

THE EU CYBERSECURITY AGENCY

ENISA'S ISAC IN A BOX

Dr. Konstantinos Moulinos – ENISA

15 | 12 | 2020

ENISA'S ROLE

ENISA ISACS MATURITY ASSESSMENT

Based on

The Gartner Cyber Security Maturity Model

The model is about:

- organizational maturity,
- collaboration and
- cyber security.

5 levels of maturity:

- Initial
- Developed
- Defined
- Managed
- Optimised

— Maturity Score* — Desired score

Includes 13 ISAC Functions

- **CEF ISAC facilities manager uses it to assess the maturity of existing EU ISACs**
- **Integrated with ISAC in a box**

ISAC IN A BOX

TOOLKIT FOR ISAC'S

This is a comprehensive toolkit for establishing and developing Information Sharing and Analysis Centres, or ISACs. It includes activities, documents and tools, everything you need to set up and run an ISAC. The toolkit is divided into five different phases corresponding to the development of the ISAC. Each phase contains different topics for developing the organisation in that particular phase.

Hence, the topics have been classified into "New" for ISACs starting from scratch and "Established" for already established ISACs that aim at taking the next step in its maturity process. Throughout the report, topics that concern mainly new ISACs are marked with an "N" and topics that concern mainly established ISACs are marked with an "E". The guiding text is adapted to being used on the ENISA website in a web-based toolkit

- N** = New ISAC
- E** = Established ISAC
- TLP** = ISACs Traffic Light Protocol
