

Regional coordination in South East Europe – SCC as regional coordinator in SEE

Duško Tubić, Director

6 July 2023

Shareholders and service users

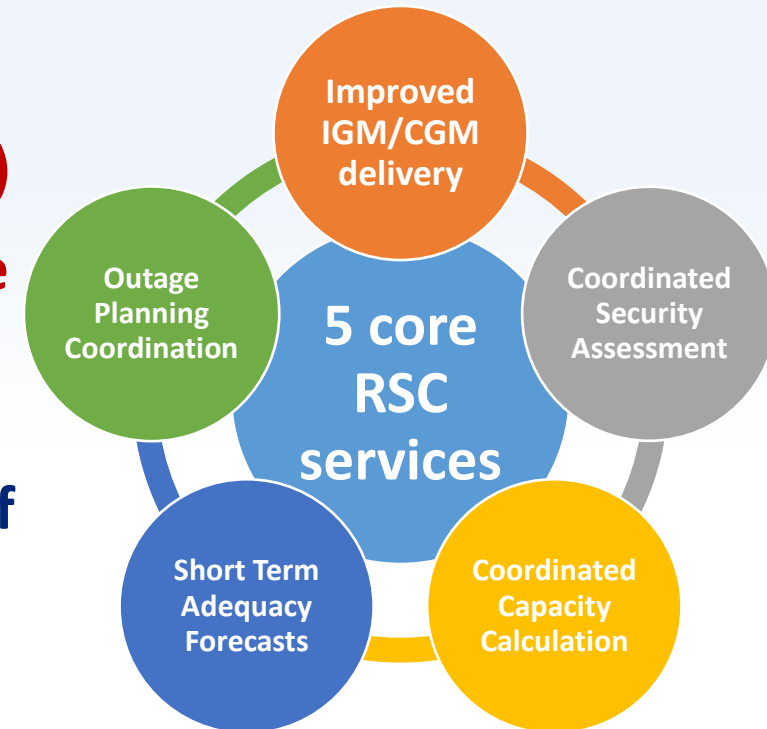

Operational services

❖ SCC provides following services to its TSO service users:

- 5 Core RSC services
- Coordination in Critical Grid Situations (CGS)
- Consistency Check of Power System Defense Plans

❖ SCC together with other RCCs participate in development and operational implementation of the following pan-European services:

- CGM in CGMES
- OPC
- STA

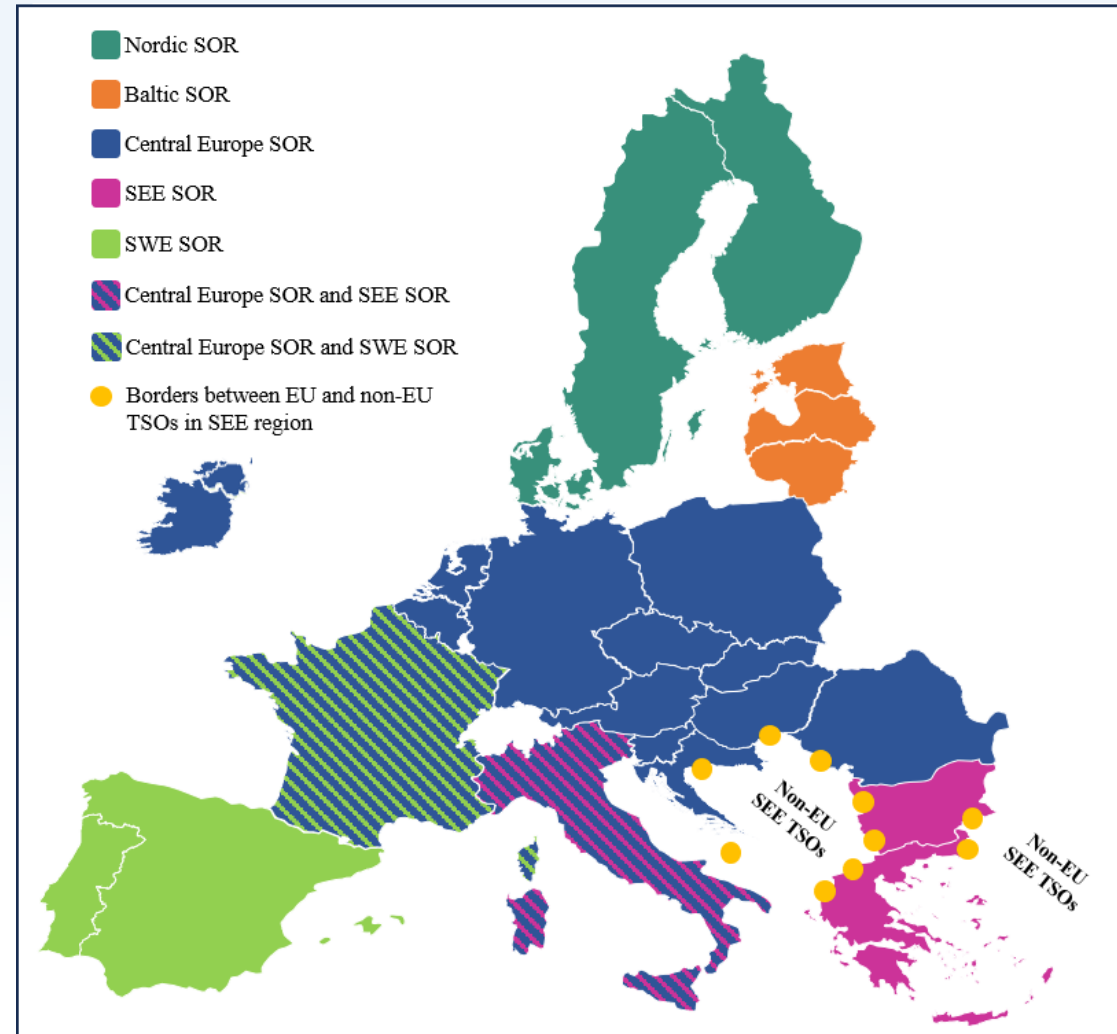

Regulatory framework in SEE

- ❖ **Bosnian, Montenegrin and Serbian TSOs** recognized the need for regional cooperation and coordination in the process of operational planning and **established SCC (2015) on voluntary basis**.
- ❖ **SCC provides RCC services to TSOs in SEE (as well to European TSOs, based on ENTSO-E MLAs) in accordance with the requirements and standards defined by EU regulations.**
- ❖ There are no preconditions for the realization of some regional RCC functions, (e.g. **CCR and SOR are not yet defined for non-EU TSOs in SEE**).
- ❖ **There are no agreed methodologies and business process among TSOs which are a prerequisites for implementation of CCC and ROSC.**
- ❖ **Transposition of relevant EU regulations for implementation in EnC will create the same regulatory framework for operation of all SEE TSOs and RCCs (EU and non-EU).**

Specificities of SEE region in the actual map of SORs

- ❖ On the borders between EU TSOs and non-EU TSOs in SEE, besides direct cooperation of neighbouring TSOs, also the cooperation and coordination of RSC/RCCs is necessary.
- ❖ Regarding mentioned borders, an equal distribution of responsibility to SCC and neighbouring EU RCCs (TSCNET, Coreso and Selene CC) is only fair solution and the best one from technical point of view.

[*ACER Decision on SOR: Annex I](#)
