Risk Preparedness – state of play

Member States do not take account of each other when preparing for or managing electricity crises

- **Plans and actions for dealing with electricity crisis focus on the national context only**
- **Lack of information sharing and transparency**
- **No common approach to identifying and assessing risks**

Proposed Regulation on Risk Preparedness

Common risk identification and assessment

- Common methodology for:
 - a) identifying electricity crisis scenarios at regional level
 - b) assessing short-term adequacy
- Identification of electricity crisis scenarios (rare/extreme risks) in a regional context and consultation to the ECG

Risk preparedness plans

- Competent Authority
- Mandatory plans (national and regional parts)
- Regional part coordinated measures (e.g. regional load shedding plans, arrangements on how to assist others)
- Plans to be consulted with other MSs and prior consultation to the ECG

Common principles to manage crisis

- Ensure markets function as long as possible in full compliance with internal market rules
- Non-market measures only as last resort
- MSs shall act and cooperate in a spirit of solidarity
- Offer assistance to others (cooperation agreed ex-ante and subject to compensation)

Information sharing and transparency

- Obligation to inform the Commission and the ECG when they have concrete information that an event may occur (*early warning*)
- Obligation to inform without delay neighbours and the Commission when they confront with electricity crisis (*declaration of crisis*)
- Information on the reasons of the crisis, measures taken and planned, and possible need for assistance

Monitoring Security of Supply

- Systematic monitoring SoS via the ECG
- Harmonised indicators to monitor SoS
- Reporting on electricity crisis events

Cooperation with Energy Community

- Possible crisis does not stop at EU border
- Close cooperation with EnC Contracting parties, esp. regarding identification of electricity crisis scenarios and establishment of risk preparedness plans
- Participation in Electricity Coordination Group upon invitation the COM

Thank you for your attention
