decision taken by the Ministerial Council shall be made publicly available on the website of the Secretariat.

**Article 37****Binding nature of the decision**

The decision by the Ministerial Council shall be binding on the Parties concerned from the date of its adoption.

**Article 38****Consequences of a decision establishing failure to comply**

(1) Where the Ministerial Council establishes the existence of a breach of a Party's obligation pursuant to Article 91 of the Treaty the Party concerned shall take all appropriate measures to rectify the breach and ensure compliance with Energy Community law.

(2) The Secretariat, in accordance with Article 67(b) of the Treaty, shall review the proper implementation by the Party concerned of the decision, and may bring the matter directly before the Ministerial Council on the grounds of a failure to take the necessary measures to comply with the decision.

**Chapter II - Serious and persistent breaches (Article 92 of the Treaty)****Article 39****Serious and persistent breach**

The Ministerial Council shall establish the existence of a serious and persistent breach by a Party of its obligations under the Treaty taking into account the particularities of each individual case.

**Article 40****Request**

(1) A Party, the Secretariat or the Regulatory Board may request the Ministerial Council to determine the existence of a serious and persistent breach without a preliminary procedure.

(2) The request may follow up on a prior decision taken by the Ministerial Council under Article 91 of the Treaty or raise a new issue.

(3) The request shall set out the allegations against the Party concerned in factual and legal terms. It shall also contain a proposal as to concrete sanctions to be taken in accordance with Article 92(1)

of the Treaty.

(4) The request shall be submitted to the Presidency and the Vice-Presidency at least 60 days before the respective meeting. A copy shall be submitted to the Secretariat for registration. The request shall not be made public.

#### **Article 41**

##### **Decision-making procedure**

(1) The Presidency shall, within seven days after receiving it, forward the request to the Party concerned and ask it for a reply to the allegations made in the request.

(2) The Presidency and the Vice-Presidency may ask the Advisory Committee for its written opinion.

(3) The decision by the Ministerial Council on the existence of a serious and persistent breach shall be taken in accordance with Articles 92(1) and 93 of the Treaty.

(4) The decision taken by the Ministerial Council shall be made publicly available on the Secretariat's website.

#### **Article 42**

##### **Measures under Article 92**

(1) In the decision establishing the existence of a serious and persistent breach, the Ministerial Council shall determine measures in accordance with Article 92(1) of the Treaty and specify a time-limit.

(2) The obligations of the Party concerned under the Treaty shall in any case continue to be binding on that Party.

(3) The Ministerial Council shall at each subsequent meeting verify that the grounds continue to apply on which the decision establishing the existence of a serious and persistent breach was made and sanctions were imposed.

### **Chapter III - Revocation of decisions**

#### **Article 43**

##### **Procedural aspects**

(1) The Ministerial Council, in accordance with Articles 91(2) and 92(2), may decide by simple majority to revoke decisions taken under Articles 91(1) and 92(1) respectively. Revocation of a decision may be proposed by any Party.

(2) Before taking the decision to revoke decisions taken under Articles 91(1) or 92(1) of the Treaty, the Ministerial Council shall ask the Secretariat and the Party concerned for their reports on the factual circumstances, as well as a legal opinion by the Advisory Committee based on the two reports.

(3) The Ministerial Council shall give reasons for its decision to revoke a previous decision and shall

make the revocation decision publicly available on the Energy Community website.

(4) A revocation shall not affect decisions taken within the domestic legal orders following up the initial decision by the Ministerial Council.

## **Title V** **FINAL PROVISIONS**

### ***Article 44***

#### **Amendments to Rules of Procedure of the Ministerial Council**

(1) In Item VII.5. of Procedural Act 2006/01 on Internal Rules of Procedure of the Ministerial Council of the Energy Community, the text after the semicolon is deleted. The semicolon is replaced by a full stop.

(2) In Item VII.6. of Procedural Act 2006/01 on Internal Rules of Procedure of the Ministerial Council of the Energy Community, the last sentence is deleted.

### ***Article 45***

#### **Addressees**

This Procedural Act is addressed to and shall be binding on all Parties to the Treaty and institutions set up under the Treaty.

### ***Article 46***

#### **Entry into force**

(1) This Procedural Act shall enter into force upon adoption.

(2) Cases initiated already before 16 October 2015 shall be dealt with in accordance with the Procedural Act applicable before the amendments adopted on that date.

### ***Article 47***

#### **Review**

The Rules of Procedure in this Procedural Act shall be reviewed in the light of experience upon proposal by the Secretariat in 2016. The review shall include the approach towards measures under Article 92 of the Treaty and the institutional set up for dispute resolution.

**Article 48**  
**Publication**

The Director of the Energy Community Secretariat shall make this Procedural Act available to all Parties and institutions under the Treaty within 7 days of its adoption and to the public on the website of the Energy Community.

Done in Tirana on 16 October 2015

## **RULES on strengthening the role of civil society**

Procedural Act 2015/03/MC-EnC of 16 October 2015 on strengthening the role of civil society.

THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY,

Having regard to the Treaty establishing the Energy Community (hereinafter referred to as the Treaty), and in particular Articles 86, 87, 82 and 83 thereof,

Having regard to the report of the High Level Reflection Group, which concluded that the role of civil society in the Energy Community institutions should be strengthened,

Whereas enhancing the role of civil society organisations will render the Energy Community's institutions and bodies more transparent,

Whereas strengthening the role of civil society organisations will make the Energy Community better equipped to meet its objectives, notably by increasing its transparency, public acceptance as well as providing additional expertise to the implementation of the *acquis* if necessary,

HAS ADOPTED THIS PROCEDURAL ACT:

### **Article 1**

1. Representatives of Civil Society Organisations may attend the meetings of Working Groups and Task Forces upon invitation of the chairman of a Working Group or a Task Force.

### **Article 2**

1. Representatives of Civil Society Organizations may be invited to attend specific agenda items of meetings of the Ministerial Council or the Permanent High Level Group as observers.
2. Such invitations may be issued in particular to seek information from the Civil Society Organizations, for instance as regards new legislative initiatives planned in the Energy Community.
3. The procedure to issue such an invitation shall be determined in the Rules of Procedure of the Ministerial Council and the Permanent High Level Group respectively.

### **Article 3**

1. A Civil Society Day shall be convened once a year to increase the transparency of the activities of the Ministerial Council and the Permanent High Level Group towards Civil Society Organizations. The meeting shall be prepared by the Secretariat.

**Article 4**

This Procedural Act enters into force upon the day of its adoption.

Done in Tirana on 16 October 2015.

## **RULES on establishment of Energy Community parliamentary plenum meetings**

Procedural Act 2015/05/MC-EnC of 16 October 2015 on establishment of Energy Community parliamentary plenum meetings.

The Ministerial Council of the Energy Community,

Having regard to the Treaty establishing the Energy Community and in particular Articles 90 to 93 as well as Articles 86, 87, 82 and 83 thereof,

Whereas participation of representatives of parliaments would make the Energy Community better equipped to meet its objectives, notably by increasing political support for the implementation of the Energy Community *acquis* and the sense of ownership of the organisation,

Whereas it is fitting to increase transparency of the organisation and improve knowledge of the parliaments regarding the Energy Community processes,

Whereas it shall improve through dialogue, better acceptance of the Energy Community and its objectives in the Parties to the Treaty,

Whereas bringing together elected representatives of the national parliaments of the Contracting Parties and the European Parliament would help to address shared challenges, and support to build a fully functioning pan-European energy market which works to the benefit of citizens,

HAS ADOPTED THIS PROCEDURAL ACT:

### **Article 1**

1. The Parliamentary Plenum meetings shall be organized up to two times a year.

Parliaments of Contracting Parties may appoint two representatives from each national parliament, preferably from the governing political spectrum and opposition. The European Parliament may send up to 16 representatives.

2. The meetings take place under the chairmanship of the Member of the Parliament of the Contracting Party holding the Presidency of the Ministerial Council.

3. The meetings of the Parliamentary Plenum shall be administered by the Secretariat.

### **Article 2**

1. The participants in the Parliamentary Plenum meetings may express views and opinions on all matters falling within the scope of the Treaty in the form of reports or resolutions, as appropriate, with the exception of dispute settlement under Articles 90-93 of the Treaty. They are invited to prepare a report on the annual progress report prepared by the Secretariat in accordance with Article 67(b) of the Treaty, to be submitted to the Ministerial Council.

2. The participants in the Parliamentary Plenum meetings may pose questions to the institutions of the Energy Community.
3. The chairperson of the Parliamentary Plenum meetings is invited before the Ministerial Council.
4. Representative of the Contracting Party holding the Presidency of the Energy Community or the Director of the Energy Community Secretariat may be invited to take part in the meetings of the Parliamentary Plenum.
5. The Secretariat is invited to propose organizational rules and procedures of the Parliamentary Plenum meetings for adoption by the Ministerial Council upon the consultation with the Parliamentary Plenum meeting.

### ***Article 3***

This Procedural Act enters into force upon the day of its adoption.

Done in Tirana on 16 October 2015.

## **RULES on the establishment of a security of supply coordination group**

Procedural Act 2008/02/MC-EnC of 11 December 2008 on establishment of a security of supply coordination group.

THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY,

Having regard to the Treaty Establishing the Energy Community (“the Treaty”), and in particular Articles 46 and 87 thereof,

Having regard to Directives 2004/67/EC and 2005/89/EC as implemented by Ministerial Council Decision No. 2007/06/MC-EnC of 18 December 2007,

Having regard to the deliberations at the Permanent High Level Group and the input from the Contracting Parties,

Having regard to the proposal by the Secretariat,

Whereas securing energy supply through solidarity constitutes one of the main objectives of the Energy Community;

Whereas the implementation of Directives 2004/67/EC and 2005/89/EC requires the setting-up of a coordination mechanism in the Energy Community;

Whereas this objective requires a group of experts to advise Energy Community and national institutions as well as to coordinate crisis management measures;

Whereas such a group should be composed of all relevant stakeholders and should cover both electricity and gas so as to ensure utmost efficiency,

HAS ADOPTED THIS PROCEDURAL ACT:

### ***Article 1***

#### **Security of Supply Coordination Group**

A Security of Supply Coordination Group is hereby established.

### ***Article 2***

#### **Composition**

(1) The Security of Supply Coordination Group shall be composed of representatives of the Parties and representative bodies of the industry concerned and of relevant consumers. The composition of the Group may differ for gas and electricity respectively.

(2) Participant and Observer countries may be represented in accordance with Articles 95 and 96 of the Treaty.

(3) The Security of Supply Coordination Group shall be chaired by the member representing the European Community.

(4) Each Party shall nominate its representatives and inform the Secretariat. The list of representative bodies of the industry concerned and of relevant consumers shall be established and updated by the Permanent High Level Group upon pro-posal by the Chair of the Security of Supply Coordination Group.

(5) The Security of Supply Coordination Group and its Chair shall be assisted by the Secretariat.

### **Article 3**

#### **Tasks**

(1) The Security of Supply Coordination Group shall facilitate the coordination of security of supply measures and advise the Energy Community institutions on issues relating to gas and electricity security of supply.

(2) The Security of Supply Coordination Group shall regularly monitor the state of security of supply of network energy within the Energy Community share experience on security of supply mechanisms and develop comprehensive risk analysis. The conclusions of the Group's annual meetings shall be submitted to the Ministerial Council, the Permanent High Level Group and the Regulatory Board.

(3) The tasks of the Security of Supply Coordination Group are without prejudice to the obligations of the Parties to adopt and update security of supply statements in accordance with Article 29 of the Treaty. The Security of Supply Coordination Group shall support the Parties in the preparation and updating of national emergency measures.

(4) In the event of an existing or imminent threat to security of supply or in the event of a supply disruption affecting a Party and involving another Party or a third country, the Security of Supply Coordination Group shall, where appropriate, coordinate measures taken at national levels. In doing so, it shall follow the principles established by Article 9 of Directive 2004/67/EC in both the gas and electricity sectors.

(5) In the cases mentioned in paragraph 4, the Chair of the Security of Supply Coordination Group or any Party directly affected may request an ad-hoc meeting of the Ministerial Council to take measures in response to the existing or imminent threat to security of supply.

(6) The activities of the Security of Supply Coordination Group may relate to, but are not restricted to, all issues falling within the scope of Directives 2004/67/EC and 2005/89/EC as well as mutual assistance within the meaning of Chapter IV in Title IV of the Treaty and the handling of unilateral safeguard measures in accordance with Article 39 of the Treaty.

### **Article 4**

#### **Meetings**

(1) The Security of Supply Coordination Group shall meet regularly once per year. Normally this meeting shall take place in connection with the second Permanent High Level Group meeting in the second half of the year. The meeting may be split in two parts for gas and electricity respectively.

(2) Ad hoc meetings of the Security of Supply Coordination Group shall be convened by the Chair in case of existing or imminent threat to security of supply on its own initiative or upon request of a

Party to the Treaty.

(3) Upon initiative of the Chair, the Security of Supply Coordination Group may hold additional ad hoe joint sessions with the European Community Gas Coordination Group to discuss issues of common interest.

**Article 5**  
**Review**

Within three years of the date of its entry into force, this Procedural Act shall be reviewed in order to assess the functioning of the cooperation mechanisms it establishes. This review may provide for the conferral of powers to take interim measures to the Permanent High Level Group, as foreseen in Article 46 of the Treaty.

**Article 6**  
**Addressees**

This Procedural Act shall enter into force on the day of its adoption and is addressed to the Parties.

Done in Tirana on 11 December 2008.

## **PROCEDURAL ACT of the Ministerial Council of the Energy Community 2018/01/MC-EnC on the establishment of a Coordination Group of the Energy Community Distribution System Operators for Electricity**

THE MINISTERIAL COUNCIL OF THE ENERGY COMMUNITY,

Having regard to the Treaty Establishing the Energy Community, and in particular Articles 86 and 87 thereof,

Whereas Directive 2009/72/EC of 13 July 2009 concerning common rules for the internal market in electricity, as incorporated in the Energy Community by Ministerial Council Decision 2011/02/MC-EnC of 6 October 2011, and in particular Articles 3, 24-31, and 41 thereof, set out the rules applicable to distribution system operators and retail markets;

Whereas the Treaty Establishing the Energy Community pursues the aims of developing and attracting investments in energy networks, reforms of energy sectors and integration of energy markets as instruments for stable and continuous energy supply and provision of energy to citizens,

Whereas distribution system operation and the development of retail markets plays a key role for achieving these aims,

Whereas distribution system operators develop, maintain and operate the networks, provide network access and services under regulated conditions and tariffs and secure energy supplies and support to consumers,

Whereas the evolution of markets in the Energy Community and progressing retail market opening in compliance with the *acquis* requires coherent rules and methodologies as well sharing best practices among distribution system operators,

Whereas the increasing use of renewable energy, digitalisation and smart technologies, deployment of production units within the distribution networks, entry of prosumers but also the continuous challenges of legal and functional unbundling, energy poverty, high level of losses etc. call for intensified and structured efforts to enhance the exchange information and experience between the Energy Community distribution system operators and building of their capacity,

Whereas the Energy Community Distribution System Operators in Electricity (ECDSO-E) coordination group, established informally and supported by the Secretariat, enables such communication and coordination already for several years,

Whereas the work of ECDSO has reached a level of maturity which calls for formalisation within the existing structures of the Energy Community,

Whereas the proposed approach was welcomed by the high-level representatives of the companies represented in ECDSO-E and supported by the Permanent High Level Group,

Upon proposal of the Secretariat,

HAS ADOPTED THIS PROCEDURAL ACT:

**Article 1**

1. A coordination group of the Energy Community Distribution System Operators for Electricity ("ECD-SO-E") is hereby established.
2. The activities of ECDSO-E shall be governed by Terms of Reference stipulated in the Annex to this Procedural Act.

**Article 2**

This Procedural Act shall enter into force on the day of its adoption and is addressed to the Parties to the Energy Community.

Done in Skopje, on 29 November 2018

## ANNEX:

### **Terms of Reference of the Energy Community Distribution System Operators in Electricity (ECDSO-E) cooperation group**

This document describes the organizational structure, activities and the responsibilities of all parties concerned within the Coordination Group of distribution system operators in electricity from the Energy Community (ECDSO-E).

#### 1. General

ECDSO-E is established as a group of experts from electricity distribution network operator (DSO) undertakings in the Energy Community Contracting Parties.

It is open for participation of distribution system operators from Observer and Participant countries.

Participation of the DSOs from the Energy Community in the ECDSO-E is voluntary.

#### 2. Structure

The operational structure of the ECDSO-E comprises:

- a) The ECDSO-E Coordination Group plenary
- b) ECDSO-E Task Forces
- c) Technical Networks.

This document gives guidance to conveners and members of the ECDSO-E bodies, with the aim of harmonizing their activities, avoiding duplication of work and ensuring that their activities are carried out in the most efficient way in line with the Energy Community Treaty.

#### 3. Format

ECDSO-E shall function in an open format with free access to events and activities by its members.

ECDSO-E shall take part in the meetings Energy Community Security of Supply Coordination Group and in its activities, where appropriate.

ECDSO-E shall organize meetings, and electronically or web based coordination and activities, facilitated by the Secretariat.

Access to specific data and files of ECDSO-E, in particular access to consultation papers and database may be limited where required. Limitations may be requested by reasoned request of a participating DSO.

#### 4. Tasks

ECDSO-E provides the format for discussion of all questions pertinent to DSO operation and functioning related to implementation of provisions of the Energy Community Treaty.

In particular its tasks will be:

- a) to facilitate and harmonize the implementation of the Directive 2009/72/EC and Directive 2005/89/EC and to elaborate guidance documents where necessary;
- b) to follow up conformity of practices, processes and activities in the field relevant for DSO operation and issue assessments and official positions;
- c) to discuss and, where appropriate, to develop a common view on issues to be discussed and agreed upon in the ECDSO-E and to be presented to other stakeholders;
- d) to support individual DSOs in the implementation of their tasks and obligations agreed upon by ECDSO-E and to coordinate related activities where appropriate;
- e) to follow up development of new rules and regulations and issue recommendations for implementation;
- f) to support DSOs in the management of transition (guidelines, recommendations of best practices, peer to peer consultations);
- g) to establish and maintain liaisons with other European and/or regional cooperation bodies by appointing a dedicated liaison person;
- h) to cooperate with relevant stakeholders of the Energy Community, especially as far as the implementation of the provisions pertinent to DSOs is concerned;
- i) to cooperate with the institutions and bodies of the Energy Community;
- j) to nominate representatives to joint working groups with other stakeholders, and to maintain liaison as required;
- k) to set up, develop and maintain the DSO electronic platform, by:
  - maintaining the annual questionnaire dataset for benchmarking database;
  - developing and making available other datasets in the content and format agreed upon by ECDSO-E, such as quality of service indicators, network costs and tariffs, investment dynamic and structure, connection of small installations.

## 5. Composition

5.1. Membership in the ECDSO-E Coordination Group is defined as follows:

- representatives of all interested DSO from the Energy Community, including Observers and Participants to the EnC Treaty, nominated to the Group;
- experts and officials of the Secretariat and the European Commission;
- representatives of other stakeholders nominated to liaise with the ECDSO-E or invited by the Chairperson or by the Secretariat;

5.2. The Secretariat shall provide overall logistic support for ECDSO-E.

5.3. The ECDSO-E Coordination Group may decide to establish special task forces, with an appointed convenor, and to study a precisely defined problem and report back on it. The task forces are automatically disbanded after presenting their final results.

5.4. All conveners of the task forces are nominated by the ECDSO-E for a defined period. Candidates are proposed by the members of ECDSO-E to the Chairperson.

5.5 ECDSO-E shall nominate members for the Joint Working Groups and upon request, to the Technical Networks task forces.

## 6. Governance

6.1 ECDSO-E shall nominate and appoint a Chairperson and two Vice Chairpersons for a period of two years.

6.2. One expert appointed by the Secretariat shall be the Moderator of ECDSO-E activities.

6.3. The work of ECDSO-E is led by a team consisting of the Chairperson, Co-Chairs and the Moderator. They shall normally communicate by means of telecommunication.

## 7. Meetings of ECDSO-E

7.1. ECDSO-E will meet when considered necessary upon a motion of the Chairperson of ECDSO-E, the Secretariat, or at least one third of ECDSO-E's members. ECDSO-E will normally meet twice a year.

7.2 The Secretariat will provide logistic support and expert assistance for ECDSO-E meetings.

7.3. A draft agenda will be distributed at least two weeks before each meeting. Draft conclusions will be distributed within two weeks after the meeting for approval by the members.

7.4. The Secretariat will prepare and organize workshops, when considered useful, following the conclusions of ECDSO-E.

## 8. Task Forces

8.1. Task Forces can be established for well-defined tasks. Terms of Reference will be defined by ECDSO-E. Task Forces will report to ECDSO-E at each meeting. A clear time frame for each task shall be defined.

8.2. Convenors are nominated by ECDSO-E.

8.3. Members of the Working Groups may be representatives of DSOs, representatives from interested parties and other stakeholders, including transmission system operators, generators and regulatory authorities. They are invited by the Convenors.

8.4. The Task Forces will be disbanded as soon as their tasks are carried out.

8.5. The Task Forces will co-ordinate their activities with the activities of other working groups within the Energy Community framework, as well as other regional and European co-operation institutions and initiatives. They will exchange results with these groups whenever possible.

8.6. Task Forces will meet when considered necessary by their convenors or by the Secretariat or by ECDSO-E. Meetings can be web meetings, as considered appropriate by Convenors. Invitations to the meetings will be distributed among the members of the groups and sent to all members of ECDSO-E at least two weeks before each meeting.

8.7. Task Forces will send copies of their minutes to the ECDSO-E Chair for distribution to ECDSO-E members within two weeks after the meeting and report to ECDSO-E at each meeting.

8.8. The ECDSO-E Moderator will keep a list of the active task forces, their tasks and composition.

8.9. Joint Working Groups are expert teams working jointly with other organizations or bodies of the Energy Community under the work plan of the SoS CG. They will follow the same rules as Task Forces, unless otherwise agreed upon by the organizations concerned.

#### 9. Technical networks (TNs)

9.1 The TNs are established to stimulate discussion and harmonisation in selected technical fields. The TNs operate by suitable electronic means and are moderated by the Secretariat.

9.2. The TNs offer to the ECDSO-E members an informal platform for discussion and exchange of experience and of technical expertise and assessors. TNs can hold a physical meeting when necessary, with the logistics support of the Secretariat

9.3. The members of the TNs are the nominated persons actively engaged in the particular field of the TN.

9.4. The ECDSO-E evaluates the work of and the need for TNs biannually. New TNs are established based on the need and interest of the ECDSO-E members following the conclusion of the meetings.

9.5. The Secretariat will keep a list of the active networking groups, their tasks and composition.

## **RULES on the establishment of the Energy Community Secretariat's Dispute Resolution and Negotiation Centre**

Procedural Act 2018/05/ECS of 25 October 2018 on the establishment of the Energy Community Secretariat's Dispute Resolution and Negotiation Centre

THE ENERGY COMMUNITY SECRETARIAT,

Having regard to the Treaty establishing the Energy Community, and in particular Article 67(e) thereof;

Given that the challenges of energy reform in many countries entail disputes between various actors in that process, and that such disputes involve in particular the states, their public authorities, market participants, civil society and investors;

Considering that the Energy Community's objective of creating stable regulatory and market frameworks capable of attracting investment requires structures suitable for rational, neutral, quick, efficient and sustainable resolution of such disputes;

Taking into account experience showing that most jurisdictions lack such structures and that the prevailing international mechanisms, be it investor-state arbitration or commercial arbitration, are expensive, sometimes politicized, time-consuming and often too adversarial to resolve energy disputes in a sustainable and cost-effective manner, and in particular they do not suit the needs of consumers and the interests of small and medium enterprises, and therefore may not be the appropriate forum to resolve energy disputes in general and smaller-scale disputes in particular;

Convinced that institutional negotiation and mediation can play an important role not only in the resolution of commercial and investments disputes, but also in the framework of dispute settlement under the Treaty, in particular during the preliminary procedure established under the Dispute Settlement Rules of Procedure which aims at resolving disputes at an early stage before they reach the Ministerial Council;

Noting that alternative dispute settlement methods such as mediation and conciliation are gaining importance as alternatives to litigation and arbitration, especially due to their focus on preserving the relationship between the parties, their flexible approach and their minimal costs;

Building on the expertise gained by the Secretariat not only in the understanding of energy markets in transition, but also in negotiating and mediating mutually beneficial solutions in several high-profile investor-state disputes to date;

Considering that in order to avoid energy disputes in the first place, the capacity of national authorities to negotiate agreements as diverse as international agreements, finance agreements, project agreements, supply agreements, investment contracts etc. needs to be improved;

Intending to establish a forum for dispute resolution and negotiation, as well as to offer dispute resolution and negotiation facilitation services for the benefits of national authorities, market participants, civil society and investors;

ADOPTS THE FOLLOWING PROCEDURAL ACT:

## **Title I**

### **Scope of application and definitions**

#### **Article 1**

#### **Establishment of the Energy Community Secretariat's Dispute Resolution and Negotiation Centre**

1. A Dispute Resolution and Negotiation Centre is hereby established within the Energy Community Secretariat (hereinafter "the Centre").
2. The purpose of the Centre shall be to promote and provide facilities for the resolution of disputes within the Energy Community between states and national authorities on the one hand, and private parties on the other; commercial disputes between private parties; disputes between states and national authorities; or disputes between the Parties to the Energy Community Treaty and the Secretariat.
3. The Centre shall offer facilities for the settlement of disputes in the following constellations:
  - a. Facilitation of negotiations or mediation between private parties, between private parties and states and/or their national authorities, and between states and/or their national authorities ("third-party disputes");
  - b. Facilitation of negotiations or mediation in the context of Article 19(2) of Procedural Act 2015/04/MC-EnC of 16 October 2015 on amending Procedural Act of the Ministerial Council 2008/01/MC-EnC of 27 June 2008 on Rules of Procedure for Dispute Settlement under the Treaty (hereinafter "the Dispute Settlement Procedures"), ("facilitated negotiations/mediation during the dispute settlement procedure");
  - c. Assisting negotiations by Parties, Participants or Observers to the Treaty and/or their authorities and public companies with other states and international organizations, their authorities, public companies or private parties ("negotiation support").
4. Article 1(3) does not exclude any other form of dispute settlement which may, in the future, be offered by the Centre, such as, but not limited to, arbitration of disputes between private parties, between private parties and states and/or national authorities, and between states and/or national authorities of other states.
5. Upon a reasoned request by a Party or Observer to the Treaty to the Chair of the Centre, a certain dispute class or classes of disputes may be excluded from the range of activities covered by paragraphs 3 and 4, to the extent any support to their resolution by the Centre is prohibited under national or international law.

## **Article 2**

### **Definitions**

For the purposes of this Procedural Act,

1. "Arbitration" means the settlement of a dispute by an arbitrator or an arbitration tribunal based on an arbitration agreement between the disputing parties and on procedural arbitration rules to be adopted by the Chair of the Centre;
2. "Dispute" means a conflict between two or more parties related to the production, transportation, distribution, sale and purchase, or consumption of energy (including the associated products, services, capital etc.), as well as consumer protection and environmental issues in the field of energy, arising out of an agreement, an investment, obligations under national or international law etc., regardless of whether they are already subject to litigation or arbitration or other kinds of dispute settlement mechanisms;
3. "Disputing party" means a state, a natural person, a private or a public entity, an association etc. subject to a dispute;
4. "Facilitated negotiations" means the service offered by the Centre to lead and support the process of negotiation of a dispute under terms and conditions agreed with the disputing parties in a Memorandum of Understanding (Article 8), with a view to reach a settlement of their dispute. The purpose of the facilitation is to reach a settlement mutually acceptable by and agreeable to the disputing parties;
5. "Mediation" means a form of facilitation which includes a more active involvement by the mediator, including by making concrete proposals for the settlement of a dispute by the mediator;
6. "Party", "Participant" and "Observer" have the meaning accorded to these terms by the Treaty establishing the Energy Community;
7. "Third party" means a natural person or a legal entity which is not a disputing party under Articles 1(3)(a) and 1(3)(b) of the present act, but which has a connection or has been involved in the facts giving rise to the respective dispute.

## **Article 3**

### **Management of the Centre**

1. The Centre shall be functionally attached to the Legal Unit. It shall be chaired by the Head of the Legal Unit who will also serve as Chair. A staff member of the Legal Unit shall perform the function of registrar.
2. The Centre shall be supported by a group of five distinguished individuals with experience in the areas covered by the Centre. Members of this group shall serve without remuneration.
3. The Centre shall not aim for or make any profit.
4. The Centre shall not charge for the use of its facilities and services. This is without prejudice to fees for mediators, arbitrators, experts, interpreters and translators, and any other persons which are not employees of the Secretariat and whose contribution is required during the facilitated negotiations

or mediation. Any such costs can only be incurred as long as envisaged by this Procedural Act and the procedural rules adopted under Article 4.

#### **Article 4**

### **Procedural Rules**

1. Upon consultation with the group established according to Article 3(2), the Centre shall develop procedural rules for the activities performed by the Centre in accordance with Article 1(3) and 1(4) of this Procedural Act.
2. The Centre shall also develop templates for a Memorandum of Understanding, settlement agreement, expert determination, standard mediation and arbitration clauses, as well as a code of conduct for facilitators and mediators, on the one hand, and disputing parties, on the other.
3. Such rules shall be adopted by the Chair of the Centre and published on the website of the Centre.

## **Title II**

### **Facilitated Negotiations or Mediation of Third-Party Disputes (Article 1(3)(a))**

#### **Article 5**

### **Request for Facilitated Negotiations or Mediation**

1. Any disputing party wishing to submit a dispute to the Centre for facilitated negotiations, mediation or any other type of dispute settlement, may address a request to that effect to the Centre. The request can also be sent by the disputing parties jointly.
2. The request shall contain the following information:
  - a. the name and address of the disputing parties;
  - b. a short summary of the dispute, including claims made by either party and any relief sought and damages claimed;
  - c. a short summary of the course of any pending proceedings, in case the dispute is already subject to litigation, arbitration, or any other form of dispute settlement;
  - d. any other documents deemed necessary for the purpose of the negotiation.
3. The registrar shall register the request. In case the request was submitted by one disputing party, a copy of the request will be sent upon registration to the other disputing party/parties.

#### **Article 6**

### **Post-award Facilitation**

1. Disputing parties may also request, and arbitration institutions or tribunals may decide, to involve the Centre in the facilitation of elements of disputes not or not entirely resolved by an arbitral award.

Parties to a dispute may also request the Centre to assist them with the implementation of an arbitral award, including with regard to the technical, economic or legal aspects of such implementation.

2. The request for post-award facilitation under Article 6 shall also contain a copy of the award.

3. Post-award facilitation is not meant to be an appeal against a final arbitral award. It will not re-judge a dispute, but it will offer the support of a facilitator for those elements of the dispute, arising after the award had been issued. Post-award facilitation will be without prejudice to any appeal, annulment or any recourse against an arbitral award provided by the applicable legal framework.

### **Article 7**

#### **Appointment of a Facilitator/Mediator**

1. Depending on the nature and scope of the dispute, the facilitator/mediator shall be selected by agreement of the disputing parties and the Centre from the experienced staff of the Secretariat or from the Energy Community's Panel of Mediators established according to Article 27 of the present Procedural Act.

2. The registrar of the Centre shall send a list of three potential facilitators/mediators, taking into account their qualifications and experience, as well as the particularities of the dispute. If no agreement is reached by the disputing parties, the Chair of the Centre shall appoint the facilitator/mediator.

3. The facilitator/mediator may be supported by other staff of the Secretariat. In such case, all the duties of the facilitator/mediator (including the duty of confidentiality) shall extend to the supporting staff of the Secretariat.

4. Before commencement of the negotiations, the facilitator/mediator shall disclose any circumstances likely to give rise to justifiable doubts as to his or her impartiality of independence. This obligation remains throughout the facilitated negotiations or mediation.

a. The 2014 IBA Guidelines on Conflicts of Interest in International Arbitration will serve as guidance as to what circumstances require disclosure. In any case, Red List and Orange List circumstances shall at all times be disclosed.

b. When in doubt whether a circumstance should be disclosed or not, disclosure should always prevail. Following disclosure, the disputing parties may request the Centre to appoint another facilitator/mediator.

### **Article 8**

#### **Memorandum of Understanding**

1. Following the appointment of the facilitator/mediator, the Centre shall provide the facilitator/mediator with a draft Memorandum of Understanding to be signed by all disputing parties consenting to the facilitation/mediation of the dispute, the facilitator/mediator and the chair of the Centre.

2. Signing a Memorandum of Understanding is not compulsory, and it is within the discretion of the facilitator/mediator to decide whether the Memorandum of Understanding may be used in the

proceedings. At all times, the facilitator/mediator shall give priority to the swift resolution of the dispute, and a Memorandum of Understanding shall not be signed if this would delay the proceedings.

3. For the cases when a Memorandum of Understanding will be concluded, the Centre shall develop and publish a model Memorandum of Understanding. The Memorandum of Understanding shall include provisions regarding the place of negotiations/mediation, the proposed timeframe, confidentiality, effect on pending legal disputes, role and powers of the facilitator/mediator, a draft schedule of the proceedings etc.

4. The disputing parties, the facilitator/mediator and the Chair of the Centre may amend the Memorandum of Understanding, for example by extending the timeframe by mutual consent at any stage of the procedure. Any amendment of the Memorandum of Understanding shall be made in writing.

### **Article 9**

#### **Conduct of the Facilitated Negotiations/Mediation**

1. The facilitated negotiations/mediation will be conducted in accordance with the procedural rules adopted as per Article 4 of this Procedural Act. The rules shall not prevent the disputing parties, together with the facilitator/mediator, to agree on an alternative manner in which the negotiations shall be conducted.

2. In all cases, the facilitator/mediator will pay particular consideration to the circumstances of the case, the positions and interests of the disputing parties, to the applicable legal framework and will aim for a swift resolution of the dispute.

3. The facilitator/mediator may also, upon request of the disputing parties or out of own initiative, arrange bilateral meetings with disputing parties separately.

4. All information exchanged during the facilitated negotiations/mediation between the disputing parties and the facilitator/mediator shall remain confidential. The information exchanged during a bilateral meeting shall not be disclosed to the other disputing party/parties, unless the disputing party/parties engaged in the respective meeting expressly agree/s to the disclosure.

5. Unless expressly agreed by the disputing parties, all correspondence and information exchanged during the facilitated negotiations/mediation shall be without prejudice to any litigation or arbitration proceedings on the same subject-matter.

6. Unless the disputing parties and the Centre agree to a longer period, negotiations shall take place within a period of three months. In all cases, the purpose of the facilitated negotiations or mediation is to reach a settlement as soon as possible in order to minimize the costs and adverse effects of a dispute.

7. Unless the disputing parties and the facilitator/mediator agree otherwise, the place of the facilitated negotiations/mediation shall be at the premises of the Energy Community Secretariat in Vienna. Facilitated negotiations/mediation may also take place by videoconference or other means of telecommunication if the disputing parties and the facilitator/mediator so agree.

8. The disputing parties may also, upon written notification to the facilitator/mediator and to the Centre, expand the scope of the facilitated negotiations/mediation in order to cover related disputes or disputes which arose after the commencement of the facilitated negotiations/mediation, or extend

the three-months deadline.

9. The facilitator/mediator does not have the authority to impose upon the disputing parties a solution to their dispute.

### **Article 10**

#### **Expert Determination**

1. At any time during the facilitated negotiations/mediation, the disputing parties jointly may refer the dispute or a part of it to an expert to make a determination on one or more technical points disputed by the parties. The expert will be part of the Secretariat's staff, or an expert from the Secretariat's Roster of Experts. The determination will be binding for the disputing parties and for the facilitator/mediator. The expert determination report shall be made in writing, it shall include a description of the issue referred for determination, state the reasons on which the finding of the expert is based, and it shall be signed and dated.

2. If the determination is made by an expert from the Secretariat's staff, it will be free of charge. If an expert from the Roster of Experts will be engaged, the expert's costs will be equally divided between the disputing parties. A cost overview will be provided, free of charge, before commencing the expert determination.

### **Article 11**

#### **Termination and Outcome of the Facilitated Negotiation/Mediation**

1. The facilitated negotiations/mediation are considered terminated in one of the following circumstances: when a settlement agreement is reached by the disputing parties; when one of the disputing parties, or all the disputing parties jointly, submits a note to the facilitator/mediator, the Centre and the Secretariat, that the facilitated negotiations/mediation are terminated; and upon expiry of the deadline as per Article 9(6) or any other deadline agreed upon, and no extension has been agreed as per Article 9(8) above..

2. Unless the disputing parties agree otherwise, the objective of facilitated negotiations/mediation is to settle a dispute by agreement of the disputing parties. The facilitator/mediator's consent is not a prerequisite for the agreement.

3. At all times, the facilitator/mediator shall work towards compliance of the outcome with Energy Community law during the facilitated negotiations/mediation.

4. Upon request of one or both disputing parties, the Centre will confirm the transparency and correctness/fairness of the negotiations.

## **Article 12**

### **Follow-up measures**

The disputing parties may engage the Secretariat in follow-up measures such as the implementation of any settlement agreement upon consent of the Chair of the Centre.

## **Title III**

### **Facilitated Negotiations/Mediation during the Dispute Settlement Procedure (Article 1(3)(b))**

## **Article 13**

### **Compliance with Energy Community Law**

1. The following rules are meant to implement Article 19(2) of the Dispute Settlement Procedure and facilitate the swift closure of dispute settlement cases during the preliminary procedure established therein.
2. Their application may not compromise the full implementation, applicability and primacy of Energy Community law in the Party concerned, nor affect any other national or international procedures in which compliance with Energy Community law is relevant.

## **Article 14**

### **Facilitated Negotiations before Opening a Dispute Settlement Procedure**

1. Before the Secretariat opens a dispute settlement procedure against a Party to the Treaty in a case of non-compliance, the Centre shall review whether the case is suitable for a settlement. A case is suitable for a settlement in particular where compliance can be reached within a commonly agreed timeframe, and/or where the Party concerned can reach compliance with the assistance of the Secretariat. The suitability assessment shall be included in the case file.
2. If the case is considered suitable for a negotiated settlement, the Opening Letter sent in accordance with Article 13 of the Consolidated Rules of Procedure for Dispute Settlement under the Treaty shall include an invitation to the Party concerned to request negotiations using the facilities of the Centre and propose a procedural calendar for facilitated negotiations.

## **Article 15**

### **Mediation after the Reasoned Opinion**

1. If the facilitated negotiations carried out in accordance with Article 14 of the present Procedural Act do not lead to a settlement of the case, or if no such negotiations take place and a Reasoned Opinion

is issued by the Secretariat, the Centre may offer to the Party concerned, or the Party concerned may request that the dispute be mediated by a neutral third-party mediator.

2. Such mediation shall be agreed upon in writing between the Secretariat, the Party concerned and the mediator within the deadline for reply set in the Reasoned Opinion. The agreement shall specify the scope and timeframe of the mediation as well as the role of the mediator in line with the Procedural Rules to be adopted under Article 4.

3. Unless the agreement between the Secretariat and the Party concerned provide otherwise, the costs of mediation (including the fee of the mediator if applicable, as well as reasonable travel and accommodation costs) shall be shared equally between the disputing parties.

4. The mediator shall actively help find a solution to the dispute settlement case in the broadest possible manner and not limited by the subject-matter of the case. This may include commitments to assistance by the Secretariat, commitments to future regulatory and legislative changes by the Party, and commitments made by the complainant where applicable. The solution may also include commitments for support by third parties such as international organizations, donors or domestic parties.

5. Solutions agreed upon by the Secretariat and the Party concerned in the course of the mediation shall be reflected in an agreement or memorandum which gives credible assurances of the solution being implemented.

6. The mere signature of an agreement or memorandum shall not give any expectations that the case shall be closed by the Secretariat, unless specifically mentioned in the respective agreement or memorandum.

### ***Article 16***

#### **Place of Negotiations and Mediation**

1. Negotiations under Title III shall be preferably held at the Centre's premises in Vienna or, if more appropriate, in the Party concerned or at any another place.

2. The costs associated with the participation in the negotiations cannot be reimbursed by the Secretariat.

### ***Article 17***

#### **Representation of the Centre**

1. The Centre shall be represented by the Head of Legal Unit or the Senior Energy Lawyer and the rapporteur in the case concerned. The Party concerned shall decide about its representatives.

2. The Centre may request other public or private parties to be present if deemed beneficial for the settlement of the dispute.

### **Article 18**

#### **The Role of the Complainant**

In cases initiated upon complaint, the Centre shall also invite the complainant to be present in negotiations and mediations under Title III, unless the Party concerned objects based on legitimate reasons of overriding interest.

### **Article 19**

#### **Publication**

Regular updates on the status of the facilitated negotiations/mediation shall be published on the webpage of the Centre.

## **Title IV**

### **Negotiation Support Provided to Parties, Participants or Observers to the Treaty (Article 1(3)(c))**

### **Article 20**

#### **The Network of Negotiators**

1. The Centre shall establish a network of negotiators involving energy negotiators representing the governments of Parties, Participants or Observers to the Treaty.
2. The Centre shall organize regular exchanges of experience and best practices (including model clauses), trainings and disseminate relevant information to the network.
3. The members of the network shall be invited to exchange information between them and the Centre with regard to the negotiations for public or private law contracts and agreements as well as non-binding instruments in areas such investments, project financing, supply or transit agreements, international relations etc in the energy sector.

### **Article 21**

#### **Requesting Negotiation Support**

1. When a Party, Participant or Observer intends to enter into negotiations for an agreement or non-binding instrument of the kind described in Article 20(3) above, it may inform the Centre and may request advice and support in the negotiations.
2. The request shall be in writing and specify whether the support should be provided by the Centre and/or other members of the network.
3. Unless excluded by the Party, Participant or Observer, the Centre and/or members of the network

may participate in the negotiations.

4. Any expenses associated with negotiation support shall be borne by the Party, Participant or Observer requesting the support.

## **Title V**

### **Final Provisions**

#### **Article 22**

#### **Compliance and Impact Assessment**

1. At any point before the closure of facilitated negotiations or mediation, the Party, Participant or Observer concerned may notify to the Secretariat the draft agreement or non-binding instrument and request an assessment of compliance with Energy Community law and/or its impact on the Energy Community Single Market, the environment and security of supply in the Energy Community.
2. The Secretariat shall provide its assessment within four weeks following the request.

#### **Article 23**

#### **Confidentiality**

1. The Centre, the staff of the Secretariat, the mediators from the Panel of Mediators and the members of the Network of Negotiators shall respect the confidentiality of all information exchanged under this Procedural Act.
2. If so requested by any of the disputing parties, all the participants to facilitated negotiations/mediation shall sign non-disclosure agreements.
3. The general obligation of confidentiality shall apply without prejudice to the publication, on the Centre's website, of general information regarding the subject-matter of the case, the name of the disputing parties and of the facilitator/mediator, as well as the status of the proceedings.

#### **Article 24**

#### **Third parties**

At the invitation of the Centre or of the facilitator/mediator, third parties may participate in any meetings or to submit written positions regarding the subject-matter of the dispute. They may also be involved actively in the facilitated negotiations/mediation.

### **Article 25**

#### **Costs**

1. The services of the Centre shall be free of charge.
2. If the facilitator/mediator is part of the staff of the Secretariat or the Centre, his/her services shall also be free of charge.
3. With regard to facilitators/mediators from the Panel of Mediators and of the Network of Negotiators, their fees (if the case) and reasonable costs for transport and accommodation shall be agreed upon between the disputing parties and the facilitator/mediator and shall be borne equally between the disputing parties.
4. The fees of the facilitators/mediators), as well as any costs incurred by disputing parties, their agents, counsel, advocates as well as witnesses and experts shall not be recoverable.

### **Article 26**

#### **Legal aid**

1. The Centre shall analyze the possibility for the establishment of a legal aid fund for Parties concerned by dispute settlement procedures under Article 90 of the Treaty and for any disputing parties within the meaning of the present Procedural Act. Such legal aid fund shall be established upon decision of the Head of the Legal Unit of the Secretariat.
2. The Head of the Legal Unit of the Secretariat shall also adopt rules of procedure for the legal aid fund.

### **Article 27**

#### **The Energy Community Panel of Mediators**

1. The Centre shall establish a Panel of Mediators of high moral character and recognized competence in the fields of energy negotiations from which the Secretariat and the Party concerned may choose a person by consensus.
2. The Panel shall include experienced mediators, members of the Network of Negotiators (see Article 20 above), representatives of companies and investors and civil society organizations in a well-balanced manner. The composition of the Panel shall be published on the website of the Secretariat.

### **Article 28**

#### **Entry into force**

This Procedural Act shall enter into force upon adoption.

**Article 29**

**Publicity**

The Secretariat shall make this Procedural Act and any amendments available on its website.

Done in Vienna, 25 October 2018

## **RULES OF PROCEDURE of 29 November 2018 of Energy Community Parliamentary Plenum**

### ***I. Participation***

Members of National Parliaments of the Contracting Parties

1. Participants in the Parliamentary Plenum meetings shall be members of their national parliaments.
2. Participants in the Parliamentary Plenum meetings shall be appointed by their national parliaments or its respective body. National parliaments may appoint two representatives. Participants should be appointed so as to ensure a fair representation of the political parties in their parliaments. Preferably one participant should be from the governing political spectrum and one from the opposition.
3. National parliaments may also appoint two alternative participants, who may take the place of a participant who is unable to attend a meeting when the Secretariat has been duly informed.
4. A participant standing for re-election to a national parliament will be considered a member of that parliament until the election is decided and may continue to be a participant in the Parliamentary Plenum meetings until his or her successor has been designated, provided he or she is still a member of the national parliament.

Members of European Parliament

5. The European Parliament may send an equal number of representatives as representatives from the Energy Community Contracting Parties.

### ***II. Chair and Vice-Chairs***

1. The chairmanship of the Parliamentary Plenum meetings shall be rotating and shall be held by the member of the National Parliament of the Contracting Party holding the Presidency of the Energy Community Ministerial Council.
2. Out of the two participants in the Parliamentary Plenum meetings of the Contracting Party holding the Presidency,
  - a) The Chair of the Parliamentary Plenum meetings shall be the Chairperson of the principle Committee in charge of energy issues in his or her National Parliament.
  - b) In case neither of the two appointed participants of the Parliamentary Plenum meetings is a Committee Chairperson, then the most senior participant, in terms of mandates served in national parliament, will be Chairperson.
  - c) In case of disagreement, the Chair shall be decided by draw.
3. The Chair calls for, proposes an agenda and chairs the meetings of the Parliamentary Plenum; ensures observance of the Rules of Procedure; ascertains whether a quorum exists, puts questions to vote and announces the results of votes. The chairperson of the Parliamentary Plenum meetings is invited before the Energy Community Ministerial Council.
4. The chairperson shall continue to act as Chair until a new chairperson of the Parliamentary Plenum

meetings has taken up his or her duties.

5. The Parliamentary Plenum meetings may have three Vice-Chairs, one from the incoming and one from the outgoing Presidency of the Energy Community Ministerial Council and one from the European Parliament. Vice-Chairs may take over the responsibilities of the Chair if requested by him or her or in the chairperson's absence.

6. The same procedure will apply for appointment of the Vice-Chairs from the national parliaments of the Contracting Parties as for the Chair of the Parliamentary Plenum meetings. The European Parliament will designate the Vice-Chair according to its own arrangements.

### ***III. Meetings***

1. The Parliamentary Plenum meetings shall be organized up to two times a year. The dates, duration and location of the meetings and the draft agenda will be established by the Chair in consultation with the Energy Community Secretariat. The meeting details shall be communicated by the Energy Community Secretariat at least two months prior to the meeting.

2. Reports and resolutions expressing the views and opinions of the participants in the Parliamentary Plenum meetings can only be adopted when at least 11 participants from 6 parliaments are present. The quorum will be determined by the Chair.

3. The meetings of the Parliamentary Plenum are public, unless the participants in the Parliamentary Plenum meetings decide otherwise.

4. The official language of the Parliamentary Plenum meetings is English.

5. Any participant wishing to use a language other than English shall be responsible for arranging translation and simultaneous interpretation from and into English.

6. The meetings of the Parliamentary Plenum shall be administered by the Energy Community Secretariat. Among its duties, the Energy Community Secretariat will write minutes of the meeting, recording attendance and reports and resolutions reached. Upon completion, the minutes will be sent to all participants and subsequently published, subject to point 3 of this Section.

### ***IV. Questions***

1. The participants in the Parliamentary Plenum meetings may pose questions to the institutions of the Energy Community, including the Ministerial Council.

2. When a representative of the Contracting Party holding the Presidency of the Energy Community is invited to attend the meetings of the Parliamentary Plenum, there will be a time limited question and answer session the length of which is to be determined by the Chair.

3. Any participant in the Parliamentary Plenum meetings may submit, through the Energy Community Secretariat, one written question a year in total to the institutions of the Energy Community.

## ***V. Resolutions and Reports***

1. The participants in the Parliamentary Plenum meetings may adopt reports or resolutions expressing their views and opinions on all matters falling within the scope of the Energy Community Treaty, with the exception of dispute settlement under Articles 90-93 of the Treaty.
2. The participants in the Parliamentary Plenum meetings may elect, by the majority of votes cast, a Rapporteur, who shall be responsible for the preparation of a draft report and its presentation to the participants in the Parliamentary Plenum meetings. A Co-Rapporteur from another parliamentary body may be appointed.
3. The Rapporteur shall make available his or her report at least one month before the Parliamentary Plenum meeting where the report will be put to vote.
4. The theme of the reports should be decided by the Chair in consultation with the Vice-Chairs and the Energy Community Secretariat. Participants may submit proposals for consideration by the Chair.
5. Any participant in the Parliamentary Plenum meetings may table a motion for a resolution providing he or she has the support of two representatives of at least two other parliaments. The participant shall make available his or her resolution at least one month before the meeting where the report will be put to vote.
6. Each participant in the Parliamentary Plenum meeting shall have one vote. A simple majority of the votes cast is required to adopt a report and a resolution.
7. The reports and resolutions adopted in the Parliamentary Plenum meetings shall be transmitted to the Ministerial Council and the parliaments via the Energy Community Secretariat.

## ***VI. Costs***

1. The travel expenses of representatives and officially designated alternative representatives of Contracting Party parliaments, in total a maximum of two representatives per Contracting Party, shall be borne by the Energy Community Budget in line with the applicable travel reimbursement rules. This provision does not apply to members of the host Parliament and to members of the European Parliament.
2. Other expenses related to the meetings or other activities of the Parliamentary Plenum meetings will be met by the host Parliament.
3. The costs for interpretation and translation shall be borne by the participant requesting such interpretation and translation in accordance with Section III/5 above.

## ***VII. Amendments to the Rules of Procedure***

1. Without prejudice to the rights of proposal under the Treaty establishing the Energy Community, participants in the Parliamentary Plenum meetings may make suggestions for revision of the Rules of Procedures. They may be assisted by the Energy Community Secretariat that may present drafts

for such suggestions.

2. Suggestions for a revision shall be put for voting on the agenda of the first Parliamentary Plenum meeting following the presentation of the proposal.

3. Adoption of the suggestions requires a quorum of two thirds of the participants and respective parliaments present. Each participant has one vote.

Done at Skopje, on 29 November 2018
