

What makes electricity trading in SEE effective and what stands against

Breakout Session - Group 2: Network Related Aspects

Co-moderators: *Mr Ljubo Knežević* and *Mr Nenad Stefanović*

21st Athens Forum - 1 June 2016

Questions for Discussion

1. Do you think that interconnection capacities are optimally utilized?
2. TSOs as traders in the electricity markets (for network losses) – contribution to liquidity vs. conflict of interest
3. Will regional capacity calculation contribute to the more efficient utilization of the capacities and what are the experiences of coordinated capacity allocation in that respect?
4. What do you think would be impact of introducing flow-based capacity calculation for a day-ahead market time-frame?
5. Do you think number of bidding zones shall be reviewed in the SEE region?

Main conclusions

Against electricity trading	In favour of electricity trading
