

Greetings to everyone, and welcome to the World of Hydrogen! My name is Mortimer, and I am happy to share some experience with you. Hydrogen technology in the use of vehicles has been researched since the 1970ies. Canada, USA, Germany and Austria were some of the main countries. Since about 2009 however, Japan and then in 2013 Korea have been responsible for offering hydrogen cars for the road. Toyota, Hyundai and Honda.

Question Nr. 1: Does anyone know, or maybe like to guess what is the range of one full hydrogen tank? How far can you go?

STUTT GART (D)

MUNICH (D)

HAMBURG (D)

HELMOND (NL)

There are many ways to produce hydrogen, as well as how to store it, in liquid form, in gas form, solid-state, or even a paste. Refueling takes only 5 minutes.

PORSGRUNN (N)

WIENER NEUDORF (A)

BOLZANO (I)

JESENICE (SI)

Question Nr. 2: What is the emission of a hydrogen car?

THANK YOU! Hope to see you again.
