ympäristökeskus

The 14th Renewable Energy Coordination Group meeting, November 29th, 2022

RED II implementation in Finland:
The Renewable Energy Permit-Guidance and the Contact Point Authority

Contact point for Project Promoters: "The Contact Point Authority"

First task:

Giving advice on proceedings regarding permits and other administrative procedures

- 43 procedures
- Managed by 18 different authorities

Second task:

Maintaining a “Handbook of Proceedings for Renewable Energy

- A result of a broad cooperation with all involved authorities
- Divided into chapters according to origin of energy (Wind-, solar-, bio-, water etc.)
- Available in both Finnish and Swedish

Third task:

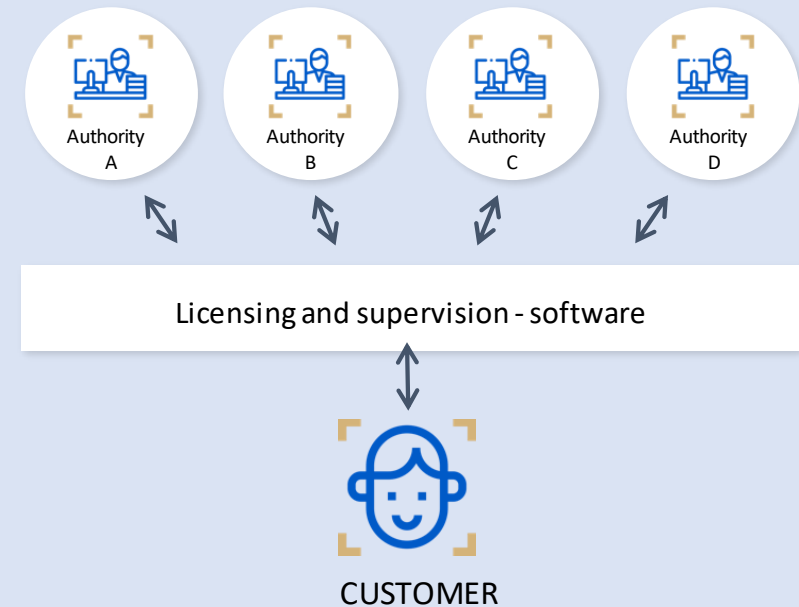

Monitoring the timelines of the authorisation procedures

- Assisting the competent authorities in agreeing on processing timelines
- The time limits are applied to 18 authorization procedures
- The electronic service layer automatically counts and keeps track of the time limits.

The electronic contact point

- Luvat ja Valvonta= “Permits and Surveillance”
- Partly already taken into use, but still under development
- All permits available through one electronic service layer
- Automatically counts and keeps track of the time limits
- To fully work, this still needs implementation and integration of all required authorities.

Thank You!
