Coal to wind in Kosovo

European Bank
for Reconstruction and Development

- Kosovo almost entirely dependent on dirty lignite burnt in two polluting plants.
- Well interconnected with neighbours but insufficient energy security.
- Lengthy World Bank-led efforts to try and replace them.

- First steps: loan to public transmission system operator and SHPP rehabilitation
- Lengthy policy dialogue on PPA and regulatory framework
- Kitka – 32 MW windfarm, already operational.
- Bajgora – 105 MW windfarm.
- And now moving on with solar auctions.
