

The background of the slide is a dark blue globe with glowing, interconnected blue lines representing energy or a network. The lines are bright and have a slight motion blur effect.

**ECODESIGN FOR INTEGRATED
ENERGY EFFICIENT PRODUCT
POLICY
IN THE ENERGY COMMUNITY**

SINERGY - ECODESIGN AND ENERGY LABELLING

- Ecodesign regulations sets minimum energy performance standards for energy-intensive products
- Ecodesign regulations best work in conjunction with energy labelling and support mechanisms, and ensure that minimum life cycle costs are achieved when taking into account both capital (upfront) and operating costs.

- Ecodesign helps “push” the market (by setting a minimum standard all products must meet).
- Energy labelling helps “pull” the market by encouraging informed purchases above that minimum standards.
- Support financial mechanisms help increase market penetration of more efficient products.
- In EU - Framework Ecodesign Directive 2009/125/EC and 31 product groups.
- In EnC - implemented voluntarily or as part of EU agreements:
 - ❖ Ongoing in Montenegro, Moldova, Serbia, and Ukraine,
 - ❖ Starting in Kosovo*, North Macedonia, and Bosnia and Herzegovina,
 - ❖ under consideration in Albania, and Georgia.
