NEW MARKET MECHANISMS FOR AN EXTENDED FLEXIBILITY OF THE EUROPEAN GRID

Integrated energy solutions and new market mechanisms for an eXtended FLEXibility of the European grid

Electricity Forum

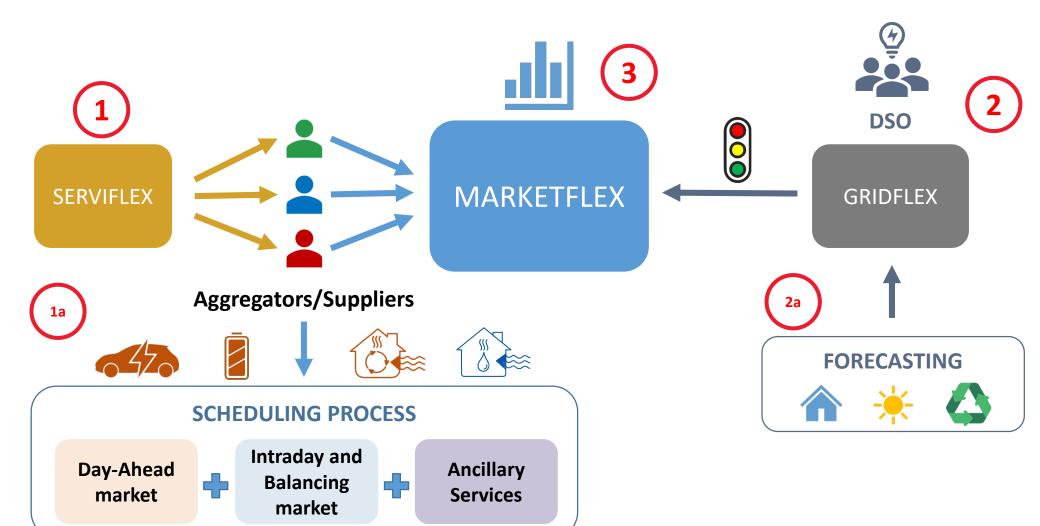

Flexibility provision on DSO level

LABORATORY OF ENERGY POLICY

dr. Tomi Medved Universtiy of Ljubljna

MARKETFLEX IN A BIG X-FLEX PICTURE

What we have learned and what is needed?

Learned:

- technology is there
- There are still some reliability connection issues, but this is solvable
- industry is interested
- Traditional local markets is not the most suitable market design
- There is a need for flexibility on LV!

Needed

- Big ICT investment
- Methodology for DSO Ancillary services valuation
 - Flexibility in the design due to the local dependency
- Regulatory push make it obligatory or really making it profitable

Not needed:

- Huge traditional investment in cables
- Complex grid tariff designs
- Transformation of HV solutions to LV solution not suitable

Thank you! QUESTIONS?
